4. MAYOR’S REPORT

5. CONSENT AGENDA: The consent agenda includes items that are routine in nature and are adopted by one motion. Should Council wish to discuss a consent agenda item, the item would be removed from the consent agenda and discussed under Council Business.

The following items are presented for Council approval:
A. Regular City Council Meeting Minutes of June 26, 2018
B. Study Session Meeting Minutes of July 3, 2018
C. AB18-028, a motion approving July 2018 Budgeted Expenditures as follows: Deferred Compensations Program; Payroll Direct Deposit; Dept. of Retirement Systems; IRS 941 ACHs; and AWC Employee Benefit Trust in the amount of $93,386.19; and Vendor Check Numbers 23350 through 23369 with EFT Payments in the amount of $70,125.05. Total distributions submitted for review & authorization in the amount of $163,511.24.
D. AB18-0412, adopting Resolution No. 18-0412, authorizing the Mayor to execute a Real Property Lease Agreement with Greg Pile for mutual benefit of Pasture Use and Vegetation Maintenance

6. COUNCIL BUSINESS
A. AB18-029, a motion confirming the Mayoral appointment of Joann Overfield Position No. 2, and Blake Morrison, Position No. 7, to the City of Edgewood Planning Commission
B. AB18-030, a motion to approve the Mayor to cause the 2017 Year End Financial Report to be posted to the City website and made available to the public as an unaudited representation of the city’s overall financial position
C. AB18-0524, a motion to adopt Ordinance No. 18-0524, amending Ordinance No. 17-0516, the Budget for the 2018 Fiscal Year, providing updates to the approved General Fund Budget, to address increases in costs relating to the Public Works Surface Water Management Plan, the 2018 Salary Schedule and a new City Hall Facilities Improvement Project, providing for severability and establishing an effective date
D. AB17-0513, a motion to adopt Ordinance No. 17-0513, relating to compliance with the Growth Management Act (GMA), Chapter 36.70A RCW, incorporating the City’s mandatory update of its Critical Areas regulations, as required by RCW 36.70A.130(7)(B); repealing Title 14 - Critical Areas of the Edgewood Municipal Code (EMC) and replacing it with a new Title 14; repealing EMC Chapter 15.10
E. AB18-0413, a motion to adopt Resolution No. 18-0413, approving the Domus Townhomes PRD Final Plat, located at 10413 11th Street East, Edgewood, WA

(Agenda continued to page 2)
7. COUNCIL COMMENTS
8. EXECUTIVE SESSION
9. ADJOURN
1. CALL TO ORDER

Deputy Mayor Christopherson called the meeting to order at 7:00pm and led the attendees in the Pledge of Allegiance.

ROLL CALL

Present: Councilmember Mark Creley, Councilmember Luke Meyers (late), Deputy Mayor Tyron Christopherson, Councilmember Stephanie Hunter, Councilmember Roseanne Tomyn, Councilmember Nate Lowry. Excused: Mayor Daryl Eidinger, Councilmember John C. West.

Staff Present: Assistant City Administrator Dave Gray, City Clerk Rachel Pitzel, Community Development Director Darren Groth, Public Works Director Jeremy Metzler, Police Chief Micah Lundborg, Carol Morris, City Attorney.

Additions/Deletions to the Agenda
There were no additions or deletions to the agenda.

Councilmember Meyers entered the meeting at 7:03pm

2. PRESENTATION

Part VII– Welcome to your Pierce County Contract! Now, what do you get?

Deputy Mayor Christopherson introduced Deputy Jeff Laeuger who presented Council with a PowerPoint on the Pierce County Aviation Unit:

- Introduction to the Planes (Pierce 1 and Pierce 2)
- Pierce County Air Support Unit 2010
- Partners with the Regional Aviation Program
- Regional Members:
  - King County SO, Seattle Fire Dept., Snohomish County SO, WSP, WASR/WADOT, DEM and CPF&R.
- Air assets are available for use within the region and state
- Air Unit Applications:
  - Patrol
  - Drug Interdiction
  - Surveillance
  - Search & Rescue
  - Firefighting
  - Marine Services/Swift Water
  - SWAT
  - Communication Platform
  - Crime Scene Photography/Filming
  - Natural Disaster Response & Preparedness/DEM
3. AUDIENCE COMMENT

Tim McClain – Lakehaven Board of Commissioners, President- spoke with Council regarding the city’s cooperation in resolving the current lawsuit.

4. MAYOR’S REPORT

Deputy Mayor Christopherson read Mayor Eidinger’s report into the record:

- This past week we added “rumble strips” to our new all-way stop locations to increase awareness of the change. The new speed signs just arrived and we should have them up next week. In addition, the damaged railing in front of Surprise Lake Center has been replaced.
- The Old Coots on Scoots helped again this year, and placed the large flag on the barn - it will stay up until after the 4th of July. Thanks for their commitment to our city.
- Brian Levenhagen, Parks and Rec Advisory Board chair, and I met and have scheduled the council to discuss next steps on our future park at a study session on July 17th.
- Pierce County Regional Council (PCRC) discussed this cycles grant requests and scores. They are planning a training for all councilmembers in September so that more people can be up to speed on what the PCRC does. I will let you know when they firm up a date and location if you would be interested in attending. It should be very informational about how the grant cycle works for the region.
- Connect over coffee appears to be gaining momentum with attendance almost in the double digits and several return visitors last Saturday. Next month’s Connect over Coffee will be at the picnic on July 21st. Deputy Mayor Christopherson has a sign-up sheet for Council, please pick a time that you would prefer to be in the City of Edgewood booth, probably for about an hour each.
- Noteworthy news, the city had an Inspector working last Saturday to verify code compliances within our city.
- Thanked folks who participated in the 5k run/walk last weekend.

Community Development Director Groth briefed on the following:

- Commented that the GIS mapping has received a lot of good feedback, he noted the portal would go live next Monday.
- Gave update on a couple of the “new-hires” and noted that Meg Haley has been working on the city’s addressing; and Jeremy Privett, our new inspector, was out doing some Saturday work and thanked Council for the help and support in getting those folks on board.

Public Works Director Metzler briefed on the following:

- Informed Council of a Public Information meeting he will be having regarding the SWMP on Thursday, June 28th at 6pm

Assistant City Administrator Gray briefed on the following:

- Noted that Stephen Weeks from Sound Morgan was here that evening- he did the installation of the new audio and wanted to give kudos to him for a great job on getting us upgraded.
5. CONSENT AGENDA

The consent agenda includes items that are routine in nature and are adopted by one motion. Should Council wish to discuss a consent agenda item, the item would be removed from the consent agenda and discussed under Council Business.

The following items are presented for Council approval:

A. Regular City Council Meeting Minutes of June 12, 2018,
B. Study Session Meeting Minutes of June 19, 2018.
C. AB18-026, a motion approving June 2018 Budgeted Expenditures as follows: Deferred Compensations Program; Payroll Direct Deposit; Dept. of Retirement Systems; IRS 941 ACHs; and AWC Employee Benefit Trust in the amount of $61,678.30; and Vendor Check Numbers 23337 through 23349 with EFT Payments in the amount of $196,228.46. Total distributions submitted for review & authorization in the amount of $257,906.76.
D. AB18-0406, a motion to approve Resolution No. 18-0406, authorizing the Mayor to execute a Purchase Service Agreement with TCMS for installation and maintenance of the new HVAC Control System
E. AB18-0411, a motion to approve Resolution No. 18-0411, authorizing the Mayor to execute a Professional Services Agreement with Buxton Company to provide retail recruitment and retention solutions for Economic Development

Motion: Move Item E under Council Business Action: Approve, Moved by Councilmember Mark Creley, Seconded by Councilmember Nate Lowry. Motion passed (5-0, Deputy Mayor Christopherson abstained).

Motion: to approve Consent Agenda without Item E Action: Approve, Moved by Councilmember Stephanie Hunter, Seconded by Councilmember Roseanne Tomyn. Motion passed (5-0, Deputy Mayor Christopherson abstained).

6. COUNCIL BUSINESS

A. AB18-027, a motion confirming the Mayoral appointment of Carly Guillory Position No. 1, Lucy Lowry, Position No. 3, and moving Allison Pincas to Position 6 to the City of Edgewood Planning Commission

Community Development Director Groth briefed on the agenda item.

Motion: to suspend Council Rules of Procedures to allow the Mayor to reappoint JoAnne Overfield without an interview, Action: Approve, Moved by Councilmember Stephanie Hunter, Seconded by Councilmember Roseanne Tomyn. Motion failed due to lack of majority vote (3-2, Deputy Mayor Christopherson abstained, Councilmember Lowry and Councilmember Creley voting nay)

Motion: Confirming Mayoral Appointment as Read in AB18-027, Action: Approve, Moved by Councilmember Roseanne Tomyn, Seconded by Councilmember Mark Creley. Motion passed (4-0, Deputy Mayor Christopherson abstained, Councilmember Lowry abstained by voting present)
B. **AB18-0524**, a motion to adopt Ordinance No. 18-0524, amending Ordinance No. 17-0516, the Budget for the 2018 Fiscal Year, providing updates to the approved General Fund Budget, to address increases in costs relating to the Public Works Surface Water Management Plan, the 2018 Salary Schedule and a new City Hall Facilities Improvement Project, providing for severability and establishing an effective date

Assistant City Administrator Gray briefed on this agenda item.

**Motion:** As Read, **Action:** Approve, **Moved by** Councilmember Hunter. **Motion not seconded; motion failed.**

F. **AB18-0411**, a motion to approve Resolution No. 18-0411, authorizing the Mayor to execute a Professional Services Agreement with Buxton Company to provide retail recruitment and retention solutions for Economic Development

**Motion:** As Read, **Action:** Approve, **Moved by** Councilmember Stephanie Hunter, **Seconded by** Councilmember Luke Meyers. **Motion passed unanimously (6-0).**

7. **COUNCIL COMMENTS**

Deputy Mayor Christopherson asked if there were any additional Council comments.

Councilmember Lowry asked if **AB18-0524** could be brought back on the 10th under separate items. He noted he would like more clarity on the items individually.

Councilmember Tomyn asked about the swings at Edgemont park. Public Works Director Metzler noted it was cracked and not safe to use, it is being re-ordered and will be replaced as soon as it come in.

8. **EXECUTIVE SESSION**

Deputy Mayor Christopherson asked City Attorney Carol Morris if there was an executive session.

City Attorney Morris stated there would be an Executive Session pursuant to RCW 42.30.110(1)(i) pending litigation. The Executive Session will last approximately 15 minutes.

Deputy Mayor Christopherson recessed the meeting to Executive Session at 7:54pm for 15 minutes.

Deputy Mayor Christopherson extended the Executive Session at 8:05pm for an additional 5 minutes.

Deputy Mayor Christopherson called the meeting back to order at 8:10pm.

9. **ADJOURN**

Deputy Mayor Christopherson adjourned the meeting at 8:10pm.

__________________________________________  
Rachel Pitzel, City Clerk

__________________________________________  
Daryl Eidinger, Mayor
1. CALL TO ORDER
Mayor Eidinger called the meeting to order at 7:00pm and led attendees in the Pledge of Allegiance.

ROLL CALL
Staff Present: Assistant City Administrator Dave Gray, City Clerk Rachel Pitzel, Community Development Director Darren Groth, Jeremy Metzler Public Works Director, Stephanie Goff, Accounting Manager.

2. COUNCIL BUSINESS
A. Review / Discussion – Planning Commission Reappointments/Interviews
Community Development Director Darren Groth briefed Council on the Planning Commission vacancies and terms. He introduced the candidate and Council asked the following questions:
1. Why do you want to be on the Planning Commission?
2. Please summarize your prior community involvement experience or experience serving on an advisory board.
3. The Commission has monthly meetings that last approximately 2-3 hours. In addition, you are required to research and study the issues and materials germane to your decision making in order to be an educated and involved participant. Will you be able to commit the time/energy necessary to be an effective Commission member?
4. The Commission is a diverse group with varying opinions and backgrounds. How would you express yourself and participate in the process of consensus in this environment?
5. What do you consider to be the most important issues facing the City today?
6. How would you suggest improving citizen participation?
7. How will you balance community interests with individual property owner interests?
8. Mayor’s Question: Please share the most recent joke you heard that made you laugh?

Discussion took place regarding recommendations for appointment for JoAnne Overfield who is still interested in serving, but her term has expired on June 30 and was unable to make the July 3 study session meeting, and the Mayor’s recommendation of Blake Morrison to serve on the Planning Commission.

B. Review / Discussion – Development Review
Community Development Director Darren Groth briefed Council on regular updates on land development actions occurring in Edgewood; a permit and project activity map for active permits engaged in the community; he also noted the permit report notes the activity for the previous month.

Discussion followed between staff and the Council.
C. **Review / Discussion** – Ordinance – Critical Areas  
Community Development Director Darren Groth briefed Council on this agenda item and noted for the past year, the city has been in the process of updating its Critical Areas Ordinance. He noted the most recent language revision was made at the request of Mt. View-Edgewood Water Company and pertains to the definition of wellhead protection area, which resulted in an updated mapping exhibit for the critical aquifer recharge critical area map. He noted he would like to bring this ordinance back to the regular council meeting for first read and adoption since a public hearing was already held on this agenda item on May 8, 2018.

Discussion followed between staff and the Council.

D. **Review / Discussion** – Storm Water Management Plan (SWMP) Update (Schedule/Status)  
Public Works Director Jeremy Metzler briefed Council on this agenda item and noted that the city’s consultant, Herrera, recently released a complete draft of the Comprehensive SWMP update that has been in progress since Spring 2017. He noted he held a public information meeting on June 28th and received some input from citizens and MTVE, which those comments are included in the packet. He handed out projects for CIP and TIP projects. He noted he plans to bring forward to the Planning Commission at their July 9th meeting, to be able to come back to council with a recommendation at a later regular council meeting.

Discussion followed between staff and the Council.

E. **Review / Discussion** – Resolution – Greg Pile Goat Agreement  
Assistant City Administrator Dave Gray briefed Council on this agenda item, he noted Mr. Pile and his goats have been maintaining the Nelson Farm & Nature Park for a number of years. The additional fee for maintenance paid by the city is to offset the cost of insurance the city has been advised by WCIA that Mr. Pile should carry.

Discussion followed between staff and the Council.

**Council action:** Council recommended staff to go ahead and place the Agreement on the next regular council meeting agenda under the consent agenda.

Assistant City Administrator Dave Gray briefed Council on this agenda item and noted the 2017 annual report identifies 2017 as a year the city experienced revenues above those budgeted and expenditures below those budgeted, with a net increase to ending fund balances. He also noted the city has exceeded its strategic budget goals for the year 2017.

Discussion followed between staff and the Council.
**G. Review / Discussion** – Budget Amendment No. 3  
Assistant City Administrator Dave Gray briefed Council on this agenda item and apologized to council that we have been reactionary instead of proactive, and noted staff is working hard at trying not to bring forward items that council has already seen and discussed and not times that need their immediate action on. He discussed the budget amendments and asked council if they would like to discuss each item for better clarification.

Discussion took place regarding the salary change amendment, how that occurred and why.

**Council action:** Council recommended staff to bring back this item to the next regular council meeting under Council Business.

---

3. **OTHER COUNCIL ISSUES**  
Mayor Eidinger discussed the picnic and thanked those councilmembers and staff who signed up to volunteer at the booth. He also noted Milton and Fife days and stated the city will be having a booth located at those events, and will be looking for volunteers to man the booth there as well.

Councilmember Tomyn asked about the Future Agendas List and noted she would like to see the economic strategic plan dates listed.

---

4. **ADJOURN**  
Mayor Eidinger adjourned the meeting at 8:35pm.

---

</tbody>
</table>

**Timeline:** This is a three (3) year pasture lease.

### Fiscal Note/Consideration:
The rental income is $1 per year while the goat maintenance fee to the City is $300 per year. The cost of periodic maintenance per year for the pasture would be in excess of $300 per year.

### SUMMARY STATEMENT:
Mr. Pile and his goats have been maintaining the area for a number of years. The addition of a fee for the maintenance paid by the City is ostensibly to offset the cost of insurance the City has been advised by its carrier, WCIA, the lessee should carry. The $300 per year payment is measurably less than the cost the City would incur to provide maintenance it enjoys from the benefit of the animals in the pasture. The animals add to the rural character of the Nelson Farm & Nature Park area and provide enjoyment to the community.

### Council Committee Review and Recommendation:
Reviewed at the 07/03/18 Study Session. Council recommendation to place under the consent agenda.

### Recommended Action:
**MOTION** adopting Resolution No. 18-0412, authorizing the Mayor to execute a Real Property Lease Agreement with Mr. Greg Pile for mutual benefit of pasture use and vegetation maintenance.

### Alternatives to Recommended Action:
1) Do not adopt  
2) Forward to Study Session for further review
RESOLUTION NO. 18-0412

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF EDGEWOOD, PIERCE COUNTY, WASHINGTON AUTHORIZING THE MAYOR TO EXECUTE A PASTURE LEASE WITH GREG PILE FOR MUTUAL BENEFIT OF PASTURE USE AND VEGETATION MAINTENANCE

WHEREAS, the City Council has been in favor of the mutual relationship between the City and Mr. Greg Pile, wherein his goats pasture at the Nelson Farm while keeping the vegetation under control; and

WHEREAS, the City Council understands the benefits to the community for the enjoyment the animals bring to the rural nature of the Nelson Farm and that Mr. Pile’s costs for insurance to meet the City’s insurance requirements have increased considerably over time; and

WHEREAS, the City believes the cost of providing City personnel or contract labor to provide pasture maintenance would be in excess of the fee provided Mr. Pile to provide goat maintenance and meet the increased cost of insurance as required by the City.

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF EDGEWOOD, WASHINGTON, DOES RESOLVE AS FOLLOWS:

Section 1. The Mayor is hereby authorized to execute a multi-year pasture lease, attached hereto and incorporated herein.

____________________________
Daryl Eidinger, Mayor

ATTEST:

____________________________
Rachel Pitzel, City Clerk
REAL PROPERTY LEASE AGREEMENT

This Lease is made and entered into by and between the CITY OF EDGEWOOD, An optional code, municipal corporation organized and existing under the laws of the State of Washington, herein referred to as Lessor or the City, and the GREG PILE, whose address is 12608 48th St. E., Edgewood, WA 98372, herein referred to as Lessee. This lease supersedes the March 27, 2015 Pasturing and Vegetation Management Agreement which expired on March 27, 2016 and the March 27, 2016 First Addendum to Pasturing and Vegetation Management, that expired on March 27, 2017.

WHEREAS, the City owns the real property commonly known as the Nelson Farm, 11912 - 18th Street East in Edgewood (Pierce County Assessor’s Parcel No. 0420112082) (hereinafter the “Property”); and

WHEREAS, the Property is improved with a farmhouse and water has been piped onto the Property; and

WHEREAS, the Property is currently, and has historically been, at least partially overgrown with native and non-native grasses and other vegetation; and

WHEREAS, Lessee owns a small flock of Hampshire and Dorset sheep, the natural habits of which have been proven effective in controlling vegetation; and

WHEREAS, the Lessee desires to lease a portion of the Property for the purpose of allowing the sheep to graze, which would control the vegetation to the benefit of the City; and

NOW, THEREFORE, in consideration of the mutual benefits accruing to both parties, the Lessor and Lessee agree as follows:

Section 1 - PREMISES

For and in consideration of the mutual covenants hereinafter contained, Lessor does hereby agree to lease the following real property to the Lessee:

That portion of Exhibit A denoted as fenced and marked with an “X” at 11912 18th Street East,

Section 2 - TERM AND TERMINATION

The Lessee is currently in possession of the Property. The term of the lease shall be for three (3) years commencing on July 24, 2018 and ending on June 30, 2021, if not sooner terminated in the manner provided in Section 5 or 8.

Either party may terminate this lease, with or without cause, upon 30 days written notice to the other party.

1 of 6
Section 3 - RENT

A. The rent shall be One Dollar ($1.00) per year payable in full without deduction or offset, to the Clerk of the City of Edgewood on or before June 30 of each year during this lease. Real property taxes and assessments shall be the responsibility of the City. All other taxes, including leasehold taxes shall be paid by the Lessee.

B. The City shall pay the lessee $300 per year to help offset the cost of housing the animals on-site on the Property, in exchange for the animals keeping the vegetation at a level that does not require additional City maintenance costs.

Section 4 - CONDITIONS OF USE

A. It is understood and agreed between the parties that the Lessee shall not use or occupy any portion of the Property other than the Premises described in Section 1, without the Lessor’s written permission, which may be withheld for any reason by the City.

B. The purpose of this Lease is for the temporary pasturing of the Lessee’s Hampshire and Dorset sheep, together with one or more miniature donkeys or alpacas, to provide predator deterrence (each an “Animal” and collectively referred to as the “Animals”).

C. It is specifically agreed and understood that the Lessee shall not call on the Lessor to make any improvements or repairs to the Premises. Lessee agrees to maintain the above-described real property and the Premises during the term of this Lease and shall be responsible for the maintenance and upkeep of said real property and Premises at all times, including but not limited to the pasture area and portions of the existing barn for animal shelter and storage of supplies. The Lessee agrees to inspect the fences not less than once per year; furnish labor and materials for repair of fences, supervise supply of water to Animals, return stray Animals to Premises, Call veterinarian in case of emergency, pay veterinary expenses, furnish feed to Animals.

D. The Lessee shall be and remain exclusively responsible for the transportation, care, feeding watering, monitoring, supervision, control and removal of the Animals, and the Lessor shall have no responsibility or liability whatsoever regarding the same. The Lessee shall ensure that the Animals are treated and maintained in a humane and safe manner at all times. It is expressly understood that the Lessee’s performance of the activities authorized in this Lease are undertaken at the Lessee’s sole risk, and that the Lessee assumes the responsibility and risk of all loss injury, illness, and/or death of the Animals.

E. No more than twenty (20) Animals may be pastured on the Premises at any time.

F. The Lessee shall not install any improvements at all on the Premises, temporary or permanent, unless allowed by this Lease. The Lessee is specifically prohibited from subjecting the Premises or the Lessor’s assets to any liens or claims of lien. Lessee shall keep the Premises free from any liens created by or through Lessee. If a lien is filed against the
Premises by any person claiming by, through or under the Lessee, then Lessee shall, within ten (10) days after the Lessor’s demand, at Lessee’s expense, either remove the lien or furnish to the Lessee a bond issued by a surety, approved in form by the City Attorney, and in an amount satisfactory to the Lessor, indemnifying the Lessor and the Premises against all liabilities, costs and expenses, including attorney’s fees, which the Lessor could reasonably incur as a result of such lien.

G  The Lessee accepts the condition of the Premises in its present condition on the terms described in this Lease. The Lessee accepts the Premises “AS IS” and with all faults, and the City makes no warranty of any kind, express or implied, as to the condition of the Premises. As the Lessee is the current occupant of the Premises, it is fully familiar with the physical condition of the Premises and accepts the Premises in its current condition as satisfactory to the Lessee’s needs.

Section 5 - ABANDONMENT OF PREMISES

Lessee shall not vacate or abandon the Premises during the term hereof except upon thirty (30) days written notice sent by certified mail to Lessor. Upon expiration or termination of this Lease, the Lessee shall promptly remove the Animals from the Premises and restore the Premises to its original condition prior to the Lessee’s entry thereon, except for normal wear and tear reasonably associated with the Lessee’s use.

Section 6 - INDEMNIFICATION; INSURANCE.

A. Lessee shall defend, indemnify and hold harmless the City, its officers, officials, employees and volunteers from and against any and all claims, suits, actions or liabilities, including costs, reasonable attorneys’ fees and expenses, for injury or death of any person, or for loss or damage to property, which arises out of Lessee’s use of the Premises or from the conduct of Lessee’s operations, or from any activity, work or thing done, permitted or suffered by Lessee in or about the Premises, except only injury or damage as shall have been occasioned by the sole negligence of the City. The provisions of this Section shall survive the termination or expiration of the Lease.

B. The Lessee shall procure and maintain, for the duration of this Lease, insurance against claims for injuries to persons or damage to property which may arise from or in connection with the Lessee’s operation and use of the leased Premises. Lessee’s maintenance of insurance as required by this Lease shall not be construed to limit the liability of the Lessee to the coverage provided by such insurance or otherwise to limit the City’s recourse to any remedy available at law or equity.

Lessee shall obtain insurance of the types described below:

1. Commercial General Liability insurance which shall be written on Insurance Services Office (ISO) occurrence form CG 00 01 and shall cover premises and contractual liability. The City shall be named as an insured on Lessee’s Commercial General Liability
insurance policy using ISO Additional Insured-Managers or Lessors of Premises Form CG 20 11 or a substitute endorsement providing equivalent coverage. Commercial General Liability insurance shall be written with limits no less than $1,000,000 each occurrence, $2,000,000 general aggregate.

2. Property insurance shall be written on an all risk basis. The property insurance shall be written covering the full value of Lessee’s property and improvements with no coinsurance provisions.

The Lessee’s Commercial General Liability insurance policy or policies are to contain, or be endorsed to contain that they shall be primary insurance as respects the City. Any insurance, self-insurance or insurance pool coverage maintained by the City shall be excess of the Lessee’s insurance and shall not contribute with it.

Insurance is to be placed with insurers with a current A.M. Best rating of not less than A:VII.

Lessee shall furnish the City with original certificates and a copy of the amendatory endorsements, including but not necessarily limited to the additional insured endorsement, evidencing the insurance requirements of the Lessee.

Lessee and the City hereby release and discharge each other from all claims, losses and liabilities arising from or caused by any hazard covered by property insurance on or in connection with the Premises. This release shall apply only to the extent that such claim, loss or liability is covered by insurance.

City shall purchase and maintain during the term of the Lease all-risk property insurance covering the Building for its full replacement value without any coinsurance provisions.

The Lessee shall provide the City with written notice of any policy cancellation, within two business days of their receipt of such notice.

Failure on the part of the Lessee to maintain the insurance as required shall constitute a material breach of the Lease, upon which the City may, after giving five business days’ notice to the Lessee to correct the breach, terminate the Lease or at its discretion, procure or renew such insurance and pay any and all premiums in connection therewith, with any sums so expended to be repaid to the City on demand. The language in this Section 6(A) relating to indemnification shall survive the expiration or termination of this Agreement.

Section 7 - ASSIGNMENT

Lessee shall not assign or transfer this lease or any interest therein, without the prior written consent of Lessor. Any such assignment without Lessor’s consent shall be void, and shall at the option of the Lessor, constitute cause for termination of this Lease.
Section 8 - DEFAULT

In the event the Lessee shall fail to keep and perform any of the covenants and agreements herein contained including the payment of rent, Lessor may terminate this lease by giving written notice to Lessee. Lessee shall not be deemed to be in default of the covenants and agreements hereunder unless Lessor shall first give to Lessee five (5) days written notice of such default and Lessee fails to cure such default(s) within five (5) days after receipt of written notice. In the event of any such lease termination, Lessor, in addition to the other rights and remedies it may have, shall have the immediate right of re-entry and may remove all Animals from the Premises.

Section 9 - WAIVER

Lessor’s waiver of one or more covenants or conditions by either party shall not be construed as a waiver of a subsequent breach of the same or other covenants or conditions.

Section 10 - PARTIES BOUND

The covenants and conditions herein contained shall, subject to the provisions as to assignment and transfer, apply to and bind the heirs, successors, executors, administrators, and assigns of all the parties hereto.

Section 11 – NOTICE

Any notice required to be given to the parties under this Lease shall be in writing and effective either when delivered in person or via overnight mail to the other party, or three (3) days after being sent by registered or certified mail to the other party, at the addresses set forth below:

City of Edgewood
Attn: City Clerk
2224 - 104th Ave. E.
Edgewood, WA 98371
(253)952-3299
rachel@cityofedgewood.org

Greg Pile
12608 48th St. E.,
Edgewood, WA 98372
(253) 820-0623
gpile@comcast.net

Section 12 -- LESSOR’S RESERVATION

Lessor, as well as agents and employees of the Lessor, reserve the right to enter the Premises at any reasonable time for purposes of: (a) consultation with the Lessee; (b) making repairs, improvements and inspections; and (c) after termination of the Lease is given, of performing seasonal work, none of which is to interfere with the Lessee in carrying out regular operations.
Section 13 - ENTIRE AGREEMENT

This lease sets forth the entire agreement between the parties and it shall not be modified in any manner except by an instrument in writing executed by the duly authorized representative of the parties.

Section 14 - JURISDICTION, VENUE AND ATTORNEY FEES

Any action for claims arising out of or relating to this Lease shall be governed by the laws of the State of Washington. Venue shall be in Pierce County Superior Court. In any suit or action instituted to enforce any right or obligation granted in this Agreement, the substantially prevailing party shall be entitled to recover its costs, disbursements, and reasonable attorney’s fees from the other party.

IN WITNESS WHEREOF, the parties hereto have signed and sealed this lease the 26th day of June 2018.

LESSOR: City of Edgewood

By: ___________________________ By: ___________________________
Daryl, Eidinger Greg Pile
Mayor

Mayor
SUBJECT: Planning Commission Appointments to fill two terms that ended on June 30, 2018.

Agenda Item #: AB18-029
For Agenda of: July 10, 2018
Prepared by: Darren Groth

ATTACHMENTS (list): ☒ PC Membership Roster - As of Council Action on 06-26-18

City Attorney, Carol Morris ☒ Appropriation Required: $0
City Clerk, Rachel Pitzel ☒ Timeline: N/A
Community Development Director, Darren Groth ☒
Public Works, Jeremy Metzler ☐

Fiscal Note/Consideration: N/A

SUMMARY STATEMENT:
The City of Edgewood’s seven-member Planning Commission has four open positions due to staggered two-year appointments for each Commissioner that expire annually on June 30. The initial terms for Positions 1 through 3 were scheduled to expire on June 30, 2006 and the terms for Positions 4-7 were scheduled to expire on June 30, 2005. All seven positions were planned for two-year terms running continually from those dates. To fill the vacancies, the City held a recruitment that garnered applications from two current Planning Commission members and three new applicants. On June 19, 2018, City Council conducted the first interview for two candidates that were appointed by the Mayor and confirmed by City Council on June 26, 2018. The three remaining candidates were again invited to interview on July 3; however, only Blake Morrison was available to interview on that date. Commissioner JoAnn Overfield was out of town and not available to interview on July 3, 2018 and the other candidate indicated he needed additional notice, i.e., more than two weeks, to take the time off from work. With two failed attempts to interview the new applicant, staff recommends allowing the experienced commissioner to continue serving in Position 2 and appointing the applicant that was available to interview.

In addition to the appointments, Edgewood Municipal Code (EMC), under Section 2.30.040 – Organization, states that the mayor may appoint and the city council may confirm a [Planning Commission] chair and vice-chair. If the mayor and council choose not to select the chair and vice-chair, the commission shall elect them from its members. The chair and vice-chair terms of office shall be for one year beginning July 1st and ending June 30th. The practice of City Council selecting the chair and vice-chair appears to be historically deferred to the commissioners. Since the EMC, however, calls for a choice of the City Council to either select or not to select, any deferral should be noted.

COUNCIL COMMITTEE REVIEW AND RECOMMENDATION: N/A

RECOMMENDED ACTION: Reappoint returning Planning Commissioner JoAnn Overfield to remain in Position 2 for another two-year term, appoint Blake Morrison to a one-year term for Position 7, and defer chair and vice-chair selection to the Planning Commission to nominate and approve amongst their ranks.

ALTERNATIVES TO RECOMMENDED ACTION:
1) Appoint Blake Morrison to one of the vacant positions and interview the two remaining candidates to fill the other vacancy.
2) Appoint both commissioners to two-year terms that expire on June 30, 2020.
3) Appoint the commissioners and select the chair and vice-chair.
Carly Guillory
Position 1 – Term ending June 30, 2020

Vacant – To be filled July 10
Position 2 - Term ending June 30, 2020

Lucy Lowry
Position 3 - Term ending June 30, 2020
Chair – Term ending June 30, 2018*

Carrie Streepy
Position 4 - Term ending June 30, 2019

Sigmund Brudevold
Position 5 - Term ending June 30, 2019

Allison Pincas
Position 6 - Term ending June 30, 2019

Vacant – To be filled July 10
Position 7 - Term ending June 30, 2019

*Need to select new Chair and Vice-Chair during the July 9, 2018 meeting—both roles filled annually.
Carly Guillory  
Position 1 – Term ending June 30, 2020

JoAnn Overfield  
Position 2 - Term ending June 30, 2020

Lucy Lowry  
Position 3 - Term ending June 30, 2020

Carrie Streepy  
Position 4 - Term ending June 30, 2019

Sigmund Brudevold  
Position 5 - Term ending June 30, 2019

Allison Pincas  
Position 6 - Term ending June 30, 2019

Blake Morrison  
Position 7 - Term ending June 30, 2019

*Acting Chair needed for the July 9, 2018 Planning Commission meeting. The annual term for the Chair and Vice-Chair positions will be made either by City Council during their July 10, 2018 meeting or deferred by City Council to the August 13, 2018 Planning Commission meeting.

*The accompanying notes are an integral part of this statement.*
Notes to the Financial Statements
For year ended December 31, 2017

Note 1  Summary of Significant Accounting Policies

The City of Edgewood was incorporated on February 28, 1996 and operates under the laws of the state of Washington applicable to a code city. The City is a general purpose government and provides law enforcement, community planning, street improvements, storm water maintenance and general administrative services, in addition, the City owns a sewer system that is operated and maintained through an Interlocal Agreement. The City uses single-entry, cash basis accounting which is a departure from generally accepted accounting principles (GAAP).

The City of Edgewood reports financial activity in accordance with the *Cash Basis Budgeting, Accounting and Reporting System* (BARS) Manual prescribed by the State Auditor’s Office under the authority of Washington State law, Chapter 43.09 RCW. This manual prescribes a financial reporting framework that differs from generally accepted accounting principles (GAAP) in the following manner:

- Financial transactions are recognized on a cash basis of accounting as described below.
- Component units are required to be disclosed, but are not included in the financial statements.
- Government-wide statements, as defined in GAAP, are not presented.
- All funds are presented, rather than a focus on major funds.
- The *Schedule of Liabilities* is required to be presented with the financial statements as supplementary information.
- Supplementary information required by GAAP is not presented.
- Ending balances are not presented using the classifications defined in GAAP.

A. Fund Accounting

The accounts of the City are organized on the basis of funds, each of which is considered a separate accounting entity. Each fund is accounted for with a separate set of single-entry accounts that comprises its cash, investments, revenues and expenditures, as appropriate. The City’s resources are allocated to and accounted for in individual funds depending on their intended purpose. One managerial fund 005 Strategic Reserves is listed separately in the adoption of the budget. For 2017, the 005 Strategic Reserve fund is listed separately for financial presentation as reserved in the General Fund.

The following are the fund types used by the City:

GOVERNMENTAL FUND TYPES:

**General (Current Expense) Funds**

These funds are the primary operating funds of the City. They account for all financial resources except those required or elected to be accounted for in another fund.

**Special Revenue Funds**

These funds account for specific revenue sources that are restricted or committed to expenditures for specified purposes of the City.
Debt Service Funds

These funds account for the financial resources that are restricted, committed, or assigned to expenditures for principal, interest and related costs on general long-term debt.

Capital Projects Funds

These funds account for financial resources which are restricted, committed, or assigned for the acquisition or construction of capital facilities or other capital assets.

PROPRIETARY FUND TYPES:

Enterprise Funds

These funds account for operations that provide goods or services to the general public and are supported primarily through user charges.

Internal Service Funds

These funds account for operations that provide goods or services to other departments or funds of the City on a cost reimbursement basis.

FIDUCIARY FUND TYPES:

Fiduciary funds account for assets held by the government in a trustee capacity or as an agent on behalf of others. In 2016, the City Council adopted Ordinance 16-0480 absorbing the Edgewood Transportation Benefit District (Fund 630) into the Street Fund (Fund 101) under the authority granted by Senate Bill 5987. For 2017 receipts and expenditures related to TBD revenue are accounted for as restricted in the Street Fund. In 2017 the City continues to account for assigned funds for pass through State and Local revenue collections and funds held on behalf of others as surety or deposits in Funds 640 (Assignment) $166,930; 642 (Retention) $ 0.00 and 650 (Agency) $735.

B. Basis of Accounting and Measurement Focus

Financial statements are prepared using the cash basis of accounting and measurement focus. Revenues are recognized when cash is received and expenditures are recognized when paid, including those properly chargeable against the report year(s) budget appropriations as required by state law.

In accordance with state law the City also recognizes expenditures paid during twenty days after the close of the fiscal year for claims incurred during the previous period.

Purchases of capital assets are expensed during the year of acquisition. There is no capitalization of capital assets, nor allocation of depreciation expense. Inventory is expensed when purchased.
City wide expenditures for labor, benefits, goods and services are initially charged to Central Services and then allocated to all funds and cost centers within funds (general fund) to reflect their share of said costs. This system allows management and accounting the ability to examine and balance labor, benefit, and large service provider expenditures in total while capturing the fully absorbed cost of each activity in the proper fund/cost center. Allocations are based upon personnel deployment. Cost of a direct nature are charged to their fund/cost center directly (election, consulting, etc.)

The basis of accounting described above represents a comprehensive basis of accounting other than accounting principles generally accepted in the United States of America.

C. Budgets

The City adopts annual appropriated budgets for all funds. These budgets are appropriated at the fund level. The budget constitutes the legal authority for expenditures at that level. Annual appropriations for these funds lapse at the fiscal year end.

Annual appropriated budgets are adopted on the same basis of accounting as used for financial reporting.

The appropriated and actual expenditures for the legally adopted budgets were as follow:

<table>
<thead>
<tr>
<th>Fund/Department</th>

</tbody>
</table>

Budgeted amounts are authorized to be transferred between departments within any fund/object classes within departments; however, any revisions that alter the total expenditures of a fund, or that affect specific authorized employee positions (job descriptions) or salary ranges (annual salary schedule) must be approved by the City’s legislative body.

The City budgets a Strategic Reserve Fund 005 for purposes of cash flow and unexpected emergencies. For reporting purposes, Fund 005 is reported as part of Fund 001 General Fund.
(current expense fund) as a reserved cash balance due to internal legislative restrictions for its use.

D. Cash and Investments

See Note 2, Deposits and Investments.

E. Capital Assets

Capital assets are assets with an initial individual cost of more than $1,000 and an estimated useful life in excess of one year. The capital assets and inventory of the City are recorded as expenditures when purchased.

F. Compensated Absences

Vacation leave may be accumulated up to 240 hours and is payable upon separation or retirement. Payments are recognized as expenditures when paid. Compensatory time can be accrued up to 40 hours. It is accrued at the rate of 1.5 hours per hour worked. It is paid only upon separation.

Sick leave may be accumulated indefinitely. Upon separation or retirement employees do not receive payment for unused sick leave.

G. Long-Term Debt See Note 5, Debt Service Requirements.

H. Other Financing Sources or Uses

The City’s Other Financing Sources or Uses consist of operating transfers-in and operating transfers-out and Interfund loans where appropriate and approved through resolution of the City Council.

I. Risk Management

The city of Edgewood is a member of the Washington Cities Insurance Authority (WCIA). Utilizing Chapter 48.62 RCW (self-insurance regulation) and Chapter 39.34 RCW (Interlocal Cooperation Act), nine cities originally formed WCIA on January 1, 1981. WCIA was created for the purpose of providing a pooling mechanism for jointly purchasing insurance, jointly self-insuring, and / or jointly contracting for risk management services. WCIA has a total of 161 members.

New members initially contract for a three-year term, and thereafter automatically renew on an annual basis. A one-year withdrawal notice is required before membership can be terminated. Termination does not relieve a former member from its unresolved loss history incurred during membership.

Liability coverage is written on an occurrence basis, without deductibles. Coverage includes general, automobile, police, errors or omissions, stop gap, employment practices and employee benefits liability. Limits are $4 million per occurrence in the self-insured layer, and $21 million in limits above the self-insured layer is provided by reinsurance. Total limits are $25 million per occurrence subject to aggregates and sublimits. The Board of Directors determines the limits and terms of coverage annually.
Insurance for property, automobile physical damage, fidelity, inland marine, and boiler and machinery coverage are purchased on a group basis. Various deductibles apply by type of coverage. Property coverage is self-funded from the members’ deductible to $750,000, for all perils other than flood and earthquake, and insured above that to $300 million per occurrence subject to aggregates and sublimits. Automobile physical damage coverage is self-funded from the members’ deductible to $250,000 and insured above that to $100 million per occurrence subject to aggregates and sublimits.

In-house services include risk management consultation, loss control field services, and claims and litigation administration. WCIA contracts for certain claims investigations, consultants for personnel and land use issues, insurance brokerage, actuarial, and lobbyist services.

WCIA is fully funded by its members, who make annual assessments on a prospectively rated basis, as determined by an outside, independent actuary. The assessment covers loss, loss adjustment, reinsurance and other administrative expenses. As outlined in the interlocal, WCIA retains the right to additionally assess the membership for any funding shortfall.

An investment committee, using investment brokers, produces additional revenue by investment of WCIA’s assets in financial instruments which comply with all State guidelines.

A Board of Directors governs WCIA, which is comprised of one designated representative from each member. The Board elects an Executive Committee and appoints a Treasurer to provide general policy direction for the organization. The WCIA Executive Director reports to the Executive Committee and is responsible for conducting the day to day operations of WCIA.

J. Health and Welfare

The City of Edgewood is a member of the Association of Washington Cities Employee Benefit Trust Health Care Program (AWC Trust HCP). Chapter 48.62 RCW provides that two or more local government entities may, by Interlocal agreement under Chapter 39.34 RCW, form together or join a pool or organization for the joint purchasing of insurance, and/or joint self-insurance, to the same extent that they may individually purchase insurance, or self-insure.

An agreement to form a pooling arrangement was made pursuant to the provisions of Chapter 39.34 RCW, the Interlocal Cooperation Act. The AWC Trust HCP was formed on January 1, 2014 when participating cities, towns, and non-city entities of the AWC Employee Benefit Trust in the State of Washington joined together by signing an Interlocal Governmental Agreement to jointly self-insure certain health benefit plans and programs for participating employees, their covered dependents and other beneficiaries through a designated account within the Trust.

As of December 31, 2017, 261 cities/towns/non-city entities participate in the AWC Trust HCP.

The AWC Trust HCP allows members to establish a program of joint insurance and provides health and welfare services to all participating members. The AWC Trust HCP pools claims without regard to individual member experience. The pool is actuarially rated each year with the assumption of projected claims run-out for all current members. The AWC Trust HCP includes
medical, dental and vision insurance through the following carriers: Kaiser Foundation Health Plan of Washington, Kaiser Foundation Health Plan of Washington Options, Inc., Regence BlueShield, Asuris Northwest Health, Delta Dental of Washington, and Vision Service Plan. Eligible members are cities and towns within the state of Washington. Non-City Entities (public agency, public corporation, intergovernmental agency, or political subdivision within the state of Washington) are eligible to apply for coverage into the AWC Trust HCP, submitting application to the Board of Trustees for review as required in the Trust Agreement.

Participating employers pay monthly premiums to the AWC Trust HCP. The AWC Trust HCP is responsible for payment of all covered claims. In 2017, the AWC Trust HCP purchased stop loss insurance for Regence/Asuris plans at an Individual Stop Loss (ISL) of $1.5 million through Life Map, and Kaiser ISL at $1 million with Companion Life through ASG Risk Management. The aggregate policy is for 200% of expected medical claims.

Participating employers contract to remain in the AWC HCP for a minimum of three years. Participating employers with over 250 employees must provide written notice of termination of all coverage a minimum of 12 months in advance of the termination date, and participating employers with under 250 employees must provide written notice of termination of all coverage a minimum of 6 months in advance of termination date. When all coverage is being terminated, termination will only occur on December 31. Participating employers terminating a group or line of coverage must notify the HCP a minimum of 60 days prior to termination. A participating employer’s termination will not obligate that member to past debts, or further contributions to the HCP. Similarly, the terminating member forfeits all rights and interest to the HCP Account.

The operations of the Health Care Program are managed by the Board of Trustees or its delegates. The Board of Trustees is comprised of four regionally elected officials from Trust member cities or towns, the Employee Benefit Advisory Committee Chair and Vice Chair, and two appointed individuals from the AWC Board of Directors, who are from Trust member cities or towns.

The Trustees or its appointed delegates review and analyze Health Care Program related matters and make operational decisions regarding premium contributions, reserves, plan options and benefits in compliance with Chapter 48.62 RCW. The Board of Trustees has decision authority consistent with the Trust Agreement, Health Care Program policies, Chapter 48.62 RCW and Chapter 200-110-WAC.

The accounting records of the Trust HCP are maintained in accordance with methods prescribed by the State Auditor’s office under the authority of Chapter 43.09 RCW. The Trust HCP also follows applicable accounting standards established by the Governmental Accounting Standards Board (“GASB”). Year-end financial reporting is done on an accrual basis and submitted to the Office of the State Auditor as required by Chapter 200-110 WAC. The audit report for the AWC Trust HCP is available from the Washington State Auditor’s office.
K. **Reserved Portion of Ending Cash and Investments (Fund Balance)**

Beginning and Ending Cash and Investments is reported as reserved when it is subject to restrictions on use imposed by external parties, or due to internal commitments established by the City Council. When expenditures that meet restrictions are incurred, the City intends to use reserved resources first before using unreserved amounts.

Reservations of Ending Cash and Investments consist of:

- **Strategic Reserve Fund** ($1,009,636) Funds collected represent an internal commitment for emergency purposes. These funds may be rescinded by an ordinance of the City Council. For reporting purposes, this reserved amount is combined with Fund 001 General Fund.
- **Street Fund** ($246,075) Funds collected represent payment in-lieu of construction and gas taxes used for road improvements.
- **Park Impact Fee** ($1,329,335) Funds are used for park acquisition and improvements outlined in the City’s Capital Improvement Plan. They are restricted for increasing capacity and must be expended on a legislated timeline.
- **Traffic Impact Fee** ($1,212,078) Funds collected pay for projects identified in the City’s Capital Improvement Plan. They are restricted for increasing capacity and must be expended on a legislated timeline.
- **REET1** ($204,549) and **REET2** ($274,647) The Growth Management Act (GMA) restricts projects funded from REET1 and REET2 to those capital projects outlined in the City’s Capital Improvement Plan.
- **Debt Service Fund** ($29,240) are used to retire scheduled debt and make annual interest payments.
- **Capital Parks Fund** ($109,708) is used for capital parks projects, primarily funded by grant dollars and Park Impact Fees, as identified in the City’s Capital Improvement Plan.
- **Capital Roads** ($280,945) and **Capital TIB** ($1,811) Funds are used for capital roads projects, primarily funded by grant dollars and Traffic Impact Fees, as identified in the City’s Capital Improvement Plan.
- **Sewer** ($60,361) and **Surface Water** ($145,403) Funds are used to support the operations and maintenance of the respective utility.
- **Temporary LID Fund** ($609,100) Funds from special assessment payments for securing the payment of the principal of and interest on local improvement debt. The LID Reserve Fund ($354,348) contains a reserve created from the Temporary LID Fund to achieve a one-year debt payment to USDA over a ten-year period, as a loan covenant. The City’s current LID debt is $10,652,530.
- **Equipment Replacement Fund** ($60,478) Funds collected represent an internal commitment for replacing or purchasing capital equipment set aside from General Fund Sources. Use of the funds may be restricted by Council Ordinance.
Note 2 – Deposits and Investments

It is the City of Edgewood’s policy to invest all temporary cash surpluses. The interest on these investments is prorated to the various funds of the City.

All deposits and certificates of deposit are covered by the Federal Deposit Insurance Corporation or the Washington Public Deposit Protection Commission. All investments are insured, registered, or held by the City or its agent in the government’s name.

Investments are presented as collected balances. Bonds are stated at original coupon purchase. Net gains or losses are booked upon redemption. Current US Securities are managed through US Bank Safekeeping.

Investments by type at December 31, 2017 are as follows:

<table>
<thead>
<tr>
<th>Type of Investment</th>
<th>City’s Own Investments</th>
<th>Investments held by City as an agent for other local Governments, individuals or private organizations.</th>
<th>Total</th>
</tr>
</thead>
<tbody>
<tr>
<td>L.G.I.P.</td>

<td><strong>$3,097,237</strong></td>
<td><strong>$0.00</strong></td>
<td><strong>$3,097,237</strong></td>
</tr>
</tbody>
</table>

Note 3 Property Tax

The county treasurer acts as an agent to collect property tax levied in the county for all taxing authorities. Collections are distributed around the 10th of each month.

Property tax revenues are recognized when cash is received by the City. Delinquent taxes are considered fully collectible because a lien affixes to the property after tax is levied.

The City’s regular levy for the year 2017 was $1.0853 per $1,000 on an assessed valuation of $1,556,466,106 for a total regular levy of $1,689,243.

Note 4 Interfund Loans

The following table displays Interfund loan activity during 2017:

<table>
<thead>
<tr>
<th>Borrowing Fund</th>
<th>Lending Fund</th>
<th>Balance 1/1/2017</th>
<th>New Loans</th>
<th>Repayments 12/31/2017</th>
<th>Balance 12/31/2017</th>

</tbody>
</table>
Effective March 31, 2017, the outstanding Interfund Loan to Capital Roads was repaid in full to the General Fund. It was a short term loan to cover a WSDOT Grant Reimbursement for a 2016 expenditure.

**Note 5 – Debt Service Requirements**

The accompanying Schedule of Long-Term Liabilities (09) provides more details of the outstanding debt and liabilities of the City and summarizes the City’s debt transactions for year ended December 31, 2017.

The debt service requirements for general obligation bonds, revenue bonds, special assessment bonds, and loans including both principal and interest, are as follows:

<table>
<thead>
<tr>
<th>Year</th>

</tbody>
</table>

Other Debt represents annual principal and interest payments to the Public Works Trust Fund Loan and the LID (see Note 7A for information on the LID). In 2017 the City received substantial LID assessment payoff cash payments. The USDA RD loan number 2 was retired and $1,000,000 paid down on loan number 5.

The City owns three parcels in the LID whose current portion owed is $663,434. The 14 remaining annual assessment installments are $45,324 each and the assessment will be paid in 2031. Yearly interest is due on the declining balance owed. For 2017, the interest paid was $28,894.

**Note 6 Pension Plans**

Substantially all of the City’s full-time and qualifying part-time employees participate in the Public Employees Retirement System (PERS) administered by the Washington State Department of Retirement Systems, under cost-sharing multiple-employer public employee defined benefit and defined contribution retirement plans. Actuarial information is on a system-wide basis and is not considered pertinent to the City’s financial statements. Contributions to the systems by both employee and employer are based upon gross wages covered by plan benefits.

Historical trend or other information regarding each plan is presented in the Washington State Department of Retirement Systems annual financial report. A copy of this report may be obtained by
At June 30, 2017 (the measurement date of the plans), the City of Edgewood proportionate share of the collective net pension liabilities, as reported on the Schedule 09, was as follows:

<table>
<thead>
<tr>
<th>PLAN</th>
<th>Allocation %</th>
<th>Liability (Asset)</th>
</tr>
</thead>
<tbody>
<tr>
<td>PERS 1</td>
<td>.001778%</td>
<td>$ 84,367</td>
</tr>
<tr>
<td>PERS 1(UAAL)</td>
<td>.006395%</td>
<td>$303,448</td>
</tr>
<tr>
<td>PERS 2/3</td>
<td>.008226%</td>
<td>$284,187</td>
</tr>
</tbody>
</table>

The City adjusts the PEFI worksheet for the lag in reporting City withheld pension payments vs. those reported as received by DRS. In 2017 this amount was a reduction of $1,627.

**Note 7 - Other Disclosures**

A. **Local Improvement District No. 1:** As of December 31 all law suits with LID assessed property owners as plaintiffs have been settled in favor of the City of Edgewood. The remaining petition to the State Supreme Court to hear a claim of civil rights infraction was dismissed on March 7, 2017. As of December 31, 2017, the City has not had an application for, nor collected any City Conveyance Development Charges (late comer’s fees) for sewer extensions within the Core 1 area, which would be assessed for public entity or private/developer funded projects. As of May 30, 2018 the City has executed a default on Assessment No. 055, PC Parcel 0420102059 through the Pierce County District Court of one LID assessment in the sum of $21,886.80. This includes legal and court costs.

Lakehaven Water & Sewer District filed suit in April 2018 against the City claiming an exemption to a March 2018 imposition of a Utility Tax. The City estimates that should Lakehaven prevail, the City would lose approximately $4,000 in Utility Tax Revenue, and not be reimbursed for legal fees to contest the suit. The City has a high confidence the suit will be dismissed and the imposition of the tax will prevail. The City does not consider the cost or loss of revenue to be material to its operation going forward.

B. **Personnel Changes:** The City has experienced exponential growth in building activity throughout 2017. Addition to the inspection and planning personnel complement have brought the total FTE count to 16. The City intends to continue to hire for the increased work load.

C. **Construction Commitments:** The City had no active construction projects as of December 31, 2017.
D. Mt. View Edgewood Water Company Franchise Agreement: The City of Edgewood has renewed a long term Franchise Agreement with Mt. View Edgewood Water Company, which was noted in the 2016 notes as in negotiation.

LOCAL GOVERNMENT RISK-ASSUMPTION
For the Year Ended December 31, 20__

1. __no__ Does the entity self-insure for any class of risk, including liability, property, health and welfare, unemployment compensation, workers’ compensation? (yes/no)

If NO, STOP, you do not need to complete the rest of this Schedule.

If YES, continue below.

   a. Which class of risk does the entity self-insure? Check all that apply.
      i. _____ Liability
      ii. _____ Property
      iii. _____ Health and Welfare (medical, vision, dental, prescription)
      iv. _____ Unemployment Compensation
      v. _____ Workers’ Compensation
      vi. _____ Other - please describe: __________________________________________

   b. _____ Does the entity self-insure as an individual program? (yes/no)
      i. _____ If answered YES, does the entity allow another separate legal entity into its self-insurance program(s)? (yes/no) For example, employees of a different organization participate in a health and welfare program of a city.
         If so, list the entity or entities: __________________________________________

   c. _____ Does the entity self-insure as a joint program? (yes/no)
      _____ If answered YES, list the other member(s): ____________________________
2. _____ Does the entity administer its own claims? (yes/no)

3. _____ Does the entity contract with a third party administrator for claims administration? (yes/no)

4. _____ Did the entity receive a claims audit in the last three years, regardless of who administered the claims? (yes/no)

5. _____ Were the program’s revenues sufficient to cover the program’s expenses? (yes/no)

6. _____ Did the program use an actuary to determine its liabilities? (yes/no)

**Fiscal Note/Consideration:** Exhibit A: 2018 Budget Amendment No 3 increases the labor cost by $4,982 for raising the pay of the Building Official. This raise is based upon information used by the Salary Commission to determine competitive wages for staff for the 2019 budget preparation, and is being instituted mid-year due to adding a new Plans Examiner/Building Inspector position at the same salary schedule, also evident in the Salary Comparison. The increase in the 2018 Budget for the first floor kitchen and parking lot expansion, as contemplated by the lease with the Fire District, will be funded by General Fund Existing Fund Balance. The budget request is for $210,000 to cover a yet to be determined actual cost for the construction of the parking lot and kitchen, which current staff estimate is about $167,382.04. This estimate is extremely rough and may be revised by Gray & Osborne, the City’s on-call engineers, when they assume management of the project.

**Exhibit B & C:** The Surface Water Fund Budget increase is to transfer $47,723.02 that was unspent in the 2017 Budget and an additional $2,694 which is over the 2018 budget of $15,000 for a total additional ask of $17,694 for completion of the Surface Water Management Plan update. Total cost of the Plan will be $200,044.

**SUMMARY STATEMENT:** Budget Amendment No. 3 to Ordinance No. 17-0516, addresses an increase to pay for the Building Official salary; cost of completing kitchen, and parking lot improvements, mostly recovered by the East Pierce Fire & Rescue lease; and, the need to move 2017 budgeted monies to the 2018 budget for the completion of the Surface Water Management Plan- being produced by staff & Herrera Environmental Consultants.

**COUNCIL COMMITTEE REVIEW AND RECOMMENDATION:** This Budget Amendment was reviewed and discussed by Council in the June 19th Study Session and recommended for placement on the June 26, RCM Consent Agenda for Council consideration and action. At that meeting, it was tabled to the July 3, 2018 Study Session for further clarification; whereas it was recommended by Council to be placed on the July 10, 2018 agenda under Council Business for council consideration and action.

**RECOMMENDED ACTION:** MOTION to adopt Ordinance No. 18-0524 approving the 2018 Budget Amendment No. 3, amending Ordinance No. 17-0516, increasing fund expenditures for labor, City Hall construction improvements and the completion of the Surface Water Management Plan.

**ALTERNATIVES TO RECOMMENDED ACTION:**
1) Do not adopt
2) Forward to Study Session for further review
ORDINANCE NO. 18-0524

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF EDGECOUD, WASHINGTON, AMENDING ORDINANCE NO. 17-0516, THE BUDGET FOR THE 2018 FISCAL YEAR, PROVIDING UPDATES TO THE APPROVED GENERAL FUND BUDGET, TO ADDRESS INCREASES IN COSTS RELATING TO THE PUBLIC WORKS SURFACE WATER MANAGEMENT PLAN, THE 2018 SALARY SCHEDULE AND A NEW CITY HALL FACILITIES IMPROVEMENT PROJECT, PROVIDING FOR SEVERABILITY AND ESTABLISHING AN EFFECTIVE DATE.

WHEREAS, State law, Chapter 35A.33 RCW, requires the City of Edgewood adopt an annual budget and provides procedures for such; and

WHEREAS, the City of Edgewood established its 2018 Budget in Ordinance No. 17-04570516; and

WHEREAS, the City Council desires to amend the 2018 Budget to reflect updated labor expenditure estimates for the City Building Official staff position in the Salary Schedule (Ex. A) to amend expenditures in the General Government Capital Expenditures fund to address certain capital improvements to City Hall (Ex. C); and to address increases in the cost of the Surface Water Management Plan (Ex. B); and

NOW THEREFORE THE CITY COUNCIL OF THE CITY OF EDGECOUD, WASHINGTON, DOES ORDAIN AS FOLLOWS:

Section 1. Amending the 2018 Salary Schedule. The 2018 Salary Schedule approved with Ordinance 17-0516 is amended to increase FT17-09 Step 5 for the Building Official staff position due to compression from the new Plans Examiner/Inspection position, all as shown in the attached Exhibit A.

Section 2. Amending General Government Capital Expenditure Budget. The 2018 Budget is increased to include the cost of the construction of a kitchen in the first floor of the City Hall, and parking lot improvements, as contemplated by the East Pierce Fire & Rescue Lease approved by Council at the May 22, 2018 Regular Council Meeting, as shown in the attached Exhibit D.

Section 2. Amending the 2018 General Fund, Specifically Public Works Surface Water Fund Budget Expenditures. The 2017 Surface Water Budget contemplated an expenditure of $182,350 to complete the Surface Water Management Plan. The plan was not completed in 2017 and this Budget Amendment moves $47,723.20 unspent in 2017 to the 2018 Budget and adds $2,694 to the 2018 Budgeted Expenditure, to complete the plan in 2018, attached as Exhibit B.

Section 3. Direction to Staff: Staff is hereby authorized and instructed to make the necessary changes to the printed form of the 2018 Budget and Exhibit A Salary Schedule to
reflect the above amendments and to make all necessary and appropriate line item entries and adjustments in order to reflect said amendments, attached as Exhibit C.

Section 5. Transmittal. The City Clerk is hereby authorized and directed to transmit a certified copy of this ordinance to the Association of Washington Cities, the Auditor of the State of Washington, and Municipal Research Services Center.

Section 6. Severability. Should any section, paragraph, sentence, clause, or phrase of this ordinance, or its application to any person or circumstance, be declared unconstitutional or otherwise invalid for any reason, or should any portion of this ordinance be preempted by state or federal law or regulation, such decision or preemption shall not affect the validity of the remaining portions of this ordinance or its application to other persons or circumstances.

Section 7. Effective Date. A summary of this ordinance shall be published in the official newspaper of the City and this ordinance shall take effect and be in full force five (5) days after the date of publication.

Section 8. Approval. Pursuant to RCW 35A.33.120, the City Council finds that this Ordinance is in the best interest of the City and has approved this Ordinance by a majority plus one of all members of Council.

Mayor, Daryl Eidinger

Attest/Authenticated:

City Clerk, Rachel Pitzel, CMC

Approved As To Form:

City Attorney Carol Morris

Asst. City Administrator, Dave Gray ☒ Amount Budgeted: $0
City Attorney, Carol Morris ☒ Appropriation Required: $0
City Clerk, Rachel Pitzel ☒ Timeline: N/A
Community Development Director, Darren Groth ☒
Public Works, Jeremy Metzler ☐

FISCAL NOTE/CONSIDERATION: N/A

SUMMARY STATEMENT:

For the past year, the City of Edgewood has been in the process of updating its Critical Areas Ordinance (CAO). After multiple staff changes; various public input opportunities; and multiple language changes for ease of reading, interpretation, and implementation; the draft code should be ready for adoption. The most recent language revision was made at the request of Mountain View-Edgewood (MTVE) water company and pertains to the definition of Wellhead Protection Area. This recent revision also resulted in an updated mapping exhibit for the Critical Aquifer Recharge Critical Area Map. On June 3, 2018, this item was briefed to the City Council in preparation for final action during the July 10, 2018 regular City Council meeting. Several items were discussed and clarified, including the wetland buffer distances, the revised definition and map, and the ability to make revisions to the text without further study.

COUNCIL COMMITTEE REVIEW AND RECOMMENDATION: On April 16, 2018, the Planning Commission held a second public hearing for the substantially modified draft code and recommended APPROVAL, as presented.

RECOMMENDED ACTION: MOTION to adopt Ordinance No. 17-0513, relating to compliance with the Growth Management Act (GMA), Chapter 36.70A RCW, incorporating the City’s mandatory update of its Critical Areas regulations, as required by RCW 36.70A.130(7)(B); repealing Title 14 - Critical Areas of the Edgewood Municipal Code (EMC) and replacing it with a new Title 14; repealing EMC Chapter 15.10

ALTERNATIVES TO RECOMMENDED ACTION:
1) Do not adopt
2) Forward to Study Session for further review
Date: July 10, 2018

Discussion
The City of Edgewood contracted with Environmental Sciences Associates (ESA) to update its Critical Areas Ordinance (CAO) in accordance with the requirements of the Growth Management Act. ESA reviewed best available science regarding the City’s critical areas and assisted the City with revisions to Edgewood Municipal Code (EMC) Title 14. The work ESA performed was completed within three tasks.

Under Task 1, ESA reviewed existing conditions, current critical area regulations, regulatory agency requirements and guidelines, and relevant best available science. ESA, with its team partners, developed recommendations for revising the CAO based on our review of best available science, our experience with other critical areas ordinances, and recent agency guidelines.

Task 2 charged ESA with a review and update to existing critical areas inventory mapping datasets, where information changed. These maps were updated using existing publicly-available data sources from the City, Pierce County, State of Washington (WDNR, WDFW and Ecology), and federal agencies. After City review and approval of the recommended code revisions developed in Task 1, ESA proposed revisions to the City’s current CAO regulations. The final task, Task 3, was the initial redlined draft from ESA that is included as Exhibit 1.

The Planning Commission (PC) held a public hearing on the modified draft code on August 21, 2017. City staff incorporated the PC comments and refined the CAO draft for discussion during the October 17, 2017 City Council meeting. The refined CAO draft is attached as Exhibit 2 and served as the basis for City Council’s public hearing on November 14, 2017. Once the lingering public comments and the input from City Council’s hearing were incorporated into the drafted code, major modifications were necessary. The result of the major modifications led staff to request City Council to remand this item back to the Planning Commission for another public hearing.

On March 30, 2018, the City sent a copy of the latest draft code, both the redlined and clean drafts (Exhibits 3 and 4, respectively), to the Washington State Department of Commerce (DOC), as required by RCW 36.70A.106(1). On April 3, 2018, the DOC confirmed the City met the procedural requirements and processed the request with material ID # 24770.
On April 16, 2018, the PC held a public hearing on the updated draft. The ESA consultants, the Washington Department of Ecology, and the City Attorney Office all provided comments in conjunction with the PC hearing. Those comments and any received during the City Council hearing on May 8 will be incorporated into the final draft ordinance.

On May 8, 2018, the City Council held a public hearing on Ordinance 18-0513. Mayor Eidinger opened the public hearing at 7:03 p.m. and Community Development Director Groth gave an update on Ordinance No. 17-0513. After the update, Mayor Eidinger asked for public comments. One commenter, Colleen Wise, thanked staff for the great job on such a big project and had a question regarding the swales and not being considered in setbacks/buffer zones. Since no other speakers were present to offer input, Mayor Eidinger closed the public hearing at 7:08 p.m.

On May 15, 2018, during the City Council’s study session, Community Development Director Darren Groth briefed Council on subject code amendment with an update regarding the differentiation between natural and artificial swales in response to the input received at the public hearing. After the introductory briefing, Mike Craig from Mt. View-Edgewood (MTVE) water added comments regarding the Critical Aquifer Recharge Map and zone of contribution. Mr. Craig asked for a map revision and definition update. Discussion took place and Mayor Eidinger noted an off-line discussion will take place between staff and MTVE to find a solution to the map and definition.

On May 29, 2018, MTVE and City staff met to discuss the map revisions and code language changes requested by MTVE. The discussion resulted in a change to the Critical Aquifer Recharge Map to include the zone of contribution and a definition change to Wellhead Protection Area.

On July 3, 2018, this item was briefed to the City Council in preparation for final action during the July 10, 2018 regular City Council meeting. Several items were discussed and clarified, including the wetland buffer distances, the revised definition and map, and the ability to make revisions to the text without further study.
Date: July 3, 2018

Discussion
The City of Edgewood contracted with Environmental Sciences Associates (ESA) to update its Critical Areas Ordinance (CAO) in accordance with the requirements of the Growth Management Act. ESA reviewed best available science regarding the City’s critical areas and assisted the City with revisions to Edgewood Municipal Code (EMC) Title 14. The work ESA performed was completed within three tasks.

Under Task 1, ESA reviewed existing conditions, current critical area regulations, regulatory agency requirements and guidelines, and relevant best available science. ESA, with its team partners, developed recommendations for revising the CAO based on our review of best available science, our experience with other critical areas ordinances, and recent agency guidelines.

Task 2 charged ESA with a review and update to existing critical areas inventory mapping datasets, where information changed. These maps were updated using existing publicly-available data sources from the City, Pierce County, State of Washington (WDNR, WDFW and Ecology), and federal agencies. After City review and approval of the recommended code revisions developed in Task 1, ESA proposed revisions to the City’s current CAO regulations. The final task, Task 3, was the initial redlined draft from ESA that is included as Exhibit 1.

The Planning Commission (PC) held a public hearing on the modified draft code on August 21, 2017. City staff incorporated the PC comments and refined the CAO draft for discussion during the October 17, 2017 City Council meeting. The refined CAO draft is attached as Exhibit 2 and served as the basis for City Council’s public hearing on November 14, 2017. Once the lingering public comments and the input from City Council’s hearing were incorporated into the drafted code, major modifications were necessary. The result of the major modifications led staff to request City Council to remand this item back to the Planning Commission for another public hearing.

On March 30, 2018, the City sent a copy of the latest draft code, both the redlined and clean drafts (Exhibits 3 and 4, respectively), to the Washington State Department of Commerce (DOC), as required by RCW 36.70A.106(1). On April 3, 2018, the DOC confirmed the City met the procedural requirements and processed the request with material ID # 24770.
On April 16, 2018, the PC held a public hearing on the updated draft. The ESA consultants, the Washington Department of Ecology, and the City Attorney Office all provided comments in conjunction with the PC hearing. Those comments and any received during the City Council hearing on May 8 will be incorporated into the final draft ordinance.

On May 8, 2018, the City Council held a public hearing on Ordinance 18-0513. Mayor Eidinger opened the public hearing at 7:03 p.m. and Community Development Director Groth gave an update on Ordinance No. 17-0513. After the update, Mayor Eidinger asked for public comments. One commenter, Colleen Wise, thanked staff for the great job on such a big project and had a question regarding the swales and not being considered in setbacks/buffer zones. Since no other speakers were present to offer input, Mayor Eidinger closed the public hearing at 7:08 p.m.

On May 15, 2018, during the City Council’s study session, Community Development Director Darren Groth briefed Council on subject code amendment with an update regarding the differentiation between natural and artificial swales in response to the input received at the public hearing. After the introductory briefing, Mike Craig from Mt. View-Edgewood (MTVE) water added comments regarding the Critical Aquifer Recharge Map and zone of contribution. Mr. Craig asked for a map revision and definition update. Discussion took place and Mayor Eidinger noted an off-line discussion will take place between staff and MTVE to find a solution to the map and definition.

On May 29, 2018, MTVE and City staff met to discuss the map revisions and code language changes requested by MTVE. The discussion resulted in a change to the Critical Aquifer Recharge Map to include the zone of contribution and a definition change to Wellhead Protection Area.
Title 14
CRITICAL AREAS

Chapters:
14.10 General Provisions
14.20 Use and Activity Regulations
14.30 Wetlands
14.40 Critical Fish and Wildlife Habitat Areas
14.50 Aquifer Recharge and Wellhead Protection Areas
14.60 Volcanic Hazard Areas
14.70 Flood Hazard Areas
14.80 Landslide Hazard Areas
14.90 Seismic (Earthquake) Hazard Areas
14.110 Erosion Hazard Areas
14.500 Natural Resource Lands

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
Chapter 14.10
GENERAL PROVISIONS

Sections:
14.10.010 Authority.
14.10.020 Repeal.
14.10.025 Title.
14.10.030 Purpose.
14.10.040 Interpretation.
14.10.050 Applicability.
14.10.060 Definitions.
14.10.070 Administration.
14.10.075 Relationship to Other Regulations.
14.10.080 Critical area protective measures.
14.10.085 Variances to critical areas.
14.10.090 Reconsideration and appeal procedures.
14.10.100 Fees.
14.10.110 Compliance.
14.10.120 Warning and disclaimer of liability.
14.10.130 Severability.
14.10.135 Violation – Civil infraction.
14.10.140 Appendices.
14.10.150 Figures.

14.10.010 Authority.
A. This title is established and adopted pursuant to the Growth Management Act (RCW 36.70A.060).
B. As provided herein, the director or his/her designee is given the authority to interpret and apply, and the responsibility to enforce this title to accomplish the stated purpose.

This title is established and adopted pursuant to:
A. Environmental policies and procedures for this title are established pursuant to Chapter 43.21C RCW, as amended and entitled the “State Environmental Policy Act” (SEPA), and Chapter 197-11 WAC, as amended and entitled “State Environmental Policy Act Rules”, and
B. The city adopts by reference WAC 197-11-300 through 197-11-800; and
C. Chapter 173-22 WAC; and
D. Chapter 86.16 RCW; and
E. The Growth Management Act (RCW 36.70A.060); and
F. The Tri-County Response to the 4(D) Rule-Land Management Development Regulations; and
G. RCW 36.70A.172, Critical areas – Designation and protection. (Ord. 02-200 § 2).

14.10.020 Repeal.
The current EMC Title 19, Shoreline Management, and EMC Title 20, Critical Areas, are hereby repealed in their entirety and EMC Title 20 is replaced with this title (effective December 24, 2002). Repeal of EMC Title 20 does not affect any existing permits, land use applications or requirements, or existing enforcement actions. (Ord. 02-200 § 2).

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
Chapter 14.10 GENERAL PROVISIONS

14.10.025 Title.
The current EMC Title 14, Environment, is hereby renamed EMC Title 20, SEPA, and the new EMC Title 14 shall be known as EMC Title 14, Critical Areas (effective December 24, 2002). (Ord. 02-200 § 2).

14.10.030 Purpose.
The purpose of this title is to protect environmentally sensitive critical areas of Edgewood from the impacts of development and protect development from the impacts of hazard areas by establishing minimum standards for development of sites which contain or are adjacent to identified critical areas and thus promote the public health, safety, and welfare by:

A. Avoiding impacts to critical areas;
B. Mitigating unavoidable impacts by regulating development;
C. Protecting critical areas from impacts of development;
D. Protecting the public against losses from:
   1. Costs of public emergency rescue and relief operations where the causes are avoidable; and
   2. Degradation of the natural environment and the expense associated with repair or replacement;
E. Preventing adverse impacts on water availability, water quality, wetlands, and streams;
F. Protecting unique, fragile, and valuable elements of the environment, including critical fish and wildlife habitat;
G. Providing department staff with sufficient information to adequately protect critical areas and proposed development when approving, conditioning, or denying public or private development proposals;
H. Providing the public with sufficient information and notice of potential risks associated with development in natural hazard critical areas; and
I. Implementing the goals and requirements of the Growth Management Act (RCW 36.70A.060)Growth Management Act of 1990, the State Environmental Policy Act, the Puget Sound Water Quality Management Plan, the Pierce County Charter, the Pierce County Interim Growth Management Policies, and the city of Edgewood comprehensive plan, and all updates and amendments, functional plans, and other land use policies formally adopted or accepted by the city of Edgewood.

1. This title also consolidates procedures and regulations that shall promote compatibility between the natural and built environment within the city of Edgewood. Chapters within this title detail the procedures for activities related to critical areas and natural resource lands. (Ord. 02-200 § 2).

14.10.040 Interpretation.
In the interpretation and application of this title, all provisions shall be:

A. Considered the minimum necessary;
B. Liberally construed to serve the purposes of this title; and
C. Deemed neither to limit nor repeal any other powers under state statute. (Ord. 02-200 § 2).

Critical area reports and decisions to alter critical areas shall be based on the best available science to protect the functions and values of critical areas and must give special consideration to conservation or protection measures necessary to preserve or enhance anadromous fish, such as salmon and bull trout, and their habitat.

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
14.10.050 Applicability.

A. This title shall apply to all lands and waters within Edgewood that are designated as critical areas and their corresponding buffer and setback.

B. No development (see “development” definition) shall hereafter be affected without full compliance with the terms of this title.

C. When the requirements of this title are more stringent than those of other Edgewood codes and regulations, including the International Building Code, the requirements of this title shall apply.

D. Compliance with these regulations does not remove an applicant’s obligation to comply with applicable provisions of any other federal, state, or local law or regulation.

E. Criteria for determining critical areas is contained within each chapter of this title.

F. When a site contains two or more critical areas, the site shall meet the minimum standards and requirements for each identified critical area as set forth in this title.

G. Critical areas, as defined and regulated by this title, are identified, but not limited to the following Edgewood critical areas atlas maps:

1. Wetland inventory maps
2. Landslide hazard area maps
3. Erosion hazard area maps
4. Seismic hazard area maps
5. Volcanic hazard area maps
6. Aquifer recharge and wellhead protection area maps
7. Fish and wildlife habitat, and stream typing area maps
8. Flood hazard area maps
9. Resource lands maps
10. Soils maps
11. FIRM (flood insurance rate maps)

H. The exact boundary of each critical area depicted on the City’s critical areas atlas maps is approximate and is only intended to provide an indication of the presence of a critical area on a particular site. Additional critical areas that have not been mapped may be present on a site. The actual presence of a critical area, or areas and the applicability of these regulations shall be determined based upon the classification or categorization criteria and review procedures established for each critical area. City staff and/or consultant(s) may conduct on-site inspections to assess the site in order to determine if additional studies or reports identified in this title are necessary. An inspection report of findings shall be written after the on-site inspection and will become a part of any site development application as a future reference.

I. The Edgewood critical areas atlas maps shall be updated and maintained by the city’s department of community development geospatial information system (GIS) division.

J. Development of the city’s critical areas atlas maps were derived from the sources listed in EMC 14.10.140, Appendix A. These sources may be updated from time to time and will result in a correlating update to the applicable critical areas atlas maps. (Ord. 02-200 § 2).
A. This title shall rely on the definitions contained in Chapter 18.20 EMC, Definitions. The city also adopts by reference the definitions stated in WAC 197-11-700 through 197-11-799 as now or hereafter amended. In addition, the definitions in subsection (B) of this section shall also apply:

B. Additional definitions that apply to this title are:

“Abutting” means bordering upon, to touch upon, in physical contact with. Sites are considered abutting even though the area of contact may be only a point.

“Act” See “State Environmental Policy Act (SEPA).”

“Actions” include, as further specified below:

1. New and continuing activities (including projects and programs) entirely or partly financed, assisted, conducted, regulated, licensed, or approved by agencies,

2. New or revised agency rules, regulations, plans, policies, or procedures, and legislative proposals. Actions fall within one of two categories:

a. Project Actions. Involves a decision on a specific project, such as a construction or management activity, located in a defined geographic area. Projects include and are limited to agency decisions to:

i. License, fund, or undertake any activity that will directly modify the environment, whether the activity will be conducted by the agency, an applicant, or under contract,

ii. Purchase, sell, lease, transfer, or exchange natural resources, including publicly owned land, whether or not the environment is directly modified.

b. Nonproject Actions. Involve decisions on policies, plans, or programs.

i. The adoption or amendment of legislation, ordinances, rules, or regulations that contain standards controlling use or modification of the environment,

ii. The adoption or amendment of comprehensive land use plans or zoning ordinances,

iii. The adoption of any policy, plan, or program that will govern the development of a series of connected actions (WAC 197-11-060), but not including any policy, plan, or program for which approval must be obtained from any federal agency prior to implementation,

iv. Creation of a district or annexations to any city, town or district,

v. Capital budgets, and

vi. Road, street, and highway plans.

“Actions” do not include the activities listed above when an agency is not involved, or include bringing judicial or administrative civil or criminal enforcement actions (categorical exemptions in WAC 197-11-800 identify in more detail governmental activities that would not have any environmental impacts and for which SEPA review is not required).

“Activity” means any use conducted on a site.

“Addendum” means an environmental document used to provide additional information or analysis that does not substantially change the analysis of significant impacts and alternatives in the existing environmental document. The term does not include supplemental EISes. An addendum may be used at any time during the SEPA process.
“Addition” means an alteration to an existing structure that increases the floor area. There are two types of additions: additions affixed to the side of an existing structure and an upper story addition.

“Adjacent” means within 500 feet from the exterior boundaries of designated resource lands pursuant to RCW 36.70A.060.

“Aggrieved person” means the project sponsor, or any person affected by the proposal.

“Agricultural activities” means the production of crops and/or raising or keeping livestock, including operation and maintenance of farm and stock ponds, drainage ditches, irrigation systems, and normal operation, maintenance, and repair of existing serviceable agricultural structures, facilities, or improved areas, and the practice of aquaculture. Forest practices regulated under Chapter 76.09 RCW and WAC Title 222 are not included in this definition.

“Agricultural land” means land primarily devoted to the commercial production of horticultural, viticultural, floricultural, dairy, apiary, vegetable, or animal products or of berries, grain, hay, straw, turf, seed, Christmas trees not subject to the excise tax imposed by RCW 84.33.100 through 84.33.140, finfish in upland hatcheries, or livestock, and that has long-term commercial significance for agricultural production.

“Alluvial geologic unit” means geologically recent (Holocene) stream, lake, swamp, and beach deposits of gravel, sand, silt, and peat.

“Animal containment area” means a site where two or more animal units of large animals per acre or 0.75 of an animal unit of small animals per acre are kept, and where a high volume of waste material is deposited in quantities capable of impacting groundwater resources.

“Animal unit” means the equivalent of 1,000 pounds of animal.

“Appeal” means a request for a review of the interpretation of any provision of this chapter, per EMC 14.10.090.

“Applicant” means any person or entity, including an agency, applying for a license from an agency.

“Application” means a request for a license.

“Aquifer” means a saturated geologic formation, which will yield a sufficient quantity of water to serve as a private or public water supply.

“Aquifer recharge area” means areas that have a critical recharging effect on groundwater used for potable water supplies and/or that demonstrate a high level of susceptibility or vulnerability to groundwater contamination from land use activities. Examples of aquifer recharge areas include:

1. Wellhead protection areas delineated pursuant to the Federal Safe Drinking Water Act; and
2. Other areas with a high level of susceptibility or vulnerability to contamination as demonstrated through the use of the DRASTIC (see DRASTIC) model.

“Area of shallow flooding” means areas designated as AO or AH zones on the FIRM(s). AO zones are characterized as sheet flows, having base flood depths that range from one to three feet above the natural ground, where a clearly defined channel does not exist, the path of flooding is unpredictable and indeterminate, and velocity flow may be evident. AH zones indicate similar depth ponding, shown with standard base flood elevations on the FIRM(s).

“Area of special flood hazard” means land in the floodplain within a community subject to a one percent or greater chance of flooding in any given year. Designation on FIRM(s) always includes the letter A or V.

“Base flood” means the flood having a one percent chance of being equaled or exceeded in any given year, also referred to as the “100-year flood,” and is designated on FIRM(s) by the letter A or V.

“Basement” means any area of the building having its floor sub-grade (below ground level) on all sides, for the purposes of this title.

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
“Best available science” means scientific information applicable to the critical area prepared by local, state, or federal natural resource agencies, a qualified scientific professional, or team of qualified scientific professionals that is consistent with criteria established in WAC 365-195-900 through WAC 365-195-925, or defined by WAC 365-180-005, Criteria for determining which information is the “best available science.”

“Best available technology” means the technology that provides the greatest degree of protection to the natural resource, taking into consideration processes that are developed, or could feasibly be developed given overall reasonable expenditures on research and development, and processes that are currently in use. In determining what is best available technology, the local government shall consider the effectiveness, engineering feasibility and commercial availability of the technology.

“Best management plan” means a plan developed for a property, which specifies best management practices for the control of animal wastes, stormwater runoff, and erosion.

“Best management practices” means conservation practices or systems of practices and management measures that:

A. Control soil loss and reduce water quality degradation caused by high conservations of nutrients, animal waste, toxics and sediment;
B. Minimize adverse impacts to surface water and ground water flow and circulation patterns and to the chemical, physical, and biological characteristics of wetlands;
C. Protect trees and vegetation designated to be retained during and following site construction and use native plant species appropriate to the site for re-vegetation of disturbed areas; and
D. Provide standards for proper use of chemical herbicides within critical areas.

“Breakaway wall” means a wall that is not part of the structural support of the building and is intended through its design and construction to collapse under specific lateral loading forces, without causing damage to the elevated portion of the building or supporting foundation system.

“Buffer” means an area contiguous with a critical area that is required for the integrity, maintenance, function, and structural stability of the critical area.

“Building footprint” means the horizontal area measured within the outside of the exterior walls of the ground floor of all principal and accessory buildings on a lot.

“Cave” means a natural subterranean chamber greater than one foot in diameter and greater than three feet deep.

“City” means the city of Edgewood.

“Class” means one of the wetland classes in the United States Fish and Wildlife Service (USFWS) December 1979 publication, Classification of Wetlands and Deep Water Habitats of the United States.

“Classification” means defining value and hazard categories to which critical areas and land resource lands will be assigned.

“Clearing” means the removal of timber, brush, grass, ground cover, or other vegetative matter from a site, which exposes the earth’s surface on the site.

“Cliff” means a steep vertical or overhanging face of rock or earth greater than 25 feet in height.

“Colluvium” means loose materials deposited by gravity on the face of or at the foot of a slope (e.g., talus, soil creep, etc.).

“Compensatory mitigation” means mitigation to compensate for loss of wetland habitat due to filling of wetlands or other regulated activities in wetlands replacing project-induced losses or impacts to a critical areas.

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
“Conservation easement” means a recorded deed restriction or covenant that runs in perpetuity on a parcel of land restricting the use of the property by preventing future real estate development such as residential, industrial, or commercial use. Conservation easements may allow for continued current uses (e.g., residential, recreational, agriculture, forestry, or ranching); however, conservation easements most often restrict both the current use as well as future uses of the land to some important conservation quality such as habitat preservation, open space, or scenic views. A land trust or governmental entity that manages properties for long-term goals typically holds conservation easements.

“Contaminant” means any chemical, physical, biological, or radiological substance that does not occur naturally or occurs at concentrations and duration as to be injurious to human health or welfare or shown to be ecologically damaging.

“Council” means the Edgewood city council.

“County” means Pierce County.

“Crawl space” means the shallow space beneath the bottom floor of a house with no basement; used for access and inspection of framing, electrical, plumbing, insulation, vapor barriers, or duct work. For purposes of the National Flood Insurance Program Elevation Certificate, a crawl space that has subgrade around all sides shall be considered a basement.

“Creation” means producing or forming a wetland through artificial means from an upland (nonwetland) site.

“Critical aquifer recharge areas” means areas with a critical recharging effect on aquifers used for potable water, including areas where an aquifer that is a source of drinking water is vulnerable to contamination that would affect the potability of the water, or is susceptible to reduced recharge.

“Critical areas” means the following areas and ecosystems: (a) Wetlands; (b) areas with a critical recharging effect on aquifers used for potable water; (c) fish and wildlife habitat conservation areas; (d) frequently flooded areas; and (e) geologically hazardous areas: erosion, landslide, seismic, volcanic, and flood hazard areas, streams, wetlands, fish and wildlife habitat, and aquifer recharge and (depressional) pothole areas as defined by RCW 36.70A.030. All of these areas are of special concern to the people of Edgewood and the state of Washington.

“Critical facilities” means those facilities occupied by populations or which handle dangerous substances including but not limited to hospitals, medical facilities, nursing homes; structures housing, supporting, or containing toxic or explosive substances; covered public assembly structures; school buildings through secondary, including daycare centers; buildings for colleges or adult education; police, fire, and emergency response installations; jails and detention facilities; and all structures with occupancy of greater than 5,000 people. These facilities are such that even a slight chance of flooding might be too great. Essential public facilities (as defined under EMC 18.20.080 and 18.100.050) are considered critical facilities, for floodplain management purposes.

“Debris flow” means the rapid downslope movement of a viscous mass of water-saturated sediments.

“Degraded” means to have suffered a decrease in naturally occurring functions and values due to activities undertaken or managed by persons on or off a site.

“Delineation” means a wetland study conducted in accordance with the approved federal wetland delineation manual and applicable regional supplements Corps of Engineers Wetlands Delineation Manual 1987 edition and corresponding guidance letters and the Washington State Wetlands Identification and Delineation Manual. Delineation report” means a written document prepared by a wetland specialist, which includes data sheets, findings of the delineation, and a site plan, which identifies the wetland boundaries.

“Department” means any division, subdivision, or organizational unit of the city, established by regulation, resolution or order, the City of Edgewood Department of Community Development.

“Depressional pothole” means a relatively sunken or low-lying area of the earth’s surface, especially one having no natural outlet for surface drainage.

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
“Designation” means taking formal legislative action to adopt classifications, inventories, and regulations.

“Determination of”:
1. Nonsignificance (DNS).
2. Significance (DS).
3. Mitigated determination of nonsignificance (MDNS).

“Development” means any human-induced change to improved or unimproved real property, including but not limited to: the construction of buildings or other structures, placement of a manufactured home/mobile home, mining, dredging, clearing, filling, grading, paving, excavation, drilling operations, storage of equipment or materials located within an area of special flood hazard, or activities otherwise governed by EMC Title 16, Subdivisions.

“Development activity” means any construction, development, earth movement, clearing, or other site disturbance of the land, except as listed under exemptions.

“Director” means the mayor or designee, the director of the city of Edgewood Department of Community Development or his/her designee.

“Downed logs” means trees that have fallen or toppled which are dead or in the process of dying, and exhibit sufficient decay characteristics to enable use by fish or wildlife species as habitat. Also referred to as “large woody debris (LWD).”

“DRASTIC” is an acronym for a computer model developed by the National Water Well Association and Environmental Protection Agency used to measure aquifer susceptibility.

“Drift” means a nearly horizontal mine passageway driven on or parallel to the course of a vein or rock stratum.

“Dwelling unit” means one or more rooms designed for or occupied by one family for living or sleeping purposes and containing kitchen facilities for use solely by one family.

“Earth/earth material” means naturally occurring rock, soil, stone, sediment, or combination thereof.

“Earthflow” means a slow downslope movement in which of viscous, saturated regolith sediments sag downward in a series of irregular terraces.

“Ecotone” means a transition area between two adjacent vegetation communities.

“Elevated building” means, for insurance purposes, a nonbasement building that has its lowest elevated floor raised above ground level by foundation walls, shear walls, posts, piers, pilings, or columns.

“Elevation certificate” means the official form (FEMA Form 81-31) used to track development, provide elevation information necessary to ensure compliance with community floodplain management ordinances, and determine the proper insurance premium rate with Section B completed by community officials.

“Encroachment” means any development or regulated activity conducted inside the boundaries of a designated critical area and/or its associated buffer.

“Engineer” as defined by Chapter 18.43 RCW.

“Engineering geologist” means a geologist who, by reason of his or her knowledge of engineering geology, acquired by education and practical experience, is qualified to engage in the practice of engineering geology, has met the qualifications in engineering geology established under Chapter 18.220 RCW, and has been issued a license in engineering geology by the Washington State Geologist Licensing Board.

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
“Engineering geology” means a specialty of geology affecting the planning, design, operation, and maintenance of engineering works and other human activities where geological factors and conditions impact the public welfare or the safeguarding of life, health, property, and the environment.

“Enhancement” means actions performed within an existing degraded critical area and/or buffer to intentionally increase or augment one or more ecological functions or values of the existing area. Enhancement actions include, but are not limited to, increasing plant diversity and cover; increasing wildlife habitat and structural complexity (snags, woody debris); installing environmentally compatible erosion controls; removing non-native plant or animal species; or removing human-made structures or fill that are degrading ecological functions or values. Aims performed to improve the condition of existing degraded wetlands and/or buffers so that the quality of wetland functions increases (e.g., increasing plant diversity, increasing wildlife habitat, installing environmentally compatible erosion controls, removing nonindigenous plant or animal species, removing fill material or solid waste).

“Environmental determination” means that the responsible official or proponent has determined whether or not there are significant adverse effects on quality of the environment and if so, can they be mitigated.

“Erosion” means the wearing away of the earth’s surface as a result of the movement of wind, water, or ice.

“Erosion hazard areas” means those areas that because of natural characteristics, including vegetative cover, soil texture, slope, gradient, and rainfall patterns, or human-induced changes to such characteristics, are vulnerable to erosion.

“Excavation” means the mechanical removal of earth material.

“Existing manufactured home park or subdivision” means a manufactured home park or subdivision for which the construction of facilities for servicing the lots on which the manufactured homes are to be affixed (including, at a minimum, the installation of utilities, the construction of streets, and either final site grading or the pouring of concrete pads) is completed before the effective date of the adopted floodplain management regulations.

“Expansion to an existing manufactured home park or subdivision” means the preparation of additional sites by the construction of facilities for servicing the lots on which the manufactured homes are to be affixed (including the installation of utilities, the construction of streets, and either final site grading or the pouring of concrete pads).

“Extirpation” means the elimination of a species from a portion of its original geographic range.

“Facility” means all structures, contiguous land, appurtenances, and other improvements on the land used for recycling, reusing, reclaiming, transferring, storing, treating, disposing, or otherwise handling a hazardous substance. Use of the term “facility” includes underground and aboveground tanks and operations, which handle, use, dispose of, or store hazardous substances.

“Fill/fill material” means a deposit of earth material placed by human or mechanical means.

“Filling” means the act of placing fill/fill material on any surface, including temporary stockpiling of fill material.

“Finished floor” means the top of the next higher floor above the lowest floor. For purposes of the National Flood Insurance Program Elevation Certificate, the finished floor referenced in this regulation shall equal the top of the next higher floor.

“Fish and wildlife habitat conservation areas” means those areas identified as being of critical importance to maintenance of fish, wildlife, and plant species, including areas with which endangered, threatened, and sensitive species have a primary association, habitats and species of local importance, naturally occurring ponds under 20 acres and their submerged aquatic beds that provide fish or wildlife habitat; waters of the state; lakes, ponds, streams, and rivers planted with game fish by a governmental or tribal entity, or private organization; state natural area preserves and natural resource conservation areas. This does not include such artificial features or constructs as irrigation.
The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
purpose should not be confused with a building or construction setback from a landslide hazard area buffer. A foundation footing setback is also not a buffer. (see Figure 14.10-1 in EMC 14.10.150).

“Frequently flooded area” means lands in the floodplain subject to at least a one percent or greater chance of flooding in any given year, or within areas subject to flooding due to high groundwater. These areas include, but are not limited to, streams, rivers, lakes, wetlands, and areas where high groundwater forms ponds on the ground surface.

“Geological assessment” means an assessment prepared by a professional engineer licensed by the state of Washington with expertise in geotechnical engineering or prepared by a licensed professional geologist, hydrologist, or soils scientist, as specified later in this section, who has earned the related bachelor’s degree from an accredited college or university, or equivalent educational training, and has five years’ experience assessing the relevant geologic hazard. A geological assessment must detail the surface and subsurface conditions of a site and delineate the areas of a property that might be subject to specified geologic hazards.

“Geologically hazardous areas” means areas that because of their susceptibility to erosion, sliding, earthquake, or other geological events are not suited to the siting of commercial, residential, or industrial development consistent with public health or safety concerns.

“Geologist” means engineering geologist, or hydrogeologist, registered in the state of Washington.

“Geotechnical professional” means a person with experience and training in analyzing, evaluating, and mitigating landslide, erosion, and/or seismic hazards. A geotechnical professional shall be licensed in the state of Washington as a geologist or professional engineer, and must have five or more years experience specializing in landslide, erosion, or seismic hazards, as applicable.

“Geotechnical report” means a report prepared by a professional engineer licensed by the state of Washington with expertise in geotechnical engineering, evaluating the site conditions and mitigating measures necessary to reduce the risks associated with development in geologically hazardous areas.

“Grading” means any excavating, filling, clearing, or creating of impervious surfaces or combination thereof.

“Ground amplification” means an increase in the intensity of earthquake induced ground shaking which occurs at a site whereby thick deposits of unconsolidated soil or surficial geologic materials are present.

“Groundwater” means all water found beneath the ground surface, including slowly moving subsurface water present in aquifers and recharge areas.

“Group A water system” means a water system:

1. With 15 or more service connections; or

2. A system that services an average of 25 or more people per day for 60 or more days within a calendar year.

“Habitat assessment” means a report prepared by a professional wildlife biologist or fisheries biologist which identifies the presence of fish and wildlife habitat conservation areas near the proposed development site.

“Habitat evaluation” means a procedure for determining the abundance and quality of habitat features for a species or other taxonomic group (in this case, salmonid fishes) at or on a particular site or property.

“Habitat evaluation report package” means the combined materials that compose a report on a habitat evaluation (see definition in this section), including narrative on methods and findings, as well as maps and data in tabular and graphic form.

“Habitat management plan” means a report prepared by a professional wildlife biologist or fisheries biologist, which discusses and evaluates the measures necessary to maintain fish and wildlife habitat conservation areas on a proposed development site.

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
“Habitat of local importance” means an area, range, or habitat within which a species has a primary association and which, if altered, may reduce the likelihood that the species will maintain and reproduce over the long term. Examples include areas of high relative density or species richness, breeding habitat, winter range, and movement corridors. These areas may also include habitats that are of limited availability or high vulnerability to alteration.

“Hard armoring” means the use of large rock and/or human-made materials to protect property from shoreline erosion. Such techniques include cement/concrete bulkheads, steel structures, rock wall revetments, and rock gabion structures. Hard armoring typically does not utilize or integrate any of soft armoring or soil bioengineering techniques.

“Hazardous substance(s)” means any liquid, solid, gas, or sludge, including any materials, substance, product, commodity, or waste, regardless of quantity, that exhibits any of the characteristics or criteria of hazardous waste; and including waste oil and petroleum products.

“Hazardous substance processing or handling” means the use, storage, manufacture, or other land use activity involving hazardous substances, but does not include individually packaged household consumer products or quantities of hazardous substances of less than five gallons in volume per container. Hazardous substances shall not be disposed on-site unless in compliance with Dangerous Waste Regulations, Chapter 173-303 WAC, and any pertinent local ordinances such as sewer discharge standards.

“Hazardous waste” means and includes all dangerous waste and extremely hazardous waste as designated pursuant to Chapter 70.105 RCW and Chapter 173-303 WAC.

1. “Dangerous waste” means any discarded, useless, unwanted, or abandoned substances including but not limited to certain pesticides or any residues or containers of such substances which are disposed of in such quantity or concentrations as to pose a substantial present or potential hazard to human health, wildlife, or the environment because such wastes or constituents or combinations of such wastes:

   a. Have short-lived, toxic properties that may cause death, injury, or illness, or have mutagenic, teratogenic, or carcinogenic properties; or

   b. Are corrosive, explosive, flammable, or may generate pressure through decomposition or other means.

2. “Extremely hazardous waste” means any waste which:

   a. Will persist in a hazardous form for several years or more at a disposal site and which in its persistent form presents a significant environmental hazard and may be concentrated by living organisms through a food chain or may affect the genetic make-up of humans or wildlife; and

   b. Is disposed of at a disposal site in such quantities as would present an extreme hazard to humans or the environment.

“Hazardous waste treatment and storage facility” means a facility that treats and stores hazardous waste and is authorized pursuant to Chapter 70.105 RCW and Chapter 173-303 WAC. It includes all contiguous land and structures used for recycling, reusing, reclaiming, transferring, storing, treating, or disposing of hazardous waste. Treatment includes using physical, chemical, or biological processing of hazardous wastes to make such waste nondangerous or less dangerous and safer for transport, amenable for energy or material resource recovery. Storage includes the holding of waste for a temporary period, but not the accumulation of waste on the site of generation as long as the storage complies with applicable requirements of Chapter 173-303 WAC.

1. “On-site treatment and storage facility” means a facility that treats or stores hazardous wastes generated on the same geographically contiguous property.

2. “Off-site treatment and storage facility” means a facility that treats or stores hazardous wastes generated on property other than those on which the off-site facility is located.

Hearing Examiner or Examiner. See EMC 18.20.110, “H” definitions.
"Holocene Epoch" means that part of the geologic record that post-dates the youngest deposits associated with the late Pleistocene Age Fraser Glaciation and is typically considered to be the past 10,000 years.

"Hydrogeologic assessment" means a report detailing the subsurface conditions, the design of a proposed land use action, and the facilities operation which indicates the susceptibility and potential for contamination of groundwater supplies.

"Hydrologically connected" means a connection between two or more surface water bodies including, but not limited to, wetlands, streams or lakes as evidenced by:

1. The presence of surface water in a perennial or intermittent stream, through a culvert or otherwise above ground;
2. The presence of contiguous hydric soil; or
3. The location of a water body within or contiguous to a 100-year floodplain of a wetland, stream or lake.

"Hydrologically isolated wetland" means a wetland which:

1. Is not contiguous to any 100-year floodplain of a lake, river, or stream; and
2. Has no contiguous surface hydrology, hydric soil, or hydrophytic vegetation between the wetland and any other wetland or stream system.

"Impervious surface" means a hard surface, which prevents or retards the entry of water into the soil mantle as under natural conditions prior to development, and/or a hard surface area, which causes water to run off the surface in greater quantities or at an increased rate of flow than the flow present under natural conditions prior to development. Common impervious surfaces include, but are not limited to, roof tops, walkways, patios, driveways, parking lots or storage areas, concrete or asphalt paving, gravel roads, gravel parking lots, packed earthen materials, and oiled, macadam or other surfaces which similarly impede the natural infiltration of stormwater. Open, uncovered retention/detention facilities shall not be considered as impervious surfaces.

"In-kind mitigation" means to replace wetlands with substitute wetlands whose characteristics and functions and values are intended to replicate those destroyed or degraded by a regulated activity.

"Increased cost of compliance (ICC)" means a flood insurance claim payment up to $30,000 directly to a property owner for the cost to comply with floodplain management regulations after a direct physical loss caused by a flood. Eligibility for an ICC claim can be through a single instance of “substantial damage” or as a result of a “cumulative substantial damage.” (More information can be found in FEMA ICC Manual 301.)

"Interspersion between wetland classes" means the degree to which different wetland classes are scattered among each other.

"Lahar" means a mudflow or debris flow mobilized by water, which originates on the slopes of a volcano.

"Lakes" means impoundments of open water 20 acres or larger.

"Landfill" means a place to dispose of refuse and other waste material by burying it and covering it over with soil.

"Landslide" means the abrupt downslope movement of soil, rocks, or other surface matter on a site. Landslides may include but are not limited to slumps, debris flows, mudflows, earthflows, rockfalls, and snow avalanches.

"Landslide hazard areas" means areas which are potentially subject to risk of mass movement due to a combination of geologic, topographic, and hydrologic factors.

"Large animal" means an animal with an average weight of 100 pounds or more.
“License” means any form of written permission given to any person, organization, or agency to engage in any activity, as required by law or agency rule. A license includes all or part of a city permit, certificate, approval, registration, charter, or plat approvals or rezones to facilitate a particular proposal. The term does not include a license required solely for revenue purposes.

“LiDAR” means Light Detection and Ranging imaging.

“Liquefaction” means a process by which a water-saturated granular (sandy) soil layer loses strength because of ground shaking caused by an earthquake.

“Long-term commercial significance” means the growing capacity, productivity, and soil composition of land, which makes it suitable for long-term commercial production, in consideration with the land’s proximity to population areas, and the possibility of more intense uses of land.

“Lowest floor” means the lowest floor of the lowest enclosed area (including basement and crawl space). An unfinished or flood resistant enclosure, usable solely for parking of vehicles, building access, or storage in an area other than a basement area, is not considered a building’s lowest floor; provided, that such enclosure is not built so as to render the structure in violation of the applicable non-elevation design requirements of this title.

“Maintenance” means those usual acts to prevent a decline, lapse, or cessation from a lawfully established condition without any expansion of or significant change from that originally established condition. For the purposes of this document, activities within landscaped areas within areas subject to native vegetation retention requirements may be considered maintenance only if they maintain or enhance the canopy and understory cover.

“Manufactured home/mobile home” means a structure, transportable in one or more sections, which is built on a permanent chassis and is designed for use with or without a permanent foundation when connected to the required utilities. For floodplain management purposes, the term “manufactured home/mobile home” also includes park trailers, travel trailers, and other similar recreational vehicles placed on a site for greater than 180 consecutive days. For insurance purposes, the term “manufactured home/mobile home” does not include park trailers, travel trailers, recreational vehicles, or other similar vehicles.

“Manufactured home park or subdivision” means a parcel (or contiguous parcels) of land divided into two or more manufactured home lots for rent or sale.

“Mineral resource lands” means lands primarily devoted to the extraction of minerals or which have known or potential long-term commercial significance for the extraction of minerals.

“Minerals” include gravel, sand, or other resources that are extracted from the ground, and valuable metallic substances.

“Mitigation” means:

1. Avoiding the impact altogether by not taking a certain action or parts of an action;
2. Minimizing impacts by limiting the degree or magnitude of the action and its implementation, by using appropriate technology, or by taking affirmative steps to avoid or reduce impacts;
3. Rectifying the impact by repairing, rehabilitating, or restoring the affected environment;
4. Reducing or eliminating the impact over time by preservation and maintenance operations during the life of the action;
5. Compensating for the impact by replacing, enhancing, or providing substitute resources or environments; and
6. Monitoring the impact and taking appropriate corrective measures; and
7. Measures used in sequential order to eliminate, reduce, or compensate for adverse impacts to habitat resulting from a development proposal or alteration.

“Mudflow” means a debris flow containing an abundance of fine particles.

“Native vegetation” or “native plants” means a mix of plant species comprising herbs, grasses, grass-like plants, shrubs and trees indigenous to the Puget Sound region that reasonably could be expected to naturally occur on the site.

“Natural resource lands” means agricultural and mineral resource lands, which have long-term commercial significance.

“New construction” means structures for which the “start of construction” commenced on or after the following:

1. For the purposes of determining flood insurance rates, the effective date of an initial FIRM (i.e., August 19, 1987, or August 4, 1988, for Panel 350 only), and includes any subsequent improvements to such structures.

2. For floodplain management purposes, the effective date of this floodplain management ordinance and includes any subsequent improvements to such structures.

3. For all other cases, the effective date of the applicable critical areas ordinance.

“New manufactured home park or subdivision” means a manufactured home park or subdivision for which the construction of facilities for servicing the lots on which the manufactured homes are to be affixed (including, at a minimum, the installation of utilities, the construction of streets, and either final site grading or the pouring of concrete pads) is completed on or after the effective date of the adopted floodplain management regulations.

“Oak woodlands” means those areas where Oregon white oak comprises more than 20 percent of the trees in a stand, and where the stand size is one acre or greater, provided, that stand size may be smaller where white oak serves as linkages between larger stands. Trees should be greater than 15 inches in diameter at breast height and greater than 16 feet tall.

“Old growth forests” means a stand of trees generally containing mature and overmature trees in the overstory, a multi-layered canopy, and trees of several age classes, and standing dead trees and down material.

“Ordinance” means the ordinance, resolution, or other procedure used by the city to adopt regulatory requirements.

“Ordinary high water mark (OHWM)” means the mark on all lakes, streams and tidal waters that will be found by examining the beds and banks and ascertaining where the presence and action of waters are so common and usual, and so long continued in all ordinary years, as to mark upon the soil a character distinct from that of the abutting upland and vegetation, as that condition exists on the effective date of the ordinance codified in this title, or as it may naturally change thereafter. In any area where the ordinary high water mark cannot be found, the ordinary high water mark shall be the line of mean higher high tide in areas adjoining saltwater, and the line of mean high water in areas adjoining freshwater.

“Out-of-kind mitigation” means to replace wetlands with substitute wetlands whose characteristics do not approximate those destroyed or degraded by a regulated activity.

“Parties of record” are those persons with legal standing with respect to an application including the applicant, property owner as identified by the records available from the Pierce County assessor’s office, or any person who testified at the open record public hearing on the application, and/or any person who submitted written comments during administrative review, or has submitted written comments concerning the application at the open record public hearing, excluding persons who have only signed petitions or mechanically produced form letters.

“Permanent erosion control” means continuous on-site and off-site control measures that are needed to control conveyance and/or deposition of earth, turbidity, or pollutants after development, construction, or restoration.

Person. See EMC 18.20.190, “P” definitions.
“Plat” means:

1. “Short subdivision” or “short plat” means the division or redivision of land into six or fewer lots, tracts, parcels, sites, or divisions for the purpose of sale, lease, or transfer of ownership.

2. “Subdivision” or “formal subdivision” means the division or redivision of land into seven or more lots, tracts, parcels, sites, or division for the purpose of sale, lease, or transfer of ownership. For floodplain management regulation purposes, this includes land over five acres in area situated within a flood hazard area.

“Ponds” means naturally occurring impoundments of open water less than 20 acres in size and larger than 2,500 square feet, which maintain standing water throughout the year. Also see “depressional pothole.”

“Private organization” means a nonprofit corporation organized pursuant to Chapter 24.03 RCW, which includes the planting of game fish among its purposes for organizing as a nonprofit corporation.

“Professional engineer” means an engineer currently licensed and registered in the state of Washington.

“Project permit” means any land use or environmental permit or license required from the city for a project action, including but not limited to building permits, site development permits, land use preparation permits, subdivisions, binding site plans, planned unit developments, conditional use, shoreline substantial development permits, development plan review, site specific zones authorized by the comprehensive plan, but excluding adoption or amendment of the comprehensive plan and development regulations, zoning of newly annexed land, area wide zones, and zoning map amendments except as otherwise specifically included in this subsection.

“Public services” means fire protection and suppression, law enforcement, public health, education, recreation, environmental protection, and other governmental services.

“Recessional outwash geologic unit” means sand and gravel materials deposited by melt-water streams from receding glaciers.

“Reconstruction” means the rebuilding of an existing structure which has been partially or completely destroyed by any cause, such as but not limited to fire, wind, landslides, and water, without increasing the original floor area or square footage area.

“Recreational vehicle (RV)” means a vehicle built on a single chassis, 400 square feet or less when measured at the largest horizontal projection, designed to be self-propelled or permanently towable by a light duty truck, and designed primarily not for use as a permanent dwelling but as a temporary living quarters for recreational, camping, travel, or seasonal use.

“Rectification” means an action which repairs an alteration to habitat and its functions.

“Regolith” means any body of loose, noncemented particles overlying and usually covering the bedrock.

“Regulated activities” means, but is not limited to, any of the following activities which are directly undertaken or originate in a regulated critical area or its buffer: building permit, commercial or residential; binding site plan; franchise right-of-way construction permit; site development permit; right-of-way permit; shoreline permits; short subdivision; use permits; subdivision; utility permits; or any subsequently adopted permit or required approval not expressly exempted by this title.

“Rehabilitation” means any improvements and repairs which are made to the interior and exterior of an existing structure, but which do not result in any increase in the floor area of the structure. This is also commonly referred to as a “remodel” of an existing structure.

“Restoration” means an action which returns habitat to a state in which its stability and functions approach its unaltered state as closely as possible. This may be accomplished through measures including, but not limited to, re-vegetation, removal of intrusive stream bank structures, and removal or treatment of toxic materials. Restoration does not imply a requirement for returning the critical area to aboriginal or pre-European settlement conditions.
"Revised Code of Washington (RCW)" means all laws of a general and permanent nature heretofore or hereafter enacted by the legislature, and assign permanent numbers as provided by law to all new titles, chapters, and sections thereof.

"Riparian" means the area adjacent to aquatic systems with flowing water that contains elements of both aquatic and terrestrial ecosystems which mutually influence each other. Riparian habitat begins at the ordinary high water mark and includes the entire extent of the floodplain and riparian areas of wetlands that are directly connected to the stream course.

"Seismic hazard areas" means areas subject to severe risk of damage as a result of earthquake-induced ground shaking, slope failure, settlement, or soil liquefaction.

"Sensitive areas" mean agricultural lands and mineral resource lands and all associated buffers.

"Shoreline" for this title means the line where a body of water and the shore meet or the strip of land along the shoreline. There are no waters within the city of Edgewood meeting the criteria of shorelines of statewide significance as defined by RCW 90.58.030.

"Single-family dwelling" means a detached building designed exclusively for occupancy by one family and containing one dwelling unit.

"Site" means a lot, parcel, tract, or combination of lots, parcels, or tracts on which a regulated activity is proposed.

"Slope" means an inclined earth surface, the inclination of which is expressed as the ratio of horizontal distance to vertical distance.

"Sludge" means a semisolid substance consisting of settled solids combined with varying amounts of water and dissolved materials generated from a wastewater treatment plant or system or other sources, including septage sludge, sewage sludge, and industrial sludge.

"Sludge land application site" means a site where stabilized sludge, septage, and other organic wastes are applied to the surface of the land in accordance with established agronomic rates for fertilization or soil conditioning.

"Slump" means the downward and outward movement of a mass of bedrock, colluvium, or other sediments along a distinct surface of failure.

"Small animal" means an animal with an average weight of less than 100 pounds.

"Snag-rich areas" means forested areas which contain concentrations of standing dead trees, averaging 10 snags or greater per acre, and averaging greater than 15 inches in diameter at breast height.

"Special occupancy structures" means those structures that have the potential to provide capacity for large numbers of people or special groups of people or assemblies such as but not limited to schools, jails and detention facilities, and resident incapacitated patients.

"Species of local importance" means species that are of local concern due to their population status or their sensitivity to habitat manipulation.

"Soft armoring techniques" means the use of woody plants and limited structural-mechanical systems that are integrated in a structurally and environmentally sound manner to repair and protect slopes and shorelines against shallow mass wasting and surface erosion. Measures such as live stake, live fascine, brushlayer, live cribwall, vegetated geogrid, branchpacking, live slope grading, beach berms, or earthen berms are examples of soft armoring techniques. Soft armoring techniques may also be referred to as soil bioengineering methods.

"Start of construction" includes substantial improvement, and means the date the building permit was issued, provided the actual start of construction, repair, reconstruction, placement or other improvement was within 180 days of the permit date. The "actual start" means either the first placement of permanent construction of a structure on a site, such as the pouring of slab or footings, the installation of piles, the construction of columns, or any work beyond the stage
of excavation; or the placement of a manufactured home on a foundation. Permanent construction does not include land preparation, such as clearing, grading and filling; nor does it include the installation of streets and/or walkways; nor does it include excavation for a basement, footings, piers, or foundations or the erection of temporary forms; nor does it include the installation on the property of accessory buildings, such as garages or sheds not occupied as dwelling units or not part of the main structure. For a substantial improvement, the “actual start of construction” means the first alteration of any wall, ceiling, floor, or other structural part of a building, whether or not that alteration affects the external dimensions of the building.

“State Environmental Policy Act (SEPA)” means RCW 43.21C.010, to declare a state policy which will encourage productive and enjoyable harmony between man and his environment; to promote efforts which will prevent or eliminate damage to the environment and biosphere; stimulate the health and welfare of man; and to enrich the understanding of the ecological systems and natural resources important to the state and nation.

“Stockpiling” means the placement of material with the intent to remove it later.

“Structure” means a walled and roofed building, including a gas or liquid storage tank that is principally above ground.

“Subbasin” means a drainage area which drains to marine water, lakes or the mainstream of a watershed water resource inventory area.

“Subclass” means one of the subclasses identified in the United States Fish and Wildlife Service (USFWS) December 1979 publication, Classification of Wetlands and Deep Water Habitats of the United States.

“Substantial damage” means damage of any origin sustained by a structure whereby the cost of restoring the structure to its before-damaged condition would equal or exceed 50 percent of the market value of the structure before the damage occurred.

“Substantial improvement” means any repair, reconstruction, addition, rehabilitation, or other improvement of a structure, whereby the cost for the work exceeds 50 percent of the market value of the existing structure before the “start of construction” of the improvement. This term includes structures which have incurred “substantial damage,” regardless of the actual repair work performed.

The term does not, however, include either:

1. Any project for improvement of a structure to correct existing violations of state or local health, sanitary, or safety code specifications which have been identified by the local code enforcement official and which are the minimum necessary to assure safe living conditions; or

2. Any alteration of a structure listed on the National Register of Historic Places or a State Inventory of Historic Places; provided, that the alteration will not preclude the structure’s continued designation as a “historic structure.”

Except for floodplain management regulation, the “cost” and “market value” may be determined using the current permit valuation. The building official shall determine the current permit valuation based on the cost per square foot values in effect at the time of permit application. Substantial improvement shall be accumulative from the effective date of the ordinance codified in this chapter.

“Substrate” means the soil, sediment, decomposing organic matter, or combination of those located on the bottom surface of a wetland.

“Talus” means a homogenous area of rock rubble ranging in average size 0.15 to 2.0 meters (0.5 to 6.5 feet) composed of basalt, andesite, and/or sedimentary rocks, including riprap slides and mine tailings. Talus areas may be associated with cliffs.

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
“Temporary erosion control” means on-site and off-site control measures that are needed to control conveyance or deposition of earth, turbidity, or pollutants during development, construction, or restoration.

“Ten-year time travel zone boundary” means the maximum distance around a pumping well from which a contaminant hypothetically present in groundwater could travel to the well within a 10-year time period.

“Toe of slope” means a distinct topographic break in slope at the lowermost limit of the landslide or erosion hazard area.

“Top of slope” means a distinct topographic break in slope at the uppermost limit of the landslide or erosion hazard area.

“TPCHD” means the Tacoma-Pierce County Health Department.

“Underground storage tank” means any one or a combination of tanks (including underground pipes connected thereto) which are used to contain or dispense an accumulation of hazardous substances or hazardous wastes, and the volume of which (including the volume of underground pipes connected thereto) is 10 percent or more beneath the surface of the ground.

“Urban governmental services” means those governmental services historically and typically delivered by cities, and includes storm and sanitary sewer systems, domestic water systems, street cleaning services, and other public utilities associated with urban areas and normally not associated with nonurban areas.

“Urban growth” means growth that makes intensive use of the land for the location of buildings, structures, and impermeable surfaces to such a degree as to be incompatible with the primary use of such land for the production of food, other agricultural products, or fiber, or the extraction of mineral resources. When allowed to spread over wide areas, urban growth typically requires urban governmental services. “Characterized by urban growth” refers to land having urban growth located on it or to land located in relationship to an area with urban growth on it as to be appropriate for urban growth.

“Utility line” means pipe, conduit, cable, or other similar facility by which services are conveyed to the public or individual recipients. Such services shall include, but are not limited to, water supply, electric power, gas, communications, and sanitary sewers.

“Variance” means a grant of relief from the requirements of this chapter that permits construction in a manner that would otherwise be prohibited by this chapter, per EMC 14.10.085.

“View corridor” means an area, which affords views of lakes, mountains, or other scenic amenities normally enjoyed by residential property owners.

“Violation” means the failure of a structure or other development activity to be fully compliant with the provisions of this title. With regard to the floodplain management regulations, projects without the elevation certificate, other certifications, or other evidence of compliance required in Chapter 14.70 EMC are presumed to be in violation until such time as that documentation is provided. See Chapter 1.10 EMC for penalties.

“Volcanic hazard areas” means those areas subject to pyroclastic flows, lava flows, and inundation by debris flows, mudflows, or related flooding resulting from geologic or volcanic events on Mount Rainier.

“Water dependent” means a structure for commerce or industry that cannot exist in any other location and is dependent on the water by reason of the intrinsic nature of its operations.

“Wellhead protection area” means the area within the 10-year time-of-travel zone boundary of a group A public water system well, as delineated by the water system purveyor or its designee, pursuant to WAC 246-290-135.

“Wetland” means areas that are inundated or saturated by surface water or groundwater at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
life in saturated soil conditions. Wetlands generally include swamps, marshes, bogs, and similar areas. Wetlands do not include those artificial wetlands intentionally created from nonwetland sites, including, but not limited to, irrigation and drainage ditches, grass-lined swales, canals, detention facilities, wastewater treatment facilities, farm ponds, and landscape amenities, or those wetlands created after July 1, 1990, that were unintentionally created as a result of the construction of a road, street, or highway. Wetlands may include those artificial wetlands intentionally created from nonwetland areas created to mitigate conversion of wetlands.

“Wetland mosaic” means a patchwork of wetlands that is considered one unit where each patch of wetland is less than one acre and the areas delineated as vegetated wetland are more than fifty percent of the total area of the wetlands and uplands together means any area which is inundated or saturated by ground or surface water at a frequency and duration sufficient to support, and under normal circumstances does support, a prevalence of vegetation typically adapted for life in saturated soil conditions. For the purpose of this definition:

1. Where the vegetation has been removed or substantially altered, the presence of a wetland is determined by the presence or evidence of hydric soil, by other documentation such as aerial photographs of the previous existence of wetland vegetation or by any other manner authorized in the “Washington State Wetlands Identification and Delineation Manual,” 1997, Department of Ecology;

2. A wetland may occur along the shoreline of tidal water, a lake, a stream or in a depression in the landscape. For any wetland occurring along a shoreline, the wetland’s waterward boundary is where the water’s depth exceeds six and six-tenths feet below low water or, if low water cannot be determined, six and six-tenths feet below the outlet’s invert elevation;

3. Except for artificial features intentionally made for the purpose of mitigation, a wetland does not include an artificial feature made from a nonwetland area which may include, but is not limited to, a surface water conveyance for drainage or irrigation, a grass-lined swale, a canal, a flow control facility, a wastewater treatment facility, a farm pond, a wetpond, landscape amenities or a wetland made after July 1, 1990, which was unintentionally made as a result of the construction of a road, street, or highway; and

4. Wetlands shall include those wetlands intentionally created from nonwetland areas, formed to mitigate conversion of wetlands.

“Wetland, isolated” means a wetland, which is not hydrologically connected, does not have permanent open water and is often of low function.

“Wetland specialist” means a person with experience and training in wetlands issues and with experience in preparing a wetland delineation, analyzing wetland functions and values, analyzing wetland impacts, and recommending wetland mitigation and restoration approaches. A wetland scientist with at least two years of full-time work experience as a wetlands professional, including delineating wetlands using the federal manual and supplements, preparing wetland reports, conducting function assessment, and development and implementing mitigation plans.

Qualifications include:

1. Bachelor of Science or Bachelor of Arts or equivalent degree in biology, botany, environmental studies, fisheries, soil science, wildlife, agriculture, or related field, and two years of related work experience, including a minimum of one year experience delineating wetlands using the Unified Federal Manual and preparing wetland reports and mitigation plans. Additional education may substitute for one year of related work experience;

2. Four years of related work experience and training, with a minimum of two years experience delineating wetlands using the Unified Federal Manual and preparing wetland reports and mitigation plans. The person should be familiar with the Federal Manual for Identifying and Delineating Jurisdictional Wetlands, Corps of Engineers Wetlands Delineation Manual 1987 edition and corresponding guidance letters, Washington State Wetlands Identification and Delineation Manual, the city site development regulations, and the requirements of this title.
“Wildlife biologist” means a professional with a degree in wildlife, or certification by the Wildlife Society, or with five years’ professional experience as a wildlife biologist. (Ord. 17-492 § 2 (Exh. A); Ord. 16-461 § 2; Ord. 15-447 § 1 (Exh. A); Ord. 02-200 § 2).

14.10.070 Administration.
A. Approvals Required. An approval must be obtained from the city when the department determines that the site or project area is or may be located within 300 feet of a critical area, as set forth in each chapter.

B. Application Requirements.
1. Preliminary Review. The provisions for conducting a preliminary review of an application are set forth in EMC 18.40.070, Process types.

2. Application Filing.
   a. Applications shall be reviewed for completeness in accordance with department submittal standards checklists and pursuant to EMC 18.40.150, Determination of completeness.
   b. Applications and associated reports shall not be submitted without an accompanying permit application for an underlying action (parent application) such as, but not limited to, a building permit, subdivision or boundary alteration action, site development application, TPCHD permit, or use permit, with the exception of applications required by the department as a result of an enforcement action or reports required by TPCHD for septic design approval.

3. Modifications. The department may request an update of any required assessment, report, delineation, etc., due to the potential for change in the existing environment that may have been caused by a natural event (e.g., seismic event, landslides, flooding, etc.) or human induced activity that degraded the existing conditions that occurred after the original document was initially submitted.

C. Public Notice. Public notice provisions for notice of application; public hearing, if applicable; and final decision pursuant to this title are outlined in EMC 18.40.190, Notice of public hearing.

D. Review.
1. Initial Review. The department shall conduct an initial review of any application in accordance with the provisions outlined in EMC 18.40.150, Determination of completeness.

2. Review Responsibilities.
   a. The department is responsible for administration, circulation, and review of any applications and approvals required by this title.
   b. The hearing examiner shall be the decision authority for reasonable use applications.
   c. Other city or county departments and state agencies, as determined by the department, may review an application and forward their respective recommendations to the director or hearing examiner, as appropriate.

   a. The department shall perform a critical area review for any building or land use application submitted for a regulated activity, including, but not limited to, those set forth in EMC 14.20.020. Reviews for multiple critical areas shall occur concurrently.
   b. The department shall, to the extent reasonable, consolidate the processing of related aspects of other Edgewood city regulatory programs which affect activities in regulated critical areas, such as subdivision or site development, with the approval process established herein so as to provide a timely and coordinated review process.

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
Edgewood Municipal Code
Chapter 14.10 GENERAL PROVISIONS

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.

c. As part of the initial review of all development or building-related approvals or permit applications, the department shall review the information submitted by the applicant to:

i. Confirm the nature and type of the critical area and evaluate any required assessments, reports, or studies;

ii. Determine whether the development proposal is consistent with this title;

iii. Determine whether any proposed alterations to the site containing critical areas are necessary; and

iv. Determine if the mitigation and monitoring plans proposed by the applicant are sufficient to protect the public health, safety, and welfare consistent with the goals, purposes, objectives, and requirements of this title.

d. Regulated activities subject to SEPA shall also be reviewed with consideration for impacts on critical areas as identified in this title. Regulated activities that pose a significant adverse impact which are not addressed by the standards and criteria established in this title (gaps), may be subject to additional mitigation measures as determined through the SEPA process. A threshold determination issued pursuant to EMC Title 20, SEPA, may not be made prior to departmental review of any special studies or technical reports required by this title, except where the applicant requests a declaration of significance so that environmental review is required.

ed. Critical area applications required under this title shall be approved prior to approval of any related action (parent application) such as, but not limited to, a building permit, subdivision action, site development action, forest practice application, or use permit.

ef. The requirement to submit a critical area assessment, report, etc., required under this title, may be waived at the department’s discretion when the proposed project area for a regulated activity is located in an area that has been the subject of a previously submitted and approved assessment, report, etc., if all of the following conditions have been met:

i. The provisions of this title have been previously addressed as part of another approval;

ii. There has been no material change in the potential impact to the critical area or required buffer since the prior review;

iii. There is no new information available that is applicable to any critical review of the site or particular critical area;

iv. The permit or approval has not expired or, if there is no expiration date, no more than five years have elapsed since the issuance of that permit or approval, and

v. Compliance with any standards or conditions placed upon the prior permit or approval has been achieved or secured.

4. Burden of Proof. The applicant has the burden of proving that a proposed application complies with the standards set forth in this title.

5. Approval.

a. The department may approve, approve with conditions, or deny any development proposal in order to comply with the requirements and carry out the goals, purposes, objectives, and requirements of this title based on the department’s or hearing examiner’s, as applicable, evaluation of the ability of any proposed mitigation measures to reduce risks associated with the critical area and compliance with required standards. Approval of a development proposal does not discharge the obligation of the applicant to comply with the provisions of this title.
b. Applicants shall comply with the recommendations and/or mitigation measures contained in final approved assessments or reports and any department or hearing examiner conditions of approval.

c. Approval of an application required under this title must be given prior to the start of any development activity on a site.

6. Denial. The department or hearing examiner, as applicable, shall have the authority to deny any application for development or building-related approvals or permits when the criteria established in this title have not been met.

7. Time Period for Final Decision. The provisions for issuing a notice of final decision on any application filed pursuant to this title is set forth in EMC 18.40.040, Coordination of development permit procedures.

E. Time Limitations.

1. Expiration of Approval.

   a. Approvals granted under this title shall be valid for the same time period as the underlying permit (e.g., preliminary plat, site development, building permit). If the underlying permit does not contain a specified expiration date then approvals granted under this title shall be valid for a period of three years from the date of issue, unless a longer or shorter period is specified by the department.

   b. The approval shall be considered null and void upon expiration, unless a time extension is requested and granted as set forth in subsection (E)(2) of this section.

2. Time Extensions.

   a. The applicant or owner(s) may request in writing a one-time, one-year extension of the original approval.

   b. Knowledge of the expiration date and initiation of a request for a time extension is the responsibility of the applicant or owner(s).

   c. A written request for a time extension shall be filed with the department at least 60 days prior to the expiration of the approval.

   d. Upon filing of a written request for a time extension, a copy shall be sent to each party of record together with governmental departments or agencies that were involved in the original approval process. By letter, the department shall request written comments be delivered to the department within 30 days of the date of the letter.

   e. Prior to the granting of a time extension, the department may require a new application(s), updated study(ies), and fee(s) if:

      i. The original intent of the approval is altered or enlarged by the renewal;

      ii. The circumstances relevant to the review and issuance of the original approval have changed substantially; or

      iii. The applicant failed to abide by the terms of the original approval.

   f. If approved, the one-year time extension shall be calculated from the date of granting said approval.

F. Recording.

1. Approvals.

   a. Critical area regulation approvals are to be recorded on the title of the project parcel(s) at the Pierce County auditor’s office within six months of issuance. Failure to record an approval in this timeframe may result in the project being placed into inactive status. A new application(s) and fee(s) may be required to

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
remove the project from inactive status. Also refer to EMC 14.10.080(C), Title and Land Division Notification, for additional recording requirements.

b. Recording of a wetland approval for work completed within utility line easements on lands not owned by the jurisdiction conducting the regulated activity shall be required.

2. Right of Entry Agreement. The city may require the applicant to record a right of entry agreement, which shall be consistent with a format approved by the department. The right of entry agreement shall:

a. Allow the department and agents of the department to access the site for purposes of inspection during the course of application review, construction, and post-construction monitoring.

b. Allow the department and agents of the department to enter a property to construct required improvements, mitigation measures, or monitoring that have been financially guaranteed.

c. Run with the land, and be binding on all parties having or acquiring any right, title, interest, or any part thereof of the site, including the grantor, heirs, successors, and assigns. (Ord. 02-200 § 2).

14.10.075 Relationship to Other Regulations
A. This title shall apply as an overlay and in addition to zoning and other regulations adopted by the City.

B. These critical areas regulations shall apply concurrently with review conducted under SEPA, as adopted under Chapter EMC 20.05.

C. Compliance with the provisions of this title does not constitute compliance with other federal, state, and local regulations and permit requirements that may be required (for example, Hydraulic Permit Act [HPA] permits, Section 106 of the National Historic Preservation Act, U.S. Army Corps of Engineers Section 404 permits, National Pollution Discharge Elimination System permits). The applicant is responsible for complying with these requirements, apart from the process established in this title.

14.10.080 Critical area protective measures
A. General. All critical area tracts, conservation easements, land trust dedications, and other similarly preserved areas shall remain undeveloped in perpetuity, except as they may be allowed to be altered pursuant to each chapter.

B. Financial Guarantees.

1. The city may require an applicant to submit one or more financial guarantees to the city, as set forth in each chapter of this title (and other titles of Edgewood’s Municipal Code as required), to guarantee any performance, mitigation, maintenance, or monitoring required as a condition of permit approval. The approval for the project will not be granted until the financial guarantee is received by the department. Projects where the city or one of its departments is the applicant shall not be required to post a financial guarantee.

2. Financial guarantees required under this title shall be:

a. In addition to any other site development guarantees required for project approval.

b. Submitted on financial guarantee forms approved by the city.

c. In the amount of 125 percent of the estimate of the cost of mitigation or monitoring to allow for inflation and administration should the city have to complete the mitigation or monitoring, unless the provisions set forth in subsection (B)(2)(D) of this section are applicable; and.

d. Released by the city only when the applicant’s appropriate technical professional has provided written confirmation that the performance, mitigation, or monitoring requirements have been met and department staff, or agent, inspected the site(s) for compliance.

3. Failure to complete any performance, mitigation, or monitoring may result in the forfeiture of the guarantee. Applicants who have previously defaulted will no longer be allowed to post a guarantee for improvements.
necessary for approval of a land use application. Applicants who have previously defaulted will be allowed to post guarantees for subsequent critical area mitigation work needed for approval of a land use application or permit, but the guarantee must be by bond and must be for two times the required amount.

C. Title and Land Division Notification.

1. General.
   a. Title and/or land division notice shall be required to be recorded with the Pierce County auditor on each site that contains a critical area, prior to approval of any regulated activity on a site.
   b. If more than one critical area subject to the provisions of this title exists on the site, then one notice which addresses all of the critical areas shall be sufficient.
   c. Title and land division notifications and notes shall be approved by the department and shall be consistent with Appendix B in EMC 14.10.140, Appendix A.

2. Title Notification.
   a. When the city determines that activities not exempt from this title are proposed, the property owner shall file a notice with the Pierce County auditor. The notice shall provide a public record of the presence of a critical area and associated buffer, if applicable, the application of this title to the property, and that limitations on actions in or affecting such critical area and associated buffer, if applicable, may exist.
   b. The notice shall be notarized and shall be recorded with the Pierce County auditor prior to approval of any regulated use or activity for the site.
   c. Notice on title is not required for utility line easements on lands not owned by the jurisdiction conducting the regulated activity (e.g., gas pipelines).

3. Land Division Notification and Notes. The applicant shall include notes, as referenced in EMC 14.10.140, Appendix AB, on the face of any proposed activity as defined in EMC Title 16, Subdivisions (i.e., final plat, binding site plan, large lot, short subdivision, boundary line adjustment, or lot combination), for projects that contain critical areas or critical area buffers. The applicant shall also clearly identify the critical area boundaries and the boundary of any associated buffers on the face of these documents.

D. Conservation Easements. Prior to any final critical area approval, the part of the critical area and required buffer which is located on the site shall be protected with a conservation easement or other similar permanent deed restriction. The conservation easement shall indicate allowable and prohibited uses within the critical area and required buffer.

E. Tracts. Prior to final approval of any subdivisions, short subdivisions, large lot divisions, or binding site plans, the part of the critical area and required buffer which is located on the site, shall be placed in a separate tract or tracts (see Figure 14.10-2 in EMC 14.10.150). In lieu of a separate tract, an applicant may propose to establish an alternative permanent protective mechanism; however, approval of such is based upon the department’s or hearing examiner’s, as applicable, determination that such alternative mechanism provides the same level of permanent protection as designation of a separate tract or tracts.

F. Homeowner’s Covenants. A description of the critical area and required buffer shall be placed in any required homeowner’s covenants. Such covenants shall contain a detailed description of the allowable uses within the critical area and, if applicable, associated buffer and long-term management and maintenance requirements of that critical area.

G. Identification of Critical Areas and Required Buffers on Construction Plans. Critical areas and required buffers shall be clearly identified on all construction plans such as, but not limited to, site development plans, residential building plans, commercial building plans, forest harvest plans, etc.

H. Markers, Fencing, and Signage.
1. Markers. Prior to final approval of any critical area application, the outer edge of the critical area boundaries or, if applicable, required buffer boundaries on the site shall be flagged by the qualified professional, as outlined in each chapter. These boundaries shall then be identified with permanent markers (rebar and cap) and flagged by a licensed surveyor, unless otherwise stated in this title. The permanent markers shall be clearly visible, durable, and permanently affixed to the ground.

2. Fencing.
   a. Temporary Construction Fencing. Temporary fencing is required when vegetation is to be retained in an undisturbed condition within the critical area and required buffer. In such cases, the applicant will be required to construct silt fencing, construction fencing, or other city-approved method of temporary fencing at the edge of the critical area or, if applicable, the edge of the required buffer prior to beginning construction on the site.
   b. Permanent Fencing. Where deemed necessary by the department to provide protection to the critical area, the applicant will be required to construct permanent, wildlife-passable fencing along the buffer boundary.

3. Signage.
   a. The department shall require permanent signage to be installed at the edge of the critical area or, if applicable, the edge of the required buffer.
   b. The sign shall indicate the type of critical area and if the area is to remain in a natural condition as permanent open space.
   c. Exact sign locations, wording, size, and design specifications shall be established by the department. Required signage shall be clearly visible, durable, and permanently affixed to the ground.
   d. Prior to final approval of any critical area application, the applicant shall submit an affidavit of posting to the department as proof that the required signs were posted on the site.

I. Building Setbacks.
1. Unless otherwise provided in this title, buildings and other structures shall be set back a distance of 15 feet from the edge of all critical area buffers or, where no buffers are required, the edge of the critical area.

2. The following uses and activities may be allowed in the building setback area:
   a. Landscaping;
   b. Uncovered decks;
   c. Building overhangs if such overhangs do not extend more than 18 inches into the setback area;
   d. Impervious ground surfaces, such as driveways, parking lots, roads, walkways, and patios; provided, that such improvements conform to the water quality standards set forth in the city’s adopted stormwater management manual and that construction equipment does not enter the buffer during the construction process; and
   e. Clearing and grading. (Ord. 02-200 § 2).

1. Mitigation Sequence
   1. Adverse impacts caused by new activities and developments shall be mitigated using the following action in order of priority:
      a. Avoiding the impact altogether by not taking a certain action or parts of an action;

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
b. Minimizing impacts by limiting the degree or magnitude of the action and its implementation, by using appropriate technology, or by taking affirmative steps, such as project redesign, relocation, or timing, to avoid or reduce impacts;

c. Rectifying the impact by repairing, rehabilitating, or restoring the affected environment;

d. Reducing or eliminating the impact over time by preservation and maintenance operations;

e. Compensating for the impact by replacing, enhancing, or providing substitute resources or environments; and

f. Monitoring the impact and the compensation project and taking appropriate corrective measures.

14.10.085 Variances to critical areas.

A. General. Variances are reviewed pursuant to EMC 18.50.080, Variances. Conditions may be attached to a critical area(s) variance, which will serve to meet the goals, objectives, and policies of this title.

B. Criteria for Priority Habitat Buffer Variances. In order to grant a priority habitat buffer variance, requirements pursuant to EMC 18.50.080, Variances, shall apply. In addition, the applicant must also demonstrate, and the examiner must find, that the requested buffer width modification preserves adequate vegetation. Variance Criteria. A variance may be granted only if the applicant demonstrates that the requested action conforms to all of the criteria set forth as follows:

1. Special conditions and circumstances exist that are peculiar to the land, the lot, or something inherent in the land, and that are not applicable to other lands in the same district;

2. The special conditions and circumstances do not result from the actions of the applicant;

3. A literal interpretation of the provisions of this title would deprive the applicant of all reasonable economic uses and privileges permitted to other properties in the vicinity and zone of the subject property under the terms of this title, and the variance requested is the minimum necessary to provide the applicant with such rights;

4. Granting the variance requested will not confer on the applicant any special privilege that is denied by this title to other lands, structures, or buildings under similar circumstances;

5. The granting of the variance is consistent with the general purpose and intent of this title, and will not further degrade the functions or values of the associated critical areas or otherwise be materially detrimental to the public welfare or injurious to the property or improvements in the vicinity of the subject property;

6. The decision to grant the variance includes the best available science and gives special consideration to conservation or protection measures necessary to preserve or enhance anadromous fish habitat; and

7. The granting of the variance is consistent with the general purpose and intent of the Edgewood Comprehensive Plan and adopted development regulations.

C. Additional Criteria for Flood Hazard Area Variances. In addition to the variance criteria specified above in subsection (B) of this section, a flood hazard area variance applicant must also demonstrate, and the hearing examiner must find, that the proposal satisfies all of the following: In order to grant a flood hazard area variance, requirements pursuant to EMC 18.50.080, Variances, shall apply. In addition, the applicant must also demonstrate, and the examiner must find, that the proposal satisfies all of the following:

1. Maintain proper water temperature;

2. Minimize sedimentation; and

3. Provide food and cover for listed species.
1. Generally, the only condition under which a variance from the elevation standard may be issued is for new construction and substantial improvements to be erected on a small or irregularly shaped lot contiguous to and surrounded by lots with existing structures constructed below the base flood level. As the lot size increases the technical justification required for issuing the variance increases.

2. Variances shall not be issued within a designated floodway if any increase in flood levels during the base flood discharge would result.

3. Variances shall only be issued upon a determination that the variance is the minimum necessary, considering the flood hazard, to afford relief.

4. Variances shall only be issued upon:
   a. A showing of good and sufficient cause;
   b. A determination that failure to grant the variance would result in exceptional hardship to the applicant;
   c. A determination that the granting of a variance will not result in increased flood heights, additional threats to public safety, extraordinary public expense, create nuisances, cause fraud on or victimization of the public, or conflict with existing local laws or ordinances.

5. Variances as interpreted in the National Flood Insurance Program are based on the general zoning law principle that they pertain to a physical piece of property; they are not personal in nature and do not pertain to the structure, its inhabitants, economic or financial circumstances. They primarily address small lots in densely populated residential neighborhoods. As such, variances from flood elevations should be quite rare.

6. Variances may be issued for nonresidential buildings in very limited circumstances to allow a lesser degree of floodproofing than watertight or dry-floodproofing, where it can be determined that such action will have low damage potential, complies with all other variance criteria (except 4.4-1), and otherwise complies with Sections 5.1-1, 5.1-3, and 5.1-4 of the General Standards.

7. Any applicant to whom a variance is granted shall be given written notice that the permitted structure will be built with its lowest floor below the base flood elevation and that the cost of flood insurance will be commensurate with the increased risk.

D. Should a variance be denied, the application will be reviewed as a reasonable use exception pursuant to EMC 14.20.050. (Ord. 17-492 § 2 (Exh. A); Ord. 02-200 § 2).

14.10.090 Reconsideration and appeal procedures.

Procedures for appeal of an administrative decision and procedures for reconsideration or appeal of a hearing examiner decision issued pursuant to this title are set forth in EMC 18.40.090, Process II – Administrative action. (Ord. 02-200 § 2).

14.10.100 Fees.

Fees for applications and/or review of reports, studies, or plans filed pursuant to this title are set forth in the adopted fee schedule and as stipulated below:

A. Fee Establishment. The city, by resolution, shall establish fees for filing of critical area review processing and other services provided by the city as required by this title. These fees shall be based on the anticipated sum of direct costs incurred by the city for any individual development or action and may be established as a sliding scale that will recover all of the city costs. Basis for these fees shall include, but not be limited to, the cost of engineering and planning review time, cost of inspection time, costs for administration, and any other special costs attributable to the critical area review process.

B. Applicant Responsibilities. Unless otherwise indicated in this title, the applicant shall be responsible for the initiation, preparation, submission, and expense of all required reports, assessment(s), studies, plans, reconnaissance(s), peer review(s) by qualified consultants, and other work prepared in support of or necessary to review the application.
C. Fee Schedule. The director is charged with the responsibility of collecting appropriate fees charged to applicants for any permits or discretionary approval processes provided for in this title. The amount of the fees charged shall be as established by resolution or ordinance of the city council filed in the office of the city clerk and may be, from time to time, changed without amendment to this title.

D. Payment. Fees established in accordance with this title shall be paid upon submission of a signed application or petition for appeal, or as otherwise provided by any fee ordinance or resolution adopted by the city council. A department of the city shall not be required to pay application fees when applying for a permit regulated under this title. Where such an application will require substantial review time or expenditures, the mayor may, at his/her sole discretion, direct that the department initiating the permit request to reimburse the community development department for some or all of the costs expended for the application review.

E. Investigation Fee. To investigate violations of this title, all city fees associated with investigation of violations of this title may be assessed at the adopted billable staff hour rate in addition to any required consultant costs, legal costs, and other expenses necessary to complete the investigation of the violation. The payment of such investigation fees shall not exempt any person from compliance with all other provisions of this title, nor from penalties prescribed by law.

F. Fees for Environmental Assessments and EISs. Environmental assessment/checklist fees for the construction, alteration, or repair of single- or two-family dwellings may be waived when the application provides sufficient documentation showing, to the satisfaction of the city, who shall make written findings, that all of the following conditions exist:

1. The single- or two-family dwelling is intended for low-income families. Low-income families are those families who meet the low-income guidelines as set forth by the city of Edgewood community development department, Department of Housing and Urban Development (HUD) annual guidelines, Section 8.

2. The construction, alteration, or repair of the single- or two-family dwelling involves some volunteer labor; and

3. The construction, alteration, or repair is being undertaken by an organization classified as a 501(c)(3) nonprofit organization by the Internal Revenue Service; or

4. The construction, alteration, or repair is being undertaken by Pierce County department of community services housing rehabilitation or authorized agent. (Ord. 16-482 § 2 (Exh. C); Ord. 02-200 § 2).

14.10.110 Compliance.

A. The regulations for compliance with the provisions of this title are set forth in EMC 18.30.040, Scope and compliance.

B. When a critical area or its required buffer has been altered in violation of this title, the department shall require the property owner to bring the site into compliance. The property owner shall be required to submit the appropriate critical area application and commence a departmental review, as applicable for each chapter of this title. In addition to any required site investigation, delineations, assessments, reports, etc., the property owner shall be required to submit a restoration plan that identifies the proposed mitigation to bring the subject property into compliance with the requirements of this title. (Ord. 02-200 § 2).

14.10.120 Warning and disclaimer of liability.

The degree of protection required through application of this title is deemed to be reasonable for regulatory purposes and is based on scientific and engineering considerations; however, natural events that may exceed the geographic boundaries regulated under this title can and will occur (e.g., flood heights that are higher than anticipated). This title does not mean to imply that land outside designated hazard areas or uses permitted within such areas will be free from damages. Application of this title shall not create liability on the part of the city, any officer or employee thereof, or the Federal Insurance Administration for any damages that may result from the administration of this title or any administrative decision lawfully made hereunder. (Ord. 02-200 § 2).
14.10.130 Severability.
If any provision of this title or its application to any person or circumstance is held to be invalid or unconstitutional, then said holding shall in no way affect the validity or application of the remainder of this regulation to other persons or circumstances. (Ord. 17-492 § 2 (Exh. A), Ord. 02-200 § 2).

14.10.135 Violation – Civil infraction.
A. In addition to any other sanction or penalty, or any remedial, judicial or administrative procedure available under city code or state law, violation of any provision of this title or failure to comply with a decision of the responsible official, hearing examiner, or city council issued pursuant to this title constitutes a civil infraction.

B. Each day or portion thereof during which a violation occurs or exists shall be deemed a separate civil infraction. A person found to have committed a civil infraction shall be assessed a monetary penalty. The maximum penalty and the default amount for a civil infraction shall be $250.00, not including statutory assessments. In addition:

1. The court may consider dismissing with costs only upon a showing that the violation was corrected within 30 days.

2. Whenever a monetary penalty is imposed by a court under this title, it is immediately payable. If the person is unable to pay at that time, the court may grant an extension. If the penalty is not paid on or before the time established for payment, the court may proceed to collect the penalty in the same manner as other civil judgments and may notify the prosecuting attorney of the failure to pay.

3. Payment of a monetary penalty or performance of the required community service shall not relieve a person of the duty to correct the violation.

4. The court may also order a person found to have committed a civil infraction to make restitution. (Ord. 02-200 § 2).

14.10.140 Appendices.
A. Mapping Sources.

APPENDIX A

MAPPING SOURCES

The following sources of information and/or best available science may be used to indicate the presence of critical areas within Edgewood and provide data used in the development of the city of Edgewood critical areas atlas maps:

A. The following sources identify wetlands that are depicted in the Edgewood wetland inventory map and/or used as indicators of wetland presence:

1. Soil Survey of Pierce County Area, Washington, 1979, Soil Conservation Service, United States Department of Agriculture (USDA);

3. Potential flood hazard areas as identified under subsection (G) of this section;

4. Aerial photographs, Department of Natural Resources, 1985 (Assessor’s Office aerials) or city-acquired aerial photographs;

5. Applicant supplied and verified data;

6. Ongoing field investigation to categorize and delineate wetlands; and

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.

B. The following sources identify landslide and erosion hazard areas that are depicted in the critical areas landslide-hazard area map and erosion hazard areas map and/or used as indicators of landslide and erosion hazard area presence:

1. Soil Survey of Pierce County Area, Washington, 1979, Soil Conservation Service, United States Department of Agriculture (USDA);

2. Areas designated as slumps, earthflows, mudflows, lahars, or landslides on maps published by the United States Geological Survey or Washington Department of Natural Resources Division of Geology and Earth Resources;

3. The city of Edgewood topographic data;

4. United States Geologic Survey Quadrangle maps;

5. Applicant supplied and verified data of active landslide areas and potentially unstable areas; and

C. The following sources identify seismic hazard areas which are depicted in the critical areas seismic hazard areas map and/or used as indicators of seismic hazard area presence:

1. Washington State Department of Natural Resources Division of Geology and Earth Resources 1:100,000 Scale Digital Geology of Washington State; and

2. Areas designated as faults or subject to liquefaction or dynamic settlement on maps or data published by the United States Geological Survey or Washington Department of Natural Resources Division of Geology and Earth Resources.

D. The following sources identify volcanic hazard areas that are depicted in the Critical Areas Atlas – Volcanic Hazard Areas Map:

1. “Map Showing Debris Flows and Debris Avalanches at Mount Rainier, Washington – Historical and Potential Future Inundation Areas,” Hydrogeologic Investigations Atlas HA-729, U.S. Department of Interior, Geologic Survey, 1995, as amended by Kevin Scott, USGS, on November 10, 1997, to be consistent with the reports listed in subsections (D)(1) and (2) of this section;

E. The following sources identify fish and wildlife habitats or presence and/or are used as indicators of critical fish or wildlife presence:

1. Water Type Reference Maps, Washington Department of Natural Resources, were used as sources to identify fish and wildlife habitat areas that are depicted in the Critical Areas Fish and Wildlife Habitat Areas—Stream Typing Map;

2. Priority Habitats and Species Program and Priority Habitat Species Maps, Washington Department of Fish and Wildlife (WDFW),

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
3. Water Resource Index Areas (WRIA), Washington Department of Fish and Wildlife; and

E. The following sources identify the aquifer recharge, pothole and wellhead protection areas that are depicted in the Critical Areas Aquifer Recharge Area — DRASTIC Zones Map and Aquifer Recharge Area:

1. The boundaries of the two highest DRASTIC zones which are rated 180 and above on the DRASTIC index range, as identified in Map of Groundwater Pollution Potential, Edgewood, Washington, National Water Well Association, U.S. Environmental Protection Agency;
2. Wellhead protection areas as identified by the Mountain-View/Edgewood Water Company.

F. The following sources identify the aquifer recharge, pothole and wellhead protection areas that are depicted in the Critical Areas Aquifer Recharge Area:

1. The boundaries of the two highest DRASTIC zones which are rated 180 and above on the DRASTIC index range, as identified in Map of Groundwater Pollution Potential, Edgewood, Washington, National Water Well Association, U.S. Environmental Protection Agency;
2. Wellhead protection areas as identified by the Mountain-View/Edgewood Water Company.

G. The following sources identify flood hazard areas:

1. The areas of special flood hazard identified by the Federal Insurance Administration in a scientific and engineering report entitled “The Flood Insurance Study for Pierce County, Washington and Incorporated Areas” dated March 7, 2017, with accompanying FIRM’s and any map amendments or corrections are hereby adopted by reference and declared to be a part of this title. The Flood Insurance Study and FIRM’s are on file at Edgewood City Hall, 2224 104th Avenue East, Edgewood, Washington, 98371. The city may add or delete land from areas of special flood hazard or revise base flood elevations, utilizing best available information for flood hazard identification in accordance with federal regulations.
2. The city’s Surface Water Management Plan, 1997, or as amended thereafter.
4. The city’s two-foot elevation contour mapping performed by Nies Mapping Group, Inc., 1999, or as subsequently updated.
6. Relevant and verifiable government and citizen photographs, notes, observations, etc., regarding historic ponding/flooding levels.
7. Relevant and verifiable information available through Pierce County.
8. Relevant and verifiable information available through FEMA.
9. Where the flood insurance study, FIRM, and floodway maps do not provide adequate, best, or most recent information, the city may utilize flood information that is more restrictive or detailed than the FEMA data which can be used for identifying flood hazard areas. This information may include, but is not limited to, new and more accurate mapping or data on channel migration, high water elevations from flood events, base flood elevations, groundwater flooding areas, pothole maps showing increased flood inundation based on future build-out or changed hydrologic conditions, specific maps from watershed basin plans or related studies, studies by federal or state agencies, or other information deemed appropriate by the city.

APPENDIX AB

TITLE AND PLAT NOTIFICATION FORMS

A. Notice for Title Notification.

1. (Example: Appropriate Critical Area from EMC 14.10.030)

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
Tax Parcel Number:

Address:

Legal Description:

Present Owner:

NOTICE: This property contains (e.g., wetlands or wetland buffers) as defined by EMC 14.10.030. The site was the subject of a development proposal for _________ application number filed on ___________ (date). Restrictions on use or alteration of the site may exist due to natural conditions of the property and resulting regulations. Review of such application has provided information on the location of the (e.g., wetland or wetland buffers) and any restriction on use.

Date       Signature of owner

Notary acknowledgment and notary seal

B. Additional Title Notification Statements.

1. Title notification for liquefaction and dynamic settlement hazard areas shall include a statement of the performance criteria (i.e., protection of life safety only, provision for minimal structural damage so that post-earthquake functionality is substantially unchanged, no structural damage for the design earthquake).

2. Title notification for fault rupture hazard areas shall include a statement that a fault rupture hazard area or associated buffer exists on the site. The title notification shall include a site plan of the subject property with the fault rupture hazard area and associated buffer identified.

3. Properties that contain flood hazard areas pursuant to Chapter 14.70 EMC shall include the following statement:

Flood Elevation Certificates are kept on file by the Department.

C. Notice for Plat Notification/Plat Notes.

1. General. The following notice shall be placed on the face of the final plat, short plat, large lot, or binding site plan documents when said subdivision contains critical areas or critical area buffers:

Notice: This site lies within a (e.g., landslide hazard area) as defined in EMC Title 14. Restrictions on use or alteration of the site may exist due to natural conditions of the site and resulting regulation.

2. Native/Natural Vegetation Preservation Areas. The following notice shall be placed on the face of the final plat, short plat, large lot, or binding site plan documents when said subdivision contains critical areas or critical area buffers and when said critical areas or critical area buffers have been identified as native/natural vegetation preservation areas.

Notice: The Critical Areas (e.g., Oregon White Oak Preservation Areas) appearing on this (final site plan/preliminary plat/final plat/short plat/large lot/engineering drawing) contain areas of natural/native vegetation intended to buffer the Critical Area from the adverse effects of development. These Critical Areas (e.g., Oregon White Oak Preservation Areas) shall remain and be maintained in a natural, undeveloped, open space state. There shall be no clearing, grading, filling, or construction within the Critical Areas (e.g., Oregon White Oak Preservation Areas), except as shown on plans or documents approved by the City of Edgewood and contained in the official files for this development. Each Critical Area (e.g.,...
The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.

3. Plat Notes for Flood Hazard Areas. The following notes shall be placed on the face of any of final plat, short plat, large lot, or binding site plan documents which lie within a flood hazard area.

   a. Grading, clearing, and/or filling within the limits of the 100-year floodplain is prohibited except for watercourse related construction, repair, and/or maintenance work that is done by the city for management operations.

   b. If a higher frequency event occurs or if existing conditions upon which the flood hazard area boundaries were based were to change or occur differently than depicted, then the level of protection afforded by the existing levee, if applicable, and flood hazard area standards may not be adequate to prevent the subject site from flooding.

   c. All purchasers and developers (and/or their agents) of property within the subject development area and/or parcel shall take notice of the above conditions and hereby agree to defend, indemnify, and hold harmless Edgewood from any and all claims, losses, costs, liabilities, or damages of any nature imposed upon or asserted against Edgewood arising out of or caused by the city’s issuance of approval or by issuance of any other permits arising out of this approval.

   d. All occupants and/or owners of property in the subject area assume the risk of flooding which may occur and waive any claims against Edgewood arising out of damage or injury to person or property resulting therefrom. (Ord. 17-492 § 2 (Exh. A); Ord. 16-461 § 3; Ord. 02-200 § 2).

14.10.150 Figures.

   A. Figure 14.10-1, Foundation Footing Setback.

   B. Figure 14.10-2, Critical Area Protective Measures – Tracts.

(Ord. 02-200 § 2).
Chapter 14.20

USE AND ACTIVITY REGULATIONS

Sections:
14.20.010 Permitted uses.
14.20.020 Regulated uses and activities.
14.20.030 Exemptions.
14.20.040 Nonconforming uses and structures.
14.20.050 Reasonable use exceptions.
14.20.060 Current use assessment program.
14.20.070 Mitigation plans.

14.20.010 Permitted uses.
Uses permitted on properties designated as critical areas shall be the same as those permitted in the zone classification shown in the city’s zoning atlas unless specifically prohibited by this title. (Ord. 02-200 § 2).

14.20.020 Regulated uses and activities.
A. Unless the requirements of this title are met, the department shall not grant any approval or permission to alter the condition of any land, water, or vegetation, or to construct or alter any structure or improvement regulated through the following: building permit, commercial or residential; binding site plan; franchise right-of-way construction permit; site development permit; right-of-way permit; short subdivision; large lots; use permits; subdivision; utility permits; or any subsequently adopted permit or required approval not expressly exempted by this chapter.

B. The following activities are regulated within a critical fish and wildlife habitat area, wetland, aquifer recharge area, landslide or erosion hazard area, flood hazard area, within critical areas and/or their buffers, unless exempted by EMC 14.20.030:

1. Removing, excavating, disturbing, or dredging soil, sand, gravel, minerals, organic matter, or materials of any kind;
2. Dumping, discharging, or filling;
3. Draining, flooding, or disturbing the water level or water table. In addition, an activity which involves intentional draining, flooding, or disturbing the water level or water table in a wetland or stream in which the activity itself occurs outside the regulated area shall be considered a regulated activity;
4. Driving, piling or placing obstructions, including placement of utilities;
5. Constructing, reconstructing, installing, demolishing, or altering the size of any structure or infrastructure, including manufactured and/or mobile homes;
6. Altering the character of a regulated area by destroying or altering vegetation through clearing, harvesting, cutting, intentional burning, shading, or planting;
7. Activities which result in significant changes in water temperature or physical or chemical characteristics of wetland or stream water sources, including changes in quantity of water and pollutant level;
8. Application of pesticides, fertilizers, and/or other chemicals unless demonstrated not to be harmful to the regulated area;
9. The division or redivision of land;

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
10. The creation of hard impervious surfaces.

11. The city adopts the Forest Practice Act (Chapter 76.09 RCW) by reference. (Ord. 17-092 § 2 (Exh. A); Ord. 02-200 § 2).

14.20.030 Exemptions.

A. All exempted activities shall use reasonable methods to avoid potential impacts to critical areas and their buffers to the greatest degree feasible. To be exempt from this title does not give permission to degrade a critical area or its buffer or ignore risk from natural hazards. Any incidental damage to, or alteration of, a critical area or its buffer, that is not a necessary outcome of the exempted activity shall be restored, rehabilitated, or replaced at the responsible party’s expense.

B. The following activities are exempt from the provisions of this title:

The following activities are exempt from the provisions of this title:

A. Existing agricultural activities established prior to February 2, 1992; that after that date, do not cause permanent conversion of a critical area through actions such as filling, ditching, draining, clearing, grading, etc., provided, that:

1. Existing agricultural activities and structures shall comply with the provisions of Chapter 14.70 EMC, Flood Hazard Areas.

2. Determination of an agricultural exemption status is limited to the specific area(s) upon which lawfully established agricultural activities are being conducted. A determination that an activity is exempt within one portion of a property does not necessarily extend to other portions of the property.

1. Operation, maintenance, or repair of existing structures, infrastructure improvements, utilities, public or private roads, dikes, levees, or drainage systems, that do not require construction permits, if the activity does not further alter or increase the impact to, or encroach further within, the critical area or buffer and there is no increased risk to life or property as a result of the proposed operation, maintenance, or repair. Operation and maintenance includes vegetation management performed in accordance with best management practices that is part of ongoing maintenance of structures, infrastructure, or utilities, provided that such management actions are part of ongoing maintenance, do not expand further into the critical area or buffer, and are the result of an expansion of the structure or utility, and do not directly impact an endangered or threatened species.

2. Normal maintenance or repair of existing structures or developments, including damage by accident, fire, or elements. “Normal maintenance” includes those usual acts to prevent a decline, lapse, or cessation from a lawfully established condition. "Normal repair" means to restore a development to a state comparable to its original condition including, but not limited to, its size, shape, configuration, location, and external appearance, within a reasonable period after decay or partial destruction, except where repair causes substantial adverse effects to critical areas or their buffers. Replacement of a structure or development may be authorized as repair where such replacement is the common method of repair for the type of structure or development and the replacement structure or development is comparable to the original structure or development including, but not limited to, its size, shape, configuration, location, and external appearance and the replacement does not cause substantial adverse effects to critical areas or their buffers.

B. Maintenance or reconstruction of existing, lawfully established public facilities, provided, that reconstruction does not involve expansion of the facility:

1. Roads, paths, bicycle ways, trails, bridges, and associated storm drainage facilities or other public rights-of-way.

2. Flood control improvements such as, but not limited to, levees, revetments, floodwalls, regional storm drainage facilities, drainage structures, or channel capacity projects to protect public infrastructure and/or existing development, when administered by Edgewood public works and utilities, provided, that the work shall:

   a. Not increase the height of the facility or linear length of the affected stream edge.

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
b. Not expand the footprint of the facility waterward or into any landward aquatic habitat; and
c. Use approved fish-friendly bioengineering techniques to the extent feasible.

C. Maintenance or reconstruction of existing private roads, driveways, on-site septic systems, and wells, provided, that reconstruction does not involve expansion of facilities, widening, or relocation.

D. For the following utility activities, when undertaken pursuant to best management practices to avoid impacts to critical areas:

1. Normal and routine maintenance or repair of existing utility infrastructure that does not include any expansion.
2. Installation, replacement, operation, repair, alteration, extension, or construction of all utility lines, equipment, or appurtenances in improved city road rights-of-way.

3. Reconstruction, remodeling, or maintenance of existing single-family residential structures and accessory structures that are located outside a flood hazard area and active landslide hazard area; provided, that such reconstruction, remodeling, or maintenance does not increase the floor area nor extend beyond the existing ground coverage. The exemption shall not apply to reconstruction which is proposed as a result of structural damage associated with a critical area, such as slope failure in a landslide hazard area or flooding in a flood hazard area.

4. Reconstruction, remodeling, or maintenance of structures, other than single-family structures and accessory structures that are located outside a flood hazard area or active landslide hazard area; provided, that such reconstruction, remodeling, or maintenance does not increase the floor area nor extend beyond the existing ground coverage. The exemption shall not apply to reconstruction which is proposed as a result of structural damage associated with a critical area, such as slope failure in a landslide hazard area or flooding in a flood hazard area.

5. Site investigative work necessary for land use application submittals such as surveys, soil logs, percolation tests, and other related activities. Critical area impacts shall be minimized and disturbed areas shall be immediately restored.

6. Emergency actions necessary to prevent imminent threat or danger to public health or safety, or to public or private property, or serious environmental degradation.

   a. The department shall review all proposed emergency actions to determine the existence of the emergency and reasonableness of the proposed actions taken; however, post-emergency actions, such as submittal of permits, completion of city review, modification or removal of the emergency repair work, or mitigation shall be required by the department.

   b. Shoreline erosion protection measures shall only be allowed as an emergency action when the owner can demonstrate that there is an imminent threat to an existing residential, commercial, industrial, or agricultural structure. The owner shall retain either city staff or an engineering geologist to conduct a site investigation and provide adequate documentation that the situation is actually an emergency. An emergency action is not warranted when the structure is located outside the active landslide or shoreline erosion hazard area.

   c. After the emergency, the person or agency undertaking the action shall fully fund and conduct necessary restoration and/or mitigation for any impacts to the critical area and buffers resulting from the emergency action in accordance with an approved critical area report and mitigation plan. The person or agency undertaking the action shall apply for review, and the alteration, critical area report, and mitigation shall be reviewed by the department in accordance with the review procedures contained herein. Restoration and/or mitigation activities must be initiated within one (1) year of the date of the emergency activity, and completed in a timely manner.

7. Installation, construction, replacement, repair, operation or alteration of natural gas, cable and telecommunication facilities, electric facilities and lines, water, sewer or storm lines, pipes, mains, equipment or appurtenances in publicly owned right-of-way (which may be within or adjacent to a critical

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
area or its buffer), subject to full review and approval of the department, including any mitigation and restoration requirements established by the department.

I. Activities in artificial wetlands, except those artificial wetlands intentionally created from non-wetland sites, including but not limited to irrigation and drainage ditches, grass-lined swales, canals, detention facilities, wastewater treatment facilities, farm ponds, and landscape amenities, or those wetlands created after July 1, 1990, that were unintentionally created as a result of the construction of a road, street, or highway. However, wetlands may include those artificial wetlands intentionally created from non-wetland areas, created to mitigate conversion of wetlands, if permitted by the department.

J. Activities affecting:
   1. Category III wetlands less than 2,500 square feet in size which fail to meet the definition of an associated wetland, and which are not part of a mosaic wetland system as set forth in EMC 14.30.020(E)(2).
   2. Category IV wetlands less than 10,000 square feet in size and which fail to meet the definition of an associated wetland, and which are not part of a mosaic wetland system as set forth in EMC 14.30.020(E)(2).
   3. Category III and IV wetlands exempted under this section may still be regulated under the provisions of the city’s adopted stormwater management manual.

K. Placement of access roads, utility lines, and utility poles across a Category IV wetland and/or a buffer for a Category IV wetland if there is no reasonable alternative.

L. Activities on improved portions of roads, rights-of-way, or easements, provided, there is no expansion of ground coverage.

M. Activities in wetlands in areas managed according to a special area management plan or other plan adopted by the department and specifically designed to protect wetland resources.

N. Removal by hand of manmade litter and control of noxious weeds that are included on the state noxious weed list (Chapter 16-750 WAC) or invasive plant species as identified by the city. Control may be conducted by clipping, pulling, or digging, or by an alternative nonmechanical method upon approval of a plan by the department.

O. Activities undertaken to comply with a United States Environmental Protection Agency superfund order, or a Washington Department of Ecology order, pursuant to the Model Toxics Control Act, including the following activities:
   1. Remediation or removal of hazardous or toxic substances;
   2. Source control; and
   3. Natural resource damage restoration.

P. Maintenance activities of landscaping and gardens in a required buffer, including but not limited to, mowing lawns, weeding, harvesting, and replanting of garden crops, pruning and planting of vegetation to maintain the condition and appearance of the site existing on February 1, 1992.

Q. Activities designed for previously approved maintenance and enhancement of critical areas and/or their associated buffers.

R. Activities undertaken on the site of an existing holding pond where the water flow and/or water table is controlled by a previously approved pump system.

S. A residential building permit for a lot which was created through a land division action subject to previous reports and assessments as required under this title, provided, that the previous reports and assessments adequately identified the impacts associated with the current development proposal.

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
replaced if reconstruction is commenced within one year of such damage and is substantially completed within 18 months of the date such damage occurred. The reconstruction or restoration shall not serve to expand, enlarge, or increase the nonconformity except as allowed through the provisions in EMC 14.20.030(F) and (G). Structures in a floodway or active landslide hazard area may be allowed to be restored only up to the limits of substantial improvement, as set forth in each chapter. (Ord. 02-200 § 2).

14.20.050 Reasonable use exceptions.
A. General Requirements.

1. If the application of this title would deny all reasonable use of a site, development may be allowed which is consistent with the general purposes of this title and the public interest. Nothing in this title is intended to preclude all reasonable use of property.

2. The provisions outlined in this section shall only be used when application of this title would deny all reasonable use of a site.

3. Reasonable use provisions shall apply to new construction, expansions, additions, replacements, and redevelopment projects.

4. Applications for a reasonable use shall automatically constitute an application for a variance to reduce front, side, or rear yard setback requirements. The hearing examiner shall examine the feasibility of reducing setbacks as a method of locating a structure outside a critical area or its associated buffer prior to granting a reasonable use exception for allowing construction to occur within a critical area or its associated buffer. Reductions in setback requirements shall be given preference over granting of a reasonable use exception.

5. The proposed impact to the critical area shall be the minimum necessary to allow for reasonable economic use of the property.

6. Mitigation may be required to assure that the proposal will result in no net loss of critical area functions and values, consistent with the best available science.

7. The creation of new lots within critical areas and their associated buffers is prohibited.

8. The proposal must comply with all provisions in Chapter 14.70 EMC, Flood Hazard Areas, and Chapter 14.80 EMC, Landslide Hazard Areas.

B. Application Requirements. An application for a reasonable use exception shall include the following information:

1. A description of the areas of the site that contains a critical area, buffers, or within setbacks required under this title;

2. A description of the amount of the site that is within setbacks required by other standards of the zoning code;

3. A description of the proposed development, including a site plan;

4. An analysis of the impact that the amount of development described in subsection (B)(3) of this section would have on the critical area(s);

5. An analysis of whether any other reasonable use with less impact on the critical area(s) and associated buffer(s) is possible;

6. A design of the proposal so that the amount of development proposed as reasonable use will have the least impact practicable on the critical area(s);

7. An analysis of the modifications needed to the standards of this title to accommodate the proposed development;

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
8. A description of any modifications needed to the required front, side, and rear setbacks; building height; and buffer widths to provide for a reasonable use while providing greater protection to the critical area(s);

9. Such other information as the department determines is reasonably necessary to evaluate the issue of reasonable use as it relates to the proposed development, such as but not limited to a wetland analysis report, mitigation plan, habitat evaluation study, and/or a buffer enhancement plan.

C. Review.

1. Public Hearing Required. The department shall set a date for a public hearing before the hearing examiner after all requests for additional information or plan correction, as set forth in EMC 18.40.150, have been satisfied. The public hearing shall follow the procedures set forth in EMC 18.40.190, Notice of public hearing.

2. Decision Criteria. The hearing examiner may approve a reasonable use exception if the examiner determines the following criteria are met:

   a. The proposed development is located on an existing lot of record that was created prior to the effective date of the ordinance codified in this title and there is no other reasonable use or feasible alternative to the proposed development with less impact on the critical area(s) and/or associated buffers including phasing or project implementation, change in timing of activities, buffer averaging or reduction, setback variance, relocation of driveway, or placement of structure.

   b. The development cannot be located outside the critical area and/or its associated buffer due to topographic constraints of the parcel or size and/or location of the parcel in relation to the limits of the critical area and/or its associated buffer and a building setback variance or road variance has been reviewed, analyzed, and rejected as a feasible alternative.

   c. The proposed development does not pose a threat to the public health, safety, or welfare on or off the site, nor shall it damage nearby public or private property.

   d. Any alteration of the critical area(s) shall be the minimum necessary to allow for reasonable use of the property.

   e. The inability of the applicant to derive reasonable use of the property is not the result of actions by the applicant in subdividing the property or adjusting a boundary line thereby creating the undevelopable condition after February 1, 1992.

   f. The proposal mitigates the impacts on the critical area(s) to the maximum extent possible, ensure no net loss of critical area functions, while still allowing reasonable use of the site.

   g. The proposed activities will not jeopardize the continued existence of species listed by the state or federal government as endangered, threatened, sensitive, or documented priority species or priority habitats.

   h. The proposed activities will not cause significant degradation of groundwater or surface water quality.

3. Additional Decision Criteria for Wetlands and Associated Buffers. In addition to the decision criteria listed in subsection (C)(2) of this section, a reasonable use exception for wetlands and associated buffers shall also demonstrate that the proposed activity will result in minimum feasible alteration or impairment to the wetland's functional characteristics and existing contours, vegetation, fish and wildlife resources, and hydrological conditions.

4. Additional Decision Criteria for Critical Fish and Wildlife Habitat Areas and Associated Buffers. In addition to the decision criteria listed in subsection (C)(2) of this section, the hearing examiner may approve a reasonable use exception for critical fish and wildlife habitat areas and associated buffers if the examiner determines that the proposal complies with the mitigation measures as set forth in EMC 14.40.050.

34. Hearing Examiner’s Authority. The hearing examiner has the authority to approve an application for a reasonable use exception, approve with additional requirements above those specified in this title, require
46. Required Written Findings and Determinations. A reasonable use exception may be approved by the hearing examiner only if all of the following findings can be made regarding the proposal and are supported by the record:

   a. The granting of the proposal will not be detrimental to the public health, safety, and general welfare.

   b. The granting of the proposal will not be injurious to the property, regulated critical area(s), or improvements adjacent to and in the vicinity of the proposal.

   c. The proposal minimizes adverse environmental impacts to the maximum practicable extent and provides mitigation to offset any impacts.

   d. The granting of the proposal is consistent and compatible with the goals, objectives, and policies of the comprehensive plan, community plan, if applicable, and the provisions of this title. (Ord. 02-200 § 2).

14.20.060 Current use assessment program.

A. An owner of agricultural land, timberland, or open space desiring current use classification under Chapter 84.34 RCW may file for such current use classification with the Pierce County assessor-treasurer’s office.

B. The department shall notify the assessor-treasurer’s office when restrictions on development occur on a particular site.

C. The assessor-treasurer’s office shall consider the critical areas and buffering requirements of this title in determining the fair market value of land. Any owner of an undeveloped buffer which has been placed in a separate tract or tracts, protective easement, public or private land trust dedication, or other similarly preserved area shall have that portion of land assessed consistent with those restrictions. (Ord. 02-200 § 2).

14.20.060 Critical areas reports

A. When required in accordance with this title, the applicant shall submit a critical areas report.

B. The critical areas report shall use scientifically valid methods and studies in the analysis of critical area data and field reconnaissance to evaluate the proposed development and all probably impacts to critical areas in accordance with the provisions of this title. The report shall reference the source(s) of science used.

C. At a minimum the report shall contain the following:

   1. The name and contact information of the applicant and a description of the proposal;

   2. The site plan for the proposed development, including a map drawn to scale depicting critical areas, buffers, the proposed development, and any areas to be cleared or altered;

   3. The names and qualifications of the persons preparing the report;

   4. Documentation of any fieldwork performed on the site;

   5. Identification and characterization of all critical areas and buffers on and adjacent to the proposed development;

   6. A statement specifying the accuracy of the report, and all assumptions made and relied upon;

   7. A discussion of the performance standards applicable to the critical area and proposed development;

   8. A mitigation plan in accordance with EMC 14.20.070 if mitigation is required; and

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
9. Any additional report information required for the critical area as specified in the following chapters.

14.20.070 Mitigation plans

When mitigation is required, the applicant shall submit a mitigation plan. The mitigation plan shall include all of the following:

A. Mitigation sequencing. A description of reasonable efforts made to apply mitigation sequencing pursuant to EMC 14.10.080(J) to avoid, minimize, and mitigate impacts to critical areas and buffers.

B. Mitigation details:

1. A description of the anticipated impacts to the critical area and buffer, including impacts to critical area functions and values;

2. The mitigating actions proposed, including: type of mitigation proposed (e.g., on-site or off-site); site selection criteria; identification of compensation goals; and identification of critical area functions.

3. The environmental goals and objectives of the mitigation, together with specific measurable criteria and performance standards for evaluating whether or not the goals and objectives of the mitigation project have been successfully attained;

4. A review of the best available science supporting the proposed mitigation; and

5. An analysis of the likelihood of success of the mitigation project.

C. Construction details. The mitigation plan shall include written specifications, descriptions, and drawings of the mitigation proposed, including:

1. Construction sequence, timing, and duration;

2. Grading and excavation details; and

3. Erosion and sediment control features; and

4. Planting plan specifying plant species, quantities, locations, size, spacing, density, and measures to protect and maintain plants until established. All plant species must be native to the region.

D. Monitoring details:

1. A program for monitoring construction and assessing the outcome of the mitigation project, including: the schedule for site monitoring (for example, monitoring shall occur in year 1, 3, and 5 after site construction), and how the monitoring data will be evaluated to determine if the performance standards are being met. Monitoring reports shall be submitted to document milestones, successes, problems, and contingency actions of the compensation project. The mitigation project shall be monitored for a period necessary to establish that performance standards have been met, but not for a period less than five (5) years. Mitigation monitoring shall be the responsibility of the applicant.

2. A contingency plan with courses of action and corrective measures to be taken if monitoring or evaluation indicates project performance standards are not being met.

E. Bond estimate. A bond estimate for the entire compensatory mitigation project, per the requirements of EMC 14.10.080(B).

F. Other requirements. The mitigation plan shall address any additional mitigation requirements relevant to the specific critical area as specified in the following chapters.

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
Chapter 14.30
WETLANDS

Sections:
14.30.010 Purpose.
14.30.020 Wetland areas identification and rating.
14.30.030 Wetland review procedures.
14.30.040 Wetland standards Allowed activities.
14.30.050 Mitigation Buffer requirements.
14.30.060 Buffer Mitigation requirements.
14.30.070 Appendices.
14.30.080 Figures.

14.30.010 Purpose.
The purpose of this chapter is to avoid or, in appropriate circumstances, to minimize, rectify, reduce, or compensate for impacts arising from land development and other activities affecting wetlands, and to maintain and enhance the biological and physical functions and values of wetlands with respect to water quality maintenance, stormwater and floodwater storage and conveyance, fish and wildlife habitat, primary productivity, recreation, education, and historic and cultural preservation. When wetland impacts occur, mitigation will be required to achieve no net loss of wetlands in terms of acreage, function, and value. (Ord. 02-200 § 2).

14.30.020 Wetland areas identification and rating.
A. General Designation. All areas within the city meeting the meeting the definition of “wetland” in EMC 14.10.060 are hereby designated critical areas.

B. Identification and Delineation. Wetlands shall be identified and delineated by a qualified wetland scientist in accordance with the approved federal wetland delineation manual and applicable regional supplements. Wetland delineations are valid for 5 years, after which date the City shall require verification that the wetland boundaries and prior conditions have not changed.

1. Wetlands are those areas that are inundated or saturated by surface water or groundwater at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands generally include swamps, marshes, bogs, and similar areas.

2. The city will require the use of the following documents to determine the presence or absence of potential wetlands:

B. Wetland Indicators. Indicators of wetlands normally include, but are not limited to: saturated soils or standing water; water-tolerant plant species such as salmonberry, Oregon ash, Western red cedar, rushes and sedges; and dark-brown or black soil colors. Refer to the documents listed in subsection (A)(2) of this section for detailed wetland indicator criteria.

C. Potential Wetland Areas Mapping. Potential wetland areas, as depicted on the city’s Critical Areas Atlas — Wetland Inventory Maps, are those areas where wetland indicators have been mapped or identified. Potential wetlands include:

1. Areas within 165 feet of hydric soils identified on the soil survey of Pierce County area, wetlands identified on the National Wetland Inventory Maps or Edgewood wetland inventory maps, areas of known flooding identified on the.
The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
14.30.030 Wetland review procedures.

A. General Requirements. When the department’s maps, sources, or field investigations indicate that the proposed project area is located within 300 feet of a known or suspected wetland, an applicant shall submit a wetland critical areas report prepared by a qualified wetland scientist. The requirement to provide a wetland critical areas report may be waived if the department determines that there are no potential direct and/or indirect impacts on wetlands or their buffers that would result from the proposed development. Wetland critical areas reports shall comply with the requirements established in EMC 14.30.070, Appendix A.

A. General Requirements.

1. The city’s Critical Areas Atlas – Wetland Inventory Maps provide an indication of where potential wetlands are located within the city. The actual presence or location of a potential wetland or a potential wetland that has not been mapped, but may be present on or adjacent to a site shall be determined using the procedures and criteria established in this chapter.

2. The department will complete a review of the city’s Critical Areas Atlas – Wetland Inventory Maps and other source documents for any proposed regulated activity to determine whether the project area for a proposed single-family dwelling unit or site for all other proposed regulated activities is located within a potential wetland. Identification of a potential wetland may also occur as a result of field investigations conducted by department staff.

3. When the department’s maps, sources, or field investigation indicate that a potential wetland is located within the project area for a proposed one-family dwelling unit or within the site for all other proposed regulated activities, the department shall require a site evaluation (field investigation) to determine whether or not a regulated wetland is present and if so, its relative location in relation to the proposed project area or site. The findings of the site evaluation shall be documented as outlined in subsections (B), (C), (D), or (E) of this section.

4. If department staff completes the site evaluation and determines that no regulated wetlands are present, the wetland review will be considered complete.

5. All site evaluations shall include a proposed categorization of the wetland in accordance with the guidelines set forth in EMC 14.30.020(B) and a calculation of the standard wetland buffer as set forth in EMC 14.30.060.

6. Unless otherwise stated in this chapter, the critical area protective measure provisions contained in EMC 14.10.080 shall apply.

B. General Wetland Review. A general wetland review shall include the submittal of a wetland verification report, wetland delineation report, or a wetland analysis report, together with a wetland application and appropriate fees (see EMC 14.30.080(B), Figure 14.30-2).

a. A wetland verification report shall be submitted when the site evaluation determines that:

i. No regulated wetland is present within 165 feet of the site;

ii. A regulated wetland is present, but its standard buffer does not extend within the site; or

iii. Wetlands are identified but are evaluated and found to be exempt as set forth in EMC 14.20.030(K).

b. The wetland verification report shall include data sheets, site maps, and other field data and information necessary to confirm wetland presence or absence and category. If exempt wetlands (refer to EMC 14.20.030(K)) are identified, a site plan must be provided that identifies their location.
c. The wetland verification report shall identify and discuss wetland boundaries within the site as well as those that extend off-site. Off-site wetlands and associated standard buffers do not have to be marked in the field.

d. Department staff shall review the wetland verification report and either:
   i. Accept the report and approve the wetland application; or
   ii. Reject the report and require the submittal of a wetland analysis report.

   a. If a regulated wetland or its standard buffer extends onto the site, the department shall require a wetland analysis report. Information required in a wetland analysis report is identified in EMC 14.30.070, Appendix B.

   b. If the department determines that a Category I wetland is on-site which is associated with documented habitat for endangered, threatened, or sensitive species or for potentially extirpated plant species recognized by state or federal agencies, the department shall also require the submittal of a habitat assessment report as set forth in Chapter 14.40 EMC.

   c. If the department determines that mitigation is necessary to offset the identified impacts, the applicant shall comply with the mitigation requirements set forth in EMC 14.30.050.

   d. Approval of the wetland application shall be granted upon a determination that the wetland analysis report and mitigation plan, if applicable, are thorough and accurate, and meet all requirements of this title, and that the monitoring program and contingency plan are tied to an acceptable financial guarantee as set forth in EMC 14.10.080 to assure that the requirements will be followed.

B. 3. Time Limitations. Wetland delineations and reports that have been accepted by the city shall be valid for a period of five (5) years, unless the department determines that new information warrants revision of the delineation or report.

   a. General. Delineation reports and mitigation plans that have not been accepted by the city for a project are valid for a period of four years unless a longer period is approved by the department.

   b. Extensions. A one-year extension may be approved by the department upon written request for such extension of that delineation report or mitigation plan.

C. Single-Family Dwelling Wetland Review. Two alternative review procedures exist for construction of a single-family dwelling and regulated activities accessory to a single-family dwelling (see EMC 14.30.080(C), Figure 14.30-3). Both review procedures require the completion of a site evaluation as follows:

      a. Prior to issuance of a building permit, site development permit, or on-site sewage system permit, the applicant shall submit a single-family wetland certification form completed by a wetland specialist that certifies either:

         i. No regulated wetlands are present within 165 feet of the project area; or

         ii. Wetlands are present within 165 feet of the project area, but all regulated activities associated with the dwelling (i.e., landscaped areas, septic facilities, outbuildings, etc.) will occur outside of the standard buffer of the identified wetland.

      b. If regulated wetland buffers extend onto the site, the wetland specialist shall place permanent, clearlyvisible, wetland buffer signs at the edge of the buffer. A wetland buffer sign affidavit, signed by the wetland specialist, must be submitted to the city.

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
specialist, shall be submitted to the department as verification that the wetland buffer signs have been placed on the site.

c. A survey as outlined in EMC 14.10.080(H) will not be required.

d. The single-family certification form may be used only to authorize single-family dwellings and associated
   homeite features such as driveways, gardens, fences, wells, lawns, and on-site septic systems. It may not be
   used for new agricultural activities, expansion of existing agricultural activities, forest practice activities,
   commercial projects, land divisions, buffer width modifications (as set forth in EMC 14.30.060), or
   violations.

e. The single-family certification process will be monitored by the department for accuracy, and
   enforcement actions will be initiated should encroachment into a regulated wetland or buffer occur.

f. The applicant/property owner assumes responsibility for any and all errors of the single-family
   certification form and all associated mitigation imposed by the department.

g. Single-family certification forms shall be filed with the Pierce County auditor’s office in accordance with
   EMC 14.10.070(F) and 14.10.110(B).

a. A wetland application and wetland delineation report shall be submitted to the department when the
   single-family dwelling and associated homeite features are located within the standard buffer of a regulated wetland.

b. The applicant may retain either a wetland specialist or department staff to delineate the limits of a
   regulated wetland and determine the impacts associated with the project, subject to the following:

   i. A wetland delineation report, as defined in subsection (C)(3) of this section, shall be submitted to the
      department for review; or

   ii. Upon the applicant’s request and payment of fees, the department shall delineate the regulated
      wetland(s).

c. If the department determines that mitigation is necessary to offset the identified impacts, the applicant
   shall comply with the mitigation requirements set forth in EMC 14.30.050.

d. The applicant shall place permanent, clearly visible, wetland boundary buffer signs at the edge of the
   buffer.

e. A survey as defined in EMC 14.10.080(H) will not be required.

3. Wetland Delineation Report. The wetland delineation report shall include data sheets; scaled site maps
   showing the project boundary, wetland boundary, categorization of the wetland and standard buffer boundary,
   boundary flag location and sample plot location and designation; a vicinity map with driving instructions; and
   any other field data and information necessary for the department to confirm wetland presence, location, and
   category.

D. Agricultural Activity Wetland Review. A wetland application and wetland delineation report shall be submitted to
the department when the site evaluation indicates that a regulated wetland or its standard buffer extends into a site
proposed for an agricultural activity.

1. The applicant may either retain a wetland specialist or department staff to delineate the limits of a regulated
wetland and determine the impacts associated with the project area, subject to the following:

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
a. A wetland delineation report, as defined in subsection (C)(3) of this section, shall be submitted to the department for review; or

b. Upon the applicant’s request and payment of fees, the department shall delineate the regulated wetland(s).

2. If the department determines that mitigation is necessary to offset the identified impacts, the applicant shall comply with the mitigation requirements set forth in EMC 14.30.050.

3. The applicant shall place permanent, clearly visible, wetland boundary buffer signs at the edge of the buffer.

4. A survey as defined in EMC 14.10.080(H) will not be required.

5. Agricultural activities may be initiated subject to compliance with the requirements set forth in subsections (D)(1) through (4) of this section and the submittal of a best management plan developed by the Pierce County Conservation District or Natural Resource Conservation Service (NRCS).

E. Forest Practice Wetland Review.

1. All forest practice activities that are not exempt from the provisions of this title shall be reviewed pursuant to the criteria set forth in subsection (B) of this section, General Wetland Review, except for conversion option harvest plan (COHP).

2. An abbreviated wetland review process may be used for COHPs as follows:

a. If a regulated wetland or its standard buffer extends onto the site, the department shall require the submittal of a wetland application and delineation report. At a minimum the report shall include:
   i. A detailed description of all wetlands on, or within, 165 feet of the site, including the wetland(s) approximate size, vegetation, categorization, and hydrology source(s).
   ii. Sample data sheets for each wetland.
   iii. An accurate map delineating the boundaries of the wetland(s) and standard buffer(s) in relation to the boundaries of the site.

b. The wetland delineation report shall be prepared, signed, and dated by a wetland specialist.

c. The accuracy of the wetland delineation, flagging, and categorization shall be field verified by the department.

d. A survey as defined in EMC 14.10.080(H) will not be required.

3. Where an application for a development permit, other than a site development permit, has not been submitted in association with a proposed forest practice activity, a deviation, from the standard wetland buffer, as set forth in EMC 14.30.060(A), shall not be allowed. (Ord. 02-200 § 2).
14.30.040  Wetland standards

\textbf{Allowed activities.}

A. The following wetlands are exempt from the requirement to avoid impacts in EMC 14.10.080(J) and may be altered if the impacts are fully mitigated based on the remaining mitigation sequencing actions in EMC 14.10.080(J). In order to verify the following conditions, a wetland critical areas report meeting the requirements of EMC 14.30.070, Appendix A must be submitted.

1. All isolated Category IV wetlands less than 4,000 square feet that:
   a. Are not associated with riparian areas or their buffers;
   b. Are not part of a wetland mosaic;
   c. Do not score 5 or more points for habitat functions based on current version of the Washington State Wetland Rating System for Western Washington (Ecology, 2014);
   d. Do not contain a Priority Habitat or a Priority Area for a Priority Species identified by the Washington Department of Fish and Wildlife, federally listed species or their critical habitat, or habitats or species of local importance as identified in EMC 14.40.030(A).

2. Wetlands less than 1,000 square feet that meet the criteria specified in subsection (A)(1) of this section.

3. Utility projects within wetland buffers which have minor or short-duration impacts, as determined by the department in accordance with the criteria below, and which do not significantly impact the function or values of wetlands; provided, that such projects are constructed with best management practices and additional restoration measures are provided. Minor activities shall not result in the transport of sediment or increased stormwater. Such allowed minor utility projects shall meet the following criteria:
   a. There is no practical alternative to the proposed activity with less impact on wetlands;
   b. The activity involves the placement of a utility pole, street signs, anchor, or vault or other small component of a utility facility; and
   c. The activity involves disturbance of an area less than 75 square feet.

AB. Regulated activities in wetlands and/or buffers may be allowed when the applicant demonstrates to the department that all adverse impacts to wetlands or associated buffers will be mitigated according to EMC 14.30.050. The activities listed below are allowed in wetlands and their buffers, and do not require submission of a critical area report, except where such activities would result in a loss of the functions and values of a wetland or wetland buffer. These activities include:

1. Activities in wetlands in areas managed according to a special area management plan or other plan adopted by the department and specifically designed to protect wetland resources.

B. The following activities may be allowed in a buffer without a complete mitigation plan if the applicant demonstrates to the department that all adverse impacts to wetlands will be mitigated according to the provisions in EMC 14.30.050. In cases that require environmental review, a threshold environmental determination may not be made until the department is satisfied that adequate mitigation will occur. The allowed activities are as follows:

1. One well and necessary appurtenances, including a pump and appropriately sized pump house, but not including a water storage tank (unless the water storage tank can be contained within the pump house), subject to the following conditions:
   a. The pump house is a one-story building with a ground area of less than 120 square feet; and
   b. The well is more than 75 feet deep; and
   c. For Category I and II wetlands, the minimum distance from the well and appurtenances to the wetland edge is no less than 50 percent of the buffer widths established in the table in EMC 14.30.060(A); and
   d. Access to the well and pump house shall be by a pervious trail for pedestrian traffic only or, if necessary, by an improved access for a maintenance vehicle.

2. Pervious trails and associated viewing platforms.

3. The placement of utility lines which do not require excavation or utility pole installation in any part of a buffer for a Category II, III, or IV wetland. They may be placed in a buffer for a Category I wetland, provided, that the
minimum distance from the wetland edge is no less than 50 percent of the Category I buffer width established in the table in EMC 14.30.060(A).

4. New farm and agricultural activities may be permitted within a buffer subject to the following:
   a. Agricultural activities and structures shall comply with the provisions of Chapter 14.70 EMC, Flood Hazard Areas.
   b. The agricultural activity is in compliance with the USDA, NRCS Conservation Reserve Program farm management standards.
   c. A copy of an approved NRCS or Pierce County Conservation District farm management plan that documents compliance with the USDA, NRCS Conservation Reserve Program farm management standards has been submitted to the department for review and approval.

2C. Trimming of vegetation for purposes of providing view corridors will be allowed; provided, that trimming shall be limited to view corridors of a maximum 20-foot width and that benefit to fish and wildlife habitat are not reduced. Trimming shall be limited to hand pruning of branches and vegetation. Trimming shall not include felling, topping, or removal of trees. (Ord. 02-200 § 2).

3. Drilling for utilities/utility corridors under a wetland, with entrance/exit portal located completely outside of the wetland buffer, provided that the drilling does not interrupt the ground water connection to the wetland or percolation of surface water down through the soil column. Specified studies by a hydrologist are necessary to determine whether the ground water connection to the wetland or percolation of surface water down through the soil column will be disturbed.

A. Determining buffer widths. Buffer widths shall be measured horizontally from the perpendicular line established at the wetland edge as shown in Table 14.20.050(1).

<table>

C. Modification of Buffer Widths. The standard buffer widths of subsection (A) of this section may be modified by averaging, reducing, or increasing.

1. Buffer Averaging. Buffer width averaging may be allowed only where the applicant demonstrates all of the following:

   a. Buffer encroachment is unavoidable.
   b. The wetland contains variations in sensitivity due to existing physical characteristics.
   c. Width averaging will provide equal or greater protection of current wetland functions and values.
   d. The total buffer area after averaging is no less than the buffer area prior to averaging.
   e. The minimum width of the buffer at any given point shall be at least seventy-five percent (75%) of the standard width, or twenty-five (25) feet, whichever is greater.
   f. The averaging is accomplished within the project boundaries.
2. Buffer Width Reductions. Buffer width reduction to a maximum of twenty-five (25) percent may be allowed when the applicant demonstrates the following circumstances:
   a. Buffer encroachment is unavoidable.
   b. The existing buffer is predominately un-vegetated, composed of nuisance species, or is in an otherwise highly disturbed condition.
   c. The project includes a buffer enhancement plan as part of the mitigation required by EMC 14.30.060. The buffer enhancement plan shall use plant species which are native, noninvasive to the project area.
   d. Buffer reduction with enhancement will provide equal or greater protection of current wetland functions and values.

3. Buffer Increases. The department may require increased buffer width(s) when any of the following are identified:
   a. A larger buffer is necessary to maintain viable populations of existing species;
   b. The wetland is used by, or associated with, species listed by the federal government or the state as endangered, threatened, sensitive, or as documented priority species or habitats, or essential or outstanding potential sites such as heron rookeries or raptor nesting areas;
   c. The adjacent land is susceptible to severe erosion and erosion control measures will not effectively prevent adverse wetland impacts;
   d. The adjacent land has minimal vegetative cover, or slopes greater than 20 percent. (Ord. 02-200 § 2).

14.30.0650 Mitigation requirements.
A. Mitigation. All regulated development activities in wetlands or buffers shall be mitigated according to this title subject to the following criteria:
   1. Avoiding the impact altogether by not taking a certain action or parts of actions;
   2. Minimizing impacts by limiting the degree or magnitude of the action and its implementation by using appropriate technology or by taking affirmative steps to reduce impacts;
   3. The following types of mitigation (no order of preference):
      a. Rectifying the impact by repairing, rehabilitating, or restoring the affected environment;
      b. Reducing or eliminating the impact over time by preservation and maintenance operations during the life of the action;
      c. Compensating for the impact by replacing or providing substitute resources or environments;
   4. Monitoring the impact and compensation and taking appropriate corrective measures; and
   5. Mitigation for individual actions may include a combination of the above measures.

A. Mitigation. Compensatory mitigation is required for all unavoidable alterations to wetlands or their buffers, except for buffer averaging when done in accordance with EMC 14.30.050(C)(1). Compensatory mitigation actions shall replace functions affected by the alteration and shall provide equal or greater functions compared to the impacted wetland.

B. Preference of Mitigation Actions. Compensatory wetland mitigation shall occur in the following order of preference:

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.

1. Restoration: The manipulation of the physical, chemical, or biological characteristics of a site with the goal of returning natural or historic functions to a former or degraded wetland. For the purpose of tracking net gains in wetland acres, restoration is divided into:
   a. Re-establishment: The manipulation of the physical, chemical, or biological characteristics of a site with the goal of returning natural or historic functions to a former wetland. Re-establishment results in a gain in wetland acres (and functions). Activities could include removing fill material, plugging ditches, or breaking drain tiles.
   b. Rehabilitation: The manipulation of the physical, chemical, or biological characteristics of a site with the goal of repairing natural or historic functions of a degraded wetland. Rehabilitation results in a gain in wetland function but does not result in a gain in wetland acres. Activities could involve breaching a dike to reconnect wetlands to a floodplain or return tidal influence to a wetland.

2. Creation: The manipulation of the physical, chemical, or biological characteristics of a site to develop a wetland on an upland or deepwater site where a wetland did not previously exist. Creation results in a gain in wetland acres. Activities typically involve excavation of upland soils to elevations that will produce a wetland hydriperiod, create hydric soils, and support the growth of hydrophytic plant species.

3. Enhancement: The manipulation of the physical, chemical, or biological characteristics of a wetland site to heighten, intensify, or improve specific function(s) or to change the growth stage or composition of the vegetation present. Enhancement is undertaken for specified purposes such as water quality improvement, flood water retention, or wildlife habitat. Enhancement results in a change in some wetland functions and can lead to a decline in other wetland functions, but does not result in a gain in wetland acres. Activities typically consist of planting vegetation, controlling non-native or invasive species, modifying site elevations or the proportion of open water to influence hydriperiods, or some combination of these activities.

C. Approaches to Compensatory Mitigation. Mitigation for alterations to wetland and their buffers shall rely on the approaches listed below.

1. Wetland Mitigation Banks. Credits from a certified wetland mitigation bank may be used to compensate for impacts within the service area specified in the mitigation bank instrument. Use of credits from a wetland mitigation bank certified under Chapter 173-700 WAC is allowed if:
   a. The department determines that it would provide appropriate compensation for the proposed impacts; and
   b. The impact site is located in the service area of the bank.
   c. The proposed use of credits is consistent with the terms and conditions of the certified bank instrument.
   d. Replacement ratios for projects using bank credits is consistent with replacement ratios specified in the certified mitigation bank instrument.

2. In-Lieu Fee Mitigation. Credits from an approved in-lieu-fee program may be used when all the following apply:
   a. The approval authority determines that it would provide environmentally appropriate compensation for the proposed impacts.
   b. The proposed use of credits is consistent with the terms and conditions of the approved in-lieu-fee program instrument.
   c. Project using in-lieu-fee credits shall have debits associated with the proposed impacts calculated by the applicant’s qualified wetland scientist using the credit assessment method specified in the approved instrument for the in-lieu-fee program.
The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.

The impacts are located within the service area specified in the approved in-lieu-fee instrument.

3. Permittee-responsible mitigation. In this situation, the permittee performs the mitigation after the permit is issued and is ultimately responsible for implementation and success of the mitigation. Permittee-responsible mitigation may occur at the site of the permitted impacts or at an off-site location within the same watershed. If available, the use of wetland mitigation banks and in-lieu-fee programs are preferable to permittee-responsible mitigation.

D. Wetland mitigation ratios. The ratios listed in Table 14.30.060 apply to permittee-responsible mitigation. The first number specifies the acreage of replacement wetlands required, and the second number specifies the acreage of wetlands altered or relocated.

The director may increase the ratios under the following circumstances:

1. Uncertainty as to the probable success of the proposed restoration or creation;
2. Significant period of time between destruction and replication of wetland values;
3. Projected losses in functional value;
4. The compensatory mitigation is off site.

E. Wetland buffer mitigation. To mitigate unavoidable impacts to functions and values of wetland buffers, a minimum buffer ratio of 1:1 (alteration area: mitigation area) is required. This ratio assumes that creation/restoration of a wetland buffer with appropriate native vegetation is sufficient to compensate for the wetland buffer functions and values affected by alteration of an existing wetland buffer. If enhancement of an existing wetland buffer is proposed as mitigation, a higher mitigation ratio may be required. For any proposed wetland buffer activities, the applicant must demonstrate that the functions and values of the altered wetland buffer will be fully replaced by the proposed mitigation. The department may increase the buffer mitigation ratios under the following circumstances:

1. The replacement ratio needed to recover the lost functions and values of buffer area is greater than 1:1, based upon the existing type of vegetative cover of either the impact site or the proposed mitigation site.
2. Uncertainty exists as to the probable success of the proposed restoration or creation;

3. A significant period of time will elapse between impact and replication of wetland functions;

4. The impact was an unauthorized impact.

F. Wetland and buffer mitigation plans. Compensatory wetland mitigation plans shall be consistent with Wetland Mitigation in Washington State - Part 2: Developing Mitigation Plans (Ecology, 2006); and Selecting Wetland Mitigation Sites Using a Watershed Approach (Ecology, 2009), or as revised. Mitigation plans shall comply with the requirements established in EMC 14.30.070, Appendix B.

B. Mitigation for Regulated Activities in Wetland Buffers. Noncompensatory mitigation shall be required for all regulated activities in buffers. Specific mitigation plan requirements are provided in EMC 14.30.070, Appendix C. Where environmental review is required, a threshold determination may not be made until the department has reviewed and approved the noncompensatory mitigation plan.

C. Mitigation for Regulated Activities in Wetlands. Compensatory mitigation shall be required for regulated activities that result in the loss of wetland acreage. Noncompensatory mitigation shall be required for regulated activities that do not result in the loss of wetland acreage. Specific mitigation plan requirements are provided in EMC 14.30.070, Appendices D and E.

1. The compensatory mitigation plan shall be completed in two phases, a conceptual phase and a detailed phase.

   a. Conceptual Phase. The applicant shall submit a conceptual mitigation plan for compensatory mitigation to the department. Where environmental review is required, the department shall not make a threshold determination prior to department review and approval of the conceptual mitigation plan. See EMC 14.30.070, Appendix D, for specific requirements of the conceptual mitigation plan.

   b. Detailed Phase. Following the department's approval of the conceptual mitigation plan, the applicant shall submit a detailed mitigation plan for compensatory mitigation to the department. See EMC 14.30.070, Appendix E, for specific requirements of the detailed mitigation plan.

2. The detailed mitigation plan shall be prepared, signed, and dated by the wetland specialist to indicate that the plan is in accordance with specifications determined by the wetland specialist. A signed original mitigation plan shall be submitted to the department.

3. Approval of the detailed mitigation plan shall be signified by a notarized memorandum of agreement signed by the applicant and director, and recorded with the Pierce County auditor. The agreement shall refer to all requirements for the mitigation project.

4. The mitigation project shall be completed according to a schedule agreed upon between the department and the applicant.

5. Wetland mitigation shall occur according to the approved wetland mitigation plan and shall be consistent with provisions of this chapter and title.

6. The wetland specialist shall be on-site during construction and plant installation phases of all mitigation projects.

7. On completion of construction for the wetland mitigation project, the wetland specialist shall submit an as-built report to the department for review and approval.

D. Mitigation Banking. (Reserved). (Ord. 02-200 § 2).

14.30.060 Buffer requirements.

A. Determining Buffer Widths. Buffer widths shall be measured horizontally from the perpendicular line established at the wetland edge based on the following table:

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.

</tbody>
</table>

B. Modification of Buffer Widths. The standard buffer widths of subsection (A) of this section may be modified by averaging, reducing, or increasing.

1. Buffer Averaging. Buffer width averaging may be allowed only where the applicant demonstrates all of the following:
   a. Buffer encroachment is unavoidable.
   b. A habitat assessment has been submitted which demonstrates that no documented habitat for endangered, threatened, or sensitive plant, fish, or animal species, or for potentially extirpated plant species recognized by state or federal agencies exists; or
   c. For wetlands and/or required buffers associated with documented habitat for endangered, threatened, or sensitive plant, fish, or wildlife species, or for potentially extirpated plant species recognized by state or federal agencies, a habitat assessment report has been submitted that demonstrates that the buffer reduction will not result in an adverse impact to the species of study.
   d. The wetland contains variations in sensitivity due to existing physical characteristics.
   e. Width averaging will not adversely impact the wetland or critical fish or wildlife habitat.
   f. The total buffer area after averaging is no less than the buffer area prior to averaging (see EMC 14.30.080(D), Figure 14.30-4).
   g. The minimum buffer width will not be less than 50 percent of the widths established in subsection (A) of this section.
   h. The averaging is accomplished within the project boundaries.

2. Buffer Width Reductions. Buffer width reduction to a maximum of 25 percent may be allowed when the applicant demonstrates the following circumstances:
   a. Buffer encroachment is unavoidable; and
   b. A habitat assessment has been submitted which demonstrates that no documented habitat for endangered, threatened, or sensitive plant, fish, or animal species, or for potentially extirpated plant species recognized by state or federal agencies exists; or
   c. A habitat assessment report has been submitted that demonstrates that the buffer reduction will not result in an adverse impact to the species of study for wetlands and/or required buffers associated with documented habitat for endangered, threatened, or sensitive plant, fish or wildlife species or for potentially extirpated plant species recognized by state or federal agencies; and
   d. The applicant demonstrates one or more of the following conditions:
      i. The proposed buffer area is extensively vegetated, has less than 20 percent slopes, and the reduction will not result in adverse impacts to the wetland; or
ii. The project includes a buffer enhancement plan as part of the mitigation required by EMC 14.30.050. The buffer enhancement plan shall use plant species which are native, noninvasive to the project area and shall substantiate that an enhanced buffer will improve the functional attributes of the buffer to provide additional protection for wetland functional values, or

iii. The acreage included in the buffer would substantially exceed the size of the wetland and the reduction will not result in adverse impacts to the wetland.

3. Buffer Increases. The department may require increased buffer width(s) when any of the following are identified:

a. A larger buffer is necessary to maintain viable populations of existing species;

b. The wetland is used by, or associated with, species listed by the federal government or the state as endangered, threatened, sensitive, or as documented priority species or habitats, or essential or outstanding potential sites such as heron rookeries or raptor nesting areas;

c. The adjacent land is susceptible to severe erosion and erosion control measures will not effectively prevent adverse wetland impacts;

d. The adjacent land has minimal vegetative cover, or slopes greater than 20 percent. (Ord. 02-200 § 2).

14.30.070 Appendices.

A. Wetland Report.

APPENDIX A

WETLAND REPORT

A. A wetland critical areas report shall, at a minimum, include the following:

1. The general critical areas report requirements in EMC 14.20.060;

2. Map showing the location of all wetlands and required buffers within three hundred (300) feet of the proposed development;

3. An analysis of the onsite wetland(s) include the following site- and proposal-related information:

   a. Documentation of any fieldwork performed on the site, including, but not limited to, field delineation data sheets for delineations and wetland rating forms;

   b. Wetland acreage;

   c. Wetland category;

   d. A discussion of the water sources supplying the wetland and documentation of hydrologic regime (locations of inlet and outlet features, water depths throughout the wetland, evidence of recharge or discharge);

   e. A discussion of the functions of existing wetlands, including vegetative, faunal, and hydrologic conditions, and

   f. A description of the methodologies used to conduct the wetland delineations;

4. A discussion of measures, including avoidance, minimization, and mitigation, proposed to preserve existing wetlands;
5. A detailed discussion of the direct and/or indirect potential impacts on the wetland by the project; and
6. The wetland mitigation plan requirements of EMC 14.30.070, Appendix B, if the activity will result in unavoidable impacts to wetlands or their buffers.

APPENDIX B
WETLAND MITIGATION PLAN
A. A wetland mitigation plan shall, at a minimum, include the following:
   1. The general mitigation plan requirements in EMC 14.20.070 and the following information:
   2. Existing and proposed wetland acreage;
   3. Vegetative and faunal conditions;
   4. Surface and subsurface hydrologic conditions including an analysis of existing and future hydrologic regime and proposed hydrologic regime for enhanced, created, or restored mitigation areas;
   5. Relationship within watershed and to existing waterbodies;
   6. Soils and substrate conditions, topographic elevations;
   7. Existing and proposed adjacent site conditions;
   8. Required wetland buffers (including any buffer reduction or averaging and mitigation proposed to enhance buffers);
   9. Property ownership;
   10. A discussion of ongoing management practices that will protect wetlands after the project site has been developed, including proposed monitoring and maintenance programs;

A. Wetland Categories.
B. Information to Be Included in a Wetland Analysis Report.
C. Mitigation Plan for Regulated Activities in Buffers.
D. Compensatory Mitigation Plan for Regulated Activities in Wetlands, Conceptual Phase.
E. Compensatory Mitigation Plan for Regulated Activities in Wetlands, Detailed Phase.
F. Edgewood Wetlands Rating Form.

APPENDIX A
WETLAND CATEGORIES
Wetland categories shall be designated according to the following generalized criteria:
A. Category I. Wetlands that contain any of the following:

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
1. Documented habitat for endangered or threatened plant, fish, or animal species or for potentially extirpated plant species recognized by state or federal agencies;

2. Wetlands associated with documented habitat for endangered, threatened, sensitive plant, fish, or animal species or for potentially extirpated plant species recognized by state or federal agencies;

3. High quality native wetland communities, including documented natural heritage wetland sites and sites which qualify as a natural heritage wetland;

4. High quality, regionally rare wetland communities with irreplaceable ecological functions, including sphagnum bogs and fens, estuarine wetlands, mature forested wetlands, or snag-rich areas;

5. Wetlands of exceptional local significance, as designated by separate Edgewood ordinance.

B. Category II. Regulated wetlands that do not contain features outlined in Category I with any of the following:

1. Documented habitats for sensitive plants or fish species recognized by federal or state agencies;

2. Documented priority habitats and species recognized by state agencies;

3. Regionally rare wetland communities which are not high quality, but which have irreplaceable ecological functions, including sphagnum bogs and fens, estuarine wetlands, or mature forested wetlands;

4. Wetland types with significant functions which may not be adequately replicated through creation or restoration. These wetlands may be demonstrated by any of the following characteristics:
   a. Peat or muck systems;
   b. Forested wetlands that have three canopy layers;
   c. Significant spring fed systems;

5. Wetlands with significant habitat value based on diversity and size including wetlands:
   a. Ten acres or greater in size with two or more wetland classes together with an open water class at any time during a normal year;
   b. Ten acres or greater in size, with three or more wetland classes and five or more subclasses of vegetation in a dispersed pattern;
   c. Five acres or greater in size, with 40 to 60 percent open water at any time during a normal year, and two or more subclasses of vegetation in a dispersed pattern;

6. Regulated wetlands that are associated with either year-round or intermittent salmonid fishbearing waters;

7. Wetlands with significant use by fish and wildlife.

C. Category III. Regulated wetlands that do not contain features outlined in Category I, II, or IV wetlands that are not part of a mosaic wetland.

D. Category IV. Regulated wetlands that do not meet the criteria of a Category I, II, or III wetland that are:

1. Hydrologically isolated;

2. Less than or equal to one acre in size;

3. Have only one wetland class and one dominant plant species (i.e., displaying monotypic vegetation); and

4. Not part of a mosaic wetland.

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
The category of a wetland shall not be changed to recognize illegal modifications to the wetland.

APPENDIX B

INFORMATION TO BE INCLUDED IN A WETLAND ANALYSIS REPORT

A wetland analysis report shall include the following:

A. Vicinity map and detailed driving instructions to the site;

B. A site map setting forth all of the following:
   1. Surveyed wetland boundaries based upon a delineation by a wetlands specialist;
   2. Wetlands and buffers off-site, within 165 feet of the site boundaries, are also to be discussed and shown in as much detail as possible;
   3. Site boundary property lines and roads;
   4. A north arrow and scale;
   5. Internal property lines, rights-of-way, easements, etc.;
   6. Existing physical features of the site including buildings, fences, and other structures, roads, parking lots, utilities, water bodies, etc.;
   7. Contours at the smallest readily available intervals, preferably at two-foot intervals;
   8. Hydrologic mapping showing patterns of surface water movement and known subsurface water movement into, through, and out of the site area; and
   9. Location of all test holes and vegetation sample sites, and wetland boundary flags numbered to correspond with flagging in the field and field data sheets;

C. A report which includes the following:
   1. Location information (legal description, parcel number, and address);
   2. Delineation analysis results. The wetland boundaries on the site established by the delineation shall be staked and flagged in the field. If the wetland extends outside the site, the delineation report shall discuss all wetland areas within 150 feet of the site, but need only delineate those wetland boundaries within the site;
   3. General site conditions including topography, acreage, and surface areas of all wetlands identified in the city’s wetland atlas and water bodies within one-quarter mile of the subject wetland(s);
   4. Hydrological analysis, including topography of existing surface and known significant sub-surface flows into and out of the subject wetland(s), and
   5. Discussion of the values of existing wetlands, including vegetative, faunal, and hydrologic conditions and the presence of threatened, endangered, candidate, sensitive or monitor species;

D. A summary of the proposed activity and potential direct or indirect impacts to the wetland(s) including stormwater-related impacts to wetland hydrology;

E. Recommended wetland category, including rationale for the recommendation;

F. Recommended buffer boundaries, including rationale for boundary locations;

G. Proposed on-site residential density transfer from wetlands and/or buffers to upland areas;
H. Site plan of proposed activity, including location of all parcels, tracts, easements, roads, structures, and other modifications to the existing site. The location of all wetlands and buffers shall be identified on the site plan;

I. The wetland analysis report shall be signed and dated by the wetlands specialist.

APPENDIX C

MITIGATION PLAN FOR REGULATED ACTIVITIES IN BUFFERS

A. A mitigation plan for regulated activities in buffers shall be prepared, signed, and dated by a wetlands specialist and shall contain the following:

1. General goals of the mitigation plan including a discussion of the function and values of impact and enhancement areas;

2. Approximated site topography before and after alteration;

3. Location of proposed mitigation area (include a north arrow and scale);

4. General hydrologic patterns on the site before and after construction;

5. General plant selection and justification, planting instructions, and approximate planting sequencing and schedule;

6. A maintenance plan;

7. A monitoring and contingency plan. Monitoring is to occur for a minimum of five years;

8. Estimated costs for the installation, maintenance, and monitoring phases of the project. Separate estimates shall be prepared for the installation phase and monitoring and maintenance phase of the project; and

9. Address and phone number of person(s) or organization(s) responsible for the monitoring requirements.

B. Upon department review and approval of this plan, it shall become the detailed plan.

C. Where environmental review is required, a threshold determination may not be made prior to submittal of a plan which meets department approval.

APPENDIX D

COMPENSATORY MITIGATION PLAN FOR REGULATED ACTIVITIES IN WETLANDS – CONCEPTUAL PHASE

A. The conceptual phase of a mitigation plan for regulated activities in wetlands shall be prepared, signed, and dated by a wetland specialist and shall include the following:

1. General goals of the compensatory mitigation plan, including an overall goal of no net loss of wetland function, values, and acreage;

2. Mitigation projects that involve Category I wetlands associated with documented habitat for endangered or threatened plant, fish, or animal species or for potentially extirpated plant species recognized by state or federal agencies must also demonstrate a net benefit to the conservation of the affected species;

3. Site topography before and after construction;

4. Location of proposed wetland mitigation area;

5. General hydrologic patterns on the site before and after construction;
6. Field data confirming the presence of adequate hydrology to support the existing and created wetland area(s).
   At a minimum, the following information shall be included:
   a. Seasonal (growing season) water level;
   b. Sources of water (if the water source is adjacent to a stream or river then no instream structures will be
      allowed that restrict fish migration or access);
   c. Pre- and post-development inflow and outflow volumes and velocity and frequency of flooding;
   d. Groundwater and surface water table (Guidelines for Developing Freshwater Wetlands Mitigation Plans
      and Proposals, 1994, COE, EPA, DOE, USFWS, and WDFW).

7. Nature of mitigation, including wetland types (in-kind and out-of-kind), general plant selection and
   justification, approximate project sequencing and schedule, and approximate size of the new wetland buffer. A
   discussion of the function and values of both the impact and creation areas is also to be provided.

8. A conceptual maintenance plan; and

B. Once the department approves the conceptual mitigation plan, a detailed mitigation plan shall be submitted. Due to
   the complex nature of creating and restoring wetlands, very detailed plans are needed (see EMC 14.30.070, Appendix
   E, for further information on detailed mitigation plans).

APPENDIX E

COMPENSATORY MITIGATION PLAN FOR REGULATED ACTIVITIES IN WETLANDS – DETAILED
PHASE

Article I. Outline of Detailed Mitigation Plan

A. The detailed mitigation plan shall contain the following:

1. Site specific, quantifiable criteria for evaluating whether or not the goals for the proposed compensation are
   being met. Such criteria shall include the establishment of viable plant communities, hydric soil formation, and
   establishment of wetland hydrology, and may include water quality standards, species abundance and diversity-
   targets, habitat diversity indices, or other ecological, geological, or hydrological criteria (see Article III of this
   appendix for specific performance standards).

2. Pre-development analysis of the proposed compensation area including:
   a. Existing vegetation community analysis;
   b. Hydrological analysis that demonstrates the project will not adversely impact existing wetland and buffer
      areas and ensures adequate hydrology for any created wetland areas (see Article V for specific
      requirements);
   c. On-site soils analysis data and, where appropriate, Natural Resources Conservation Service mapping;
   d. Detailed description of flora and fauna existing on the site; and
   e. Description of existing site conditions in relation to historic conditions for those sites which have been
      recently altered or degraded.

3. Proposed post-development conditions within existing wetland and buffer areas and mitigation areas,
   including:
   a. Relationship of the project to the watershed and existing water bodies;
The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.

b. Topography, using one-foot contour intervals;

c. Hydrologic analysis (see Article V of this appendix for specific requirements);

d. Grading, filling, and excavation, including a description of imported soils;

e. Irrigation requirements;

f. Erosion control measures during construction; and

g. Aerial coverage of planted areas to open water areas (if any open water is to be present).

4. Detailed site diagrams, to-scale construction drawings with cross-section data, topographic maps showing slope percentage and final grade elevations, and any other drawings appropriate to show construction techniques or anticipated final outcome. The plan shall provide for elevations which are appropriate for the desired habitat types. The construction drawings must include a note that requires the contractor to refer to the approved mitigation plan.

5. Planting plan prepared by a wetland specialist that shall include the following:

a. Soils and substrate characteristics;

b. Specification of substrate stockpiling techniques;

c. Planting instructions, including species, stock type and size, density or spacing of plants, and water and nutrient requirements; and

d. Specification of where plant materials will be procured. Documentation shall be provided which guarantees plant materials are to be procured from licensed regional nurseries or from wetlands on-site which are part of the mitigation plan.

6. Schedule showing dates for beginning and completing the mitigation project, including a sequence of construction activities.

7. Monitoring and maintenance plan which includes the following:

a. Specification of procedures for monitoring and site maintenance; and

b. Schedule for submitting monitoring reports.

8. Detailed contingency plan, consistent with Article IV of this appendix.

9. Detailed budget for implementing the mitigation plan, including construction, monitoring, maintenance, and contingency phases.

10. Financial guarantee for the work to be performed as planned and approved. Separate guarantee estimates shall be prepared for the installation phase and monitoring and maintenance phase of the project.

11. Address and phone number of the person or organization responsible for monitoring requirements.

Article II. Location Criteria

In cases in which it is determined that compensatory mitigation is appropriate, the following shall apply:

A. Compensatory mitigation shall be provided on-site, except where the applicant demonstrates that on-site mitigation is not scientifically feasible or practical due to physical features of the site.

B. When compensatory mitigation cannot be provided on-site, it shall be provided in the immediate vicinity of and within the same watershed as the regulated activity.

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
Article III. Mitigation Performance Standards

A. When regulated activities occur in wetlands, the applicant shall restore, create, or enhance equivalent areas of wetlands. Equivalent areas shall be determined according to acreage, functional value, type, location, time factors, and projected success. No overall net losses shall occur in wetland acreage, functions and/or values, and any restored, created, or enhanced wetland shall be as persistent as the wetland it replaces.

B. When an applicant proposes to alter or eliminate wetland, the applicant shall replace acreage at the following ratios:

<table>
<thead>
<tr>
<th>Category</th>
<th>Acreage Replacement Ratio</th>
</tr>
</thead>
<tbody>
<tr>
<td>Category I</td>
<td>3:1 (acreage replacement: acreage lost)</td>
</tr>
<tr>
<td>Category II and III</td>
<td></td>
</tr>
<tr>
<td>- Forested Class</td>
<td>2:1</td>
</tr>
<tr>
<td>- Scrub/Shrub Class</td>
<td>1.5:1</td>
</tr>
<tr>
<td>- Emergent Class</td>
<td>1.5:1</td>
</tr>
<tr>
<td>- Open Water</td>
<td>1:1</td>
</tr>
<tr>
<td>Category IV</td>
<td>1:1</td>
</tr>
</tbody>
</table>

C. Ratios provided are for proposed projects with on-site, in-kind replacement which occurs prior to regulated activities on the site. The department may increase the ratios under the following circumstances:

1. Uncertainty as to the probable success of the proposed restoration or creation; or
2. Significant period of time between destruction and replication of wetland functions; or
3. Projected losses in wetland functions and value; or
4. Off-site and/or out-of-kind compensation.

D. The department may allow enhancement of existing or created wetland area(s) as a means of reducing the standard acreage replacement ratio if the applicant demonstrates that no net loss of wetland function or value will result, provided that:

1. Enhancement mitigation ratios shall be no less than twice the standard creation ratio of the impacted wetland.
2. The applicant may be required to complete an analysis of the impact and mitigation areas in support of the acreage replacement ratio reduction. An example of an acceptable analysis methodology is the Washington State Department of Ecology Wetland Function Assessment Methodology (Ecology Publication # 99-116); however, other methodologies may be proposed.
3. The county will not allow the acreage replacement ratio to be reduced to less than 1:1 except as described in subsection (E) of Article III of this appendix.

E. In the case of Category II, III, and IV wetlands, the replacement ratio may be decreased to a ratio of less than 1:1 if, following a public hearing, the hearing examiner determines the following:

1. A replacement ratio of greater than 1:1 is either not feasible on-site or would be likely to result in substantial degradation of other natural features; and
2. The mitigation plan shows that a net increase in wetland functional values will result from the mitigation; and
3. The mitigation is completed, and then monitored by the department for one year prior to the issuance of a permit. If after one year of monitoring, the department is not satisfied that the anticipated final outcome of the...
mitigation plan will be met, modifications to the mitigation plan and further monitoring may be required. When the department is satisfied that the mitigation will be successful, permits pending will be issued.

F. In-kind compensation shall be provided except where the applicant demonstrates that:

1. Greater functional and habitat values can be achieved through out-of-kind mitigation; and
2. The wetland is already significantly degraded; or
3. Problems such as the presence of exotic vegetation and changes in watershed hydrology make implementation of in-kind compensation infeasible; or
4. Out-of-kind replacement will best meet identified regional goals (e.g., replacement of historically diminished wetland types).

G. Design requirements for the mitigation plan shall, at a minimum, include the following:

1. Use only indigenous native plants (not introduced or exotic species);
2. Use plants appropriate to the depth of water at which they will be planted;
3. Use plants that originate and are available from local sources;
4. Use plant species high in food and cover value for fish and wildlife;
5. Plant mostly perennial species;
6. Avoid committing significant areas of site to species that have questionable potential for successful establishment;
7. Water depth is not to exceed 6.5 feet (two meters);
8. The grade or slope that water flows through the wetland is not to exceed six percent;
9. Slopes within the wetland and buffer should not be steeper than 3:1 (horizontal to vertical);
10. Planting densities and placement of plants shall be shown on the design plans;
11. The wetland should not contain more than 60 percent open water as measured at the seasonal high water mark;
12. Stockpiling shall be confined to upland areas and contract specifications should limit stockpile duration to less than four weeks. Erosion control measures shall be in effect at the stockpiling location;
13. Planting instructions shall describe proper placement, diversity, and spacing of seeds, tubers, bulbs, rhizomes, sprigs, plugs, cuttings, and transplanted stock;
14. Apply controlled release fertilizer at the time of planting and afterward only as plant conditions warrant (determined during the monitoring process), and only to the extent that the release would be conducted in an environmentally sound manner;
15. Install an irrigation system, as necessary, until plants are established.

H. Mitigation projects are unique and performance standards will differ based upon the goals and objectives of the project. However, performance standards pertaining to water regime, vegetative structure and establishment, and hydric soil formation are to be established for all mitigation projects, as defined below:

1. The mitigation wetland must meet the technical criteria for wetland hydrology, seasonal inundation, and/or saturation to the surface for a consecutive number of days greater than or equal to 12.5 percent of the growing season.
season. Areas that are seasonally inundated and/or saturated to the surface for a consecutive number of days, between five percent and 12.5 percent of the growing season may also be wetlands. Hydrology may be monitored through the use of one or a combination of the following: groundwater wells, piezometers, crest gauges, hand-dug soil pits, staff gauges, and continuous recording flow meters.

2. At a minimum, vegetative success equals the establishment of a multi-species, mixed canopy community comprised of emergent, scrub-shrub, and tree species. Yearly standards pertaining to survival and aerial coverage shall also be established for each vegetative stratum.

3. Hydric soil characteristics shall be monitored through the use of one or a combination of the following: Munsell soil color, pH, particle size, redox potential, organic content, microbial activity, time and duration of saturation or ponding, and alkalinity.

Article IV. Monitoring Program and Contingency Plan

A. A contingency plan shall be established for compensation in the event the mitigation project is inadequate or fails. The contingency plan is to provide specific corrective measures for each common mitigation plan failing as plant mortality, vandalism, damage due to wildlife grazing, grading errors, and hydro-regime problems. A financial guarantee on a form acceptable to the city is required for the duration of the monitoring period and the guarantee plus any accrued interest will be released by the city when the required mitigation and monitoring are completed. To determine the amount of the financial guarantee, an estimate shall be submitted to the city detailing the work to be accomplished and the cost thereof. The estimate shall be based on current costs. The city will review the estimate and, if acceptable, will establish the financial guarantee at 125 percent of the estimate to allow for inflation and administration expenses should the city have to complete the project.

B. Requirements of the monitoring program are as follows:

1. Scientific procedures are to be used for establishing the success or failure of the project.

2. Monitoring reports prepared by a wetland specialist are to be submitted for department review. Monitoring reports shall include discussions of wildlife utilization of the site, vegetation establishment, water quality, water flow, stormwater storage and conveyance, and existing or potential degradation, according to the following schedule:

   a. At completion of construction of mitigation project (as-built report);

   b. Thirty days after completion;

   c. Early in the first growing season after construction;

   d. End of the first growing season after construction;

   e. Twice the second year; and

   f. Annually after the second year.

3. Monitor for a period of time appropriate to the nature of the project (single-family versus commercial) and the complexity of the mitigation project. The majority of monitoring programs will last a minimum of five years.

4. The city will require a right of entry form be recorded that allows city staff access to the mitigation area through completion of the monitoring program.

5. Correct for failures in the mitigation project.

6. Replace dead or undesirable vegetation with appropriate plantings.

7. Repair damages caused by erosion, settling, or other geomorphological processes.
8. If necessary, redesign mitigation project and implement the new design.

9. Correction procedures shall be approved by a wetland specialist and the department director or designee.

Article V. Hydrology Monitoring Guidelines

A. Applicants are required to ensure that the proposed development does not result in adverse impacts to regulated wetland and/or buffers. To achieve this, an applicant must provide detailed hydrologic calculations, compiled by a licensed civil engineer or hydrologist which shows the project will either:

1. Match the predevelopment contributing basin flow quantities and durations; or

2. That any identified changes will not adversely impact the wetland or wetland buffer.

B. The existing hydroperiod of the on-site wetland(s) shall be established through direct monitoring or computer estimation. Monitoring may be accomplished by the use of a continuous recording level gauge or a combination of a crest stage and staff gauge. Computer estimation may be either a time series model (for Category I and II wetlands) or a single event model (for Category III and IV wetlands).

C. Additional guidance in the design of a project’s stormwater plan can be found in the Puget Sound Wetlands and Stormwater Management Research Program and in the “Wetland Hydrology Management Guidelines” included as Appendix A of the document entitled “Sensitive Areas Mitigation Guidelines” prepared by King County department of development and environmental services.

WHEN THE FIELD DATA FORM IS COMPLETE ENTER CATEGORY HERE:

Q.1. High Quality Natural Heritage Wetland

Answer this question if you have adequate information or experience to do so. If not, find someone with the expertise to answer the questions. Then, if the answer to questions 1a, 1b, and 1c are all NO, contact the Natural Heritage Program of DNR to determine if it qualifies as a Natural Heritage wetland.

1a. Human-Caused Disturbances
Is there significant evidence of human-caused changes to topography or hydrology of the wetland? Significant changes could include clearing, grading, filling, bagging of the wetland or its immediate buffer, culturing, ditching, dredging, ditching, or drainage of the wetland. Briefly describe the changes, their date of occurrence, and your information source(s):

_______________________________________________________________________________
_______________________________________________________________________________
_______________________________________________________________________________

Yes: Go to 3a.
No: Go to 1b.

1b. Are there populations of nonnative plants which are currently present and appear to be invading native populations?
Briefly describe any nonnative plant populations and information source(s):

_______________________________________________________________________________
_______________________________________________________________________________
_______________________________________________________________________________

Yes: Go to 3a.
No: Go to 1c.

1c. Is there significant evidence of human-caused disturbance of the water quality of the system?
Degradation of water quality could be evidenced by culverts entering the system, direct road/parking lot runoff evidence of historic dumping of wastes, oily sheens, extreme eutrophic conditions, livestock use, or dead fish, etc. Briefly describe:

_______________________________________________________________________________
_______________________________________________________________________________
_______________________________________________________________________________

Yes: Go to Q.3.
No: Possible Category

Q.2. Regionally Rare Native Wetland Communities

Edgewood has not yet developed any methodology for identifying regionally rare native wetland communities.

Q.3. Irreplaceable Ecological Functions

Does the wetland:

• have at least ½ acre of contiguous peat wetland;
Yes: go to 3a.

• or, have a forested component > one acre in size;
Yes: go to 3b.

• or, have characteristics of an estuarine system;
Yes: go to 3c.

• or, have eel grass, floating or nonfloating kelp beds;
Yes: go to 3d.

• or, have spring fed hydrology?
Yes: go to 3e.

3a. Peat Wetlands

3a1. Does at least ½ acre of the contiguous peat wetland have < 25% areal cover of any combination of species from Table 1 in the List of Invasive/Exotic Species, and have < 80% areal cover of Spiraea douglasii?
Yes: Category I
No: go to Q.4.

3b. Forested Wetlands

3b1. Is the forested wetland a monotypic stand of red alder or black cottonwood with an average dbh of less than 8 inches?
Yes: Category III
No: go to 3b2.

3b2. Is the average age of dominant trees in the forested wetland > 80 years?
Yes: Category I
No: go to 3b3.

3b3. Is the average age of dominant trees in the forested wetland 50 to 80 years, AND is the structural diversity high, as characterized by a multi-layer community of trees > 50 feet tall, from 20 to 49 feet tall, shrubs, and herbaceous ground cover?
Yes: go to 3b4.
No: go to 3b5.

3c. Estuarine Wetlands

3c1. Does at least ½ acre of the contiguous peat wetland have ≥ 75% total cover of my combination of species from Table 1 in the List of Invasive/Exotic Species, and have ≥ 80% total cover of Spartina douglasii?
Yes: Category I
No: go to Q.4.

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
5b. Is the wetland 10 acres or greater in size, have 3 or more wetland classes, and 5 or more subclasses of vegetation in a dispersion pattern?

Yes: Category II
No: go to 5c.

5c. Is the wetland 5 acres or greater in size, 40 to 60% open water at any time during a normal year, and 2 or more subclasses of vegetation in a dispersed pattern?

Yes: Category II
No: go to Q.6.

Q.6. Wetlands with significant habitat value based on the following specific diversity and size criteria and significant use by fish and wildlife.

Answer all questions and enter data requested.

5a. Total Wetland Area

<table>
<thead>
<tr>
<th>Acreage</th>
<th>Category</th>

<td>Forested</td>
<td>2</td>
</tr>
<tr>
<td>Forested</td>
<td>3</td>
</tr>
</tbody>
</table>

5d. Structural Diversity (include observations of off-site wetland area)

If the wetland has a forested community type, add 1 point for each of the following:

- Trees > 50 feet tall
- Trees 30 to 49 feet tall
- Shrubs or saplings
- Herbaceous ground cover

6. Decide from the diagrams below whether interspersion between wetland community types is high, moderate, low, or none?
### Edgewood Municipal Code
#### Chapter 14.30 WETLANDS

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.

#### 6f. Habitat Features (include observations of off-site wetland areas)

Answer questions below, circle features that apply, and score to right:

- **Is there evidence of current use by beavers?**
  - Yes = 3

- **Is a heron rookery located within 300 feet?**
  - Yes = 2

- **Are raptor nest(s) located within 300 feet?**
  - Yes = 1

- **Are there at least 3 standing dead trees (snags) per acre?**
  - Yes = 1

- **Are any of these standing dead trees (snags) >10 inches in diameter?**
  - Yes = 1

- **Are there any other perches (wires, poles, or posts)?**
  - Yes = 1

- **Are there at least 3 downed logs at least 10’ in length with a diameter ≥6” per acre (include observations of off-site wetland areas)?**
  - Yes = 1

#### 6g. Connection to streams

- **Is the wetland connected at any time of the year via surface water to a seasonal stream? The connection could be during flood events, via a natural or manmade channel, culvert, or an area of open water.**
  - Yes = 1

#### 6h. Adjacent Land Use and Buffers

**Step 1**

Estimate (to the nearest 5%) the percent of each land use that adjoins the wetland boundary.

**Step 2**

Multiply result(s) of step 1:

- 1, if buffer width is 25 – 50 feet
- 2, if buffer width is 50 – 100 feet
- 3, if buffer width is > 100 feet

**Step 3**

Enter results below and add subtotals:

<table>
<thead>
<tr>
<th>Buffer Total</th>
<th>900 – 1,200</th>
<th>600 – 899</th>
<th>300 – 599</th>
<th>100 – 299</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>0</td>
<td>0</td>
<td>0</td>
<td>0</td>
</tr>
<tr>
<td>roads, buildings, or parking lots:</td>
<td>[ ] %</td>
<td>[ ] %</td>
<td>[ ] %</td>
<td>[ ] %</td>
</tr>
<tr>
<td>trees, grazed pasture, vineyards, or annual crops:</td>
<td>[ ] %</td>
<td>[ ] %</td>
<td>[ ] %</td>
<td>[ ] %</td>
</tr>
<tr>
<td>ungrazed grassland or orchards:</td>
<td>[ ] %</td>
<td>[ ] %</td>
<td>[ ] %</td>
<td>[ ] %</td>
</tr>
</tbody>
</table>

Score points according to table below:

- **Buffer Total:**
  - 400 – 1,200: Yes = 4
  - 600 – 899: Yes = 3
  - 300 – 599: Yes = 2
  - 100 – 299: Yes = 1

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.

Chapter 14.40 CRITICAL FISH AND WILDLIFE HABITAT AREAS
CONSERVATION AREAS

Sections:
14.40.010 Purpose.
14.40.020 Critical fish and wildlife species and habitat areas. Fish and wildlife habitat conservation area identification and classification.
14.40.030 Critical fish and wildlife habitat area. Fish and wildlife habitat conservation area review procedures.
14.40.040 Critical fish and wildlife habitat area standards. Allowed activities.
14.40.050 Mitigation Buffer requirements.
14.40.060 Buffer Mitigation requirements.
14.40.070 Appendix.
14.40.080 Figures.

14.40.010 Purpose.
Many land use activities can impact the habitats of fish and wildlife. Special care must be taken in the management of lands that support critical fish and wildlife species to ensure that development occurs in a manner that is sensitive to their habitat needs. The purpose of this chapter is to identify critical fish and wildlife species and habitats, fish and wildlife habitat conservation areas, and establish habitat protection procedures and mitigation measures that are designed to minimize any negative impacts and result in no net loss of habitat functions and values associated with new development or regulated activities. (Ord. 02-200 § 2).

14.40.020 Critical fish and wildlife species and habitat areas. Fish and wildlife habitat conservation area identification and classification.
A. General. Critical fish and wildlife habitat areas are those areas that support critical fish and wildlife species, typically identified either by known point locations of specific species (such as a nest or den) or by habitat areas or both. Designation. Fish and wildlife habitat conservation areas include:

B. Federally and State Listed Species and their Associated Habitats. Areas which have a primary association with federally or state-listed endangered, threatened, or sensitive species of fish or wildlife (specified in 50 CFR 17.11, 50 CFR 17.12, WAC 232-12-011 and 232-12-014) and which if altered may reduce the likelihood that the species will survive and reproduce over the long term. The list of endangered, threatened, or sensitive species is maintained and located at:

1. Waters of the state. Waters of the state include lakes, rivers, ponds, streams, and all other surface waters and watercourses within jurisdiction of the state of Washington, as classified in WAC 222-16-030.

2. Areas with which federally designated endangered, threatened, and sensitive species have a primary association. The U.S. Fish and Wildlife Service and the National Marine Fisheries Service should be consulted for current federal listing status.

3. Areas with which state designated endangered, threatened, and sensitive species have a primary association. The Washington State Department of Fish and Wildlife should be consulted for current state listing status.

4. State priority habitats and areas associated with state priority species. The state Department of Fish and Wildlife should be consulted for current listing of priority habitats and species.
Chapter 14.40 CRITICAL FISH AND WILDLIFE HABITAT
HABITAT AREAS
FISH AND WILDLIFE HABITAT CONSERVATION AREAS

5. Habitats and species of local importance. The following fish and wildlife species and their associated habitat areas shall be regulated under this chapter:

a. Fish. Coho salmon (Oncorhynchus kisutch), pink salmon (Oncorhynchus gorbuscha), chum salmon (Oncorhynchus keta), cutthroat trout (Oncorhynchus clarkii), and steelhead (Oncorhynchus mykiss).

b. Birds. Great blue heron (Ardea herodias) and green heron (Butorides virescens).

c. Areas with which state-listed monitor or candidate fish or wildlife species or federally listed candidate fish or wildlife species have a primary association, and which if altered may reduce the likelihood that the species will survive and reproduce over the long term.

d. Old growth/mature forests.

e. Heron rookeries.

B. Habitat boundary survey. If the department determines that a regulated habitat conservation area may be present, within the project vicinity, the department may require the habitat area to be delineated and/or mapped by a qualified fisheries biologist or wildlife biologist who is knowledgeable of fish and wildlife habitat within western Washington or by the Washington Department of Fish and Wildlife. The boundary of aquatic habitats shall be the ordinary high water mark of the waterbody. The management recommendations for Washington’s priority habitats and species or federal equivalent should be used as a tool for identifying and delineating wildlife habitat boundaries. The City may waive this requirement if there is adequate information available on the area proposed for development to determine the impacts of the proposed development and appropriate mitigating measures.

C. Mapping. The approximate location and extent of waters of the state and fish presence within the City are shown on maps maintained by the City. The City shall update the maps periodically as new information becomes available. The approximate location and extent of other fish and wildlife habitat conservation areas area shown on maps maintained by the Washington State Department of Fish and Wildlife and other state and federal agencies. These maps are to be used as a guide and do not provide definitive information about fish and wildlife habitat conservation area size or presence. Fish and wildlife habitat conservation areas may exist that do not appear on the maps.

D. Waters of the state classification. The City hereby adopts the water typing system specified in WAC 222-16-030, as described below:

1. Type S. All waters, within their ordinary high water mark, meeting the criteria as “shorelines of the state” and “shorelines of statewide significance” under RCW Chapter 90.58. As of the effective date of this title, there are no Type S streams within city jurisdiction.

2. Type F: segments of natural waters other than Type S Waters, which are within the bankfull widths of defined channels and periodically inundated area of their associated wetlands, or within lakes, ponds, or impoundments having a surface area of 0.5 acre or greater at seasonal low water and which in any case contain fish habitat.

3. Type Np: all segments of natural waters within the bankfull width of defined channels that are perennial non-fish habitat stream. Perennial stream waters do not go dry any time of a year of normal rainfall. However, for the purpose of water typing, Type Np Waters include the intermittent dry portions of the perennial channel below the uppermost point of perennial flow.

4. Type Ns: All segments of natural waters within the bankfull width of the defined channels that are not Type S, T, or Np waters. These are seasonal, non-fish habitat streams in which surface flow is not present for at least some portion of a year of normal rainfall and are not located downstream from any stream reach that is a Type Np Water. Ns Waters must be physically connected by an above-ground channel system to Type S, T, or Np Waters.

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
C. Species of Local Importance. In addition to federally and state-listed species, the following fish and wildlife species and their associated habitat areas shall be regulated under this chapter:

1. Fish. Coho salmon, pink salmon, chum salmon, sockeye salmon, cutthroat trout, steelhead.

D. Habitats of Local Importance.

1. Areas with which state-listed monitor or candidate fish or wildlife species or federally listed candidate fish or wildlife species have a primary association (habitat areas and point locations), as specified in Washington Department of Wildlife Policies 4802 and 4803, and which if altered may reduce the likelihood that the species will survive and reproduce over the long term. The list of endangered, threatened, or sensitive species is maintained and located at:

2. Documented habitat areas or potential habitat areas and point locations for fish and wildlife species. These areas include specific habitat types, which are infrequent in occurrence in Edgewood and may provide specific habitats with which endangered, threatened, sensitive, candidate, or monitor fish and wildlife species have a primary association, such as breeding habitat, winter range, and movement corridors. These areas include the following:
   a. Oregon white oak trees and woodlands. Oregon white oak woodlands, stands, and individual trees meeting the following criteria shall be considered priority habitat and shall be subject to protection under the provisions of this chapter:
      i. Priority Oregon White Oak Woodlands. Stands of Oregon white oak or oak/conifer associations where the stand is at least one acre in size and the canopy coverage of the oak component of the stand is greater than or equal to 25 percent (see Figure 14.40-1).
      ii. Significant Oaks and Stands. Single oaks, or stands of oaks smaller than one acre in size, when any of the following criteria are met:
         (A) Individual trees having a diameter at breast height of 20 inches or more; or
         (B) Oregon white oak stands in which the oak trees have an average diameter at breast height of 15 inches or more regardless of stand size.
   b. Old growth/mature forests.
   c. Caves.
   d. Cliffs.
   e. Snag-rich areas and logs.
   f. Waters of the state and/or natural waters and adjacent shoreline areas (200 feet landward measured from the ordinary high water mark) including:
      i. All water bodies classified by the Washington Department of Natural Resources (DNR) water typing classification system as detailed in WAC 222-16-030 and 222-16-031.
      ii. All waters that support critical fish or wildlife species (i.e., areas that have connectivity to fish bearing waters and may potentially provide habitat given no natural barriers to fish passage).
      iii. Ponds and their submerged aquatic beds.
   g. Wetlands (refer to Chapter 14.30 EMC).
Chapter 14.40 CRITICAL FISH AND WILDLIFE HABITAT CONSERVATION AREAS

h. Heron rookeries.

E. Potential Critical Fish and Wildlife Habitat Areas. Potential critical fish and wildlife habitat areas, as depicted on the Critical Areas Atlas — Critical Fish and Wildlife Habitat Area Maps, are those areas where the suspected presence of critical fish or wildlife species is sufficient to require critical fish or wildlife habitat area review (see Figure 14.40-2). Potential critical fish and wildlife habitat areas are determined using the following criteria:

1. A habitat area identified on one of the maps listed in EMC 14.10.140, Appendix A (includes but is not limited to breeding habitat, winter ranges, movement corridors, oak woodlands, streams, ponds, etc., as outlined in subsections (A) through (D) of this section) plus the adjacent 200 feet surrounding the habitat area.

2. A point location identified on one of the maps listed in EMC 14.10.140, Appendix A, (including but not limited to nests, dens, rookeries, etc.) plus the adjacent 800 feet surrounding the point location. (Ord. 02-200 § 2).

14.40.030 Critical fish and wildlife habitat conservation area review procedures.

A. Habitat management plan. When the department’s maps, sources, or field investigations indicate that the proposed project area is located within 300 feet of a known or suspected fish or wildlife habitat conservation area, an applicant shall submit a habitat management plan prepared by a qualified fisheries biologist or wildlife biologist. The requirement to provide a habitat conservation plan for habitat conservation areas may be waived if the department determines that there are no potential direct and/or indirect impacts on designated species or habitats that would result from the proposed development. Habitat management plans shall comply with the requirements established in EMC 14.40.070, Appendix A.

A. General Requirements.

1. The City’s Critical Areas Atlas — Critical Fish and Wildlife Habitat Area Maps provide an indication of where potential critical fish and wildlife habitat areas are located within the city. The presence or location of a potential critical fish or wildlife species, habitat area, or point location that has not been mapped, but that may be present on or adjacent to a site, shall be determined using the procedures and criteria established in this chapter.

2. The department will complete a review of the Critical Areas Atlas — Critical Fish and Wildlife Habitat Area Maps and other source documents for any proposed regulated activity to determine whether the site for the regulated activity is located within a potential critical fish or wildlife habitat area. Identification of a potential critical fish or wildlife habitat area may also occur as a result of field investigation conducted by Department or Washington Department of Fish and Wildlife (WDFW) staff.

3. When the department’s maps, sources, or field investigation indicates that the site for a proposed regulated activity is located within a potential critical fish or wildlife habitat area, the department shall require the submittal of a critical fish and wildlife application and habitat assessment to determine the presence or absence of critical fish or wildlife species or habitat. The habitat assessment shall be documented as set forth in subsection (B) of this section (see EMC 14.40.080(C), Figure 14.40-3).

4. The requirement to conduct a habitat assessment may be waived by the department when the department determines that no other critical fish and wildlife species and habitats, as set forth in EMC 14.40.020, are present. The applicant shall be required to comply with the standards set forth in EMC 14.40.040(D).

5. Projects undergoing review for critical fish and wildlife habitat areas shall be routed to tribal agencies with jurisdiction for review. Tribes will have an opportunity to provide specific habitat information on proposed development sites. If necessary, the department will seek additional assistance from the Washington Department of Fish and Wildlife and similar appropriate state and federal agencies.

6. Approval of a critical fish and wildlife application shall be granted upon a determination that the habitat assessment and mitigation plan, if applicable, are thorough and accurate and meet all requirements of this title.

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
7. If application of the standards contained in this chapter would deny all reasonable use of a site, the applicant may pursue a reasonable use exception as set forth in EMC 14.20.050.

8. Unless otherwise stated in this chapter, the critical area protective measure provisions contained in EMC 14.10.080 shall apply.

B. Habitat Assessment. A habitat assessment is a site investigation process to evaluate the presence or absence of a potential critical fish or wildlife species or habitat affecting a subject property.

1. The applicant may select either a fish or wildlife biologist, as applicable, or department staff to conduct a habitat assessment to determine whether or not a critical fish or wildlife habitat area, point location, and any associated buffer are located on the site for a proposed development as outlined below:

   a. Applicants for single-family dwellings or agricultural activities may retain department staff to complete the habitat assessment as follows:
      
      i. Requests for department staff to conduct a habitat assessment shall be accompanied with a critical fish and wildlife habitat area application and associated fee(s).
      
      ii. If department staff conducts the habitat assessment and determines that no critical fish or wildlife habitat areas, point locations, or associated buffers are present on the site, then the critical fish and wildlife habitat area review will be considered complete.
      
      iii. If department staff conducts the habitat assessment and determines that critical fish or wildlife habitat areas, point locations, or associated buffers are present on the site, then the applicant shall be required to submit a habitat assessment study or a habitat assessment report as outlined in subsection (B)(1)(b) of this section. This requirement may be waived if the applicant agrees to comply with the standards set forth in EMC 14.40.040 and the critical area protective measure set forth in EMC 14.10.080.

   b. If a fish or wildlife biologist conducts the habitat assessment, then the following documentation shall be submitted to the department:
      
      i. The habitat assessment shall be submitted in the form of a habitat assessment letter when the fish or wildlife biologist completes the field investigation and determines that a critical fish or wildlife habitat area, point location, or associated buffer is not located on the site. The habitat assessment letter shall meet the requirements contained in EMC 14.40.070, Appendix A (see EMC 14.40.080(C), Figure 14.40-3).
      
      ii. The habitat assessment shall be submitted in the form of a habitat assessment study when the fish or wildlife biologist completes the field investigation and determines a critical fish or wildlife habitat area, point location, or associated buffer is located on the site and when the proposed regulated activity complies with the standards set forth in EMC 14.40.040 and the buffer requirements as set forth in EMC 14.40.060. The habitat assessment study shall meet the requirements contained in EMC 14.40.070, Appendix B (see EMC 14.40.080(C), Figure 14.40-3).
      
      iii. The habitat assessment shall be submitted in the form of a habitat assessment report when the fish or wildlife biologist completes the field investigation and determines a critical fish or wildlife habitat area, point location, or associated buffer is located on the site and when the proposed development activity does not or cannot comply with the standards set forth in EMC 14.40.040 and the buffer requirements as set forth in EMC 14.40.060. The habitat assessment report shall meet the requirements contained in EMC 14.40.070, Appendix C (see EMC 14.40.080(C), Figure 14.40-3).
      
      iv. Habitat assessments shall be submitted to the department for review and approval together with a critical fish and wildlife habitat area application and associated fee(s).
      
      v. Habitat assessments shall be prepared, signed, and dated by a fisheries or wildlife biologist (as defined in EMC 14.10.060), as applicable to the particular species or habitat type.
      
      vi. Habitat assessment reports shall address the mitigation requirements set forth in EMC 14.40.050.
The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.

Chapter 14.40 CRITICAL FISH AND WILDLIFE HABITAT AREAS

2. All habitat assessments submitted under the requirements of this chapter shall, at a minimum, include the following:

a. The parcel number of the subject property.

b. The site address of the subject property, if one has been assigned by the city.

c. The date and time when the site evaluation for the habitat assessment was conducted and the date when the habitat assessment was prepared.

d. The credentials of the fish or wildlife biologist who prepared the habitat assessment.

e. The mailing address and phone number of the property owner and the fish or wildlife biologist that prepared the habitat assessment.

f. A detailed description of the vegetation on and adjacent to the site.

g. Identification and a detailed description of any critical fish or wildlife species or habitats, as set forth in EMC 14.40.020, on or adjacent to the site and the distance of such habitats or species in relation to the site. Describe efforts to determine the status of any critical species in the project area, including information on survey methods, timing, and results of surveys for species or suitable habitat identification.

h. Include any information received from biologists with special expertise on the species or habitat type, such as WDFW, Tribal, USFS, or other local, regional, federal, and university fish, wildlife and habitat biologists and plant ecologists. Include any such conversations in the habitat assessment and cite as personal communication.

i. A map showing the location of the site, including written directions.

j. The department may also require that the applicant request a separate evaluation of the site by WDFW staff to confirm the findings of the habitat assessment.

3. Hold harmless clauses, disclaimers, and limitations are not allowed within a habitat assessment letter.

4. The department shall review the habitat assessment and either:

a. Accept the habitat assessment and approve the critical fish and wildlife application; or

b. Reject the habitat assessment and notify the applicant in writing of the reasons why the habitat assessment was rejected. (Ord. 02-200 § 2).

14.40.040 Critical fish and wildlife habitat area standards

A. Allowed activities.

1. Activities permitted under this section shall comply with the provisions of all other chapters contained in this title.

2. All proposed regulated activities shall comply with the buffer requirements contained in EMC 14.40.060.

3. If the department determines that mitigation is necessary to offset the identified impacts from a proposed development, the applicant shall comply with the mitigation requirements set forth in EMC 14.40.050.

4. Unless otherwise allowed in this chapter, all regulated activities shall be located outside critical fish and wildlife habitat areas and associated buffers.

5. A proposed regulated activity may be allowed within a critical fish or wildlife habitat area or required buffer when located on an existing lot of record that was created prior to the effective date of the ordinance codified in this chapter subject to the following conditions.
a. Applicants shall demonstrate there are no other feasible alternatives that would allow the proposed development to occur completely outside the critical fish or wildlife habitat area or the required associated buffer.

b. The development cannot be located outside the critical fish or wildlife habitat area or required buffer due to topographic constraints of the parcel or size and/or location of the parcel in relation to the limits of the critical fish or wildlife habitat area or required buffer.

c. If applicable, a building setback variance has been reviewed, analyzed, and rejected as a feasible alternative to encroachment into the critical fish or wildlife habitat area or associated buffer.

d. The proposed project complies with the standards set forth in this section and has demonstrated through the submittal of a habitat assessment report that adequate mitigation as outlined in EMC 14.40.050 has been provided.

A. The following activities may be permitted in habitat conservation areas and/or their buffers when all reasonable measures have been taken to avoid and mitigate adverse effects on species and habitats and a net loss of habitat functions will not occur. In order to verify the following conditions, a habitat management plan meeting the requirements of EMC 14.40.070, Appendix A must be submitted.

B. Riparian Areas, Ponds, and Associated Buffers. The following specific regulated activities may occur within a riparian area, pond, or associated buffer subject to the following standards:

1. Clearing and Grading. When clearing and grading is permitted as part of an authorized regulated activity or as otherwise allowed in these standards, the following shall apply:

   a. Grading is allowed only during the dry season, which is typically regarded as beginning on May 1st and ending on October 1st of each year, the department may extend or shorten the dry season on a case-by-case basis, determined on actual weather conditions.

   b. Filling or modification of a wetland or wetland buffer is permitted only if it is conducted as part of an approved wetland permit issued by the department.

   c. The soil duff layer shall remain undisturbed to the maximum extent possible. Where feasible, any soil disturbed shall be redistributed to other areas of the project site.

   d. The moisture-holding capacity of the topsoil layer shall be maintained by minimizing soil compaction or reestablishing natural soil structure and infiltrative capacity on all areas of the site that impervious surfaces do not cover.

   e. Erosion and sediment control that meets or exceeds the standards set forth in Edgewood’s adopted stormwater management manual (Chapter 13.05 EMC) shall be provided.

   1. Stream Erosion Control Measures. New or replacement stream erosion control measures shall be subject to the following standards:

      a. The proposal complies with the provisions set forth in Chapter 14.110 EMC.

      b. The required habitat management plan demonstrates the following:

         i. Natural stream processes will be maintained. The project will not result in increased beach erosion or alterations to, or loss of, stream substrate within one-quarter mile of the site.

         ii. The stream erosion control measure will not adversely impact fish or wildlife habitat conservation areas or associated wetlands.

   2. Docks and launching ramps. Construction, reconstruction, repair, and maintenance of docks and public or private launching ramps are subject to all of the following:

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
8. On-Site Sewage Systems and Wells.

a. New on-site sewage systems and individual wells are permitted if accessory to an approved structure.

b. Repairs to failing on-site sewage systems associated with an existing structure shall be accomplished by utilizing one of the following methods that result in the least impact:
   i. Connection to an available public sewer system;
   ii. Replacement with a new on-site sewage system located in a portion of the site that has already been disturbed by development and is located landward as far as possible, provided the proposed sewage system is in compliance with the provisions in Chapter 14.70 EMC.; or
   iii. Repair to the existing on-site septic system.

B. The activities listed below are allowed in habitat conservation areas and their buffers, and do not require submission of a habitat management plan, except where such activities would result in a loss of the functions and values of habitat conservation areas or buffers.

12. Vegetation Removal, Disturbance, and Introduction. Limited vegetation removal shall be allowed subject to EMC 18.90.180 (tree preservation) and the following standards:

a. Hazard trees may be cut; provided, that:
   i. The applicant submits a report from a certified arborist, licensed architect, or professional forester that documents the hazard and provides a replanting schedule for the replacement trees and receives written approval from the city authorizing the tree removal;
   ii. Tree cutting shall be limited to limbing and crown thinning, unless otherwise justified by the landowner’s expert. Where limbing or crown thinning is not sufficient to address the hazard, trees should be topped to remove the hazard rather than cut at or near the base of the tree. All vegetation cuttings (tree stems, branches, tops, etc.) shall be left within the critical habitat area or buffer unless removal is warranted due to the potential for disease transmittal to other healthy vegetation;
   iii. The landowner shall replace any trees that are felled or topped with new trees at a ratio of two replacement trees for each tree felled or topped. Tree species that are native and indigenous to the site shall be used;
   iv. Hazard trees determined to pose an imminent threat or danger to public health or safety, or to public or private property, or serious environmental degradation may be removed or topped by the landowner prior to receiving written approval from the department; provided, that within 14 days following such action, the landowner shall submit the necessary report and replanting schedule demonstrating compliance with subsections (B)(12)(a)(i) through (iii) of this section.

b. Trimming of vegetation for purposes of providing view corridors will be allowed; provided, that trimming shall be limited to view corridors of 20 feet in width or less, that no more than 30 percent of the live crown is removed, and that benefits to fish and wildlife habitat are not reduced. Trimming shall be limited to hand pruning of branches and vegetation. Trimming shall not include felling, topping, or removal of trees.

c. Limited vegetation and tree removal subject to the conditions contained in an approval for a regulated activity.
The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.

23. Fencing. Fencing shall be placed in such a manner as to maintain wildlife movement corridors and not create any fish passage blockages. The department shall approve the location, type, and height of any proposed fencing.

4. Shoreline Erosion Control Measures. New or replacement shoreline erosion control measures shall be subject to the following standards:
   a. The proposal complies with the provisions set forth in Chapter 14.110 EMC.
   b. The applicant has submitted a habitat assessment report, as set forth in EMC 14.40.030.
   c. The habitat assessment report demonstrates the following:
      i. Natural shoreline processes will be maintained. The project will not result in increased beach erosion or alterations to, or loss of, shoreline substrate within one-quarter mile of the site.
      ii. The shoreline erosion control measure will not adversely impact critical fish or wildlife habitat areas or associated wetlands.
      iii. Adequate mitigation measures, as set forth in EMC 14.40.050, are provided that ensure no net loss of intertidal or riparian habitat or function occurs as a result of the proposed shoreline erosion control measure.
      iv. No alteration of intertidal migration corridors occurs as a result of the proposed shoreline erosion control measure.

5. Streambank Stabilization. Streambank stabilization to protect new structures from future channel migration is not permitted except when such stabilization is achieved through bioengineering or soft armoring techniques. Streambank stabilization shall comply with the provisions set forth in Chapter 14.70 EMC.

6. Launching Ramps – Public or Private. Launching ramps may be allowed when the applicant has submitted a habitat assessment report as set forth in EMC 14.40.030 that has demonstrated the following:
   a. The project will not result in increased beach erosion or alterations to, or loss of, shoreline substrate within one-quarter mile of the site.
   b. The ramp will not adversely impact critical fish or wildlife habitat areas or associated wetlands.
   c. Adequate mitigation measures, as set forth in EMC 14.40.050, are provided that ensure no net loss of intertidal or riparian habitat or function occurs as a result of the ramp.
   d. No alteration of intertidal migration corridors as a result of the ramp.

7. Docks. Repair and maintenance of an existing dock or pier shall be permitted subject to the following:
   a. There is no increase in the use of materials creating shade for predator species;
   b. There is no expansion in overwater coverage;
   c. There is no new spanning of waters between three and 13 feet deep;
   d. There is no increase in the size and number of pilings; and
   e. There is no use of toxic materials (such as creosote) that come in contact with the water.

8. Roads, Trails, Bridges, and Rights-of-Way. Construction of trails, roadways, and minor road bridging (less than or equal to 30 feet wide) may be allowed subject to the following standards:
   a. There is no other feasible alternative route with less impact on the environment.
b. The crossing allows for uninterrupted downstream movement of wood and gravel.

c. Mitigation, pursuant to EMC 14.40.050, for impacts is provided.

d. Road bridges are designed according to the WDFW Habitat and Lands Environmental Division’s Fish Passage Design at Road Culverts, March, 1999, and the NMFS Guidelines for Salmonid Passage at Stream Crossings, 2000.

e. Trails and associated viewing platforms shall be made of pervious materials.

a. Installation of a utility is permitted if constructed in an existing, improved roadway, driveable surface or shoulder, subject to compliance with Pierce County road maintenance best management practices (BMPs).

b. New utility lines and facilities are permitted to cross watercourses if they comply with the following standards:

i. Avoid critical fish and wildlife habitat areas to the maximum extent possible.

ii. Cross at an angle greater than 60 degrees to the centerline of the channel in streams or perpendicular to the channel centerline whenever boring under the channel is not feasible.

iii. Crossings are contained within the footprint of an existing road or utility crossing where possible.

iv. Avoid paralleling the stream or following a down-valley course near the channel.

v. Do not increase or decrease the natural rate of shore migration or channel migration.

vi. Bore beneath the scour depth and hyporheic zone of the water body and channel migration zone (CMZ) where feasible.

10. Public Flood Protection Measures. New public flood protection measures and expansion of existing ones may be approved, subject to the department’s review and approval of a habitat assessment report or the approval of a federal biological assessment.

11. Instream Structures. A new instream structure (e.g., such as, but not limited to, high flow bypass, sediment ponds, instream pools, retention and detention facilities, side, gart, dams, weirs, etc.) shall be allowed only as part of an approved mitigation or restoration project or watershed basin plan approved by the city and upon acquisition of any required state or federal permits. The structure shall be designed to avoid modifying flows and water quality in ways that may adversely affect critical fish species. Proposals for placement of water quality, water quantity, or other instruments or structures within a stream to gather data, or as a mitigation measure, shall be exempt from the provisions of this title upon review and approval by the department.

12. Stormwater Conveyance Facilities. Conveyance structures whose sole purpose is to convey stormwater already treated for quality, or water bypassed around water quality treatment facilities pursuant to an approved stormwater plan, may be constructed subject to the following standards:

a. No other feasible alternatives with less impact exist;

b. Mitigation for impacts is provided;

c. Stormwater conveyance facilities shall incorporate fish habitat features;

d. Vegetation shall be maintained and, if necessary, added adjacent to all open channels and ponds in order to retard erosion, filter out sediments, and shade the water.

13. On-Site Sewage Systems and Wells.

a. New on-site sewage systems and individual wells are permitted if accessory to an approved structure.

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
b. Repairs to failing on-site sewage systems associated with an existing structure shall be accomplished by utilizing one of the following methods that result in the least impact:

i. Connection to an available public sewer system;

ii. Replacement with a new on-site sewage system located in a portion of the site that has already been disturbed by development and is located landward as far as possible, provided the proposed sewage system is in compliance with the provisions in Chapter 14.70 EMC; or

iii. Repair to the existing on-site septic system.

14. New Agricultural Activities. New agricultural activities are permitted subject to the following:

a. Agricultural activities and structures shall comply with the provisions of Chapter 14.70 EMC, Flood Hazard Areas.

b. The agricultural activity is in compliance with the USDA, NRCS Conservation Reserve Program farm management standards.

c. A copy of an approved NRCS or Pierce County conservation district farm management plan that documents compliance with the USDA, NRCS Conservation Reserve Program farm management standards has been submitted to the department for review and approval.

15. Structures and Landscaped Areas. New construction, redevelopment, or additions or expansions of existing structures or reconstruction of damaged structures may be permitted subject to the following:

a. Maximum disturbance (including the principal structure, accessory structures, and related appurtenances such as landscaped areas, wells, on-site septic systems, etc.) within the habitat area and/or associated buffer shall be:

i. Two thousand five hundred square feet if the area of the lot within the buffer is 5,000 square feet or less;

ii. Five thousand square feet if the area of the lot within the buffer is 10,000 square feet or greater;

iii. Fifty percent of the area of the lot if the area within the buffer is between 5,001 and 9,999 square feet; and

iv. Expansions and redevelopment projects shall be limited to the lesser of 1,000 additional square feet of disturbance area or the same area and disturbance criteria that would have been permitted if the site were undeveloped.

b. Development is prohibited within 50 feet of any waterbody, watercourse, as measured landward from the ordinary high water mark.

c. Development is prohibited within any side channel, oxbow, spring, or other type of off-channel habitat including connectable relic channels or oxbows.

d. The area not disturbed by development shall be managed for native or approved vegetation and planted with native or approved vegetation when necessary following adopted guidelines to reestablish natural forested conditions (example: WDFW’s Restoring the Watershed, A Citizen’s Guide to Riparian Restoration in Western Washington).

e. The proposal complies with the standards set forth in Chapter 14.70 EMC, Flood Hazard Areas.

f. The expansion of existing multifamily structures and the conversion of lots from single-family to multifamily use is prohibited.

16. Alteration of Watercourses. Alteration of watercourses shall comply with the standards set forth in subsection (D) of this section.

C. Oregon White Oak Trees and Woodlands.

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
1. Habitat Protection. Oak woodlands, stands, and individual trees meeting the criteria set forth in EMC 14.40.020(D) shall be protected as follows:

   a. Priority Oregon White Oak Woodlands.
      i. Priority Oregon white oak woodlands shall be protected through inclusion within a conservation tract meeting the requirements set forth in EMC 14.40.060. The tract shall extend a minimum of five feet beyond the outermost dripline of the trees within the woodland.
      ii. A minimum of 80 percent of the Oregon white oak trees on site having a diameter at breast height of six inches or larger shall be preserved within the conservation tract.
      iii. The conservation tract shall be maintained in an undisturbed state except for periodic watering, grass mowing of not more than four times per year, and hand removal of noxious or invasive plants, including conifer seedlings and saplings.
      iv. No clearing, grading, filling, or construction of any kind shall occur within the conservation tract.
      v. Use of pesticides, herbicides, rodenticides, fungicides, or fertilizers in the conservation tract shall be prohibited.
      vi. No clearing, grading, filling, or construction of any kind shall occur within the conservation tract.
      vii. Downed or felled oak trees within the conservation tract shall be retained; provided, that such trees may be selectively cut to further enhance habitat value.

   b. Significant Oaks and Stands.
      i. Significant Oaks. Seventy percent of all Oregon white oaks having a diameter at breast height of 20 inches or greater shall be preserved.
      ii. Significant Oak Stands. A minimum of 50 percent of the Oregon white oak trees within the stand shall be preserved.
      iii. Downed or felled oak trees and snags within significant oak stands shall be retained when located within a tract of land separate from individually owned lots.
      iv. Downed or felled oak trees and snags within significant oak stands shall be retained when located within a tract of land separate from individually owned lots.

2. Protection of Trees during Construction. Trees conserved pursuant to this chapter shall be protected before and during site development and construction through adherence to the following requirements:

   a. Tree protection area shall be designed to protect each tree or tree stand during site development and construction.
      Tree protection areas shall vary widely in shape, but must extend a minimum of five feet beyond the existing tree canopy along the outer edge of the dripline of the tree(s), unless otherwise approved by the department.
   b. Tree protection areas shall be added and clearly labeled on all applicable site development and construction drawings submitted to the department.
   c. Temporary construction fencing at least three feet tall shall be erected around the perimeter of the tree protection area prior to the initiation of any clearing or grading. The fencing shall be posted with signage clearly identifying the tree protection area. The fencing shall remain in place through site development and construction.
   d. No clearing, grading, filling, or other development activities shall occur within the tree protection area, except where approved in advance by the department and shown on the approved plans for the proposal.
   e. No vehicles, construction materials, fuel, or other materials shall be placed in tree protection areas. Movement of any vehicle within tree protection areas shall be prohibited.
   f. No nails, rope, cable, signs, or fencing shall be attached to any tree proposed for retention.

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.

**Chapter 14.40 CRITICAL FISH AND WILDLIFE HABITAT CONSERVATION AREAS**

**14.40.030(A) Critical fish and wildlife habitat conservation areas.** The department may approve the use of alternate tree protection techniques if an equal or greater level of protection will be provided.

D. Standards for Other Critical Habitat Areas. Standards for critical habitat areas not listed in EMC 14.40.030(A) and (B) shall be determined on a case-by-case basis, based upon the needs of specific species or habitat area of study. The department will coordinate with the WDFW in these instances to determine appropriate standards and development a habitat management plan. (Ord. 16-482 § 2 (Exh. C); Ord. 02-200 § 2).

**14.40.050 Buffer standards.**

A. Determining buffer widths. Buffers shall be required as set forth for each habitat type. The required buffers shall be delineated, both on a site plan or plat, and on the property prior to approval of any regulated activity.

1. Aquatic habitat conservation areas.
   a. Buffers for aquatic habitat conservation areas shall be based upon the water type classification of the water body as specified in WAC 22-16-030. Refer to Table 14.40.050 for the water types and the associated buffer requirements.
   b. The required buffer width shall be measured in all directions from the ordinary high water mark.
   c. The required buffer shall be extended to include any adjacent regulated wetland(s), landslide hazard areas, and/or erosion hazard areas and required buffers.

2. Non-aquatic habitat conservation areas. Appropriate buffers for critical habitat areas and species not listed in Table 14.40.050 shall be determined by the Washington Department of Fish and Wildlife or by a qualified wildlife biologist and documented in an approved habitat management plan.

¹ In the event that buffers for any habitat conservation area or other critical area are contiguous or overlapping, the landward-most edge of all such buffers shall apply.

² As of the effective date of this title, there are no Type S streams within city jurisdiction.

C. Modification to Buffer Width Requirements. The standard buffer widths of subsection (A) of this section may be modified as follows:

1. Buffer Width Reductions. A buffer width reduction may be proposed through submittal of a habitat management plan. Buffer reductions of up to a maximum of 25 percent may be allowed when the applicant demonstrates the following circumstances:
   a. Buffer encroachment is unavoidable.
   b. The existing buffer is predominately un-vegetated, composed of nuisance species, or is in an otherwise highly disturbed condition.

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
c. Buffer reduction with enhancement will provide equal or greater protection of current habitat functions, and values, and will not adversely affect salmon habitat.

d. The buffer reduction will not increase the risk of slope failure or downslope stormwater drainage impacts.

e. The minimum width of the buffer at any given point shall be at least seventy-five (75) percent of the standard width, or twenty-five (25) feet, whichever is greater.

f. The project includes a buffer enhancement plan as part of the mitigation required by EMC 14.40.060. The buffer enhancement plan shall use native plant species.

2. Buffer Width Increases. The department may require increased buffer width(s) when any of the following are identified:

a. A larger buffer is necessary to maintain viable populations of existing species or protect the existing functions of the habitat area;

b. The adjacent land is susceptible to severe erosion and erosion control measures will not effectively prevent adverse habitat impacts;

c. The adjacent land has minimal vegetative cover or slopes greater than 20 percent; or

d. The habitat area is in an area of high tree blow down potential. In these cases the habitat area may be expanded an additional 50 feet on the windward side.

14.40.050 Mitigation requirements.

A. Mitigation. Compensatory mitigation is required for all unavoidable alterations to fish and wildlife habitat conservation areas or their buffers. Mitigation of alteration to habitat areas shall achieve equivalent or greater biological functions. Mitigation shall address each functional attribute affected by the alteration to achieve functional equivalency or improvement on a per function basis. Mitigation elements to be addressed may include, but are not limited to: restoration of previously degraded areas and key habitat features, restoration of riparian vegetation communities to provide shade and large woody debris, addition of large woody debris, and installation of upland habitat features.

B. Type of mitigation required. In determining the extent and type of mitigation required, the department may consider all of the following:

1. The ecological processes that affect and influence habitat structure and function within the watershed or sub-basin;

2. The individual and cumulative effects of the action upon the functions of the critical area and associated watershed;

3. Observed or predicted trends regarding the gains or losses of specific habitats or species in the watershed, in light of natural and human processes;

4. The likely success of the proposed mitigation measures;

5. Effects of the mitigation actions on neighboring properties; and

6. Opportunities to implement restoration actions formally identified by an adopted shoreline restoration plan, watershed planning document prepared and adopted pursuant to Chapter 90.82 RCW, a salmonid recovery plan or project that has been identified on the Salmon Recovery Board Habitat Project List or by the Washington State Department of Fish and Wildlife as essential for fish and wildlife habitat enhancement.

C. Location. Compensatory mitigation shall be provided on-site or off-site in the location that will provide the greatest ecological benefit to the species and/or habitats affected and have the greatest likelihood of success. Mitigation shall occur as close to the impact site as possible, within the same sub-basin, and in a similar habitat type as the permitted...
D. Mitigation plans. When required by this chapter, the applicant shall submit a fish and wildlife habitat conservation area mitigation plan meeting the requirements of EMC 14.30.060. A. All regulated development activities in critical fish and/or wildlife habitat areas and associated buffers shall be mitigated in the following order:

1. Avoiding the impact altogether by not taking a certain action or parts of actions.

2. Minimizing impacts by limiting the degree or magnitude of the action and its implementation by using appropriate technology or by taking affirmative steps to reduce impacts.

3. The following types of mitigation (no order of preference):
   a. Rectifying the impact by repairing, rehabilitating, or restoring the affected environment;
   b. Reducing or eliminating the impact over time by preservation and maintenance operations during the life of the action; or
   c. Compensating for the impact by replacing or providing substitute resources or environments.

4. Monitoring the impact and compensation and taking appropriate corrective measures. Monitoring reports are to be submitted to the department for a period of time, and upon a schedule, appropriate for the species or habitat of concern.

5. Mitigation for individual actions may include a combination of the above measures.

B. Specific mitigation elements are to be discussed within a habitat assessment report, as defined in EMC 14.40.070, Appendix C. The habitat assessment report is to provide specific recommendations to reduce, eliminate, or mitigate for the adverse effects of the proposed activity. Potential measures include timing restrictions for all or some of the activities, clearing limitations; avoidance of specific areas; special construction techniques; hydraulic project approval (HPA) conditions; planting with native vegetation; habitat enhancement (i.e., fish passage barrier removal); best management practices, etc. If applicable, append a copy of the HPA, specifications for BMPs, or other documentation to support the implementation of the conservation measure.

C. The department may require an enhancement plan that provides mitigation for the impacts associated with any encroachment into the habitat area or associated buffer or a request for buffer averaging/reduction as set forth in EMC 14.40.060(C). The enhancement plan shall use native plant species that are indigenous to the project area and shall substantiate that an enhanced habitat area and/or buffer will improve the functional attributes of the affected area to provide additional protection for critical fish or wildlife habitat, wetlands, landslide hazard areas, or adjacent properties that may be affected by the proposal. At a minimum, the enhancement plan shall include detailed information on the following:

1. Type of species proposed.

2. Exact location of proposed enhancement area.

3. Timing and schedule of planting.

4. Schedule for monitoring and maintenance and any financial guarantees for those as required in EMC 14.10.080.

5. Name, address, and telephone number of the person(s) responsible for the enhancement project.

6. Any additional information required by the department.
The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.

*Water types are based upon the criteria established in WAC 222-16-030 and 222-16-031. Weater types are mapped in the City’s Critical Areas Atlas—Fish and Wildlife Habitat Areas—Stream Typing Maps and Fish and Wildlife Habitat Areas—Critical Fish Presence Maps.*

*There may be wetlands associated with ponds or streams that are regulated and which may have a required buffer greater than those listed in Table 14.40.060, e.g., an urban lake with no buffer requirement may have associated wetlands with 50 to 150 foot buffers.*

**C. Modification to Buffer Width Requirements.** The standard buffer widths of subsection (B) of this section may be modified by averaging, reducing, or increasing as follows:

1. **Buffer Averaging.** Buffer width averaging may be proposed through submittal of a habitat assessment report. Buffer width averaging shall be allowed only when the applicant demonstrates all of the following:
   a. Buffer encroachment is unavoidable.
   b. The habitat area contains variations in sensitivity (both geological and biological) due to existing site characteristics.
   c. Buffer averaging will not adversely impact the structure and function of the habitat area.
   d. The buffer averaging is not inconsistent with other buffer requirements set forth under this title (e.g., wetlands, landslide hazard areas, etc.).
   e. The buffer averaging will not increase the risk of slope failure or downslope stormwater drainage impacts.
   f. The total buffer area after averaging is no less than the buffer area prior to the averaging.
   g. The minimum buffer width after averaging will not be less than 50 percent of the width established in subsection (B) of this section.
   h. The averaging is accomplished within the project boundaries.

2. **Buffer Width Reductions.** A buffer width reduction may be proposed through submittal of a habitat assessment report. Buffer reductions of up to a maximum of 25 percent may be allowed when the applicant demonstrates the following circumstances:

---

**Formatted: Indent: 0"**
The buffer encroachment is unavoidable.

b. The buffer reduction will not result in an adverse impact to the species of study, any associated wetlands, or landslide hazard areas.

c. The buffer reduction will not increase the risk of slope failure or downslope stormwater drainage impacts.

d. The encroachment does not occur within landslide hazard area buffer or into the buffer of any associated wetlands.

e. The proposed buffer area is extensively vegetated, has less than 20 percent slopes, and the reduction will not result in adverse impact to the structure and function of the habitat area.

f. The acreage included in the buffer would substantially exceed the size of the habitat area.

g. The minimum buffer width will not be less than 75 percent of the total required width.

3. Buffer Width Increases. The department may require an increased buffer width when a larger buffer is necessary, based on site conditions, to protect habitat area functions and values. This determination shall be reasonably related to protection of the functions and values of the regulated habitat area. Such determination shall demonstrate any of the following:

a. A larger buffer is necessary to maintain viable populations of existing species or protect the existing functions of the habitat area;

b. The adjacent land is susceptible to severe erosion and erosion control measures will not effectively prevent adverse habitat impacts;

c. The adjacent land has minimal vegetative cover or slopes greater than 20 percent or

d. The habitat area is in an area of high tree blow down potential. In these cases the habitat area may be expanded an additional 50 feet on the windward side.

4. Where an application for a development permit, other than a site development permit, has not been submitted in association with a proposed forest practice activity, a deviation from the standard buffer, as set forth in subsections (C)(1) and (2) of this section, shall not be allowed. (Ord. 02-200 § 2).

APPENDIX A

HABITAT MANAGEMENT PLAN

A. A habitat management plan shall, at a minimum, include the following:

1. The general critical areas report requirements in EMC 14.20.060.
2. Identification of any endangered, threatened, sensitive, or candidate species that have a primary association with habitat on the project area;
3. Map showing the location of the ordinary high water mark and/or locations of wildlife habitat conservation area(s) and their buffers in accordance with EMC 14.40.050;
4. The vegetative, faunal, topographic, and hydrologic characteristics of the habitat conservation area;
5. A discussion of any federal, state, or local special management recommendations, including Washington Department of Fish and Wildlife habitat management recommendations, that have been developed for species or habitat located on or adjacent to the project area;
6. A detailed discussion of the direct and/or indirect potential impacts on the habitat conservation area by the project. Such discussion shall include a discussion of the ongoing management practices that will protect habitat after the project site has been developed;
7. The mitigation plan requirements of EMC 14.20.070 if the activity will result in unavoidable impacts to habitat conservation areas. Mitigation measures may include:
   a. Prohibition or limitation of use and development activities within the habitat conservation area;
   b. Retention of vegetation and/or re-vegetation of areas/habitats critically important to species;
   c. Special construction techniques;
   d. Implementation of erosion and sediment control measures;
   e. Habitat restoration or enhancement (i.e., fish passage barrier removal);
   f. Seasonal restrictions on construction activities on the subject property;
   g. Clustering of development activities on the subject property; and/or
   h. Any other requirements and/or recommendations from federal, state, or local special management recommendations, including the Washington State Department of Fish and Wildlife’s habitat management guidelines.

14.40.070. Appendices.

A. Habitat Assessment Letters.
B. Habitat Assessment Studies.
C. Habitat Assessment Reports.

APPENDIX A

HABITAT ASSESSMENT LETTERS

A. The habitat assessment letter shall, at a minimum, include the following:

1. The information required in EMC 14.40.030(B)(2).
2. Documentation that the potential habitat is not present. Discuss the habitat features or types that are available as compared to the habitat features that define the potential habitat. Describe why potential restoration measures would not be feasible.
3. Documentation that potential species are not present. Note: a determination that a species is lacking based upon limited field investigation, occurring at an inappropriate time of the year for the species of study will not be...

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.

APPENDIX B

HABITAT ASSESSMENT STUDIES

A. The habitat assessment study shall, at a minimum, include the following:

1. The information required in EMC 14.40.030(B)(3).

2. Identify the presence of the habitat area or species on the site.

3. Identify and discuss how the project complies with the standards set forth in EMC 14.40.040.

4. Provide a detailed description of the proposed project. At a minimum, the following items should be included:
   a. A legal description (section, township, range) and vicinity map that clearly show the site and project area in relation to nearby waterbodies, sensitive habitats, etc.
   b. A site plan of the habitat area and associated buffer in relation to the proposed project area.
   c. Photographs, especially color copies, are useful to orient the reviewer to the project area. A combination of aerial or orthophotos and snapshots are ideal.

5. Describe the environmental baseline (current or pre-project) condition of the habitat and the project area. The baseline description should address all pertinent habitat parameters for the species.

6. Describe in detail the type and scope of development activity proposed:
   a. Describe the overall purpose of the project and a brief summary of project objectives.
   b. List all proposed project related construction activities and types of equipment. Provide a chronology of activities, timing of construction, hours of operation, phasing.
   c. Provide to-scale plans that show where work is proposed relative to habitat areas and buffers.
   d. Quantify areas of vegetation removal, include clearing and grubbing, vegetation type.
   e. Describe proposed grading and filling or other earthwork, include specific BMPs for erosion, sedimentation, stormwater, and spill control. If appropriate, append the temporary erosion sediment control (TESC) plan, spill control plan, BMP specifications, etc.
   f. Provide stormwater treatment information including:
      i. Amount of new impervious surface;
      ii. Percent of surface and type of treatment for new and existing impervious surface;
      iii. Specify BMPs to treat for quality and quantity; and
      iv. Identify the receiving area/waterbody for each BMP, including overflow channels.

B. Hold harmless clauses, disclaimers, and limitations are not allowed within a habitat assessment letter.

APPENDIX C
A. The applicant is advised to refer to the following guidance documents during the course of the habitat assessment report (HAR) preparation:

1. Washington Department of Fish and Wildlife Priority Habitat and Species Management Recommendations, May 1991 (or as hereafter amended), and supplemental documents including but not limited to:
   a. Priority Habitats and Species List;
   c. Management Recommendations for Washington’s Priority Habitats: Volume I Invertebrates; and

5. NMFS Checklist for Documenting Environmental Baseline and Effects of Proposed Action(s) on Relevant Indicators.

B. The following information must be included in every habitat assessment report:

1. Project Description. Describe in detail the type and scope of action proposed.
   a. Describe the overall purpose of the project and a brief summary of project objectives.
   b. List all proposed project related construction activities and types of equipment.
   c. Provide to-scale plans that show where work is proposed relative to sensitive areas and/or habitat.
   d. Quantify areas of vegetation removal, include clearing and grubbing, vegetation type, replanting plans.
   e. Provide a chronology of activities, timing of construction, phasing.
   f. Describe proposed grading and filling or other earthwork, include specific BMPs for erosion, sedimentation, stormwater, and spill control. If appropriate, append the spill control plan, BMP specifications, etc.
   g. Provide stormwater treatment information including:
      i. Amount of new impervious surface;
      ii. Percent of surface and type of treatment for new and existing impervious surface;
      iii. Specify BMPs to treat for quality and quantity;
      iv. Identify the receiving area/waterbody for each BMP, including overflow channels.
2. Description of the Project Area. The following items should be addressed as appropriate:

a. Provide a legal description (section, township, range) and vicinity map that clearly shows the project in relation to nearby waterbodies, sensitive habitats, etc.

b. Date of field review(s) of project, credentials of personnel involved, and results of visit(s).

c. Describe the environmental baseline (current or pre-project) condition of the habitat and the project area. The baseline description should address all pertinent habitat parameters for the species.

d. Describe the project setting in terms of physiographic region, general topography, dominant habitat and vegetation type(s), aquatic resources, land use patterns, and existing disturbance levels from human activities, roadways, etc.

e. Include information about past and present activities in the area that relate to the species or its habitat and/or the proposed action. This could include information on adjacent development projects, past consultations with state or federal agencies, previously established conservation measures, or species management plans.

3. Critical Fish and Wildlife Species and Habitat Occurrence. The HAR must be based on current site-specific information about the species and its life history. Cite any relevant scientific literature or research findings. At a minimum, the following items should be addressed:

a. Cite species listings provided by NMFS, WDFW, and/or USFWS. Append a copy of the listing to the report. Species listings should be updated every six months.

   i. Identify any state listed, federal or state proposed species (and candidate or species of concern if appropriate), and designated or proposed critical habitat that are known or have the potential to occur on-site or in the vicinity of the project area.

   ii. Identify fish by ecologically significant unit (ESU).

b. Describe the species, its habitat requirements and ecology in general, and relate that to the local populations. A lengthy life history is not required, but enough information should be provided to adequately explain the potential impacts.

c. Describe the potential suitable habitat for the species found on-site or in the project vicinity and how local populations use it. Discuss the local status of the species as appropriate. Determine the likely level and type of use of the area by each species.

4. Analysis of Effects on Listed and Proposed Species and Designated and Proposed Critical Habitat. The HAR should provide a thorough analysis of, and a separate section addressing the potential direct, indirect, interrelated and interdependent, and cumulative effects of the action on the species and its habitat within the project area. The following items should be addressed:

a. Define the project area (area of potential impacts, both indirect and direct). The area of impact is usually larger than the project area or project vicinity (i.e., the river upstream and downstream from a bridge project, waterbodies receiving stormwater).

b. Describe how the environmental baseline (current or pre-project condition of the habitat in the project area) will be degraded, maintained or improved (restored). If appropriate, append the completed NMFS Checklist for Documenting Environmental Baseline and Effects of Proposed Action(s) on Relevant Indicators.
The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
A determination of effect must be made for each identified critical fish and wildlife species or habitat area. For each, only one of the following determinations of effect is acceptable:

(A) No Effect. The appropriate finding to make when the direct or indirect impacts of a project will have no effect of any kind, negative or beneficial, upon a species or habitat area;

(B) May Affect, Not Likely to Adversely Affect. The appropriate finding to make when the direct or indirect effects of a project are insignificant, discountable, or beneficial; or

(C) Likely to Adversely Affect. The appropriate finding to make when the direct or indirect effects of a project may adversely impact a species or habitat area and the effects are not insignificant.

Determinations of “no effect” or “may affect, not likely to adversely affect” may not be based upon the argument that species will be displaced to other suitable habitat or that (based upon a limited number of surveys) species are not known to occur. The failure to provide site-specific surveys at the appropriate time of the year for the species of study will result in the department assuming a worst-case scenario in regards to project-related impacts.

For any proposed species or proposed critical habitat discussed, the conclusions should indicate whether the proposed project is likely to jeopardize the continued existence of the species (as in the entire species, not individual(s)), or adversely modify the proposed critical habitat.

7. References and Appendices. Refer to all appropriate project documents, particularly if the assessment depends upon information located elsewhere (e.g., in an EIS). Applicants may consider providing the department with copies of pertinent documents along with the HAR. At a minimum, the following items should be addressed:

a. Provide citations for other information referred to in the HAR, such as current literature and personal contacts used in the assessment. Include name, affiliation, and date.

b. Include as appropriate any photographs, survey methods, protocols, and results. Do not provide specific information regarding the exact location of state or federally listed species within the HAR document. Federal and state restrictions exist regarding the release of such information.

C. Hold harmless clauses, disclaimers, and limitations are not allowed within a habitat assessment report. (Ord. 02-200 § 2).

Chapter 14.50

AQUIFER RECHARGE AND WELLHEAD PROTECTION AREAS
CRITICAL AQUIFER RECHARGE AREAS

Sections:
14.50.010 Purpose.
14.50.020 Aquifer recharge and wellhead protection areas.
14.50.030 Aquifer recharge and wellhead protection areas review procedures.
14.50.040 Aquifer recharge and wellhead protection areas standards.

14.50.010 Purpose.
The purpose of this chapter is to protect critical aquifer recharge and wellhead protection areas from degradation or depletion resulting from new or changed land use activities. Due to the exceptional susceptibility and/or vulnerability of groundwater underlying aquifer recharge areas to contamination and the importance of such groundwater as sources of public water supply, it is the intent of this chapter to safeguard groundwater resources and wellhead protection areas by mitigating or precluding future discharges of contaminants from new land use activities. (Ord. 02-200 § 2).

14.50.020 Aquifer recharge and wellhead protection areas.
A. General. Aquifer recharge and wellhead protection areas are areas that have a critical recharging effect on groundwater used for potable water supplies and/or that demonstrate a high level of susceptibility or vulnerability to groundwater contamination from land use activities. These areas include the following:

1. Aquifer Recharge Areas. The boundaries of the two highest DRASTIC zones that are rated 180 and above on the DRASTIC index range, as identified in Map of Groundwater Pollution Potential, Edgewood, Washington, National Water Well Association, U.S. Environmental Protection Agency.

2. Wellhead Protection Areas. Wellhead protection areas that lie within the 10-year time of travel zone boundary of a group A public water system well, as delineated by the water system purveyor or its designee, pursuant to WAC 246-290-135.

3. Sole Source Aquifers. Sole source aquifers are areas that have been designated by the U.S. Environmental Protection Agency pursuant to the Federal Safe Water Drinking Act. As of the effective date of this title, there are no designated sole source aquifers within city limits.

14.50.030 Aquifer recharge and wellhead protection areas review procedures.
A. General Requirements.

1. The city’s Critical Areas Atlas – Aquifer Recharge and Wellhead Protection Area Map provides an indication of where aquifer recharge and wellhead protection areas are located within the city and the map is updated as necessary.

2. The department will complete a review of the aquifer recharge area map for any development proposal to determine whether the proposed project area for a regulated activity falls within an aquifer recharge or wellhead protection area.

3. When the department’s maps or sources indicate that the proposed project area for a regulated activity is located within an aquifer recharge or wellhead protection area, the department shall require an aquifer recharge and wellhead protection area review as set forth in this chapter.

4. Any proposed development located within an aquifer recharge or wellhead protection area shall comply with the standards set forth in EMC 14.50.040.

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
35. Any hazardous uses, as defined in EMC 14.50.040, shall require the submittal of a hydrogeologic assessment, as set forth in subsection (B) of this section.

46. The department may waive some of the critical area protective measure provisions contained in EMC 14.10.080.

B. Hydrogeologic Assessment.

1. The hydrogeologic assessment shall be prepared, signed, and dated by a state licensed geologist/hydrogeologist.

2. The hydrogeologic assessment shall be submitted in the form of a report detailing the subsurface conditions, the design of a proposed land use action, and the facilities operation which indicates the susceptibility and potential for contamination of groundwater supplies. The hydrogeologic assessment shall, at a minimum, include the general critical area report requirements of EMC 14.20.060 in addition to the following:

   a. Information sources;
   b. Geologic setting – includes well logs or borings used to identify information;
   c. Background water quality;
   d. Groundwater elevations;
   e. Location/depth to perched water tables;
   f. Recharge potential of facility site (permeability/transmissivity);
   g. Groundwater flow direction and gradient;
   h. Current available data on wells located within one-quarter mile of the site;
   i. Current available data on any spring within one-quarter mile of the site;
   j. Surface water location and recharge potential;
   k. Water source supply to facility (e.g., high capacity well);
   l. Any sampling schedules necessary;
   m. Discussion of the effects of the proposed project on the groundwater resource;
   n. Discussion of potential mitigation measures, should it be determined that the proposed project will have an adverse impact on groundwater resources; and
   o. Any other information as required by the TPCHD, including information required under Washington Department of Ecology Publication 97-30.

C. Storage Tank Permits. In addition to the requirements set forth in this title, the following agencies also have the authority to regulate the installation, repair, replacement, or removal of underground storage tanks:

1. The Pierce County Fire Prevention Bureau regulates and authorizes permits for underground storage tanks, pursuant to the International Fire Code (Article 79) and this chapter.

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
14.50.040 Aquifer recharge and wellhead protection

Critical aquifer recharge area standards.

A. General. All regulated activities that are not exempt or prohibited under the provisions of this chapter shall ensure sufficient groundwater recharge. In order to achieve sufficient groundwater recharge, the applicant shall comply with the city’s adopted stormwater manual (Chapter 13.05 EMC) and demonstrate that the total post-development infiltration rate for the project area will be equal to or better than the predevelopment rate.

B. Prohibited Uses. Landfills (other than inert and demolition landfills), Class I, III, and IV underground injection wells, metals mining, wood treatment facilities, pesticide manufacturing, petroleum refining facilities (including distilled petroleum facilities), and the storage of large volumes of petroleum products, and other uses or activities determined by the department to have a significant adverse impact on ground water are prohibited within aquifer recharge and wellhead protection critical aquifer recharge areas.

C. Exemptions. In addition to the general exemptions listed in EMC 14.20.030, the following uses or activities are exempt from the requirements of this chapter:

1. Sewer lines and appurtenances;
2. Biosolids and sludge land application sites; provided, that these activities comply with the requirements established in Chapters 173-200, 173-216, and 173-304 WAC; and

D. Agricultural Activities. New agricultural activities that do not involve hazardous substance handling or application are allowed within an aquifer recharge or wellhead protection area subject to the following:

1. The applicant is required to submit a farm management plan prepared by the USDA, NRCS, Pierce County Conservation District, or Washington State University, Cooperative Extension Office, that certifies that water quality and quantity within the aquifer recharge area is maintained. The farm management plan shall at a minimum address the following:
   a. The limits of the proposed agricultural activities.
   b. The proposed scope of agricultural activities, including the use of any pesticides, fertilizers, or other chemicals.
   c. The existing nitrate levels on the site and any proposed increases in nitrate levels.
2. Integrated pest management (IPM) practices for pest control and best management practices (BMPs) for the use of fertilizers, as described by the Washington State University, Pierce County Cooperative Extension Office, shall be utilized.
3. Nitrate levels at down-gradient property line shall not exceed 2.5 mg/L or, if the background nitrate concentration exceeds 2.5 mg/L, that the concentration will not be increased more than 0.1 mg/L.
4. Additional protective measures may be required if deemed necessary by the department or TPCHD to protect public health or safety.

D. Nonhazardous Uses. Subdivision of land as defined in EMC Title 16, residential structures housing three or more units and all commercial and industrial sites or activities that do not include or involve hazardous substance processing or handling in an aquifer recharge or wellhead protection critical aquifer recharge area are allowed subject to the following standards:

1. Stormwater quality treatment and flow control shall be provided in conformance with the city’s adopted stormwater management manual.

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
2. Floor drains shall not be allowed to drain to the stormwater system and must be designed and installed to meet the Uniform Plumbing Code (UPC) Section 303.

3. If any roof venting carries contaminants, then the portion of the roof draining from this area must go through pretreatment pursuant to UPC Section 304(b).

4. All nonresidential vehicle washing must be self-contained or be discharged to a sanitary sewer system, if approved by the sewer utility, and is subject to UPC Sections 708 and 711.

5. Integrated pest management (IPM) practices for pest control and best management practices (BMPs) for the use of fertilizers as described by the Washington State University, Pierce County Cooperative Extension Office, shall be utilized.

6. For new or changes in regulated activities served by on-site sewage systems, the applicant must demonstrate to the TPCHD that nitrate levels at the down-gradient property line will not exceed 2.5 mg/L or that if the background nitrate concentration exceeds 2.5 mg/L the concentration will not be increased more than 0.1 mg/L.

7. Additional protective measures may be required if deemed necessary by the department or TPCHD to protect public health or safety.

E. Hazardous Uses – General. Hazardous substance processing or handling, hazardous waste treatment and storage facilities, animal containment areas, and solid waste facilities that require a solid waste handling permit from the TPCHD, requiring approval from the city, shall be allowed only in an aquifer recharge and/or wellhead protection critical aquifer recharge area subject to review and approval of a hydrogeologic assessment by the department and review by the TPCHD. The department has the authority to apply whatever standards deemed necessary to mitigate any negative impacts that may be associated with the proposed development and will consider comments by TPCHD.

F. Hazardous Uses – Storage Tanks. In addition to the requirement to submit a hydrogeologic assessment, the following standards apply to storage tanks in an aquifer recharge and/or wellhead protection critical aquifer recharge area:

1. Underground Tanks. All new underground storage facilities used or to be used for the underground storage of hazardous substances or hazardous wastes shall be designed and constructed so as to:
   a. Prevent releases due to corrosion or structural failure for the operational life of the tank;
   b. Be protected against corrosion, constructed of noncorrosive material, steel clad with a noncorrosive material, or designed to include a secondary containment system to prevent the release or threatened release of any stored substance;
   c. Use material in the construction or lining of the tank which is compatible with the substance to be stored; and
   d. The installation of underground storage tanks shall also be subject to other state and local permit requirements.

2. Aboveground Tanks.
   a. No new aboveground storage facility or part thereof shall be fabricated, constructed, installed, used, or maintained in any manner which may allow the release of a hazardous substance to the ground, groundwater, or surface waters of Edgewood the city within an aquifer recharge area.
   b. A new aboveground tank that will contain a hazardous substance will require both a double-walled tank and a secondary containment system separate from the tank that will hold 110 percent of the tank’s capacity.

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
The secondary containment system or dike system must be designed and constructed to contain material stored in the tank(s). (Ord. 16-482 § 2 (Exh. C); Ord. 02-200 § 2).
Chapter 14.60
VOLCANIC HAZARD AREAS

Sections:
14.60.010 Purpose.
14.60.020 Volcanic hazard areas.
14.60.030 Volcanic hazard area review procedures.
14.60.040 Volcanic hazard area standards.

14.60.010 Purpose.
At over 14,411 feet high, Mount Rainier dominates the skyline of the southern Puget Sound region. This glacier-clad mountain is a dormant volcano capable of generating large floods and lahars which have historically reached the floors of the lowlands south of the city of Seattle and out to Commencement Bay in the Port of Tacoma, spewing ash from pyroclastic eruptions. The purpose of this chapter is to promote the public health, safety, and general welfare of the citizens of Edgewood by providing standards that minimize the loss of life that may occur as a result of volcanic events emanating from Mount Rainier. (Ord. 02-200 § 2).

14.60.020 Volcanic hazard areas.
A. General. Volcanic hazard areas are areas subject to pyroclastic flows, lava flows, and inundation by debris flows, mudflows, or related flooding resulting from geologic and volcanic events on Mount Rainier.

B. Volcanic Hazard Area Categories. Volcanic hazard areas are areas that have been historically inundated by Case I, Case II, or Case III lahars or other types of debris flow; affected by pyroclastic flows, pyroclastic surges, lava flows, or ballistic projectiles in future eruptions; or are located in other drainages expected to be inundated by a future Case I, Case II, or Case III debris flow. Volcanic hazard areas are classified into the following categories:

1. Inundation Zone for Case I Lahars. Areas that could be affected by cohesive lahars that originate as enormous avalanches of weak chemically altered rock from the volcano. Case I lahars can occur with or without eruptive activity. The average reoccurrence rate for Case I lahars on Mount Rainier is about 500 to 1,000 years.

2. Inundation Zone for Case II Lahars. Areas that could be affected by relatively large noncohesive lahars, which most commonly are caused by the melting of snow and glacier ice by hot rock fragments during an eruption, but which can also have a noneruptive origin. The average time interval between Case II lahars from Mount Rainier is near the lower end of the 100- to 500-year range, making these flows analogous to the so-called “100-year flood” commonly considered in engineering practice.

3. Inundation Zone for Case III Lahars. Areas that could be affected by moderately large debris avalanches or small noncohesive lahars, glacial outburst floods, or other types of debris flow, all of noneruptive origin. The average time interval between Case III lahars at Mount Rainier is about one to 100 years.

4. Pyroclastic Flow Hazard Zone. Areas that could be affected by pyroclastic flows, pyroclastic surges, lava flows, and ballistic projectiles in future eruptions. During any single eruption, some drainages may be unaffected by any of these phenomena, while other drainages are affected by some or all phenomena. The average time interval between eruptions of Mount Rainier is about 100 to 1,000 years.

C. Time Travel Zones. The ability to evacuate people from within a volcanic hazard area correlates to the distance from the source of an event (i.e., those areas closest to the event will have less time to evacuate than those areas farther away from the source of an event). The amount of time that is anticipated for a debris flow, lahar, flood, or avalanche to travel geographically has been classified into the following time travel zones:

1. Time Zone A. Time Zone A is an estimated one-hour travel distance from the source of the event.

2. Time Zone B. Time Zone B is an estimated one and one-half hour travel distance from the source of the event.

3. Time Zone C. Time Zone C is an estimated two-hour travel distance from the source of the event.
14.60.030 Volcanic hazard area review procedures.
A. The City’s Critical Areas Atlas – Volcanic Hazard Area Map provides an indication of where volcanic hazard areas are located within the city.

B. The department will complete a review of the volcanic hazard area maps for any development proposal to determine whether the proposed project area for a regulated activity falls within a volcanic hazard area.

C. When the department’s maps or sources indicate that the proposed project area for a regulated activity is located within a volcanic hazard area, the department shall apply the standards for regulated activities in volcanic hazard areas, as set forth in EMC 14.60.040.

D. Title and land division notification shall be required, as set forth in EMC 14.10.080(C). (Ord. 02-200 § 2).

14.60.040 Volcanic hazard area standards.
The following standards apply within the inundation zones for Case I, II, and III lahars and within the pyroclastic flow hazard zone (refer to Table 14.60.040):

A. Bonus densities, as set forth in EMC 18.90.080, Housing incentives program, shall be prohibited.

B. All essential facilities and hazardous critical facilities, as defined in EMC 14.10.060, shall be prohibited, except sewer collection facilities and any other utilities that are located underground or not likely to cause harm to people or the environment if inundated by a lahar.

C. Special occupancy structures, as defined in EMC 14.10.060, are subject to the following:

1. Time Travel Zone A. Special occupancy structures located within the Time Travel Zone A area shall be limited to a maximum 100-person occupancy.

2. Time Travel Zone B. Special occupancy structures located within the Time Travel Zone B area shall be limited to a maximum 500-person occupancy.

3. Time Travel Zone C. Special occupancy structures located within the Time Travel Zone C area shall be limited to a maximum 1,000-person occupancy.

4. Time Travel Zone D. Special occupancy structures located within the Time Travel Zone D area shall be limited to a maximum 5,000-person occupancy.

Chapter 14.70
FLOOD HAZARD AREAS

Sections:
14.70.010 Purpose.
14.70.020 Flood hazard areas.
14.70.030 Flood hazard area review procedures.
14.70.040 Flood hazard area standards.
14.70.050 Appendices.
14.70.060 Figures.

14.70.010 Purpose.
The purpose of this chapter is to promote the public health, safety, and general welfare of the citizens of Edgewood. The standards contained in this chapter are intended to minimize public and private losses due to flood conditions in flood hazard areas and provide special criteria necessary for regulated activities located within flood hazard areas of the city. The following statements describe the purpose of this chapter:

A. Protect human life and health;
B. Minimize expenditure of public money and costly flood control projects;
C. Minimize the need for rescue and relief efforts associated with flooding;
D. Minimize prolonged business interruptions;
E. Minimize damage to public infrastructure, facilities and utilities;
F. Minimize damage to critical fish and wildlife habitat areas;
G. Minimize net loss of ecological functions of floodplains;
H. Ensure that potential buyers are notified that property is in a flood hazard area;
I. Ensure that those who occupy flood hazard areas assume responsibility for their actions; and
J. Qualify Edgewood for participation in the National Flood Insurance Program, thereby giving the citizens of Edgewood the opportunity to purchase flood insurance with particular emphasis to those in flood hazard areas. (Ord. 02-200 § 2).

14.70.020 Flood hazard areas.
Edgewood regulates the following flood hazard areas:

A. Potential Flood Hazard Areas.
   1. Potential flood hazard areas, as depicted on the Critical Areas Atlas – Flood Hazard Area Map, include:
      a. Detailed Study Areas.
         i. FEMA Flood Insurance Rate Map and Floodway Map AE and AH zones.
         ii. Areas within 300 feet horizontal distance from the base flood elevation established for the mapped AE and AH zones (see EMC 14.70.060(A), Figure 14.70-1).
         iii. Areas within five feet of vertical height from the base flood elevation established for the mapped AE and AH zones.

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
b. Unstudied Areas. FEMA Flood Insurance Rate Map A zones and shaded X zones, and areas within 300 feet horizontal distance from said mapped areas (see EMC 14.70.060(B), Figure 14.70-2).

c. Natural Waters/Watercourse. Areas within five feet of vertical height above the ordinary high water mark of an identified natural watercourse (see EMC 14.70.060(C), Figure 14.70-3).

d. Groundwater Flooding Areas. Areas within 300 feet horizontal distance from a mapped groundwater flooding area (see EMC 14.70.060(D), Figure 14.70-4).

e. Potholes. Areas not identified as a mapped flood hazard area as described above, but within 10 feet of vertical relief from the bottom of an identified pothole or within two feet of vertical relief of a potential surface water spillway or other type of outlet (see EMC 14.70.060(E) and (F), Figures 14.70-5 and 14.70-6). Potholes may be identified by city topographic mapping, field survey, or site inspections.

f. Channel Migration Zones (CMZs). Channel migration zones shall apply only to those watercourses specifically identified by the city or listed in subsection (B)(4) of this section. In those areas where detailed CMZ studies have been completed and accepted by the department, additional horizontal and vertical review threshold criteria (i.e., 300 feet horizontal and five feet vertical) shall not apply (see EMC 14.70.060(G), Figure 14.70-7).

2. The Critical Areas Atlas – Flood Hazard Areas Map may not show all potential flood hazard areas that may be necessary for a specific site analysis. The department may make interpretations, where needed, as to the approximate location of the boundaries of potential flood hazard areas. When there is a conflict between the elevations and the mapped potential flood hazard area boundaries, the elevations shall govern.

3. Where there is insufficient information shown on the potential flood hazard area maps, the department may require the applicant to verify that the site is out of the flood hazard area using the flood hazard area review procedures set forth in EMC 14.70.030.

B. Floodway. A floodway is an extremely hazardous area due to the depth and/or velocity of floodwaters, which carry debris, potential projectiles, and have erosion potential. Channel migration zones shall apply only to those watercourses specifically identified by the city or listed in subsection (B)(4) of this section. The following areas are regulated by the city as floodways:

1. Regulatory Floodway. Regulatory floodway designated by flood hazard area maps.

2. Deep and/or Fast Flowing Water Areas. Areas of deep and/or fast flowing water shall be regulated as a floodway. Based on the criteria set forth in EMC 14.70.030(E), the department shall make the determination after review and approval of applicant’s analysis of whether the project site falls within the floodway area based on deep and/or fast flowing waters (see EMC 14.70.060(I), Figure 14.70-9).

3. Potholes and Shaded X Zones. That portion of a pothole and B zone area that is three feet or greater in depth shall be regulated as a floodway (see EMC 14.70.060(J), Figure 14.70-10).

4. Channel Migration Zones (CMZs).
   a. Channel migration zones shall be regulated as a floodway.
   b. Channel migration zones are equivalent to the base flood elevation limits (i.e., 100-year floodplain limits).

C. Flood Fringe. All areas subject to inundation by the base flood, but outside the limits of the floodway as set forth in subsection (B) of this section. Those portions of the A, AE, AH, and shaded X zones not defined as floodway, and that portion of a pothole and FEMA shaded X zone area that is between zero feet (base flood elevation) and three feet in depth shall be regulated as a flood fringe.

D. Other Areas of Special Flood Hazard.
1. Groundwater Flooding Areas. Groundwater flooding areas are those areas identified by Edgewood and shown on flood hazard maps and are subject to flood inundation from subsurface waters that result from a fluctuation of the groundwater table. Groundwater flooding areas shall be regulated as a floodway or flood fringe pothole.

2. Natural Waters/Watercourse. Natural waters/watercourse as identified on city topographic, planimetric or orthophoto maps, WDNR stream classification maps, USGS quadrangle maps, or other source maps that are not identified as a flood hazard area on the FEMA maps. That portion of the natural watercourse located between the ordinary high water mark and a topographic elevation five feet above the ordinary high water mark shall be regulated as a floodway or flood fringe. If the applicant chooses to accept the five-foot topographic elevation line above the ordinary high water mark as the base flood elevation (i.e., floodplain elevation limits), a flood study shall not be required for a natural water/watercourse.

3. Frequently Flooded Areas. See EMC 14.70.030(A)(9) as the areas defined by this section. (Ord. 17-492 § 2 (Exh. A); Ord. 02-200 § 2).

14.70.030 Flood hazard area review procedures.
A. General Requirements.

1. The city’s Critical Areas Atlas – Flood Hazard Area Map provides an indication of where potential flood hazard areas are located within the city. The actual presence or location of a flood hazard area shall be determined using the procedures and criteria contained in this chapter.

2. The department will complete a review of the flood hazard area maps, and other source documents, for any development proposal to determine whether the proposed project area for a regulated activity falls within a potential flood hazard area. When there is a conflict between the elevations and the mapped 100- or 500-year floodplain or floodway boundaries, the elevations shall govern. In the instance where base flood elevation data has not been provided within a mapped A zone, the department shall obtain, review, and reasonably utilize any base flood elevation and floodway data available from a federal, state, or other source to complete their review.

3. When the department’s maps or sources indicate that the proposed project area for a regulated activity is or may be located within a potential flood hazard area (except for coastal flood hazard areas), the department shall require a flood boundary verification survey as outlined in subsection (C) of this section, and may require a flood study as outlined in subsection (D) of this section, a deep and/or fast flowing water analysis as outlined in subsection (E) of this section, and/or a zero-rise analysis as outlined in subsection (F) of this section.

4. Any proposed development located within a flood hazard area shall comply with the flood hazard area standards set forth in EMC 14.70.040.

5. Prior to approval of any proposed flood hazard area development, all necessary permits from those governmental agencies from which prior approval is required by federal or state law, including but not limited to Section 404 of the Federal Water Pollution Control Act Amendments of 1972, 33 U.S.C. 1334, must be provided to the city by the applicant.

6. A FEMA letter of map amendment (LOMA) or letter of map revision (LOMR) shall not be submitted to FEMA until review and approval has been granted by the department. The city shall not recognize any LOMA or LOMR as an amendment to the department’s flood hazard maps unless the department has granted prior approval.

7. Unless otherwise stated in this chapter, the critical area protective measure provisions contained in EMC 14.10.080 shall apply.

8. The Federal Emergency Management Agency (FEMA) administers the nation’s floodplain management program. FEMA has identified some of the flood prone areas in the city; however, it is generally recognized that FEMA’s Flood Insurance Rate Maps (FIRMs) may not accurately reflect the degree or frequency of flooding within all areas of the city. Therefore, information available through FEMA may not meet best available science criteria and cannot be used exclusively to address frequently flooded areas.

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
9. The city has determined that the following documents and sources are the most current and accurate information concerning frequently flooded areas within the city, and therefore represent best available science:

   a. The city’s Surface Water Management Plan, 1997, or as amended thereafter.
   c. The city’s two-foot elevation contour mapping performed by Nies Mapping Group, Inc., 1999, or as subsequently updated.
   e. Relevant and verifiable government and citizen photographs, notes, observations, etc., regarding historic ponding/flooding levels, including but not limited to the City of Edgewood Potholes Water Level Monitoring 2006-2007 report prepared by Robinson Engineers, LLC.
   f. Relevant and verifiable information available through Pierce County.
   g. Relevant and verifiable information available through FEMA.

10. Flooding conditions within the city generally fall into three distinct hydrologic settings: (a) upland areas within enclosed depressions, (b) streams that flow off the upland areas, and (c) valley lowlands. Accordingly, the city manages frequently flooded areas within these three zones, as described below:

   a. Upland Areas Within Enclosed Depressions. From the above list use the historic ponding elevation, determined by subsection (A)(9) of this section, or the FEMA 100-year base flood elevation, whichever is highest.
   b. Streams Which Flow Off the Upland Areas. From the above list use the historic flood elevation, determined by subsection (A)(9) of this section, or the FEMA 100-year base flood elevation, whichever is highest.
   c. Valley Lowlands. From the above list use the historic flood elevation determined by subsection (A)(9) of this section, or the FEMA 100-year base flood elevation, whichever is highest.

11. The city will provide local flood information to FEMA, and request FEMA’s assistance in accurately mapping and evaluating frequently flooded areas.

12. Warning and Disclaimer of Liability. The degree of flood protection required by this chapter is considered reasonable for regulatory purposes and is based on scientific and engineering considerations. Larger floods can and will occur on rare occasions. Flood heights may be increased by manmade or natural causes. This chapter does not imply that land outside frequently flooded areas or uses permitted within such areas will be free from flooding or flood damages. This chapter shall not create liability on the part of city, any officer or employee thereof, or the Federal Insurance Administration, for any flood damages that result from reliance on this chapter or any administrative decision lawfully made hereunder.

B. Channel Migration Zone Study.

1. In areas where Edgewood has not conducted a detailed channel migration zone study, an applicant may submit an independent channel migration zone study to demonstrate that the channel migration zone limits for those watercourses listed in EMC 14.70.020(B)(4) are located inside the 100-year floodplain limits.

2. The channel migration zone study shall be prepared, signed, and dated by a professional engineer or professional geologist with at least five years of experience in fluvial geomorphology, river dynamics, or geotechnical engineering.

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
3. The channel migration zone study shall, at a minimum, contain the information set forth in EMC 14.70.050, Appendix B.

4. The department shall review the channel migration zone study and either accept the new channel migration zone limits or reject the study and require the use of the 100-year floodplain limits. Once the department has reviewed and approved the channel migration zone study, the applicant shall be required to provide a flood boundary verification survey, as outlined in subsection (C) of this section, utilizing the newly established channel migration zone limits as the floodway limits.

C. Flood Boundary Verification Survey.

1. A flood boundary verification survey that delineates the horizontal and vertical limits of the base flood elevation shall be submitted to the department when the department’s maps or sources indicate that the proposed project area for a regulated activity is located within a potential flood hazard area.
   a. Where a base flood elevation has not been determined, a flood study shall be required pursuant to subsection (D) of this section.
   b. A base flood elevation that has been established through a detailed flood study accepted by the department may be used in lieu of conducting a flood study.
   c. The base flood elevation for a natural watercourse as set forth in EMC 14.70.020(D)(2) shall be established at the five-foot topographic elevation line above the ordinary high water mark.

2. The requirement to submit a flood boundary verification survey may be waived at the department’s discretion, when the department can determine, using contour elevations, base flood data, orthophotos, and parcel data, that the extent of the regulated activity is clearly above the base flood elevation.

3. The flood boundary verification survey shall be prepared, signed, and dated by a registered land surveyor.

4. The department shall review the flood boundary verification survey to determine if the proposed development is located within a flood hazard area.

5. If the proposed development lies within the flood hazard area, the limits of the floodway, as well as the base flood elevation, shall be shown on the flood boundary verification survey.

D. Flood Study.

1. A flood study shall be conducted when the department’s maps or sources indicate that the proposed project area for a regulated activity is, or may be located within, a potential flood hazard area where base flood elevation data is not available through the flood insurance study or other authoritative sources, or when an established base flood elevation is contested. A full engineering analysis to determine the base flood elevation shall be required by the department. Base flood elevations shall be determined using the detailed methods established in EMC 14.70.050, Appendix A. The department may approve alternative methods.

2. The flood study shall be prepared, signed, and dated by a professional engineer.

3. Once the department has reviewed and approved the flood study, the applicant shall be required to provide a flood boundary verification survey, utilizing the newly established base flood elevation, as outlined in subsection (C) of this section.

4. Flood studies shall not be required for coastal flood hazard areas.

E. Deep and/or Fast Flowing Water Analysis.

1. When the department determines that a proposed project area for a regulated activity is located within a flood hazard area, a deep and/or fast flowing water analysis based on EMC 14.70.060(D), Figure 14.70.9 and EMC 14.70.050, Appendix A, shall be required to determine the floodway limits.
2. The floodway limits and flood fringe limits identified in the deep and/or fast flowing water analysis shall be depicted on the flood boundary verification survey, as outlined in subsection (C) of this section.

3. The deep and/or fast flowing water analysis shall be prepared, signed, and dated by a professional engineer.

4. Deep and/or fast flowing water analysis shall not be required for coastal flood hazard areas.

F. Zero-Rise Analysis.

1. When the department determines that a proposed project area for a regulated activity is located within a flood hazard area, a zero-rise analysis shall be required to determine that no increase in base flood elevation, displacement of flood volume, or flow conveyance reduction will occur as a result of the development.

2. The zero-rise analysis shall be conducted utilizing HEC-RAS (Hydrologic Engineering Center – River Analysis System) modeling methodology (for stream/channel floodways), the Western Washington Hydrology Model (i.e., WWHM, for pothole/closed depression floodways), or by other alternative methodologies approved by the city (see EMC 14.70.050, Appendix A). HEC-RAS can be found at the following website: http://www.hec.usace.army.mil/software/hec-ras. WWHM can be found here: http://www.ecy.wa.gov/programs/wq/stormwater/wwhmtraining/index.html. The analysis shall show that no rise (0.01 foot or less) has occurred as a result of the proposed development. The proposed development may need to be reduced or specially engineered (such as utilizing piers or pilings) to achieve zero-rise.

3. The zero-rise analysis shall be prepared, signed, and dated by a professional engineer.

4. The zero-rise analysis shall be documented on the zero-rise analysis form, as set forth in EMC 14.70.050, Appendix A, and shall be attached to the flood hazard area permit.

5. Zero-rise analysis shall not be required for coastal flood hazard areas.

6. When structures are elevated by pier or pilings and no fill is placed in the flood hazard area, the requirement to submit a zero rise analysis may be waived at the department’s discretion. (Ord. 17-492 § 2 (Exh. A); Ord. 02-200 § 2).

14.70.040 Flood hazard area standards.

A. General.

1. New construction done by or for the city, such as bridges, roads, flood control works, revetments, retaining walls, drainage structures, sewer or water lines, parks, or other structures necessary to promote the public’s health, safety, and welfare shall be allowed in a flood hazard area when:

   a. The project is prepared, dated, and stamped by a registered professional engineer in the state of Washington and is designed so the project does not result in any increase in flood levels during the occurrence of the base flood discharge (zero-rise) and shall not obstruct the floodway or cause an adverse impact to critical fish or wildlife habitat or adjacent, cross-channel, or upstream or downstream properties; and

   b. The improvements utilize appropriate flood hazard protection standards.

2. Elevation Certificate. A Federal Emergency Management Agency (FEMA) elevation certificate shall be required for new construction, additions affixed to the side of a structure, and substantial improvements located within flood hazard areas. The most current version of the FEMA elevation certificate must be completed and certified by a professional land surveyor, currently licensed in the state of Washington, kept on file by the city for public inspection, recording the actual (as-built) elevation (in relation to mean sea level) of:

   a. The lowest floor (including basement) of all new or substantially improved structures, whether or not the structure contains a basement;

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
b. For floodproofed nonresidential structures, where the structure was floodproofed (including floodproofing certifications).

B. Floodways. Any development, encroachments, filling, clearing or grading, new construction, and substantial improvements shall be prohibited within the floodway (including structures that do not require a building permit), except as allowed in the following standards:

1. Agricultural activities that do not require the installation of structures and that do not have any associated fill.

2. Park and recreational uses and facilities that do not require the installation of structures and that do not have any associated fill.

3. Individual recreational vehicles, not located in an RV park, that are licensed and ready for highway use, on wheels or jacking system, and are not permanently attached to the site (attached only by quick disconnect type utilities and security devices, with no permanently attached additions).

4. Habitat enhancement/stream restoration activities are permitted subject to the provisions outlined in subsection (D) of this section.

5. Rehabilitation, reconstruction, or an upper story addition to an existing structure that does not exceed the limits for a substantial improvement.

6. Private bridges may be allowed to cross the floodway; provided, that the structure meets the requirements contained in EMC 14.70.030 and the following:
   a. The lowest structural member of a private bridge proposed to cross a channel migration zone shall be a minimum of six feet above the base flood elevation.
   b. The lowest structural member of a private bridge proposed to cross the floodway portion of any other watercourse shall be a minimum of one foot above the base flood elevation.

C. Flood Fringe Areas. All activities allowed in subsection (B) of this section shall be permitted in a flood fringe area. Any other proposed development, encroachments, filling, clearing or grading, new construction, and substantial improvements are prohibited in a flood fringe area except as permitted under the following standards:

1. Structures that do not require a building permit and that do not have any associated fill are allowed, subject to flood hazard area review and permitting.

2. All other regulated activities shall only be allowed when the proposed development is located on an existing lot of record that was created prior to the effective date of the ordinance codified in this chapter. Applicants shall demonstrate there are no other feasible alternatives that would allow the proposed development to occur completely outside the flood hazard area. At a minimum, the following shall be demonstrated:
   a. The development cannot be located outside the flood hazard area due to topographic constraints of the parcel or size and/or location of the parcel in relation to the limits of the flood hazard area and a building setback variance has been reviewed, analyzed, and rejected as a feasible alternative to encroachment into the flood hazard area; and
   b. The proposed development shall not cause an adverse impact to adjacent, cross-channel, or upstream or downstream properties.

   a. Roads, bridges, driveways, trails, emergency vehicle access, and access routes and easements, where allowed, shall be constructed and armored based on the standards in subsection (C)(4) of this section and elevated a minimum of one foot above the base flood elevation.
   b. Parking lots shall be elevated to a minimum of one-half foot below the base flood elevation.

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
4. Grading and Filling. When development is permitted under this subsection, it shall be designed to a zero-rise standard as set forth in EMC 14.70.030(F) and 14.70.050, Appendix A. Any filling, grading, or clearing associated with the permitted development shall not increase flood hazards, water velocities, or flood elevations. In addition to meeting the requirements for zero-rise, all permitted development must also meet the following requirements:

   a. Compensatory Storage. New excavated storage volume shall be equivalent to the flood storage capacity eliminated by filling or grading within the flood fringe. Equivalent shall mean that the storage removed shall be replaced by equal live storage volume between corresponding one-foot contour intervals that are hydraulically connected to the floodplain through their entire depth, (refer to EMC 14.70.060(K), Figure 14.70-11).

   b. Flow Conveyance. New excavated conveyance areas shall be equivalent to existing conveyance within the flood fringe. Equivalent shall mean a mechanism for transporting water from one point to another using an open channel system.

   c. Erosion Protection. Development shall be protected from flow velocities greater than two feet per second through the use of bio-engineering methods or, when bioengineering methods have been deemed insufficient to protect development, then hard armoring may be utilized. All erosion protection shall extend one to three feet, depending on development requirements, above the base flood elevation and shall be covered with topsoil and planted with native vegetation (see EMC 14.70.060(L), Figure 14.70-12).

5. Critical Facilities.

   a. New construction, additions affixed to the side of an existing structure, and substantial improvement of hazardous facilities, and special occupancy structures are prohibited.

   b. New construction of an essential facility, reconstruction of an existing essential facility, or additions to an existing essential facility that exceed the threshold for substantial improvement shall be permitted when no feasible alternative site is available outside the flood hazard area. Such regulated activities are subject to the following:

      i. Essential facilities with a crawlspace elevated by fill shall have the lowest floor and any utilities and ductwork elevated a minimum of three feet above base flood elevation, (see Figure 14.70-12), or to the height of the 500-year flood, whichever is higher.

      ii. Essential facilities elevated by piers or pilings shall have the finished floor and any utilities and ductwork elevated a minimum of three feet above the base flood elevation (or to the height of the 500-year flood, whichever is higher) and must be designed by a professional structural engineer, (see Figure 14.70-13).

      iii. Access to and from the critical facility shall be protected to the height utilized under subsections (C)(5)(b)(i) and/or (ii) of this section. Access routes shall be elevated to or above the same elevation to the maximum extent possible.

      iv. Essential facilities shall be armored based on the standards in subsection (C)(4) of this section.

      v. Flood proofing and sealing measures must be taken to ensure that toxic or explosive substances will not be displaced or released into floodwaters.

6. Structures. Single-family, two-family, multifamily, mobile/manufactured homes, commercial, industrial, etc., except for critical facilities as set forth in subsection (C)(5) of this section, shall be allowed subject to the following standards:

   a. New construction, additions affixed to the side of an existing structure, and substantial improvement of any structure with a crawlspace shall have the lowest floor elevated a minimum of two feet above base flood elevation, (see EMC 14.70.060(L), Figure 14.70-12).

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
b. New construction, additions affixed to the side of an existing structure, and substantial improvement of any structure elevated by piers or pilings shall have the bottom of the lowest horizontal structural member elevated a minimum of two feet above the base flood elevation and must be designed by a professional structural engineer. Electrical, heating, ventilation, plumbing, air-conditioning equipment, and other service facilities and associated ductwork shall be elevated a minimum of two feet above base flood elevation; however, the department may approve a lesser minimum distance above base flood elevation; provided, that the systems are designed to prevent floodwater from entering or accumulating within the components (see EMC 14.70.060(M), Figure 14.70-13). Areas below the lowest horizontal structural member shall not be enclosed and shall remain free of obstructions.

c. Mobile/manufactured homes shall be anchored to prevent flotation, collapse, or lateral movement, and shall be installed using methods and practices to minimize flood damage. Anchoring methods may include, but are not limited to, use of over-the-top or frame ties to ground anchors. This is in addition to applicable state and local anchoring requirements for resisting wind forces.

7. Agricultural Accessory Structures. The lowest floor in an agricultural accessory structure shall be located at the base flood elevation or higher; provided, that the structure be designed to automatically equalize hydrostatic flood forces on exterior walls by allowing for the entry and exit of floodwaters. Designs for meeting this requirement must either be certified by a professional engineer in the state of Washington or must meet or exceed the following minimum criteria:

a. A minimum of two openings having a total net area of not less than one square inch for every square foot of enclosed area subject to flooding shall be provided;

b. The bottom of all openings shall be no higher than one foot above grade; and

c. Openings may be equipped with screens, louvers, or other covering or devices; provided, that they permit the automatic entry and exit of floodwaters.

8. Construction Standards.

a. Construction of a basement is prohibited.

b. Crawl spaces shall be backfilled with clean earth material and shall meet International Building Code requirements. Finished grade within the crawlspace shall be at least two feet above the base flood elevation.

c. Flood proofing in lieu of elevating the structure is prohibited.

d. All single-family, two-family, multifamily, mobile/manufactured homes, commercial, and industrial structures shall be placed on standard concrete stemwall/footing foundations or piles, piers, or column foundations and engineered pursuant to International Building Code requirements.

a. New and replacement public water sources (i.e., wells and water supply lines) and public sanitary sewage conveyance systems are allowed. These systems shall be designed to withstand scour resulting from flow velocity, minimize or eliminate infiltration of floodwaters into the systems, and minimize or eliminate discharge from the systems into floodwaters

b. All replacement wells and replacement on-site sewage system (OSS) shall be designed to minimize or eliminate impairment to them or contamination from/to them during flooding (i.e., infiltration of floodwaters into or discharge out of the systems). They shall not be located in pothole or no-outlet floodplains.

c. All new individual wells and new on-site sewage system (OSS) shall be prohibited. Conveyance systems from a structure to a well or OSS located outside of the flood hazard area shall be allowed provided these systems are designed to meet the standards in subsection (C)(4) of this section.
D. Alteration of Watercourses. Any alteration of a watercourse shall comply with the following standards:

1. The city will notify adjacent communities and the Washington State Department of Ecology prior to any alteration or relocation of a watercourse proposed by the applicant and submit evidence of such notification to the Federal Insurance Administration.

2. The city shall require that maintenance be provided within the altered or relocated portion of said watercourse, so that the flood-carrying capacity is not diminished. Therefore, if the maintenance program calls for future cutting of planted native vegetation used in performing the alteration, the system shall be oversized at the time of construction to compensate for said vegetation growth or any other natural factor that may need future maintenance.

3. Alterations and relocations, including stabilization projects, shall not degrade fish habitat and shall be subject to the following provisions:
   a. Structures that cross all watercourses and water bodies shall meet fish habitat requirements of the Washington Department of Fish and Wildlife.
   b. Any culverts that are used on fish-bearing watercourses shall be arch/bottomless culverts or equivalent that provide comparable fish protection, and must meet fish habitat requirements of the latest edition of Washington Department of Fish and Wildlife's Design Manual for Culverts.
   c. Bridges or other crossings shall allow for uninterrupted downstream movement of wood and gravel, be as close to perpendicular to the watercourse as possible, and be designed to minimize fill and to pass the base flood flows.
   d. Watercourse alterations shall maintain natural meander patterns, channel complexity, and floodplain connectivity. Where feasible, such characteristics shall be restored as part of the watercourse alteration.
   e. The applicant shall identify the channel migration zone for the watercourse at the project site and for a reasonable reach upstream and downstream of the site, and shall not undertake actions as part of the alteration that would in any way inhibit movement of the channel.
   f. Existing culverts that do not meet fish habitat requirements shall be removed or replaced as part of the approved watercourse alteration project.
   g. Watercourse alteration projects shall not result in a fish blockage of side channels. Known fish barriers into side channels shall be removed as part of the approved watercourse alteration project.
   h. For any watercourse alteration of a Type S or F water (pursuant to EMC 14.40.0260(DB)) whose channel is subject to migration, bioengineered (soft) armoring of streambanks is required to allow for woody debris recruitment, gravels for spawning, and creation of side channels. The bioengineering technique used must be designed in accordance with the latest edition of Washington Department of Fish and Wildlife's Integrated Streambank Protection Guidelines.

4. The project engineer shall design the watercourse alteration so the activity does not increase the water surface elevation (zero-rise), decrease the capacity, storage, and conveyance of the watercourse; or cause an adverse impact to adjacent, cross-channel, or upstream or downstream properties. (Ord. 17-492 § 2 (Exh. A); Ord. 02-200 § 2).

14.70.050 Appendixes.
A. Floodplain/Floodway Analysis.
B. Channel Migration Zone Study.

APPENDIX A
FLOODPLAIN/FLOODWAY ANALYSIS

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
This Appendix describes the flood hazard analyses and studies as required by Chapter 14.70 EMC, Flood Hazard Areas. Flood hazard studies establish the base flood elevation and delineate floodplain and/or floodway(s) when a proposed project contains or is adjacent to a river, stream, lake, or closed depression.

Flood hazard studies must conform to FEMA regulations described in Part 65 of 44 Code of Federal Regulations (CFR). In addition, the following information must be provided and procedures performed for flood hazard studies used under Chapter 14.70 EMC to examine development proposals or improvements within a floodplain.

Article I. Floodway Determination

The city recognizes two distinct floodways. The FEMA floodway describes the limit to which encroachment into the natural conveyance channel can cause one foot or less rise in water surface elevation. The deep and/or fast flowing (DFF) water floodways are hazardous areas and conditions of the floodplain for both people and habitable structures. Life safety and protection to improved properties are compromised if encroached upon. Encroachment cannot occur within these areas.

A. FEMA Floodways.

1. FEMA floodways are determined through the procedures outlined in the FEMA publication Guidelines and Specifications for Study Contractors using the one-foot maximum allowable rise criteria.

2. Transitions shall take into account obstructions to flow such as road approach grades, bridges, piers, culverts, or other restrictions. General guidelines for transitions may be found in HEC-RAS, Water Surface Profiles – Users Manual, Appendix IV, Application of HEC-RAS Bridge Routines, published by the Hydrologic Engineering Center, Davis, California.

B. Deep and/or Fast Flowing (DFF) Floodways.

1. DFF floodways are generally assumed to include the entire 100-year floodplain until the department approves a detailed floodway analysis that defines areas of DFF within the entire floodplain area based on the criteria.

2. The hydraulic model must adequately be calibrated to known or recorded stage elevations of past flood events with computed recurrence frequency intervals for the 100-year flood recurrence interval. This is to ensure model accuracy.

Article II. Flood Study Content and Required Information

Three copies of the completed floodplain/floodway analysis study report and the modeling digital files shall be submitted. The report submittal must be stamped by a licensed professional civil engineer and include the following information in addition to that required for the drainage plan of a proposed project:

A. Floodplain/Floodway Map.

1. A scaled survey base map stamped by a licensed professional land surveyor registered in the state of Washington. The map must accurately locate the proposed development with respect to the floodplain and floodway, the channel of the subject stream, river, and/or pothole location, and the existing improvements within the subject study area. It must also supply all pertinent information such as the nature of the proposed project, legal description of the property on which the project would be located, fill quantity, limits and elevation, the building floor elevations, and use of compensatory storage.

2. The map must show elevation contours at a minimum of two-foot vertical intervals and shall comply with survey and map guidelines published in the FEMA publication Guidelines and Specifications for Study Contractors. The map must show the following:

   a. Elevations and ground contours, spot elevations, and vertical datum NAVD 88 (North American Vertical Datum of 1988) (or most recent vertical datum accepted by the department).
The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.

b. Elevations and dimensions of existing structures, fill, and compensatory storage areas.

c. Size, location, elevation and spatial arrangement of all proposed structures on the site.

d. Location and elevations of roadways, drainage facilities, water supply lines, and sanitary sewer facilities.

e. Areas of DFF must clearly be shown and plotted on the map sheet depicting the bounded area of the floodway on both sides of the study channel through the subject site. DFF floodway studies must reflect all transitions as referenced above as well.

f. The base maps must also be accompanied by all field survey notes/computations, drawings, etc., for each cross-section with water surface elevation at the time the cross-section field survey was done.

B. Study Report.

1. Soil maps, groundcover maps, and photographs.

2. A narrative report containing the purpose of the study and description of the study area, data collection, methodology for both the hydrology and hydraulics, detailed discussion on the input parameters used, modeling results, and conclusions.

3. A floodplain/floodway analysis must include calculations and all computer analysis input and output information, supporting graphical illustrations, as well as the following additional information:

   a. Scaled cross-sections showing the current/existing conditions of the river/stream channel, the floodplain adjoining each side of the channel, the computed floodway, the cross-sectional area to be occupied by any proposed development and all historic high water information.

   b. Profiles showing the bottom of the channel, the top of both left and right banks and computed base flood water surface elevations for the 10-, 25-, 50- and 100-year events.

   c. Plans and specifications of any flood protection for structures, construction areas, filling, dredging, channel improvements, storage of materials, water supply, and sanitary facilities within the floodplain.

   d. Complete printout of input and output data of the model that was used for the analysis. Liberal use of comments and written discussion will assist considerably in understanding the model logic and minimize misinterpretations and/or questions.

   e. A map, showing the graphical/plotted location and limits of the computed floodway and/or floodplain.

   f. Three copies of ready-to-run digital files of both the hydrologic and hydraulic model and its input and output files used in the study. Data shall be submitted on a disk in standard ASCII format, ready to use on an IBM-compatible personal computer and in the applicable software application (i.e., HEC-RAS, HSPF – Hydrological Simulation Program – Fortran, SBUH, etc.).

   g. A section on the flood flow including computer modeling and/or calculations (see below for additional requirements on flood flow determinations).

   h. Aerial photographs of the site including pre-February 1996 and post-February 1996 photos of the site.

   i. All field survey notes/computations, maps, and drawings for each cross-section with water surface elevation at the time of the cross-section field survey.

C. Computer Modeling Information. Floodway/floodplain studies submitted to the city for review must include output summary tables and include the following (but not limited to) items:

1. Cross-section(s) identification number.
2. Range of flows being examined.

3. Computed water surface elevation at each cross-section.

4. Energy grade line at each cross-section.

5. Graphical plots of the channel cross-sections with computed water surface elevations for all model runs including calibrated model runs.

6. All model input and output printouts.

7. Graphical plots of the model output data that show the points and segments along each cross-section where deep and/or fast flowing water occurs. This shall include cross-section plots of depth and velocity in one-unit increments. The plots shall also be accompanied with a table listing the station distance (right and left bank), flow rate, area, hydraulic depth, velocity, and whether each point is a floodway.

8. A plan sheet clearly showing the graphical representation of the bounded area of the floodway based on DFF criteria through the entire study site and reach. Note that identified islands or pockets within the middle of the bounded floodway area are generally considered as part of the floodway, unless otherwise approved by the department.

9. Discussion on the starting water surface elevation for the hydraulic model.

Article III. Determining Flood Flows

The three techniques used to determine the flows used in a flood study depend on whether gauge data is available, whether a basin plan has been adopted, or a detailed flood study has been done and approved for use by the Department. The first technique is for basins with adopted basin plan areas. The second technique is used if a gauging station exists on the stream. The third technique is used on ungauged catchments or those with an insufficient length of record. In all cases, the engineer shall be responsible for assuring that the hydrologic methods used are technically reasonable, conservative, conform to the FEMA publication, Guidelines and Specifications for Study Contractors, and are acceptable by FEMA and the department.

A. Flood Flows from Adopted Basin Plan Information. Flood flows may be determined using information from the city’s basin plan. The hydrologic model used in the basin plan shall be updated to include the latest changes in zoning or any additional information regarding the basin which has been acquired since the adoption of the basin plan.

1. This technique may be used only if data from a gauging station in the basin is available for a period of at least 10 years.

2. If the difference in the drainage area on the stream at the study site and the drainage area to a gauging station on the stream at a different location in the same basin is less than or equal to 50 percent, the flow at the study site shall be determined by transferring the calculated flow at the gauge to the study site using a drainage area ratio raised to the 0.86 power, as in the following equation:

\[
Q_{ss} = Q_{G} \left( \frac{A_{ss}}{A_{G}} \right)^{0.86}
\]

where

- \(Q_{ss}\) = estimated flow for the given return frequency on the stream at the study site.
- \(Q_{G}\) = flow for the given return frequency on the stream at the gauge site.
- \(A_{ss}\) = drainage area tributary to the stream at the study site.
- \(A_{G}\) = drainage area tributary to the stream at the gauge site.
3. If the difference in the drainage area at the study site and the drainage area at a gauging station in the basin is more than 50 percent and a basin plan has not been prepared, a continuous model shall be used as described below to determine the flood flows at the study site.

4. In all cases where dams or reservoirs, floodplain development, or land use upstream may have altered the storage capacity or runoff characteristics of the basin so as to affect the validity of this technique, a continuous model shall be used to determine flood flows at the study site.

C. Flood Flows from a Calibrated Continuous Model. Flood flows may be determined by utilizing a continuous flow simulation model such as HSPF or other equivalent continuous flow simulation model, as approved by the city. Where flood elevation or stream gauging data are available, the model shall be calibrated to the known data. Otherwise, regional parameters may be used.

Article IV. Determining Flood Elevations, Profiles and Floodways (Hydraulic Model)

A. Reconnaissance. The applicant’s project engineer is responsible for the collection of all existing data with regard to flooding in the study area. This shall include a literature search of all published reports in the study area and adjacent communities and an information search to obtain all unpublished information on flooding in the immediate and adjacent areas from federal, state, and local units of government. This search shall include specific information on past flooding in the area, drainage structures such as bridges and culverts that affect flooding in the area, available topographic maps, available community maps, photographs of past flood events, and general flooding problems within the community. Documented discussions with nearby property owners should also be done to obtain a witness account of the flooding extent. A field reconnaissance shall be made by the applicant’s project engineer to determine hydraulic conditions of the study area, including type and number of structures, locations of cross-sections, and other parameters including the roughness values necessary for the hydraulic analysis.

B. Base Data. Channel cross-sections used in the hydraulic analysis shall be current/existing at the time the study is performed and shall be obtained by field survey. Topographic information obtained from aerial photographs/mapping may be used in combination with surveyed channel cross-sections in the hydraulic analysis. The elevation datum of all information used in the hydraulic analysis shall be verified. All information shall be referenced directly to NAVD 1988 (and include local correlation to NGVD) unless otherwise approved by the city.

C. Methodology. Flood studies and analysis (including deep and/or fast flowing floodways and zero-rise analysis) shall be calculated using the U.S. Army Corps of Engineers HEC-RAS computer model (or subsequent revision) unless otherwise approved by the city.

D. Adequacy of the Hydraulic Model. Edgewood considers the following (but not limited to) factors when determining the adequacy of the hydraulic model for use in the floodway/floodplain model:

1. Cross-section of a downstream starting location and spacing.

2. Differences in energy grade line (significant differences in the energy grade line from cross-section to cross-section are an indication that cross-sections should be more closely spaced or that other inaccuracies exist in the hydraulic model).

3. Methods and results for analyzing the hydraulics of structures such as bridges and culverts.

4. Lack of flow continuity.

5. Use of a gradually varied flow model. In certain cases, rapidly varied flow techniques may need to be used in combination with a gradually varied flow model such as weir flow over a levee, flow through a spillway of a dam, or special application of bridge flow (pressure flow if bridge superstructure is shown to be submerged for the study event).

7. Calibration of hydraulic model to known and/or observed flow stage elevations including past flood events.

8. Special applications. In some cases, steady state one-dimensional hydraulic models may not be sufficient for preparing the floodplain/floodway analysis. This may occur where sediment transport, two-dimensional flow, or other unique hydraulic circumstances affect the accuracy of the model. In these cases, the project engineer must propose and obtain department approval of alternative models for establishing the water surface elevations.

9. All reported error and/or warning messages by the model must be properly and adequately addressed and/or resolved and included in the report for review verification.

Article V. Zero-Rise Analysis (ZRA)

A. Zero-rise analysis (ZRA) is required where encroachment within the flood fringe area is allowed and approved by the department. The ZRA must show that the proposed development encroachment in the flood fringe area will not show a measurable rise in the base flood elevation (i.e., less than 0.01 foot), resulting from a comparison of existing conditions and proposed conditions. This is directly attributable to development in the floodplain but not attributable to manipulation of mathematical variables such as roughness factors, coefficients, discharge, and other hydraulic parameters.

B. In addition to those items listed in subsection (A) of this article, the following shall be included in a ZRA:

1. Floodway boundaries (based on zero-rise) are to follow the stream lines and reasonably balance the rights of property owners on either side of the floodway. Use of the automatic equal conveyance encroachment option in the model will be considered equitable.

2. The ZRA must include a sufficient number of cross-sections in order to accurately model the subject fill and compensatory storage areas of the site. In all cases, cross-sections shall be located downstream, through the subject site and upstream of the site at a very minimum. They shall also be located where changes in channel and the fill material characteristics occur, such as slope, shape, and roughness. The sections shall also be located perpendicular to the flow path in the channel and the outside overbank areas. The department shall review and approve the proposed number and location of cross-sections. All cross-sections and surveys shall be prepared and certified by a professional land surveyor or registered professional engineer in the state of Washington.

3. The difference between two profiles of water surface elevation at the cross-section (e.g., difference between existing and encroached water surface). The model must report 0.01 feet or less an allowable change in the water surface elevation. This must be shown in the profile graphical plot as well.

4. The difference between profiles of the energy grade line at the cross-section. The model must report 0.01 feet or less. This is the allowable change in the energy grade line. This must be shown in the profile graphical plot as well.

C. Conveyance Capacity.

1. The ZRA must also show that the proposed development encroachment in the flood fringe area will not show a measurable decrease (less than 0.01 CFS) in the conveyance capacity of the channel, resulting from a comparison of existing conditions and proposed conditions, for each of the cross-sections. This is also directly attributable to development in the floodplain but not attributable to manipulation of mathematical variables such as roughness factors, coefficients, discharge, and other hydraulic parameters.

2. The analysis must provide calculations of the reduction in conveyance caused by the proposed development encroachment, assuming no change in the water surface elevation, and using the roughness coefficient value(s) appropriate for the proposed development.

3. The analysis must then provide calculations for the increase in conveyance of the proposed compensatory measure, using the roughness coefficient value(s) appropriate for the proposed development.
4. Include a comparison analysis and discussion from subsections (C)(2) and (3) of this article. The comparison must adequately show that the conveyance capacity has not measurably decreased between the existing condition and proposed development condition.

**Floodplain/Floodway Zero-Rise Certification**

This is to certify that I am a duly qualified professional engineer licensed to practice in the state of Washington.

This is to further certify that the attached floodplain/floodway zero-rise analysis conclusively shows that the proposed development of:

(Name of Development)    Parcel Number

will not increase the 100-year base flood elevation(s) and widths nor reduce the conveyance capacity of the floodplain/floodway and its associated channel to the

(Name of River, Stream, Pothole or other Watercourse)

**Supporting Data**

Base Flood Elevation (Pre-Development) = ___________ FT (NAVD 88)
Base Flood Elevation (Post-Development) = ___________ FT (NAVD 88)
Conveyance Capacity (Pre-Development) = ___________ CFS
Conveyance Capacity (Post-Development = ___________ CFS

with compensatory storage)

**APPENDIX B**

**CHANNEL MIGRATION ZONE STUDY REQUIREMENTS**

The channel migration zone (CMZ) is the area within the lateral extent of likely stream channel movement due to stream bank destabilization and erosion, rapid stream incision, and shifts in location of stream channels. The CMZ will define areas in which, to the best information available, development should be regulated due to the dangers expected from erosion.

**Article I. Determining Channel Migration Zone Limits**

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
A. The CMZ shall be based on available historic records of channel migration, or 100 years of calculated channel migration whichever is greater, and will generally include those areas that encompass:

1. The limit of geologic controls, such as hill slope, bedrock outcrop, or abandoned floodplain terrace;
2. Side channels, abandoned channels, and oxbows; and
3. Outside edges of progressive bank erosion at meander bends.

B. Channel migration over the 100-year time frame can be estimated and predicted from geomorphic analysis of annual bank erosion rates, historic meander belt width, and measured meander bend amplitudes, potential avulsion sites, and previous river channel locations as depicted on historic aerial photographs and maps. The 100-year time span represents the time required to grow mature trees that can provide functional large woody debris to streams.

C. The CMZ boundaries will be determined using the following specific criteria:

1. The representative average annual rate of channel migration in the affected river reach is calculated by dividing the lateral distance eroded with the corresponding elapsed time shown in sequential aerial photographs or historic maps (distance/time equals channel movement). Measurements from reaches that have had some form of bank armoring shall not be included. Historical records will need to be checked closely for this information.
2. Identify the width of the channel migration zone by multiplying the representative average annual erosion rate by 100 years.

D. Areas separated from the active channel by legally existing artificial channel constraints (levees, roads, driveways, etc.) that limit bank erosion and channel avulsion to the 100-year recurrence interval flood elevation plus three feet of freeboard shall serve as a boundary for the outer limit of the CMZ.

Article II. Channel Migration Zone Study Content and Required Information

Three copies of the completed channel migration zone study shall be submitted. The study submittal must be stamped by a licensed professional engineer or professional geologist with five years experience in fluvial geomorphology, river dynamics, or geotechnical engineering. The CMZ study shall include the following information in addition to that required for the drainage plan of a proposed project. The CMZ study will consist of a written technical report including:

A. Detailed methods, techniques, and assumptions used in determining the location of the CMZ.
B. A vicinity map and site with scale, north arrow, and parcel number(s) or specific site being studied.
C. A clear statement of the requested revision to the county’s determination of the 100-year floodplain limits as the CMZ.
D. A clearly stated conclusion of the study results that support the requested revision. The conclusion needs to document the basis for the revision, show how the data presented refutes the 100-year floodplain limits as the CMZ, and calculates the new results using the new information.
E. A map clearly delineating the subject property and the CMZ of the adjacent watercourse. In addition to providing a hard copy of the CMZ map, the CMZ map shall also be provided in ARC-View shapefile format. Contact the city GIS department for mapping and aerial imaging standards. (Ord. 02-200 § 2).

Chapter 14.80
LANDSLIDE HAZARD AREAS

Sections:
14.80.010 Purpose.
14.80.020 Landslide hazard areas.
14.80.030 Landslide hazard area review procedures.
14.80.040 Landslide and erosion hazard area standards.
14.80.050 Buffer requirements.
14.80.060 Appendices.
14.80.070 Figures.

14.80.010 Purpose.
The following statements describe the purpose of this chapter is to:

A. Protect human life and health.
B. Regulate uses of land in order to avoid damage to structures and property being developed and damage to neighboring land and structures.
C. Identify and map active landslide hazard areas.
D. Minimize the ill effects on wetlands and critical fish and wildlife habitat that can result from landslides.
E. Establish permit requirement and review procedures for development proposals in areas with potential landslides.
(Ord. 02-200 § 2).

14.80.020 Landslide hazard areas.
A. Landslide Hazard Areas Indicators. Landslide hazard areas are areas potentially subject to mass movement due to a combination of geologic, seismic, topographic, hydrologic, or manmade factors. Landslide hazard areas can be identified by the presence of any of the following indicators:

1. Areas of historic failures, including areas of unstable, old and recent landslides or landslide debris within a head scarp.
2. Areas with active bluff retreat that exhibit continuing sloughing or calving of bluff sediments, resulting in a vertical or steep bluff face with little or no vegetation.
3. Areas with all of the following characteristics:
   a. Slopes steeper than 20° percent with a vertical relief of 20 feet or more (see EMC 14.80.070(A), Figure 14.80-1); and
   b. Hillsides that intersect geologic contacts with a relatively permeable sediment overlying a relatively impermeable sediment or bedrock; and
   c. Springs or groundwater seepage.
4. Slopes that are parallel or sub-parallel to planes of weakness, such as bedding planes, joint systems, and fault planes in subsurface materials.
5. Areas exhibiting geomorphological features indicative of past slope failure within the last 10,000 years, such as hummocky ground, back-rotated benches on slopes, tension cracks, etc.
6. Areas with tension cracks or ground fractures along and/or near the edge of the top of a bluff or ravine.
7. Areas with structures that exhibit structural damage such as settling and cracking of building foundations or separation of steps or porch from a main structure that is located near the edge of a bluff or ravine.

8. The occurrence of toppling, leaning, bowed, or jackstrawed trees that are caused by disruption of ground surface by active movement.

9. Areas with slopes containing soft or liquifiable soils.

10. Areas where gullying and surface erosion have caused dissection of the bluff edge or slope face as a result of drainage or discharge from pipes, culverts, ditches, and natural drainage courses.

11. Areas where seeps or springs or indicators (e.g., vegetation type) of a shallow groundwater table are observed on or adjacent to the face of the slope.

12. Any area with a slope of 40 percent or steeper and with a vertical relief of 15 feet or more, except those manmade slopes created under the design and inspection of a geotechnical professional or slopes composed of competent bedrock. Manmade slopes of 40 percent or steeper with a vertical relief of 15 feet or more may be exempted from the requirements of this section of the code provided that it can be demonstrated by a qualified geotechnical professional that such an exemption does not result in an increased risk of landsliding or damage to the subject site, nearby properties, or existing structures and, any associated hazards to proposed structures are suitably mitigated. For the purposes of determining whether a slope is considered to be a landslide hazard area, the horizontal and vertical distance between the top and toe of slope are utilized (see EMC 14.80.060, Appendix D, and EMC 14.80.070(A), Figure 14.80-1).

13. Areas that are at risk of mass movement due to seismic events.

B. Potential Landslide Hazard Areas. Potential landslide hazard areas (see EMC 14.80.070(BB), Figure 14.80-2), as depicted on the Critical Areas Atlas – Landslide Hazard Areas MapGeologically Hazardous Areas map, are those areas where the suspected risk of slope instability and landslide is sufficient to require a geological assessment to assess the potential for active landslide activity. Potential landslide hazard areas are determined by using the following criteria:

1. Areas identified on the city topographic maps as having slopes greater than 20 percent with a vertical relief of greater than 20 feet and any adjacent areas within a distance of 65 feet (see EMC 14.80.070(C), Figure 14.80-3).

2. Areas that possess one or more of the landslide hazard area indicators (stratigraphy, topography, emergent groundwater conditions, occurzyne, etc.) as set forth in subsection (A) of this section and any adjacent area within a distance of 65 feet (EMC 14.80.070(B), Figure 14.80-2). These areas include, but are not necessarily limited to, those areas designated on the City’s Geologically Hazardous Areas map as moderate or steep slope areas.

C. Landslide Hazard Area Categories. Landslide hazard areas shall be classified into categories, which reflect each landslide hazard area past landslide activity, and the potential for future landslide activity based on an analysis of slope instability. Landslide hazard areas shall be designated as follows:

1. Active Landslide Areas. A composite of the active landslides and/or unstable areas, including that portion of the top of slope and slope face subject to failure and sliding as well as toe of slope areas subject to impact from down slope run-out, identified and mapped during a geological assessment of a site. An active landslide hazard area exhibits one or more of the following:

a. Areas of historical landslide movement on a site which have occurred in the past century including areas identified on the Coastal Zone Atlas of Washington, Volume VII, Pierce County as Urs (unstable recent slide).

b. Unstable areas that exhibit geological and geomorphologic evidence of past slope instability or landsliding or possess geological indicators (stratigraphy, ground water conditions, etc.), as set forth in subsection (A) of this section, that have been determined through a geological assessment process to be presently failing or may be subject to future landslide activity. The impact of the proposed development activities must be considered in defining the extent of the active areas.
c. Interim areas are located between areas identified through the geological assessment process as an active landslide hazard area. Interim areas will be considered part of the active landslide hazard area if the required top of slope or toe of slope landslide hazard area buffer encompasses the area (see EMC 14.80.070(D), Figure 14.80-4).

2. Stable Areas. Areas that have been identified as potential landslide hazard areas, but through the geological assessment process meet one of the following conditions. Such stable areas shall continue to be considered critical areas for all purposes under this code including but not limited to density calculations and the application of SEPA.

a. No indicators as set forth in subsection (A) of this section actually exist that indicate the potential for future landslide activity to occur;

b. A slope stability analysis has proven that there is no landslide potential; or

c. Adequate engineering or structural measures have been provided through the submittal of a geological assessment – geotechnical report that mitigates the potential for a future landslide to occur as a result of current or cumulative development activity. (Ord. 04-240 § 1; Ord. 02-200 § 2).

14.80.030 Landslide hazard area review procedures.
A. General Requirements.

1. The city’s critical areas atlas Geologically Hazardous Areas map provides an indication of where active and potential landslide hazard areas are located within the city. The actual presence or location of an active landslide hazard area, and/or additional potential landslide hazard areas that have not been mapped, but may be present on or adjacent to a site, shall be determined using the geological assessment procedures established in this chapter.

2. The department will complete a review of the Critical Areas Atlas – Landslide Hazard Area Map Geologically Hazardous Areas map and other source documents for any proposed regulated activity to determine whether the site is, or may be, located within an active landslide hazard area or potential landslide hazard area. Identification of an active landslide hazard area or potential landslide hazard area may also occur as a result of field investigations conducted by department staff.

3. When the department’s maps or sources indicate that the site for a proposed regulated activity is or may be located within an active landslide hazard area or potential landslide hazard area, the department shall require the submittal of a geological assessment as outlined in subsection (B) of this section (see EMC 14.80.070(EC), Figure 14.80-3).

4. Unless otherwise stated in this chapter, the critical protective measure provisions contained in EMC 14.10.080 shall apply.

B. Geological Assessment. A geological assessment is a site investigation process to evaluate the on-site geology affecting a subject property. The findings of the geological assessment shall be presented in a Landslide Hazard Geotechnical Verification or Geotechnical Report, in accordance with EMC 14.80.070(C), Figure 14.80-3.

1. Geological assessments shall be submitted to the department for review and approval together with a landslide hazard area application and associated fee.

2. A geological assessment shall include a field investigation and may include the use of historical air photo analysis, LiDAR mapping, review of regional geologic mapping, review of public records and documentation, and interviews with adjacent property owners, etc.

3. The geological assessment shall include the following information and analysis:

a. A determination of which areas on the site or within the vicinity of the site meet the criteria for an active landslide hazard area and stable area as set forth in EMC 14.80.020(c)(1) and (2).

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
b. Consider the run-out hazard of landslide debris to the proposed development that starts upslope (whether part of the subject property or on a neighboring property) and/or the impacts of landslide run-out on down slope properties.

c. The geological assessment shall include a detailed review of the field investigations, published data and references, data and conclusions from past geological assessments, or geotechnical investigations of the site, site-specific measurements, tests, investigations, or studies, as well as the methods of data analysis and calculations that support the results, conclusions, and recommendations.

4. Geological assessments shall be prepared, signed, and dated by a geotechnical professional (as defined in EMC 14.10.060 and established in this chapter) and the format shall be pre-approved by the department.

5. An engineering geologist/geotechnical professional shall complete a field investigation and geological assessment to determine whether or not an active landslide hazard area exists within 300 feet of the site (see EMC 14.80.070(EC), Figure 14.80-53). Where access to off-site properties is not available by the geotechnical professional, evaluation of off-site landslide hazards must include review of regional geologic mapping and LiDAR based topographic mapping.

a. The geological assessment shall be submitted in the form of a geotechnical letter when the engineering geologist finds that no active landslide hazard area exists within 300 feet of the site. The geotechnical letter shall meet the requirements contained in EMC 14.80.060, Appendix A.

b. The geological assessment shall be submitted in the form of geotechnical verification when the engineering geologist finds that an active landslide hazard area exists, but is located more than within 300 feet away from the proposed project area. The geotechnical verification shall meet the requirements contained in EMC 14.80.060, Appendix B.

c. The geological assessment shall be submitted in the form of a geotechnical report when the engineering geologist finds that an active landslide hazard area exists within 300 feet of the proposed project area or when a geotechnical professional determines that mitigation measures are necessary in order to construct or develop within a potential landslide hazard area. The geotechnical report shall meet the requirements contained in EMC 14.80.060, Appendix C.

6. Geological assessments that do not contain the minimum required information or comply with the landslide hazard area standards set forth in EMC 14.80.030 will be returned to the geotechnical professional for revision.

7. The department shall review the geological assessment and either:

a. Accept the geological assessment; or

b. Reject the geological assessment and require revisions or additional information.

8. When the geological assessment has been accepted, the department shall issue a decision on the landslide hazard area application.

9. A geological assessment for a specific site may be valid for a period of up to five years when the proposed land use activity and surrounding site conditions are unchanged. However, if any environmental conditions associated with the site change during that five-year period, the applicant may be required to submit an amendment to the geological assessment. (Ord. 02-200 § 2).

14.80.040 Landslide and erosion hazard area standards.

A. Active Landslide Hazard Areas. Any development, encroachment, filling, clearing or grading, building structures, impervious surfaces, and vegetation removal shall be prohibited within active landslide hazard areas and associated buffers except as specified in the following standards:

1. Stormwater Conveyance. Stormwater conveyance shall be allowed when it is conveyed through a high-density polyethylene stormwater pipe with fuse-welded joints and when no other stormwater conveyance alternative is
available. The pipe shall be located on the surface of the ground and be properly anchored so that it will continue
to function in the event of an underlying slide.

2. Utility Lines. Utility lines will be permitted when no other conveyance alternative is available. The line shall
be located above ground and properly anchored and/or designed so that it will continue to function in the event of
an underlying slide.

3. Roads, Bridges, and Trails. Roads, bridges, and trails shall be allowed when all of the following conditions
have been met:
   a. Mitigation measures are provided that ensure the roadway prism and/or bridge structure will not be
      susceptible to damage from landslide-induced ground deformation or impact/coverage by landslide debris.
      Mitigation measures shall be designed for static and seismic loading conditions in accordance with the most
      recent version of the American Association of State Highway and Transportation Officials (AASHTO)
      Manual.
   b. The road is not a sole access for a development.
   c. The removal or disturbance of vegetation, clearing or grading shall be prohibited during the wet season
      (November 1st to May 1st).

B. Landslide Hazard Management Areas. All regulated activities may be allowed in areas located within 300 feet of an
active landslide hazard area subject to the following standards:

1. The department reviews and approves a geological assessment – geotechnical report and determines that the
potential landslide hazard area is stable.

2. The proposed development is located outside of an active landslide hazard area and any required buffer, as set
forth in EMC 14.80.050.

3. The proposed recommendations and mitigation measures contained within the geotechnical report are
adequate to reduce or mitigate risks to health and safety.

4. The proposed development shall not decrease the factor of safety for landslide occurrence below the limits of
1.5 for static conditions and 1.21.1 for dynamic conditions. Analysis of dynamic (seismic) conditions shall be
based on a minimum horizontal acceleration as established by the current version of the International Building
Code.

5. The removal and disturbance of vegetation, clearing or grading shall be limited to the area of the approved
development and shall not be allowed during the wet season (November 1st through May 1st) unless adequate
provisions for wet season erosion have been addressed in the geotechnical report and approved by the
department.

6. Surface drainage from developed areas, including downspouts and runoff from paved or unpaved surfaces up
slope, shall not be directed through an active landslide hazard area or its associated buffer unless it is conveyed
in conformance with the provisions in EMC 14.80.030(A)(1).

7. Stormwater retention facilities, including infiltration systems utilizing perforated pipe, are prohibited unless
the slope stability impacts of such systems have been analyzed and mitigated by a geotechnical professional and
the impacts have been determined to be negligible.

8. The proposed development shall not create a need for larger landslide hazard area buffers and setbacks on
neighboring properties unless approved through a notarized written agreement with the affected property
owner(s).

9. The proposed development shall be sited far enough from regressing slope faces to project 120 years of useful
life for the proposed structure(s) or infrastructure.
10. Any proposed lots must be completely located outside any identified active landslide hazard areas or their associated buffers.

11. Stable landslide hazard areas that are directly adjacent to any riparian areas, or wetlands, may be subject to additional buffer requirements and standards as set forth in Chapter 14.40 EMC, Critical Fish and Wildlife Habitat Conservation Areas, or wetlands as set forth in Chapter 14.30 EMC, Wetlands. (Ord. 02-200 § 2).

14.80.050 Buffer requirements.

A. Determining Buffer Widths.

1. The buffer width shall be measured on a horizontal plane from a perpendicular line established at the edge of the active landslide hazard area limits (both from the top and toe of the slope) (see EMC 14.80.070(F), Figure 14.80-6).

2. A buffer of undisturbed vegetation shall be required for an active landslide hazard area. The required buffer width is the greater amount of the following distances described in EMC 14.80.050(a) and (b):
   a. Fifty feet from all edges of the active landslide hazard area limits;
   b. A distance of one-third the height of the slope at the top of the active landslide hazard area and a distance of one-half the height of the slope at the bottom of an active landslide hazard area; or
   c. The minimum distance recommended by the geotechnical professional, measured from the edges of the active landslide hazard area (the buffer widths may be reduced below the widths specified in EMC 14.80.050(a) and (b), or eliminated upon approval by the department of a geotechnical report that demonstrates that such a reduction would not result in an increased risk of landslide activity either on or off of the subject property).

B. Modification of Buffer Widths. The department may require a larger buffer width than the buffer distance, as determined in subsection (A) of this section, if any of the following are identified:

1. The adjacent land is susceptible to severe erosion and erosion control measures will not effectively prevent adverse impacts.

2. The area has a severe risk of slope failure or downslope stormwater drainage impacts. (Ord. 02-200 § 2).

14.80.060 Appendices.

A. Geological Assessment – Landslide Hazard Geotechnical Letter.

B. Geological Assessment – Landslide Hazard Geotechnical Verification.

APPENDIX A

GEOLOGICAL ASSESSMENT – LANDSLIDE HAZARD GEOTECHNICAL LETTER

A. A geotechnical letter shall include the following:

1. The letter shall be labeled identifying the submittal as a “Landslide Hazard Geotechnical Letter.”

2. The date when the geological assessment was performed. The date when the letter was prepared.

3. The parcel number(s) of the site.

4. Site address, if the city has assigned one.

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
5. A brief description of the project (including the proposed land use) and a description of the area to be developed. The appropriate professional preparing the geotechnical letter shall provide conclusions and recommendations as to slope stability for the proposed development.

6. A paragraph that states the following specific language:

I meet the qualifications contained in EMC 14.10.060 to prepare a landslide hazard geological assessment. I understand the requirements of the current landslide hazard area Chapter 14.80. EMC and the definitions of the applicable terms contained within EMC 14.10.060. I have performed a landslide hazard geological assessment, conducted a field investigation, and researched historic records on or in the vicinity of the above referenced site and determined that no active landslide hazard area exists within 300 feet of the site.

7. The name, mailing address, and telephone number of the engineering geologist who performed the geological assessment and prepared the letter.

8. The name, mailing address, and telephone number of the property owner.

B. The engineering geologist who prepared the letter shall stamp the letter with his or her license stamp/seal.

C. Geotechnical letters shall be in conformance with a format that is pre-approved by the department.

APPENDIX BA

GEOLOGICAL ASSESSMENT – LANDSLIDE HAZARD GEOTECHNICAL VERIFICATION

A. A geotechnical verification shall include the following:

1. The first page of the document shall be labeled identifying the submittal as a “Landslide Hazard Geotechnical Verification.”

1. The general critical areas report requirements in section 14.20.060.

21. The date when the geological assessment was performed. The date when the verification document was prepared.

32. The parcel number(s) of the site.

34. Site address, if the city has assigned one.

45. A detailed description of the project (including the proposed land use) and a description of the area to be developed.

256. A description of the surface and subsurface geology, hydrology, soils, and vegetation at the site and a list of the landslide hazard area indicators, as set forth in EMC 14.80.020(A), that were found on or in the vicinity of the site.

367. A summary of the results, conclusions, and recommendations resulting from the geological assessment of the landslide hazards on or in the vicinity of the site. This summary shall address all of the information required in EMC 14.80.030(B). The summary should include a description of observations during the site visit and a discussion of information obtained from review of the listed documents in EMC 14.80.030(B)(2).

428. An accurate site plan drawn at a scale of one inch equals 20 feet, one inch equals 30 feet, one inch equals 50 feet (or other scale deemed appropriate by the department) is required. The department may require that the site plan information listed below be based on a field survey by a licensed surveyor. The site plan shall include:

a. The limits/location of the active landslide hazard area(s) set forth in EMC 14.80.020(C)(1).
b. The limits/location of the required landslide hazard buffer based upon the requirements set forth in EMC 14.80.050(A).

c. The location of any existing and proposed structures, utilities, on-site septic systems, wells, and stormwater management facilities.

d. The full geographical limits of the proposed project area (area to be developed).

e. Dimension the closest distance between the identified active landslide hazard area boundary and the project area.

f. Existing topography on the site presented in two-foot contours.

g. Property lines for the site.

h. North arrow and plan scale.

9. A paragraph that states the following specific language:

I meet the qualifications contained in EMC 14.80.030 to prepare a landslide hazard geological assessment. I understand the requirements of the current landslide hazard area Chapter 14.80 EMC and the definitions of the applicable terms contained within EMC 14.10.060. I have performed a landslide hazard geological assessment, conducted a field investigation, and researched historic records on or in the vicinity of the above referenced site and determined that no active landslide hazard area exists within 300 feet of the proposed project area.

810. The name, mailing address, and telephone number of engineering geologist the geotechnical professional who performed the geological assessment and prepared the verification document.

911. The name, mailing address, and telephone number of the property owner.

B. The engineering geologist geotechnical professional who prepared the verification document shall stamp the verification with his or her license stamp/seal.

C. Geotechnical verifications shall be in conformance with a format that is pre-approved by the department.

APPENDIX CB

GEOLOGICAL ASSESSMENT – LANDSLIDE HAZARD GEOTECHNICAL REPORT

A. At a minimum, a geotechnical report shall include the following:

1. The date when the geological assessment was performed. The date when the geotechnical report was prepared.

2. The parcel number(s) of the site.

3. Site address if the city has assigned one.

4. A detailed description of the project (including the proposed land use) and a description of the area to be developed.

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
625. A description of the surface and subsurface geology, hydrology, soils, and vegetation of the site and a list of the landslide hazard area indicators, as set forth in EMC 14.80.020(A), that were found on or in the vicinity of the site.

636. A summary of the results, conclusions, and recommendations resulting from the geological assessment of the landslide hazards on or in the vicinity of the site. This summary shall address all of the information required in EMC 14.80.030(B).

847. An accurate site plan drawn at a scale of one inch equals 20 feet, one inch equals 30 feet, one inch equals 50 feet (or other scale deemed appropriate by the department) is required. The department may require that the site plan information listed below be based on a field survey by a licensed surveyor. The site plan shall include:

a. The limits/location of the active landslide hazard area(s) within the site boundaries as set forth in EMC 14.80.020(C)(1). Delineation of the active landslide hazard area limits shall differentiate between identify any areas of historic landslide activity and adjacent unstable areas.

b. The limits/location of the required landslide hazard buffer based upon the requirements set forth in EMC 14.80.050(A).

c. The limits/location of any potential landslide hazard areas that have been designated as stable areas in accordance with EMC 14.80.020(C)(2)(c).

d. The location of any existing and proposed structures, utilities, on-site septic systems, wells, and stormwater management facilities.

e. The full geographical limits of the proposed project area (area to be developed).

f. Location and unique identifier of geotechnical borings, CPT soundings, or other surveys or explorations used to characterize subsurface conditions.

g. Extent of cross-section(s) used to evaluate the three-dimensional subsurface geologic and groundwater conditions at the site.

h. Extent of cross-section(s) used in the evaluation of slope instability.

i. Existing topography on the site presented in two-foot contours.

j. Property lines for the site.

k. North arrow and plan scale.

958. Subsurface characterization data must be provided. The data shall be based on both existing and new information that may include soil borings, test pits, geophysical surveys, or other appropriate subsurface exploration methods, development of site-specific soil and/or rock stratigraphy, and measurement of groundwater levels including variability resulting from seasonal changes, alterations to the site, etc.

a. Conventional geotechnical boring data shall be reported as a graphic log utilizing the following standards:

i. The vertical scale of the graphic log shall be such that five feet of drilled depth is scaled to range of one inch to two inches (1:60- or 1:30-scale), and shall include vertical columns that record depth in one-foot increments, SPT value and incremental blow counts, a graphic pattern representation of the soil type encountered during drilling, and sample descriptions and other comments regarding drilling.

ii. The graphic log shall have a header on the first page that includes a unique identifier for the boring, the times and dates of the start and completion of drilling, the manufacturer and model of the drilling rig, the company name of the drilling contractor, the name(s) of the site geologist(s) or engineer(s) overseeing the drilling activities, the details of the method used to advance the borehole (e.g., four-inch i.d., hollow-stem auger), the type of drilling fluid used to stabilize the borehole, verification that the SPT...
The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
All of the CPT data recorded for each sounding shall also be provided in either electronic or hardcopy format. Electronic data will be presented in an ASCII text file format.

dd. Other methods used for subsurface characterization shall be assigned a unique identifier, and the basic data presented in appropriate graphical and/or tabular format.

eg. The three-dimensional subsurface conditions at the site shall be presented using one or more cross-sections showing location and depth penetration of geotechnical borings, CPT soundings, or other subsurface characterization methods, interpretation of the geometry of major soil units, and projected location of the static groundwater surface determined from the subsurface exploration. The cross-sections shall be presented at a scale of one inch equals 20 feet, one inch equals 30 feet, one inch equals 50 feet (or other scale deemed appropriate by the department). Each cross-section shall have a legend with a description of the various major soil units.

10. Soil strength and index properties (i.e., unit weight, cohesion, etc.) shall be provided for each soil unit interpreted from the subsurface characterization of the site, and shall be presented in tabular format. Justification for the presented values of these soil parameters shall be based on one or more of the following approaches:

a. Back analysis based on pre-landslide stability conditions.

b. Laboratory measurement of strength or other index properties made on soil samples.

c. Correlation of soil strength index properties to other geotechnical indices (e.g., SPT blow counts, etc.), where the correlation relations are documented (e.g., published literature, in-house empirical data set, etc.).

d. Soil strength and indices based on generic values must provide a clear justification for their use.

A detailed description of any prior grading activity, soil instability, or slope failure.

Where deemed appropriate by the geotechnical professional assessments and conclusions regarding slope stability for both the existing and developed conditions shall be presented and documented. These assessments and conclusions shall include the information provided below in EMC 14.80.060, Appendix B(A)(10)(a), (b), and (c): The project geotechnical professional must provide justification for not including a slope stability analysis if one is excluded. The City’s geotechnical professional reserves the right to request a slope stability analysis based on site conditions. If a dispute arises between the project geotechnical professional and the City’s geotechnical professional regarding the need for a slope stability analysis, then the City reserves the right to require an independent, third party review to be paid for by the applicant to resolved the dispute.

a. Determination of the potential types of landslide failure mechanisms (e.g., debris flow, rotational slump, translational slip, etc.) that may affect the site.

b. Quantitative stability evaluation of slope conditions of the various failure mechanisms using state-of-the-practice modeling techniques. Limiting equilibrium methods of analysis shall state the stability conditions as a factor of safety. The most unstable failure geometry(ies) shall be presented in the form of a cross-section(s), with the least stable failure geometry for each failure mechanism clearly indicated. The stability evaluation shall also consider dynamic (earthquake) loading, and shall use a minimum horizontal acceleration as established by the current version of the International Building Code.

c. An analysis of slope regression rate shall be presented in those cases where stability is impacted or influenced by erosional processes (e.g., wave cutting, stream meandering, etc.) acting on the toe of the slope.

Mitigation recommendations using engineered measures to protect the proposed structure(s) and any adjacent structures, infrastructure, adjacent wetlands, or critical fish and wildlife habitat from damage or destruction as a result of proposed construction activities shall be designed by a professional engineer. Design plans and detailed geotechnical recommendations may be provided in a document separate from the geotechnical
The geotechnical report shall contain:

a. Design plans and associated design calculations for engineered structures or drainage systems (e.g., structural foundation requirements, retaining wall design, etc.).

b. Recommendations and requirements pertaining to the handling of surface and subsurface runoff in the developed condition.

c. Identification of necessary geotechnical inspections to assure conformance with the report mitigation and recommendations.

d. Proposed angles of cut and fill slopes, site grading requirements, final site topography (shown as two-foot contours), and the location of any proposed structures, on-site septic systems, wells, and stormwater management features or facilities associated with the development detailed within the body of the report and shown on a site map at the same scale as that required in subsection (A)(8) of this appendix.

e. Soil compaction criteria and compaction inspection requirements.

f. An analysis that indicates how the proposal meets the standards outlined in EMC 14.80.040.

g. Structural foundation requirements and estimated foundation settlement shall be provided if structures are proposed.

h. Lateral earth pressures.

i. Suitability of on-site soil for use as fill.

j. Mitigation measures for building construction on each lot for short plats, large lots, or formal plats such that additional geotechnical professional involvement is minimized during building construction.

B. The geotechnical report shall be prepared by an engineering geologist and shall be cowritten by both an engineering geologist and professional engineer where both geological interpretations and engineering analyses and designs are necessary or prudent in the mitigation of the landslide hazard.

C. The geotechnical professional(s) who prepared the geotechnical report shall stamp the report with his or her license stamp/seal.

D. The department may request a geotechnical professional to provide additional information in the geotechnical report based upon existing conditions, changed conditions, or unique circumstances occurring on a case-by-case basis.

E. Geotechnical reports shall be in conformance with a format that is pre-approved by the department. (Ord. 05-247 § 1; Ord. 02-200 § 2).

Chapter 14.90

SEISMIC (EARTHQUAKE) HAZARD AREAS

Sections:
14.90.010 Purpose.
14.90.020 Seismic hazard areas.
14.90.030 Seismic hazard area review procedures.
14.90.040 Seismic hazard area standards.
14.90.050 Buffer requirements.
14.90.060 Appendices.
14.90.070 Figures.

14.90.010 Purpose.
Earthquakes have historically occurred throughout the Puget Sound region. Large earthquakes have caused loss of life and over a billion dollars in property damage. The purpose of this chapter is to protect the public health, safety, and general welfare of the citizens of Edgewood from the damaging effects of earthquakes. This chapter provides standards to ensure life safety and minimize public and private losses that may occur within a seismic hazard area. (Ord. 02-200 § 2).

14.90.020 Seismic hazard areas.
A. General. Seismic hazard areas are areas subject to severe risk of damage as a result of earthquake-induced landsliding, seismic ground shaking, fault rupture, or soil liquefaction, or flooding caused by tsunamis and seiches.

B. Potential Seismic Hazard Areas. Potential seismic hazard areas, as depicted on the Critical Areas Atlas – Seismic Hazard Areas map, are those areas where the suspected risk of earthquake-induced landsliding, dynamic settlement, fault rupture, ground deformation caused by soil liquefaction, or flooding is sufficient to require a further seismic hazard area review as set forth in EMC 14.90.030. These potential seismic hazard areas are determined using the following criteria:

1. Earthquake Induced Landslide Hazard Areas. Areas identified as potential landslide hazard areas in EMC 14.80.020.

2. Liquefaction and/or Dynamic Settlement Hazard Areas. Areas identified as high and moderate liquefaction and dynamic settlement hazard areas on the Washington Department of Natural Resources, Division of Geology and Earth Resources liquefaction and dynamic settlement hazard area table Geologically Hazardous Areas map.

3. Fault Rupture Hazard Areas. 

4. Tsunami and Seiche Hazard Areas. Areas that are adjacent to Puget Sound marine waters, lakes, and ponds that are designated as "A" or "V" zones as defined by FEMA and depicted on the FEMA maps or other maps adopted by the city.

C. Seismic Hazard Area Categories.

1. Earthquake Induced Landslide Hazard Areas. Earthquake induced landslide hazard areas include slopes that can become unstable as a result of strong ground shaking, even though these areas may be stable under nonseismic conditions.

2. Liquefaction and/or Dynamic Settlement Hazard Areas.
   a. Liquefaction hazard areas are areas underlain by unconsolidated (corrected Standard Penetration Test blow counts, \((N_{60})\) less than 30) sandy or silt soils (Unified Soil Classification System S or M soil-types)

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.

Chapter 14.90 SEISMIC (EARTHQUAKE) HAZARDS

SEISMIC (EARTHQUAKE) HAZARD AREAS

and a shallow groundwater table (static groundwater depth less than 30 feet) capable of liquefying in response to earthquake shaking.

b. Dynamic settlement hazard areas are areas underlain by a significant thickness (more than 10 feet) of loose or soft soil not susceptible to liquefaction (e.g., peats or organic silts and clays, unsaturated loose sands or silts), but that could result in vertical settlement of the ground surface in response to earthquake shaking.

3. Fault Rupture Hazard Areas. Fault rupture hazard areas include:

a. Active fault rupture hazard areas are areas where displacement (movement up, down, or laterally) of the ground surface has occurred during past earthquake(s) in the Holocene Epoch; and

b. Areas adjacent to the active fault rupture hazard area that may be potentially subject to ground surface displacement in a future earthquake (see EMC 14.90.070(A), Figure 14.90-1). (Ord. 02-200 § 2).

14.90.030 Seismic hazard area review procedures.

A. General Requirements.

1. The city’s Critical Areas Atlas – Seismic Hazard Area MapGeologically Hazardous Areas map provides an indication of where potential seismic hazard areas are located within the city.

2. The department will complete a review of the Critical Areas Atlas – Seismic Hazard Area Map for any regulated activity to determine whether the site for a proposed regulated activity is located within a seismic hazard area.

3. When the department’s maps indicate that the site for a proposed regulated activity is located within a potential liquefaction or dynamic settlement hazard area, the department shall require the submittal of a geological assessment as outlined in subsection (B) of this section. (see EMC 14.90.070(B), Figure 14.90-2).

4. When the department’s maps indicate that the site for a proposed regulated activity is located within a potential fault rupture hazard area, the department shall require the submittal of a geological assessment as outlined in subsection (B) of this section. The requirement to submit a geological assessment may be waived at the department’s discretion when it is determined that the proposed project area for the regulated activity is located outside the potential fault rupture hazard area.

5. When the department’s maps indicate that the site for a proposed regulated activity is or may be located within a potential earthquake-induced landslide hazard area, the department shall conduct a review pursuant to the requirements set forth in EMC 14.80.030.

6. Unless otherwise stated in this chapter, the critical area protective measure provisions contained in EMC 14.10.080 shall apply.

B. Geological Assessments. A geological assessment is a site investigation process to evaluate the on-site geology affecting a subject property and define the extent and severity of potential seismic hazards.

1. A geological assessment shall be required when the department’s maps, sources, or field investigation indicate a site contains a potential liquefaction, dynamic settlement, or fault rupture hazard area. Geological assessments shall be submitted to the department for review and approval together with a seismic hazard area application.

2. A geotechnical professional(s) shall complete a field investigation and geological assessment to determine whether or not the site for a proposed regulated activity is located within a liquefaction or dynamic settlement hazard area. (see EMC 14.90.070(B), Figure 14.90-2).

a. The geological assessment shall be submitted in the form of a geotechnical letter when the geotechnical professional(s) finds that no liquefaction or dynamic settlement hazard areas exist within the site. The geotechnical letter shall meet the requirements contained in EMC 14.90.060, Appendix A.
Chapter 14.890 SEISMIC (EARTHQUAKE) HAZARD AREAS

ba. The geological assessment shall be submitted in the form of a geotechnical verification when the geotechnical professional(s) finds that a no liquefaction or dynamic settlement hazard area exists on the site but is located outside within the proposed project area. The geotechnical verification shall meet the requirements contained in EMC 14.90.060, Appendix A.

cb. The geological assessment shall be submitted in the form of a geotechnical report when the geotechnical professional(s) finds that a liquefaction or dynamic settlement hazard area exists within the proposed project area. The geotechnical report shall meet the requirements contained in EMC 14.90.060, Appendix A.

3. An engineering geologist A geotechnical professional shall complete a field investigation and geological assessment presented in the form of a geotechnical report to determine whether or not the site for a proposed regulated activity is located within a fault rupture hazard area. The geological assessment shall meet the requirements contained in EMC 14.90.060, Appendix B. Any structural recommendations proposed to mitigate the fault rupture hazard that are included in the geotechnical report shall be prepared by an engineer.

4. All geological assessments for seismic hazards submitted under this chapter shall include, at a minimum, the following:
   a. The dates when the geological assessment was conducted and when the assessment was prepared.
   b. The parcel number(s) of the subject property.
   c. Site address, if the city has assigned one.
   d. A brief description of the project (including the proposed land use) and the area to be developed.
   e. A map showing the property lines for the site, existing two-foot contours of the existing site topography, and the location of any existing structures, utilities, wells, stormwater or septic systems, or other developments.
   f. A site plan delineating the limits of the proposed development and the location of all areas of the site subject to potential seismic hazards based on the Critical Areas Atlas: Seismic Hazard Areas MapGeologically Hazardous Areas map and, if applicable, limits of associated buffers.
   g. A description of the surface and subsurface geology, hydrology, soils, and vegetation of the site.
   h. A detailed overview of the field investigations, published data and references, data and conclusions from past geological assessments or geotechnical investigations of the site, site-specific measurements, tests, investigations, or studies, as well as the methods of data analysis and calculations that support the determination regarding whether liquefaction and/or dynamic settlement hazards are present on the site.
   i. The results, conclusions, and recommendations resulting from the geological assessment of the liquefaction and/or dynamic settlement hazards on the subject property as prepared by a geotechnical professional(s).

5. Geological assessments shall be prepared, signed, stamped, and dated by the appropriate geotechnical professional(s) (as defined in EMC 14.10.060 and established in this chapter) and the format shall be pre-approved by the department.

6. Geological assessments that do not contain the minimum required information will be returned to the geotechnical professional(s) for revision.

7. The department shall review the geological assessment and either:
   a. Accept the geological assessment and approve the application; or
   b. Reject the geological assessment and require revisions or additional information.
8. A geological assessment for a specific site may be valid for a period of up to five years when the proposed land use activity and surrounding site conditions are unchanged. However, if any environmental conditions associated with the site change during that five-year period, the applicant may be required to submit an amendment to the geological assessment. (Ord. 02-200 § 2).

**14.90.040 Seismic hazard area standards.**

A. Earthquake Induced Landslide Hazard Areas. All standards set forth in Chapter 14.80 EMC shall apply to earthquake induced landslide hazard areas.

B. Liquefaction and/or Dynamic Settlement Hazard Areas.

1. All building structures shall conform to the standards set forth in EMC Title 15, Buildings and Construction.

2. Utility Lines. Utility lines, except for gas pipelines, which are prohibited, will be permitted when no other conveyance alternative is available. The line shall be located above ground and properly anchored and/or designed so that it will continue to function in the event of seismically induced ground deformation. Provision for automatic shut-off of utilities in a ground-rupturing event will be required.

3. Roads, Bridges, and Trails. Roads, bridges, and trails shall be allowed when mitigation measures are provided that ensure the roadway prism and/or bridge structure will not be susceptible to damage from seismic induced ground deformation. Mitigation measures shall be designed for static and seismic loading conditions in accordance with the most recent version of the American Association of State Highway and Transportation Officials (AASHTO) Manual and also for an estimated range of ground surface offset presented in the geotechnical report.

C. Fault Rupture Hazard Areas. Any development, encroachment, filling, grading, or building structures shall be prohibited within fault rupture hazard areas and associated buffers except as specified in the following standards:

1. Utility Lines. Utility lines, except for gas pipelines, which are prohibited, will be permitted when no other conveyance alternative is available. The line shall be located above ground and properly anchored and/or designed so that it will continue to function in the event of seismically-induced ground deformation. Provision for automatic shutoff of utilities in a ground-rupturing event will be required.

2. Roads, Bridges, and Trails. Roads, bridges, and trails shall be allowed when all of the following conditions have been met:

   a. Mitigation measures are provided that ensure the roadway prism and/or bridge structure will not be susceptible to damage from seismically-induced ground deformation. Mitigation measures shall be designed for static and seismic loading conditions in accordance with the most recent version of the American Association of State Highway and Transportation Officials (AASHTO) Manual and also for an estimated range of ground surface offset presented in the geotechnical report.

   b. The road is not a sole access for a development. (Ord. 02-200 § 2).

**14.90.050 Buffer requirements.**

A. Determining Buffer Widths.

1. The buffer width shall be measured on a horizontal plane from a perpendicular line established at the edge of the fault rupture hazard area limits. (see EMC 14.90.070(C), Figure 14.90-3).

2. A buffer is an area that is adjacent to a fault rupture hazard area that may be potentially subject to ground surface displacement in a future earthquake. No development shall be permitted within a fault rupture hazard area and its associated buffer. The required buffer width is the greater amount of the following distances:

   a. Fifty feet from all edges of a fault rupture hazard area, except for high occupancy or essential facilities, where the minimum buffer distance shall be 100 feet; or

   b. The required buffer width is the minimum distance recommended by the geotechnical professional(s).
B. Modification of Buffer Widths. The Department may require a larger buffer width than the buffer distance, as determined in subsection (A) of this section, if the department determines the standard or proposed buffer is not adequate to protect the health, safety, or welfare of any proposed development. (Ord. 02-200 § 2).

14.90.060 Appendices.
A. Geological Assessments – Liquefaction or Dynamic Settlement Hazard Areas.

APPENDIX A

GEOLOGICAL ASSESSMENTS – LIQUEFACTION OR DYNAMIC SETTLEMENT HAZARD AREAS

Article I. Geotechnical Letter

A. A geotechnical letter shall, at a minimum, include the following:

1. The letter shall be labeled identifying the submittal as a “Liquefaction or Dynamic Settlement Hazard Geotechnical Letter,” and will include all mandatory items listed in EMC 14.90.030(B)(4).

2. The geological assessment must include a determination that no portion of the subject property [site] includes a liquefaction and/or dynamic settlement hazard.

3. A paragraph that states the following specific language:

I meet the qualifications contained in EMC 14.90.030 to prepare this geological assessment. I understand the requirements of the current seismic (earthquake) hazard areas Chapter 14.90 EMC and the definitions of the applicable terms contained within EMC 14.10.060. I have conducted an investigation of sufficient scope on the above referenced site to determine that no liquefaction and/or dynamic settlement hazard area exists within the boundaries of the proposed site.

4. The name, mailing address and telephone number of geotechnical professional(s) who prepared the letter.

5. The name, mailing address, and telephone number of the property owner.

B. The geotechnical professional(s) who prepared the geotechnical letter shall stamp the letter with his or her license stamp/seal.

C. Hold harmless clauses, disclaimers, and limitations are not allowed within a geotechnical letter.

Article IIA. Geotechnical Verification

A. A geotechnical verification shall, at a minimum, include the following:

1. The general critical areas report requirements in EMC 14.20.060.

2. The first page of the document shall be labeled identifying the submittal as a “Liquefaction or Dynamic Settlement Hazard Geotechnical Verification,” and geotechnical verification shall will include all mandatory items listed in EMC 14.90.030(B)(4).

3. The geological assessment must include a determination that no liquefaction and/or dynamic settlement hazard exists on the site, but is located outside within the proposed project area.

4. The verification shall include an accurate site plan drawn at a scale of one inch equals 20 feet, one inch equals 30 feet, one inch equals 50 feet (or other scale deemed appropriate by the department) is required. The department may require that the site plan information be based on a field survey by a licensed surveyor. The site plan shall include:

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
a. Property lines for the site, and the location of any existing structures.

b. The existing site topography presented in two-foot contours.

c. The limits/location of any liquefaction and/or dynamic settlement hazard area(s) as set forth in EMC 14.90.020(C)(2).

d. The full geographical limits of the proposed project area or conceptual project area (i.e., area to be developed) and the location of any proposed structures, on-site septic systems, wells, and stormwater management features or facilities associated with the development, if known.

e. The limits of any setbacks from the defined locations of the liquefaction and/or dynamic settlement hazard areas determined by the geotechnical professional(s) as necessary to protect any portion of the proposed development activity from damage caused by liquefaction induced ground displacement.

4. A paragraph that states the following specific language:

I meet the qualifications contained in EMC 14.90.030 to prepare this geological assessment. I understand the requirements of the current seismic (earthquake) hazard areas Chapter 14.90 EMC and the definitions of the applicable terms contained within EMC 14.10.060. I have conducted an investigation of sufficient scope on the above referenced site to determine that no liquefaction and/or dynamic settlement hazard area exists within the boundaries of the proposed project area.

54. The name, mailing address, and telephone number of geotechnical professional(s) who prepared the letter.

65. The name, mailing address, and telephone number of the property owner.

B. The geotechnical professional(s) who prepared the geotechnical verification shall stamp the verification with his or her license stamp/seal.

C. Hold harmless clauses, disclaimers, and limitations are not allowed within a geotechnical verification.

Article III

Article II. Geotechnical Report

A. A geotechnical report shall, at a minimum, include the following:

1. The general critical areas report requirements in EMC 14.20.060.

24. The first page of the document shall be labeled identifying the submittal as a “Liquefaction or Dynamic Settlement Hazard Geotechnical Report,” and document shall include all mandatory items listed in EMC 14.90.030(B)(4). The report shall be prepared by an engineer and shall be cowritten by an engineering geologist where geological interpretations and conclusions critical to the assessment of liquefaction and/or dynamic settlement hazard and potential effects are necessary or prudent. The introductory section of the report shall specify the desired performance level of the structures and other development facilities (e.g., safety to building occupants, minimal damage to structure, post-earthquake serviceability for pre-earthquake operations, no damage, etc.).

32. The results, conclusions, and recommendations resulting from the geological assessment of the liquefaction and/or dynamic settlement hazards on the subject property as prepared by the geotechnical professional(s).

43. The geological assessment-geotechnical report shall include:

a. A statement that the proposed project area falls within a liquefaction and/or dynamic settlement hazard area.

b. A detailed engineering evaluation of expected ground displacements or other liquefaction and/or dynamic settlement effects (e.g., bearing failures, flotation of buried tanks, etc.) and proposed mitigation measures to
ensure an acceptable level of risk for the proposed structure type or other development facilities, as well as the proposed land use type (i.e., occupancy category). The minimum level of acceptable risk for any proposed structure or development facility shall ensure the life safety of any occupant. Designs shall evaluate the range of alternatives for achieving limited structural damage to no structural damage based on the proposed use intended for the structure. Where appropriate, a range of mitigation options should be considered depending on site conditions, the intended use of the structures, and acceptable levels of settlement.

The report shall include an accurate site plan drawn at a scale of one inch equals 20 feet, one inch equals 30 feet, one inch equals 50 feet (or other scale deemed appropriate by the department) is required. The department may require that the site plan information be based on a field survey by a licensed surveyor. The site plan shall include:

a. Property lines for the site and the location of any existing structures.

b. The limits/location of any liquefaction and/or dynamic settlement hazard area(s) as set forth in EMC 14.90.020(C)(2).

c. The full geographical limits of the proposed project area or conceptual project area (i.e., area to be developed) and the location of any proposed structures, on-site septic systems, wells, and stormwater management features or facilities associated with the development, if known.

d. The limits of any setbacks from the defined locations of the liquefaction and/or dynamic settlement hazard areas determined by the geotechnical professional(s) as necessary to protect any portion of the proposed development activity from damage caused by liquefaction-induced ground displacement.

e. Location and unique identifier of geotechnical borings and/or CPT sounding explorations used to characterize subsurface conditions.

The geotechnical study shall include field exploration sufficient to assess the potential for liquefaction or dynamic settlement hazards and options for mitigation of those hazards. Copies of the exploration logs shall be included in the report. The project geotechnical professional must provide justification for the scope of the field exploration program. The City’s geotechnical professional reserves the right to request additional exploration if deemed appropriate. If a dispute arises between the City’s geotechnical professional and the project geotechnical professional regarding the scope of the field exploration, the City reserves the right to require an independent, third party review to be paid for by the applicant to resolve the dispute.

Field investigation shall require the following elements:

a. Subsurface characterization using conventional geotechnical borings and standard penetration testing (SPT) or using cone penetration testing (CPT).

b. Conventional geotechnical boring data shall be reported as a graphic log utilizing the following standards:

i. The vertical scale of the graphic log shall be such that five feet of drilled depth is scaled to range of one inch to two inch (1:60- or 1:30-scale), and shall include vertical columns that record depth in one-foot increments, SPT value and incremental blow counts, a graphic pattern representation of the soil type encountered during drilling, and sample descriptions and other comments regarding drilling.

ii. The graphic log shall have a header on the first page that includes a unique identifier for the boring, the times and dates of the start and completion of drilling, the manufacturer and model of the drilling rig, the company name of the drilling contractor, the name(s) of the site geologist(s) or engineer(s) overseeing the drilling activities, the details of the method used to advance the borehole (e.g., four-inch i.d. hollow-stem auger), the type of drilling fluid used to stabilize the borehole, verification that the SPT followed all applicable ASTM standards.

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
including a description of the sampler, hammer weight, drop height, the type of hammer used to perform the SPT, number of turns of rope if a cathead is used to raise the hammer, condition of rope (i.e., new, used, frayed, oily, etc.), and the depth of static groundwater measured immediately prior to abandonment of the boring and the time and date of this measurement.

iii. All subsequent pages of the graphic log shall have the unique identifier for the boring, the times and dates of the start and completion of drilling, and the number of the page and the total number of pages comprising the log.

iv. Each SPT value will be reported in the appropriate column showing the blow counts recorded at each six-inch interval, and the sum of the blow counts between penetration distances of six inches to 18 inches, unless refusal conditions (50 or more blows with less than six inches of sampler penetration) are met anywhere in this interval. At refusal, the blow count shall be recorded as the number of blows with the corresponding sampler penetration, in inches.

v. SPT tests shall be performed every five feet during drilling, at a minimum. Additional undisturbed samples, collected following ASTM standards for undisturbed soil sampling, cannot be substituted for SPT testing.

vi. The soil sample descriptions will include the total length of the recovered sample, the soil color, odor, the density or consistency (loose to very dense, very soft to very stiff), degree of water saturation (dry, moist, wet-saturated), and distance. For granular (sand and gravel) soils, the description shall include a physical description of the soil sample, including size distribution (poorly or well graded), angularity, composition, amount and plasticity of the fines fraction. For fine soils (silt and clay), the description shall include a qualitative estimate of the proportion of the silt and clay size particles (e.g., silty clay, clay with some silt, etc.), plasticity, and amount and type of organic material. The sample description shall include a description of any bedding, laminations, slickenides, or other textural or deposition features, including contact between dissimilar soil types. The sample description shall also include a field classification of the soil sample using the Unified Soil Classification System where the classification is expressed in lower case letters (e.g., sp, ml, etc.). The sample classification shall be expressed in upper case letters (e.g., SP, ML, etc.) where subsequent laboratory testing has been performed. This column of the graphic log will also include any other information relevant to the subsurface investigation, such as loss of drilling fluid, heaving, churning of the drill in gravelly soils, etc.

c. CPT sounding data shall be reported as a graphic log utilizing the following standards:

i. The vertical scale of the graphic log shall be such that five feet of penetrated depth is scaled to range of one inch to two inch (1:60- or 1:30-scale), and shall include vertical columns that record depth in one-foot increments.

ii. The graphic log shall have a header on the first page that includes a unique identifier for the boring, the times and dates of the start and completion of the CPT sounding, the manufacturer and model of the CPT system, the company name of the CPT service contractor, the name(s) of the site geologist(s) or engineer(s) overseeing the CPT sounding, and any comments regarding the conduct of the testing, reaction of the CPT system during sounding, etc.

iii. All subsequent pages of the graphic log shall have the unique identifier for the boring, the times and dates of the start and completion of drilling, and the number of the page and the total number of pages comprising the log.

iv. The graphic log shall display, at a minimum, a continuous depth plot of the uncorrected tip resistance, the friction (sleeve) resistance, the friction ratio, and the measured pore pressure with an overlay of the calculated hydrostatic pore pressure. These curves shall be plotted so as to show the full variation of the measured quantities within the depth range of the sounding, and each curve shall have a visible scale with the minimum and maximum range labeled.

v. All of the CPT data recorded for each sounding shall also be provided in either electronic or hardcopy format. Electronic data will be presented in an ASCII text file format.

d. All SPT or CPT testing will be conducted to a minimum depth of 50 feet below the existing ground surface or lowest proposed finished grade, except where a minimum thickness of 10 feet of consolidated soils are encountered where the N60 is greater than 30, or CPT corrected tip resistance (qc \text{CPT}) is greater than 175. In
addition, SPT or CPT testing should extend a minimum of 20 feet below the lowest expected foundation level, including the lowest elevation of piling support.

76. If beneficial to the assessment of seismic hazards for the project, the three-dimensional subsurface conditions at the site shall be presented using one or more cross-sections showing location and depth penetration of borings or CPT soundings, interpretation of the geometry of major soil units, and projected location of the static groundwater surface determined from the subsurface exploration. The cross-sections shall be presented at a scale of one inch equals 20 feet, one inch equals 30 feet, one inch equals 50 feet (or other scale deemed appropriate by the department). Each cross-section shall have a legend with a description of the various major soil units. The City’s geotechnical professional reserves the right to request inclusion of one or more cross sections in the geotechnical report. If a dispute arises between the project geotechnical professional and the City’s geotechnical professional regarding this issue, then the City reserves the right to require an independent, third party review to be paid for by the applicant to resolve the dispute.

87. All assessments of liquefaction and/or dynamic settlement hazards and effects will be based on a design earthquake using ground motion parameters consistent and equivalent to those specified in the most current version of the International Building Code. The choice of moment magnitude used in the determination of the magnitude-scaling factor, as well as the scaling relations used in the analysis, shall be justified in the report narrative. These assessments shall use the shallowest groundwater table observed during or inferred from subsurface exploration and characterization (e.g., the measured depth of static groundwater immediately prior to abandonment of borings, observation of iron-oxide motting of soils samples, etc.).

98. Results of laboratory testing of samples retrieved during drilling and sampling shall be presented in order to support the values of fines contents used in subsequent analysis of liquefaction and/or dynamic settlement hazard. Where only CPT methods are used in site assessment, the correlation between fines content and CPT measurements will be discussed and documented. This documentation will require rigorous correlation of CPT and fines content measurements from similar geological deposits within the Puget Sound region.

109. The geotechnical report shall include a detailed assessment of the liquefaction and/or dynamic settlement hazard based on analysis of all available SPT or CPT data using state-of-the-practice methodologies, such as provided in Youd and Idriss (1997) or subsequent technical publications. The methodology used in results of the analysis shall be documented, and all results of intermediate and final calculations and results, including factors of safety, shall be included.

12. The name, mailing address, and telephone number of geotechnical professional(s) who prepared the letter.

13. The name, mailing address, and telephone number of the property owner.

B. The geotechnical professional(s) who prepared the geotechnical report shall stamp the report with his or her license stamp/seal.
C. Hold harmless clauses, disclaimers, and limitations are not allowed within a geotechnical report.

APPENDIX B

GEOLOGICAL ASSESSMENTS – FAULT RUPTURE HAZARD AREA GEOTECHNICAL REPORT

A. A geotechnical report shall, at a minimum, include the following:

1. The general critical areas report requirements in EMC 14.20.060.

2. The first page of the document shall be labeled identifying the submittal as a “Fault Rupture Hazard Geotechnical Report,” and shall document all mandatory items listed in EMC 14.90.030(B)(4). The report shall be prepared by an engineer and shall be cowritten by an engineering geologist where geological interpretations and conclusions critical to the assessment of liquefaction and/or dynamic settlement hazard and potential effects are necessary or prudent.

2. The geological assessment for fault rupture hazards shall include the minimum requirements specified in EMC 14.90.030(B)(4).

3. The following topics should be considered and addressed in detail where essential to support opinions, conclusions, and recommendations in any geologic report on faults. It is not expected that all the topics or investigative methods would be necessary in a single investigation. In specific cases, it may be necessary to extend some of the investigative methods well beyond the site or property being investigated.

a. Purpose and scope of investigation; description of proposed development.

b. Geologic and tectonic setting. Include seismicity and earthquake history.

c. Site description and conditions, including dates of site visits and observations. Include information on geologic units, graded and filled areas, vegetation, existing structures, and other factors that may affect the choice of investigative methods and interpretation of data.

d. Methods of Investigation.

i. Review of published and unpublished literature, maps, and records concerning geologic units, faults, groundwater barriers, and other factors.

ii. Stereoscopic interpretation of aerial photographs, review of LiDAR based topography, and other remotely sensed images to detect fault-related topography (geomorphic features), vegetation and soil contrasts, and other lineaments of possible fault origin. The area interpreted usually should extend beyond the site boundaries.

iii. Surface observations, including mapping of geologic and soil units, geologic structures, geomorphic features and surfaces, springs, deformation of engineered structures due to fault creep, both on and beyond the site.

iv. Subsurface Investigations.

(A) Trenching and other excavations to permit detailed and direct observation of continuously exposed geologic units, soils, and structures; must be of adequate depth and be carefully logged (Taylor & Cluff 1973, Hatheway & Leighton 1979, McCalpin 1996b).

(B) Borings and test pits to permit collection of data on geologic units and groundwater at specific locations. Data points must be sufficient in number and spaced adequately to permit valid correlations and interpretations.

(C) Cone penetrometer testing (CPT) (Grant et al., 1997, Edelman et al., 1996). CPT must be done in conjunction with continuously logged borings to correlate CPT results with on-site materials.

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
v. Geophysical Investigations. These are indirect methods that require a knowledge of specific geologic conditions for reliable interpretations. They should seldom, if ever, be employed alone without knowledge of the geology (Chase & Chapman 1976). Geophysical methods alone never prove the absence of a fault nor do they identify the recency of activity. The types of equipment and techniques used should be described and supporting data presented (California Board of Registration for Geologists and Geophysicists, 1993).

(A) High-resolution seismic reflection (Stephenson et al., 1995, McCalpin, 1996b).

(B) Ground penetrating radar (Cai et al., 1996).

(C) Other methods include: seismic refraction, magnetic profiling, electrical resistivity, and gravity (McCalpin, 1996b).

vi. Age-dating techniques are essential for determining the ages of geologic units, soils, and surfaces that bracket the time(s) of faulting (Pierce 1986, Birkeland et al., 1991, Rutter & Catto, 1995, McCalpin, 1996a).

(A) Radiometric dating (especially 14C).

(B) Soil-profile development.

(C) Rock and mineral weathering.

(D) Landform development.

(E) Stratigraphic correlation of rocks/minerals/fossils.

(F) Other methods – artifacts, historical records, tephrochronology, fault scarp modeling, thermoluminescence, lichenometry, paleomagnetism, dendrochronology, etc.

vii. Other methods should be included when special conditions permit or requirements for critical structures demand a more intensive investigation.

(A) Aerial reconnaissance overflights.

(B) Geodetic and strain measurements.

(C) Microseismicity monitoring.

e. Conclusions.

i. Location and existence (or absence) of hazardous faults on or adjacent to the site; ages of past rupture events.

ii. Type of faults and nature of anticipated offset, including sense and magnitude of displacement, if possible.

iii. Distribution of primary and secondary faulting (fault zone width) and fault-related deformation.

iv. Probability of, or relative potential for, future surface displacement. The likelihood of future ground rupture seldom can be stated mathematically, but may be stated in semiquantitative terms such as low, moderate, or high, or in terms of slip rates determined for specific fault segments.

v. Degree of confidence in, and limitations of data and conclusions.

f. Recommendations.

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
i. The recommended increase from the standard buffer distance (50 feet) of proposed structures from fault rupture hazard areas. The recommended buffer distance generally will depend on the quality of data and type and complexity of fault(s) encountered at the site and the proposed land use type (i.e., occupancy). In order to establish an appropriate buffer distance from a fault located by indirect or interpretative methods (e.g., borings or cone penetrometer testing), the area between data points also should be considered underlain by a fault unless additional data are used to more precisely locate the fault. Additional measures (e.g., strengthened foundations, engineering design, and flexible utility connections) to accommodate warping and distributive deformation associated with faulting (Lazarte and others, 1994).

ii. Risk evaluation relative to the proposed development.

iii. Limitations of the investigation; need for additional studies.

g. References.

i. Literature and records cited or reviewed; citations should be complete.

ii. Aerial photographs or images interpreted – list type, data, scale, source, and index numbers.

iii. Other sources of information, including well records, personal communications, and other data sources.

h. Illustrations. The following illustrations should be provided:

i. A location map that identifies site locality, significant faults, geographic features, regional geology, seismic epicenters, and other pertinent data; 1:24,000 scale is recommended.

ii. A site development map that shows site boundaries, existing and proposed structures and limits of the proposed project area, graded areas, streets, exploratory trenches, borings geophysical traverses, locations of faults, and other data; recommended scale is 1:2,400 (one inch equals 200 feet), or larger.

iii. A geologic map that shows the distribution of geologic units (if more than one), faults and other structures, geomorphic features, aerial photographic lineaments, and springs; on topographic map 1:24,000 scale or larger; can be combined with subsection (B)(h)(i) 1) or (ii2) of this appendix.

iv. Geologic cross-sections, if needed, to provide three-dimensional picture.

v. Logs of exploratory trenches and borings that show details of observed features and conditions (note: these should not be generalized or diagrammatic). Trench logs should show topographic profile and geologic structure at a 1:1 horizontal to vertical scale; scale should be 1:60 (one inch equals five feet) or larger.

vi. Geophysical data and geologic interpretations.

i. Appendix. Attach any supporting data not included above (e.g., water well data, photographs, aerial photographs).

The geotechnical professional who prepared the geotechnical shall stamp the report with his or her license stamp/seal.

The department may request a geotechnical professional to provide additional information in the geotechnical report based upon existing conditions, changed conditions, or unique circumstances occurring on a case-by-case basis.

Hold harmless clauses, disclaimers, and limitations are not allowed to be included, neither expressly nor implied, within a geological assessment. (Ord. 02-200 § 2).
The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
Chapter 14.110

EROSION HAZARD AREAS

Sections:
14.110.010 Purpose.
14.110.020 Erosion hazard areas.
14.110.030 Erosion hazard area review procedures.
14.110.040 Erosion hazard area standards.
14.110.050 Buffer requirements.
14.110.060 Appendices.
14.110.070 Figures.

14.110.010 Purpose.
The following statements describe the purpose of this chapter:

A. Protect human life and health;
B. Regulate uses of land in order to avoid damage to structures and property being developed and damage to neighboring land and structures;
C. Identify and map erosion hazard areas;
D. Minimize impacts on wetlands and critical fish and wildlife species and their associated habitat that can result from erosion;
E. Establish a permit requirement and review procedures for development proposals in areas with potential erosion hazards;
F. Strike a balance between the need to maintain natural shoreline erosion/regression processes and the need to protect existing and proposed development. (Ord. 02-200 § 2).

14.110.020 Erosion hazard areas.
A. Shoreline Erosion Hazard Indicators. Shoreline erosion hazard areas are areas potentially subject to land regression or retreat due to a combination of geologic, seismic, tidally influenced, and/or hydrologic or manmade factors. Shoreline hazard areas can be identified by the presence of any of the following indicators:

1. Areas with active bluff retreat that exhibit continuing sloughing or calving of bluff sediments, resulting in a vertical or steep bluff face with little or no vegetation.
2. Areas with active land retreat as a result of wave action.

B. Erosion Hazard Area Categories.

1. Potential Erosion Hazard Areas. Potential erosion hazard areas, as depicted on the Critical Areas Atlas – Erosion Hazard Areas Map or Geologically Hazardous Areas map, are those areas where the suspected risk of erosion through either loss of soil, slope instability, or land regression is sufficient to require additional review to assess the potential for active erosion activity or apply additional standards. These potential erosion hazard areas are determined using the following criteria:

a. Shoreline Erosion Hazard Areas. Areas within 200 feet of a freshwater (lake, pond, or shoreline) as measured landward perpendicularly from the edge of the ordinary high water mark (see EMC 14.110.070(A), Figure 14.110-1).

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
b. Riverine Erosion Hazard Areas. The rivers subject to regulation as a channel migration zone listed in EMC 14.70.020(B)(45).

c. Soil Erosion Hazard Areas. Areas identified as having slopes of 20 percent or greater and that are classified as having severe, or very severe erosion potential by the Soil Conservation Service, United States Department of Agriculture (USDA).

2. Active Shoreline Erosion Hazard Areas. Land areas located directly adjacent to freshwater or marine-water surface water bodies that, through the geological assessment process, are identified as regressing, retreating, or potentially unstable as a result of undercutting by wave action or bluff erosion. The limits of the active shoreline erosion hazard area shall extend landward to include that land area that is calculated, based on the rate of regression, to be subject to erosion processes within the next 10-year time period.

3. Riverine Erosion Hazard Areas. Riverine erosion hazard areas are located within the lateral extent of likely watercourse channel movement due to bank destabilization and erosion, rapid incision, and shifts in location of watercourse channels. Riverine erosion hazard areas are also referred to as channel migration zones (CMZs). Rivers and streams subject to erosion are regulated as a CMZ as listed in EMC 14.70.020(B)(4).

4. Soil Erosion Hazard Areas. Soil erosion hazard areas are identified by the presence or absence of natural vegetative cover, soil texture condition, slope, and rainfall patterns, or man-induced changes to such characteristics that create site conditions which are vulnerable to erosion of the upper soil horizon. Soil erosion hazard areas include those areas with slopes of 20 percent or greater and that are classified as having severe, or very severe erosion potential by the Soil Conservation Service, USDA Natural Resources Conservation Service. (Ord. 02-200 § 2).

14.110.030 Erosion hazard area review procedures.
A. General Requirements.

1. The City’s Critical Areas Atlas – Erosion Hazard Area Map provides an indication of where potential erosion hazard areas are located within the county. The actual presence or location of an erosion hazard area and/or additional potential erosion hazard area that have not been mapped, but may be present on or adjacent to a site, shall be determined using the procedures and criteria established in this chapter.

2. The department will complete a review of the Critical Areas Atlas – Erosion Hazard Area Map, and any other source documents for any proposed regulated activity to determine whether the site for the regulated activity is located within a potential erosion hazard area.

3. When the department’s maps, sources, or field investigations indicate that the site for a proposed regulated activity is located within a potential shoreline erosion hazard area, the department shall require a geological assessment as outlined in subsection (B) of this section (see EMC 14.110.070(B), Figure 14.110-2).

4. When the department’s maps, sources, or field investigations indicate that the proposed project area for a regulated activity is located within a potential riverine erosion hazard area (channel migration zone), the department shall conduct a review pursuant to the requirements set forth in EMC 14.70.030. All standards set forth in Chapter 14.70 EMC shall apply to riverine erosion hazard areas (CMZs).

5. When the department’s maps, sources, or field investigations indicate that the proposed project area for a regulated activity is located within a potential soil erosion hazard area, the department shall require submittal of an erosion control plan pursuant to the requirements set forth in EMC Title 15, Buildings and Construction.

6. Applicants requesting to develop a bulkhead along a freshwater or marine-shoreline shall be required to submit a geotechnical report. The geotechnical report shall comply with the requirements established in EMC 14.110.060, Appendix C.

7. Unless otherwise stated in this chapter, the critical area protective measure provisions contained in EMC 14.10.080 shall apply.
B. Geological Assessment. A geological assessment is a site investigation process to evaluate the on-site geology affecting a subject property and proposed development.

1. Geological assessments shall be submitted to the department for review and approval together with a shoreline erosion hazard area application.

2. The geological assessment shall include a field investigation and may also include review of public records and documentation, analysis of historical air photos, LiDAR mapping, published data and references, etc.

3. The geological assessment shall include the following information and analysis:
   a. An analysis of the shoreline erosion processes on and in the vicinity of the site including an evaluation of erosion and bluff retreat that has occurred over the past decade and an estimated probable rate of erosion based upon the historic rate of erosion that has occurred on the site.
   b. A determination of which areas on the site meet the criteria for an active shoreline erosion hazard area as set forth in EMC 14.110.020(B)(2).
   c. A determination of the area on the site or in the vicinity of the site that will experience regression in the next 120 years given natural processes.

4. Geological assessments shall be prepared, signed, and dated by a geotechnical professional (as defined in EMC 14.10.060 and established in this chapter) and the format shall be pre-approved by the department.

5. A geotechnical professional shall complete a field investigation and geological assessment to determine whether or not an active shoreline erosion hazard area exists within 200 feet of the site. (see EMC 14.110.070(B), Figure 14.110-2).
   a. The geological assessment shall be submitted in the form of a geotechnical letter when the geotechnical professional finds that no active shoreline erosion hazard area exists within 200 feet of the site. The geotechnical letter shall meet the requirements contained in EMC 14.110.060, Appendix A.
   b. The geological assessment shall be submitted in the form of geotechnical verification when the geotechnical professional finds that an active shoreline erosion hazard area exists but is located more than 200 feet away from the proposed project area. The geotechnical verification shall meet the requirements contained in EMC 14.110.060, Appendix B.
   c. The geological assessment shall be submitted in the form of a geotechnical report when the geotechnical professional finds that an active shoreline erosion hazard area exists within 200 feet of the proposed project area or when a geotechnical professional determines that mitigation measures, such as a bulkhead, are necessary in order to construct or develop within a potential shoreline erosion hazard area. The geotechnical report shall meet the requirements contained in EMC 14.110.060, Appendix C.

6. The department shall review the geological assessment and either:
   a. Accept the geological assessment and approve the application; or
   b. Reject the geological assessment and require revisions or additional information.

7. A geological assessment for a specific site may be valid for a period of up to five years when the proposed land use activity and surrounding site conditions are unchanged. However, if any environmental conditions associated with the site change during that five-year period, the applicant may be required to submit an amendment to the geological assessment.

C. Riverine Erosion Hazard Area (Channel Migration Zones) Review. Riverine erosion hazard areas shall be reviewed pursuant to the requirements set forth in EMC 14.70.030.
D. Soil Erosion Hazard Area Review. Soil erosion hazard areas shall be reviewed pursuant to the requirements set forth in EMC Title 15, Buildings and Construction. (Ord. 02-200 § 2).

14.110.040 Erosion hazard area standards.

A. Active Shoreline Erosion Hazard Areas. Any development, encroachment, filling, clearing, or grading, timber harvest, building structures, impervious surfaces, and vegetation removal shall be prohibited within active shoreline erosion hazard areas and associated buffers except as specified in the following standards:

1. Shoreline Erosion Protection Measures. Shoreline erosion protection measures located within or adjacent to freshwater or marine shorelines shall be allowed subject to the following:

   a. The proposed shoreline protection measure shall comply with the standards set forth in EMC Chapter 14.40 Fish and Wildlife Habitat Conservation Areas.

   b. A geological assessment-shoreline erosion geotechnical report has been conducted in accordance with the provisions set forth in EMC 14.110.030(B) that indicates that the shoreline is currently experiencing active erosion (i.e., land retreat or regression).

   c. The use of the shoreline erosion protection measure will not cause a significant adverse impact on adjacent properties or critical fish and wildlife species and their associated habitat (i.e., increase erosion on adjacent properties).

   d. The use of soft armoring techniques (soil bioengineering erosion control measures) is the preferred method for shoreline protection.

   e. Hard armoring shoreline erosion control measures shall be approved only when a geological assessment-shoreline erosion geotechnical report, as set forth in EMC 14.110.030(B), has been completed and indicates the following:

      i. The regression has been monitored on a yearly interval for a period of at least five consecutive years prior to allowing a bulkhead to be constructed. This monitoring shall be conducted by field survey measurements of a licensed surveyor. The department may shorten or eliminate the monitoring period if there are indicators that the regression rate is rapid and an existing structure may be threatened prior to completion of the monitoring period;

      ii. The use of beach nourishment alone or in combination with soft armoring techniques is not adequate to protect the property from shoreline erosion processes; and

      iii. The property contains an existing structure(s) that will be threatened within the next 10 years or the buildability of an undeveloped site will be threatened within the next 10 years if a hard armoring method of shoreline erosion protection is not provided.

   f. Hard armoring shoreline protection measures shall not be allowed when structures can be located landward of the 120-year rate of regression area.

2. Stormwater Conveyance. Surface drainage into an active shoreline erosion hazard area should be avoided. If there are no other alternatives for discharge, then drainage must be collected upland of the top of the active shoreline erosion hazard area and directed downhill in a high density polyethylene stormwater pipe with fusion welded joints that includes an energy dissipating device at the base of the active landslide hazard area. The pipe shall be located on the surface of the ground and be properly anchored so that it will continue to function in the event of an underlying slide. The number of these pipes should be minimized along the slope frontage.

3. Utility Lines. Utility lines will be permitted when no other conveyance alternative is available. The line shall be located above ground and properly anchored and/or designed so that it will continue to function in the event of an underlying slide.

4. Roads, Bridges, and Trails. Roads, bridges, and trails shall be allowed when all of the following conditions have been met:

   a. The proposed shoreline protection measure shall comply with the standards set forth in EMC Chapter 14.40 Fish and Wildlife Habitat Conservation Areas.

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
a. Mitigation measures are provided that ensure the roadway prism and/or bridge structure will not be susceptible to damage from active erosion.

b. The road is not a sole access for a development.

B. Shoreline Erosion Hazard Management Area. All regulated activities such as but not limited to building structures, impervious surfaces, vegetation removal, timber harvest, and clearing or grading activities may be allowed in areas located within 200 feet of an active shoreline erosion hazard area subject to the following standards:

1. The department reviews and approves a geological assessment – shoreline erosion hazard geotechnical report and determines that the proposed project area is located outside an active shoreline hazard area and the required buffer, as set forth in EMC 14.110.050.

2. The proposed recommendations and mitigation measures contained within the geotechnical report are adequate to reduce or mitigate risks to the natural environment, health, and safety.

3. Surface drainage from the proposed project area, including downspouts, landscape irrigation systems, and runoff from paved or unpaved surfaces upland of the shoreline, shall not be directed through an active shoreline erosion hazard area or its associated buffer unless it is conveyed in conformance with the provisions in subsection (A)(2) of this section.

4. Stormwater retention and detention systems, such as dry wells and infiltration systems utilizing buried pipe or french drains, shall not be permitted unless such systems are designed by a professional engineer and the geotechnical report indicates that such a system will not affect the stability of the shoreline.

5. Proposed developments, with the exception of shoreline erosion protection measures, shall be sited far enough from regressing shorelines to ensure 120 years of useful life for any proposed structures or infrastructure.

C. Riverine Erosion Hazard Area (Channel Migration Zones) Review. Riverine erosion hazard areas shall be reviewed pursuant to the requirements set forth in EMC 14.70.030.

D. Soil Erosion Hazard Area Review. Soil erosion hazard areas shall be reviewed pursuant to the requirements set forth in EMC Title 15, Buildings and Construction. (Ord. 02-200 § 2).

14.110.050 Buffer requirements.

A. Determining Buffer Widths.

1. The buffer width shall be measured on a horizontal plane from a perpendicular line established at the edge of the active shoreline erosion hazard area limits. (see Figure 14.110-3).

2. An undisturbed buffer of existing vegetation shall be required for an active shoreline erosion hazard area. The required standard buffer width is the greatest amount of the following distances in EMC 14.110.050(A)(2)(a) and (b):

   a. Fifty feet from all edges of the active shoreline erosion hazard area limits;

   b. A distance of one-third the height of the slope at the top of the slope and a distance of one-half the height at the bottom of the slope; or

   c. The minimum distance recommended by the geotechnical professional measured from the edge of the active shoreline erosion hazard area. The buffer width may be reduced below the widths specified in EMC 14.110.050(A)(2)(a) and (b) or eliminated upon approval by the Department of a geotechnical report that demonstrates that such a reduction would not result in an increased risk of erosion either on or off of the subject property.

B. Modification of Buffer Widths. The department may require a larger buffer width than the standard buffer distance, as determined in subsection (A) of this section, if any of the following are identified through the geological assessment process:

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
1. The adjacent land is susceptible to severe erosion and erosion control measures will not effectively prevent adverse impacts.

2. The area has a severe risk of slope failure or downslope stormwater drainage impacts. (Ord. 02-200 § 2).

14.110.060 Appendices.
A. Geological Assessment – Shoreline Erosion Hazard Geotechnical Letter.

APPENDIX A
GEOLOGICAL ASSESSMENT – SHORELINE EROSION HAZARD GEOTECHNICAL LETTER
A. A geotechnical letter shall, at a minimum, include the following:

1. The letter shall be labeled identifying the submittal as a “Shoreline Erosion Hazard Geotechnical Letter.”
2. The general critical areas report requirements in EMC 14.20.060.
3. The parcel number(s) of the site.
4. Site address, if the city has assigned one.
5. A brief description of the project (including the proposed land use) and a description of the area to be developed. The letter will include a summary of the findings of the site visit, a site plan, and a summary of the findings from the review of documents listed in EMC 14.110.030(B)(2). The appropriate professional preparing the geotechnical letter shall provide conclusions and recommendations as to slope-shoreline stability for the proposed development.

6. A paragraph that states the following specific language:

   I meet the qualifications contained in EMC 14.110.030 to prepare a geological assessment. I understand the requirements of the current erosion hazard area Chapter 14.110 EMC and the definitions of the applicable terms contained within EMC 14.10.060. I have performed a shoreline erosion hazard geological assessment, conducted a field investigation, and researched available historic records on the above referenced site and determined that no active shoreline erosion hazard area exists within 200 feet of the site.

7. The name, mailing address, and telephone number of the geotechnical professional who prepared the letter.
8. The name, mailing address, and telephone number of the property owner.

B. The geotechnical professional who prepared the geotechnical letter shall stamp the letter with his or her seal.
C. Hold harmless clauses, disclaimers, and limitations are not allowed within a geotechnical letter.

APPENDIX B
GEOLOGICAL ASSESSMENT – SHORELINE EROSION HAZARD GEOTECHNICAL VERIFICATION
A. A geotechnical verification shall, at a minimum, include the following:

1. The cover letter for the document shall clearly identify the submittal as a “Shoreline Erosion Hazard Geotechnical Verification.”
1. The general critical areas report requirements in EMC 14.20.060.
2. The date when the geological assessment was conducted. The date when the verification was prepared.
3. The parcel number(s) of the site.
4. Site address, if the city has assigned one.
5. A detailed description of the project (including the proposed land use) and a description of the area to be developed.
6. A summary of the results, conclusions, and recommendations resulting from the geological assessment, as set forth in EMC 14.110.030(B). The verification will also include a summary of the findings of the site visit, a site plan, and a summary of the findings from the review of the documents listed in EMC 14.110.030(B)(2).
7. An accurate site plan drawn at a scale of one inch equals 20 feet, one inch equals 30 feet, one inch equals 50 feet (or other scale deemed appropriate by the department) is required. The department may require that the site plan information listed below be based on a field survey by a licensed surveyor. The site plan shall include:
   a. The limits/location of the active shoreline erosion hazard area(s) set forth in EMC 14.110.020(B)(2).
   b. The limits of the required shoreline erosion hazard buffer based upon the requirements set forth in EMC 14.110.050(A).
   c. The limits/location of the shoreline erosion hazard management area.
   d. The limits/location of the 120-year regression area.
   e. The location of any existing structures, utilities, on-site septic systems, wells, and stormwater management facilities.
   f. The location of any proposed structures, utilities, on-site septic systems, wells, and stormwater management facilities.
   g. The full geographical limits of the proposed project area (area to be developed).
   h. Dimension of the closest distance between the identified active shoreline hazard area boundary and the proposed project area.
   i. Dimension of the closest distance between the 120-year regression line and the proposed project area.
   j. Existing contours on the site at two-foot intervals.
   k. Property lines for the site.
   l. North arrow and scale.
8. A paragraph that states the following specific language:
   I meet the qualifications contained in EMC 14.110.030 to prepare a geological assessment. I understand the requirements of the current erosion hazard area Chapter 14.110 EMC and the definitions of the applicable terms contained within EMC 14.10.060. I have performed a shoreline erosion hazard geological assessment, conducted a field investigation, and researched available historic records on the above referenced site and determined that an active shoreline erosion hazard area exists, but is located more than 200 feet away from the proposed project area.
9. The name, mailing address, and telephone number of the geotechnical professional who prepared the verification.

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
108. The name, mailing address, and telephone number of the property owner.

B. The geotechnical professional who prepared the geotechnical verification shall stamp the verification with his or her seal.

C. Hold harmless clauses, disclaimers, and limitations are not allowed within a geotechnical verification.

APPENDIX C

GEOLOGICAL ASSESSMENT – SHORELINE EROSION HAZARD GEOTECHNICAL REPORT

A. A geotechnical report shall, at a minimum, include the following:

1. The cover letter for the document shall clearly identify the submittal as a “Shoreline Erosion Hazard Geotechnical Report.”

2. The general critical areas report requirements in EMC 14.20.060.

3. The date when the geological assessment was conducted. The date when the verification was prepared.

4. The parcel number(s) of the site.

5. Site address, if the city has assigned one.

6. A detailed description of the project (including the proposed land use) and a description of the area to be developed.

7. A summary of the results, conclusions, and recommendations resulting from the geological assessment, as set forth in EMC 14.110.030(B). The report will also include a summary of the findings of the site visit, a site plan, and a summary of the findings from the review of documents listed in EMC 14.110.030(B)(2). The summary shall specifically address:

   a. Whether it is possible given the physical constraints of the property (size, shape, building setbacks, utility requirements, etc.) to locate the proposed development outside of the 120-year area of regression based on natural shoreline processes.

   b. If it is not possible to locate the development outside of the 120-year area of regression (based on natural processes), determine whether beach nourishment and/or soft armoring techniques can be used to slow the rate of regression such that the proposed development is no longer within the 120-year regression area.

   c. If it is not possible to locate the development outside of the 120-year area of regression (based on the use of beach nourishment and/or soft armoring techniques), outline the strategy, as set forth in EMC 14.110.040(A)(1), to monitor the rate of regression on the site.

   d. Determine whether any proposed shoreline erosion protection measures will cause an increase in the rate of regression on neighboring properties.

8. An accurate site plan drawn at a scale of one inch equals 20 feet, one inch equals 30 feet, one inch equals 50 feet (or other scale deemed appropriate by the department) is required. The department may require that the site plan information listed below be based on a field survey by a licensed surveyor. The site plan shall include:

   a. The limits/location of the active shoreline erosion hazard area(s) set forth in EMC 14.110.020(B)(2).

   b. The limits of the required shoreline erosion hazard buffer based upon the requirements set forth in EMC 14.110.050(A).

   c. The limits/location of the shoreline erosion hazard management area.

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.

d. The limits/location of the 120-year regression area based on natural shoreline processes and, if applicable, based upon proposed shoreline protection measures.

e. The location of any existing structures, utilities, on-site septic systems, wells, and stormwater management facilities.

f. The location of any proposed structures, utilities, on-site septic systems, wells, and stormwater management facilities.

g. The full geographical limits of the proposed project area (area to be developed).

h. Dimension of the closest distance between the identified active shoreline hazard area boundary and the proposed project area.

i. Dimension of the closest distance between the 120-year regression line and the proposed project area.

j. Existing contours on the site at two-foot intervals.

k. Property lines for the site.

l. North arrow and scale.

847. A discussion of any proposed shoreline protection measures including design and construction drawings is required.

958. A list of references utilized in preparation of the report.

109. The name, mailing address, and telephone number of the geotechnical professional(s) who prepared the report.

1110. The name, mailing address, and telephone number of the property owner.

B. The geotechnical professional(s) who performed the geological assessment shall stamp the report with his or her license stamp/seal. The report must be co-authored by a licensed professional engineer when engineering designs or interpretations are necessary to address the report requirements. The engineer must also stamp the report with his or her license stamp/seal.

C. The department may request a geotechnical professional to provide additional information in the geotechnical report based upon existing conditions, changed conditions, or unique circumstances occurring on a case-by-case basis.

D. Hold harmless clauses, disclaimers, and limitations are not allowed within a geotechnical report.

E. Geotechnical reports shall be in conformance with a format that is pre-approved by the department. (Ord. 02-200 § 2).

Chapter 14.500 NATURAL RESOURCE LANDS

Sections:
14.500.010  Purpose.
14.500.020  Intent.
14.500.030  Applicability.
14.500.040  Natural resource lands noticing requirements.
14.500.050  Current use assessment.
14.500.060  Variances and appeals.
14.500.070  Review process.
14.500.080  Title, plat, and regulated activities notification.
14.500.090  Permitted uses.
14.500.100  Appendices.

14.500.010 Purpose.
This chapter establishes requirements and regulations to protect natural resource lands and is established pursuant to WAC 197-11-908 and RCW 36.70A.170 and 36.70A.060. The city therefore designates agricultural lands and mineral resource lands, and all associated buffers as being environmentally sensitive areas and designated natural resource lands. By regulating development within, and adjacent to, or abutting within 500 feet of natural resource lands, this title seeks to implement the following goals and policies to:

A. Inform the public of the existence, location and potential incompatibility impacts of development on, or adjacent to within 500 feet of, these environmentally sensitive areas within the city.

B. Encourage the retention of open space, development of recreational opportunities, conserve priority habitat, increase access to natural resource lands and water, and develop parks.

C. Assure the conservation of resource lands and related activities by limiting encroachment of incompatible development thereon.

D. Promote the conservation of mineral resource lands through inclusion of known deposits of minerals and materials.

E. Assure that undeveloped mineral and material resources will not be forever lost by prior development of the land for other purposes.

F. Allow for the necessary mineral processing to convert such minerals and materials into marketable products.

G. Protect the environment and enhance the state’s high quality of life, including air and water quality and the availability of water.

H. Maintain and enhance the biological and physical functions and values of wetlands. (Ord. 02-200 § 2).

14.500.020 Intent.
Resource lands are of special concern to the citizens, the city, and the state. The intent of this chapter is to conserve resource lands by establishing standards for development of sites which contain, or are adjacent to within 500 feet of, resource lands to promote the public health, safety, and welfare by:

A. Noticing of property on, or within, natural resource land areas;

B. Mitigating unavoidable impacts by regulating development;

C. Protecting from development impacts;
D. Protecting the public against losses from:

1. Costs of public emergency rescue and relief operations where the causes are avoidable;

2. Degradation of the natural environment and the expense associated with repair or replacement;

E. Preventing adverse impacts on water availability, water quality, wetlands, and streams;

F. Protecting unique, fragile, and valuable elements of the environment, including fish and wildlife habitat;

G. Providing sufficient information to show that critical areas are adequately protected prior to approving, conditioning, or denying public or private development activity;

H. Providing the public with sufficient information and notice of potential risks associated with development in critical and sensitive areas;

I. Implementing the goals and requirements of the Growth Management Act (RCW 36.70A.060) Growth Management Act of 1990, the State Environmental Policy Act, the Puget Sound Water Quality Management Plan, the Pierce County Charter, the Pierce County Growth Management Policies, the city of Edgewood comprehensive plan, and all updates and amendments, functional plans, and other land use policies formally adopted or accepted by the city. (Ord. 02-200 § 2).

14.500.030 Applicability.

This chapter shall apply to all properties designated as resource lands (agricultural lands or mineral resource lands) or properties adjacent to designated resource lands within Edgewood. When the requirements of this title are more stringent than those of other local, state or federal law, codes, or regulations, the requirements of this title shall apply.

A. Agricultural Lands. Lands that are not already characterized by urban growth and that have long-term significance for the commercial production of food or other agricultural products. Agricultural lands are those lands meeting all of the following criteria:

1. Lands in parcels which are 10 acres or larger in size;

2. Lands which are on prime or unique soils as identified in:

   a. United States Department of Agriculture (USDA), Soil Conservation Service, February 1979, Soil Survey of Pierce County Area, Washington; or

   b. USDA, Soil Conservation Service, June 1981, Important Farmlands of Pierce County, Washington;

   c. Lands which are primarily devoted to the commercial production of horticultural, viticultural, floricultural, dairy, apiary, vegetable, or animal products or of berries, grain, hay, straw, turf, seed, Christmas trees not subject to the excise tax imposed by RCW 84.33.100 through 84.33.140, or livestock, and which have long-term commercial significance for agricultural production; and

   d. Lands which are not adjacent to within 500 feet of lots of record of one acre or less on more than 50 percent of the perimeter of the parcel.

B. Mineral Resource Lands. Mineral resource lands shall be identified by the city using the criteria set forth in WAC 365-190-070 as now exists or as may hereafter be amended or modified.

C. Property Adjacent to Resource Lands. All plats, short plats, development permits, and building permits issued for development activities within 500 feet of lands designated as natural resource lands shall contain a notice that a variety of commercial activities may occur that are not compatible with residential development for certain periods of limited duration. (Ord. 04-221 § 1; Ord. 02-200 § 2).
A. The city has classified the following areas as potential mineral resource lands based on the criteria in EMC 14.500.030(B).
   1. Parcels: 0420164023, 0420164024, 0420164016 (commonly known as Olson); and
   2. Parcels: 0420162047, 0420162048 (commonly known as Josties); and
B. The city staff shall study each area and prepare a written analysis of each area.
C. The city council’s land use and economic development committee shall review the staff analysis and either send the analysis back to staff for clarification or recommend approval/denial of each area as a mineral resource land to the city council. The staff analysis and land use and economic development committee’s recommendation shall be forwarded to the city council for review and action.
D. The city council shall review the staff analysis and recommendation(s) of the land use committee and shall, by ordinance, approve, deny or modify the particular study area designation using the criteria in EMC 14.500.050(B).
(Ord. 04-234 § 1).

14.500.040 Natural resource lands noticing requirements.
Pursuant to RCW 36.70A.060, the city shall require that all plats, development applications, or permits issued for development activities on, abutting, or within 500 feet of lands designated as natural resource lands contain a notice (see Appendices A through C).
A. General. If more than one natural resource land subject to the provisions of this title intersects the subject parcel, then one notice addressing all of the natural resource areas shall be sufficient.
B. Title Notification.
   1. When the city determines that activities not exempt from this title are proposed, the owner shall file a notice with the Pierce County auditor (Appendices A through C). The notice shall provide a public record of the presence of the sensitive area(s); the application of this title to the property; and any limitations on activity in or affecting such sensitive area.
   2. The notice shall be notarized and recorded with the Pierce County auditor before approval of any regulated use or activity on the site.
C. Plat Notification. For all proposals requiring a plat within sensitive areas, the applicant shall note the face of the plat consistent with the language set forth in Appendices A through C.
D. Permit Notification. The department shall require that all permits issued for regulated activities within or adjacent to on or within 500 feet of natural resource lands contain a notice as set forth in Appendices A through C. (Ord. 02-200 § 2).

14.500.050 Current use assessment.
A. An owner of natural resource lands or open space desiring current use classification under Chapter 84.40 RCW may file for such current use classification.
B. An owner of undeveloped land with critical areas which has been placed in a separate tract or tracts, protective easement, public or private land trust dedication, or other similarly preserved area for the protection of these critical areas may have that portion of land reviewed for reassessment by the assessor-treasurer’s office consistent with those restrictions to determine the fair market value of the land pursuant to RCW 84.40.030.
C. The owner shall notify the assessor-treasurer’s office when restrictions on development occur on a particular site, and shall provide a plat map in addition to the following, or other special study documents as may be required by the department:

1. Wetland delineation; and/or
2. Geotechnical study; and/or
3. Priority habitat studies; and/or
4. Special studies as determined by the department. (Ord. 02-200 § 2).

14.500.060 Variances and appeals.
Procedures for variances and appeals of an administrative decision issued pursuant to this chapter are set forth in EMC 18.40.090, Process II, Administrative action. (Ord. 02-200 § 2).

14.500.070 Review process.
A. The department shall review any permit or application requested for any regulated activity, including, but not limited to, those set forth in EMC 14.500.010 on a site which includes, or is adjacent to within 500 feet of, abutting one or more resource land is located, unless otherwise provided in this title.
B. As part of all development applications, the department shall review the information submitted by the applicant to:

1. Confirm the nature and type of the resource land and evaluate any required title, plat, and/or regulated activity notification;
2. Determine whether the development proposal is consistent with this title; and
3. Determine whether any proposed alterations to the site containing resource lands are necessary.
C. The city may approve, approve with conditions, or deny any development proposal in order to comply with the requirements and carry out the goals, purposes, objectives, and requirements of this title.
D. Approval of a development proposal does not discharge the obligation of the applicant to comply with the provisions of this title. (Ord. 02-200 § 2).

14.500.080 Title, plat, and regulated activities notification.
A. If more than one resource land subject to the provisions of this title exists on the site, then one notice addressing all of the resource lands shall be sufficient.
B. Notification shall be approved by the department and shall be consistent with the forms set forth in EMC 14.500.100, Appendices A through C as applicable.
C. Title notifications shall be notarized and recorded with the Pierce County auditor prior to approval of any regulated use or activity for the site. (Ord. 02-200 § 2).

14.500.090 Permitted uses.
Uses permitted on designated resource land sites shall be the same as those permitted in the zone classifications shown on the city zoning map. (Ord. 02-200 § 2).

14.500.100 Appendices.
A. Property Adjacent to Resource Lands.
B. Agriculture Lands Noticing.

APPENDIX A

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
PROPERTY ADJACENT TO RESOURCE LANDS

A. Title Notification.

Parcel Number: ________________

Site Address: ______________________

NOTICE: This parcel lies within 500 feet of land designated resource lands by Edgewood. A variety of commercial and industrial activities occur in the area that may be inconvenient or cause discomfort to area residents. This may arise from the use of chemicals, or from spraying or extraction which occasionally generates dust, smoke, noise, and odor. The city has established resource uses as priority uses on productive resource lands, and residents of adjacent property should be prepared to accept such inconveniences or discomfort from normal, necessary commercial resource lands operations.

Signature of Owner

_________________________________

(NOTARY ACKNOWLEDGMENT)

B. Plat Notification. The owner of any site within 500 feet of land designated as resource lands on which a large lot, short subdivision, or formal subdivision is submitted, shall record a notice on the face of the plat. Such notification shall be in the form as set forth below:

PROPERTY ADJACENT TO RESOURCE LANDS PLAT NOTIFICATION. This property lies within 500 feet of land designated resource lands by Edgewood. A variety of commercial and industrial activities occur in the area that may be inconvenient or cause discomfort to area residents. This may arise from the use of chemicals, or from spraying or extraction which occasionally generates dust, smoke, noise, and odor. The city has established resource uses as priority uses on productive resource lands, and residents of adjacent property should be prepared to accept such inconveniences or discomfort from normal, necessary commercial resource lands operations.

C. Regulated Activities Notification. The department shall require that permits issued for regulated activities, as defined in Chapter 14.500 EMC, within 500 feet of lands designated as resource lands, contain a notice as set forth below.

REGULATED ACTIVITIES NOTIFICATION. This property lies within 500 feet of land designated resource lands by Edgewood. A variety of commercial and industrial activities occur in the area that may be inconvenient or cause discomfort to area residents. This may arise from the use of chemicals, or from spraying or extraction which occasionally generates dust, smoke, noise, and odor. The city has established resource uses as priority uses on productive resource lands, and residents of adjacent property should be prepared to accept such inconveniences or discomfort from normal, necessary commercial resource lands operations.

APPENDIX B

AGRICULTURAL LANDS NOTICING

A. Title Notification.

Parcel Number: ________________

Site Address: ______________________

The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.
The Edgewood Municipal Code is current through Ordinance 17-498, passed April 11, 2017.

NOTICE: This parcel lies within 500 feet of an area identified as agricultural lands by Edgewood. A variety of commercial agricultural activities occur in the area that may be inconvenient or cause discomfort to area residents. This may arise from the use of agricultural chemicals, including herbicides, pesticides, and fertilizers; or from spraying, pruning, and harvesting which occasionally generate dust, smoke, noise, and odor. Edgewood has established agriculture as a priority use on productive agricultural lands, and residents of adjacent property should be prepared to accept such inconveniences or discomfort from normal, necessary farm operations.

B. Plat Notification. The owner of any site within this designation on which a large lot, short subdivision, or formal subdivision is submitted, shall record a notice on the face of the plat. Such notification shall be in the form as set forth below.

AGRICULTURAL LANDS PLAT NOTIFICATION. This parcel lies within an area identified as agricultural lands by Edgewood. A variety of commercial agricultural activities occur in the area that may be inconvenient or cause discomfort to area residents. This may arise from the use of agricultural chemicals, including herbicides, pesticides, and fertilizers; or from spraying, pruning, and harvesting which occasionally generate dust, smoke, noise, and odor. The city has established agriculture as a priority use on productive agricultural lands, and residents of adjacent property should be prepared to accept such inconveniences or discomfort from normal, necessary farm operations.

C. Regulated Activities Notification. The department shall require that all permits issued for regulated activities, as defined in Chapter 14.500 EMC, within this zone classification contain a notice as set forth below.

REGULATED ACTIVITIES NOTIFICATION. This parcel lies within 500 feet of an area identified as agricultural lands by Edgewood. A variety of commercial agricultural activities occur in the area that may be inconvenient or cause discomfort to area residents. This may arise from the use of agricultural chemicals, including herbicides, pesticides, and fertilizers; or from spraying, pruning, and harvesting which occasionally generate dust, smoke, noise, and odor. The city has established agriculture as a priority use on productive agricultural lands, and residents of adjacent property should be prepared to accept such inconveniences or discomfort from normal, necessary farm operations.

APPENDIX C

MINERAL RESOURCE LANDS NOTICING

A. Title Notification.

Parcel Number: ____________________

Site Address: ______________________

NOTICE: This parcel lies within 500 feet of an area of land designated mineral resource lands by the city. A variety of commercial mineral extraction activities occur in the area that may be inconvenient or cause discomfort to area residents. This may arise from the use of heavy...
equipment, chemicals, and spraying which may generate dust, smoke, and noise associated with
the extraction of mineral resources. Edgewood has established mineral resource extraction as a
priority use on productive mineral resource lands, and residents of adjacent property should be
prepared to accept such inconveniences or discomfort from normal, necessary mineral resource
extraction operations.

Signature of Owner
_________________________________
(NOTARY ACKNOWLEDGMENT)

B. Plat Notification. The owner of any site within this overlay district on which a large lot, short subdivision, or formal
subdivision is submitted, shall record a notice on the face of the plat. Such notification shall be in the form as set forth
below:

MINERAL RESOURCE LANDS PLAT NOTIFICATION. This property lies within 500 feet
of an area of land designated mineral resource lands by the city of Edgewood. A variety of
mineral resource extraction activities occur in the area that may be inconvenient or cause
discomfort to area residents. This may arise from the use of heavy equipment, chemicals, and
spraying which may generate dust, smoke, and noise associated with the extraction of mineral
resources. Edgewood has established mineral resource extraction as a priority use on
productive mineral resource lands, and residents of adjacent property should be prepared to
accept such inconveniences or discomfort from normal, necessary mineral resource
extraction lands.

C. Regulated Activities Notification. The department shall require that all permits issued for regulated activities, as
defined in Chapter 14.500 EMC, within this designation contain a notice as set forth below:

REGULATED ACTIVITIES NOTIFICATION. This property lies within 500 feet of an area of
land designated mineral resource lands by Edgewood. A variety of mineral resource extraction
activities occur in the area that may be inconvenient or cause discomfort to area residents. This
may arise from the use of chemicals and extraction of minerals, which occasionally generates
dust, smoke, noise, and odor. The city has established mineral resource extraction as a priority
use on productive mineral resource lands, and residents of adjacent property should be prepared
to accept such inconveniences or discomfort from normal, necessary mineral resource
extraction lands.

(Ord. 02-200 § 2).

The Edgewood Municipal Code (Critical Areas Ordinance 2017 Update)
Chapter 14.10
GENERAL PROVISIONS

Sections:
14.10.010 Authority.
14.10.030 Purpose.
14.10.040 Interpretation.

14.10.050 Applicability.
14.10.070 Administration.
14.10.075 Relationship to Other Regulations.
14.10.080 Critical area protective measures.
14.10.082 Critical areas reports
14.10.083 Mitigation plans
14.10.085 Variances to critical areas.
14.10.090 Reconsideration and appeal procedures.
14.10.100 Fees.
14.10.110 Compliance.
14.10.120 Warning and disclaimer of liability.
14.10.130 Severability.
14.10.135 Violation – Civil infraction.
14.10.140 Appendix.

14.10.010 Authority.
A. This title is established and adopted pursuant to the Growth Management Act (RCW 36.70A.060).
B. As provided herein, the director or his/her designee is given the authority to interpret and apply, and the responsibility to enforce this title to accomplish the purposes identified in EMC 14.10.030.

14.10.030 Purpose.
The purpose of this title is to protect environmentally sensitive critical areas of Edgewood from the impacts of development and protect development from the impacts of hazard areas by establishing minimum standards for development of sites which contain or are adjacent to identified critical areas and thus promote the public health, safety, and welfare by:

A. Avoiding impacts to critical areas;
B. Mitigating unavoidable impacts by regulating development;
C. Protecting critical areas from impacts of development;
D. Protecting the public against losses from:
   1. Costs of public emergency rescue and relief operations where the causes are avoidable; and
   2. Degradation of the natural environment and the expense associated with repair or replacement;
E. Preventing adverse impacts on water availability, water quality, wetlands, and streams;
F. Protecting unique, fragile, and valuable elements of the environment, including critical fish and wildlife habitat;
G. Providing department staff with sufficient information to adequately protect critical areas and proposed development when approving, conditioning, or denying public or private development proposals;
H. Providing the public with sufficient information and notice of potential risks associated with development in
natural hazard critical areas; and

I. Implementing the goals and requirements of the Growth Management Act (RCW 36.70A.060) and the city of
Edgewood comprehensive plan, and all updates and amendments, functional plans, and other land use policies
formally adopted or accepted by the city of Edgewood.

14.10.040 Interpretation.
In the interpretation and application of this title, all provisions shall be:
A. Considered the minimum necessary;
B. Liberally construed to serve the purposes of this title; and
C. Deemed neither to limit nor repeal any other powers under state statute. (Ord. 02-200 § 2).

14.10.050 Applicability.
A. This title shall apply to all lands and waters within Edgewood that are designated as critical areas and their
 corresponding buffers and setbacks.
B. No development (see “development” definition) shall hereafter take place without full compliance with the terms
 of this title.
C. When the requirements of this title are more stringent than those of other Edgewood codes and regulations,
 including the International Building Code, the requirements of this title shall apply.
D. Compliance with these regulations does not remove an applicant’s obligation to comply with applicable
 provisions of any other federal, state, or local law or regulation.
E. Criteria for determining critical areas is contained within each chapter of this title.
F. When a site contains two or more critical areas, the site shall meet the minimum standards and requirements for
 each identified critical area as set forth in this title.
G. Critical areas, as defined and regulated by this title, are identified, but not limited to the following Edgewood
 critical areas maps:
   1. Wetlands;
   2. Geologically hazardous areas;
   3. Critical aquifer recharge areas;
   4. Streams; and
   5. Frequently flooded areas.
H. The exact boundary of each critical area depicted on the City’s critical areas maps is approximate and is only
 intended to provide an indication of the presence of a critical area on a particular site. Additional critical areas that
 have not been mapped may be present on a site. The actual presence of a critical area, or areas and the applicability
 of these regulations shall be determined based upon the classification or categorization criteria and review
 procedures established for each critical area. City staff and/or consultant(s) may conduct on-site inspections to
 assess the site in order to determine if additional studies or reports identified in this title are necessary. An inspection
 report of findings shall be written after the on-site inspection and will become a part of any site development
 application as a future reference.
I. The Edgewood critical areas atlas maps shall be updated and maintained by the city’s department of community development geospatial information system (GIS) division.

14.10.070 Administration.

A. Critical Areas Permit or Approval Required. In order to conduct any development activity on any property located within three hundred (300) feet of a critical area (as each critical area is defined in each chapter of this Title, or as shown on the City’s Critical Areas Map), a Critical Areas Permit or an Approval must be obtained from the City.

B. Critical Areas Approval.

1. If the City requires that another permit application be submitted under a different code chapter in order to allow the proposed development activity (the underlying application), then a separate Critical Areas Permit is not required. Instead, the City shall review the underlying application, together with the application materials required in Section _______ herein, to determine compliance or noncompliance with this title. The determination on such compliance or noncompliance shall be incorporated within the decision on the underlying application.

2. In addition to the materials required to make the underlying application complete (as required by the City’s code outside of this Title), the applicant shall also submit the materials set forth in Section _______ herein, where the subject property is within three hundred (300) feet of a critical area. The City shall not issue a determination that the underlying application is complete until the materials set forth in Section _______ have been submitted.

3. The process for review of the underlying application and critical areas approval shall be the same as the Process to be followed for the underlying application, as set forth in EMC Section _______.

C. Critical Areas Permit.

1. If the City does not require any other permit in order to allow the proposed development activity, the applicant shall be required to obtain a separate Critical Areas Permit in order for the proposed development activity to proceed.

2. A complete application for a Critical Areas Permit shall consist of the materials set forth in EMC Section 14.10.070(D) below.

3. The process for review of a Critical Area Permit is the Type II Process, as set forth within EMC 18.40.090.

D. Elements of a Complete Permit Application. A complete application for Approval or a Critical Areas Permit under this Title shall consist of the following materials:

1. A completed permit/approval application form, which must be signed by the record owner of the property (the person(s) whose name is on the most recently recorded deed or contract purchaser with written permission from the record owner). An application form may be signed by an agent for the record owner, as long as the application is also accompanied by a verified statement signed by the record owner, which specifically authorizes the agent to submit the application on the record owner’s behalf.

2. The street address and/or a legal description of the subject property;

3. A complete description of the proposed development activity;

4. (Where in each of the chapters relating to the different critical areas does it list the information that must be submitted for a complete application for a proposed development activity within that particular critical area?)

5. The required application fee.
Approvals Required. An approval must be obtained from the city when the department determines that the site or project area is or may be located within 300 feet of a critical area, as set forth in each chapter.

B. Application Requirements

2. Application Filing.
   a. Applications shall be reviewed for completeness in accordance with department submittal standards checklists and pursuant to EMC 18.40.150, Determination of completeness or as outlined within section c. below.
   b. Applications and associated reports shall not be submitted without an accompanying permit application for an underlying action, such as, but not limited to, a building permit, subdivision or boundary alteration action, site development application, TPCHD permit, or use permit, with the exception of applications required by the department as a result of an enforcement action or reports required by TPCHD for septic design approval.
   c. In cases where no accompany permit applications are required for potentially regulated activities within a critical area, a separate critical areas permit application shall be filed and include the following items in order to be deemed a complete application:
      1. A completed Critical Area Permit Application;
      2. Submittal and review criteria and standards of this title, as outlined within each section of the specific critical area potentially being impacted;
      3. Associated Critical Area Permit Fee, as outlined within EMC 14.10.100;
      4. Review for a Critical Area Permit shall follow a Type II Process, as outlined within EMC 18.40.0980.

3. Modifications. The department may request an update of any required assessment, report, delineation, etc., due to the potential for change in the existing environment that may have been caused by a natural event (e.g., seismic event, landslides, flooding, etc.) or human induced activity that degraded the existing conditions that occurred after the original document was initially submitted.

C. Public Notice. Public notice provisions for notice of application; public hearing, if applicable; and final decision pursuant to this title are outlined in EMC 18.40.190, Notice of public hearing.

D. Review.

1. Initial Review. The department shall conduct an initial review of any application in accordance with the provisions outlined in EMC 18.40.150, Determination of completeness.

2. Review Responsibilities
   a. The department is responsible for administration, circulation, and review of any applications and approvals required by this title.
   b. The City Council shall be the decision authority for reasonable use applications.
c. Other city or county departments and state agencies, as determined by the department, may review an application and forward their respective recommendations to the director or hearing examiner, as appropriate.

a. The department shall perform a critical area review for any building or land use application submitted for a regulated activity, including, but not limited to, those set forth in EMC 14.20.020. Reviews for multiple critical areas shall occur concurrently.

b. The department shall, to the extent reasonable, consolidate the processing of related aspects of other city regulatory programs which affect activities in regulated critical areas, such as subdivision or site development, with the approval process established herein so as to provide a timely and coordinated regulatory program.

c. As part of the initial review of all development or related approvals or permit applications, the department shall review the information submitted by the applicant to:

   i. Confirm the nature and type of the critical area and evaluate any required assessments, reports, or studies.

   ii. Determine whether the proposal for the development activity is consistent with this title;

   iii. Determine whether any proposed alterations to the site containing critical areas are necessary; and

   iv. Determine if the mitigation and monitoring plans proposed by the applicant are sufficient to protect the public health, safety, and welfare consistent with the goals, purposes, objectives, and requirements of this title.

d. Regulated activities subject to SEPA shall also be reviewed with consideration for impacts on critical areas as identified in this title. Regulated activities that pose a significant adverse impact which are not addressed by the standards and criteria established in this title (gaps), may be subject to additional mitigation measures as determined through the SEPA process. A threshold determination issued pursuant to EMC Title 20, SEPA, may not be made prior to departmental review of any special studies or technical reports required by this title, except where the applicant requests a declaration of significance so that environmental review is required.

d. Critical area applications required under this title shall be approved prior to approval of any underlying permit action such as, but not limited to, a building permit, subdivision approval, site development forest practice application, or identified use permit.

e. The requirement to submit a critical area assessment, report, etc., required under this title, outlined within each critical area heading herein, may be waived at the department’s discretion when the proposed project area for a regulated activity is located in an area that has been the subject of a previously submitted and approved assessment, report, etc., if all of the following conditions have been met:

   i. The provisions of this title have been previously addressed as part of another approval;

   ii. There has been no material change in the potential impact to the critical area or required buffer since the prior review;

   iii. There is no new information available that is applicable to any critical review of the site or particular critical area;

   iv. The permit or approval has not expired or, if there is no expiration date, no more than five years have elapsed since the issuance of that permit or approval; and
v. Compliance with any standards or conditions placed upon the prior permit or approval has been achieved or secured.

4. Burden of Proof. The applicant has the burden of proving that a proposed application complies with the standards set forth in this title.

5. Final Decision.
   a. The department may approve, approve with conditions, or deny a critical areas permit application or underlying application for development in a critical area in order to comply with the requirements and carry out the goals, purposes, objectives, and requirements of this title based on the decision-makers’ evaluation of the ability of any proposed mitigation measures to reduce risks associated with the critical area and compliance with required standards. Approval of a development proposal does not discharge the obligation of the applicant to comply with the provisions of this title.

   b. Applicants shall comply with the recommendations and/or mitigation measures contained in final approved assessments or reports and incorporated into any final decision and conditions of approval.

   c. Approval of an application required under this title must be given prior to the start of any development activity on a site. No development activity shall be performed on any site prior to the issuance of a Critical Areas Permit or issuance of the underlying permit which incorporates an Approval under this title.

6. Time Period for Final Decision. The provisions for issuing a notice of final decision on any application filed pursuant to this title is set forth in EMC 18.40.040, Coordination of development permit procedures.

E. Time Limitations.

1. Expiration of Approval.
   a. Approvals granted under this title shall be valid for the same time period as the underlying permit (e.g., preliminary plat, site development, building permit). If there is a Critical Areas Permit, or the underlying permit does not contain a specified expiration date, then approvals and Critical Areas Permits granted under this title shall be valid for a period of three years from the date of issue, unless a longer or shorter period is specified in the final decision.

   b. The Critical Areas Permit or approval in the underlying permit shall be considered null and void upon expiration, unless a time extension is requested and granted as set forth in subsection (E)(2) of this section.

2. Time Extensions.
   a. The applicant or owner(s) may request in writing a one-time, one-year extension of the original Critical Areas Permit or approval in the underlying application, upon demonstrating to the Director that circumstances beyond the control of the Applicant dictated the need for the extension.

   b. Knowledge of the expiration date and initiation of a request for a time extension is the responsibility of the applicant or owner(s).

   c. A written request for a time extension shall be filed with the department at least 60 days prior to the expiration of the approval.

   d. Upon filing of a written request for a time extension, a copy shall be sent to each party of record together with governmental departments or agencies that were involved in the original approval process. By letter, the department shall request written comments be delivered to the department within 30 days of the date of the letter.

   e. Prior to the granting of a time extension, the department may require a new application(s), updated study(ies), and fees if:
The Edgewood Municipal Code (Critical Areas Ordinance Update 2017)

Chapter 14.30 WETLANDS

i. The original intent of the approval is altered or enlarged by the extension renewal;

ii. The circumstances relevant to the review and issuance of the original approval have changed substantially; or

iii. The applicant failed to abide by the terms of the original approval.

f. If approved, the one-year time extension shall be calculated from the date of granting said approval.

F. Recording.

1. Approvals.

   a. Critical area regulation Permits and approvals included in underlying permits are to be recorded on the title of the project parcel(s) at the Pierce County auditor’s office by City of Edgewood Staff prior to issuance and at the sole expense of Applicant. Also refer to EMC 14.10.080(F), Title and Land Division Notification, for additional recording requirements.

   b. Recording of a wetland approval for work completed within utility line easements on lands not owned by the jurisdiction conducting the regulated activity shall be required.

2. Right of Entry Agreement. When required to investigate representations made by the permit applicant in the submitted materials and/or to ensure compliance with the terms of a Critical Areas Permit or Approval, The city may require the applicant to record a right of entry agreement against the property, which shall be consistent with a format approved by the department. The right of entry agreement shall:

   a. Allow the department and agents of the department to access the site for purposes of inspection during the course of application review, construction, and post-construction monitoring.

   b. Allow the department and agents of the department to enter a property to construct required improvements, mitigation measures, or monitoring that have been financially guaranteed.

   c. Run with the land, and be binding on all parties having or acquiring any right, title, interest, or any part thereof of the site, including the grantor, heirs, successors, and assigns. (Ord. 02-200 § 2).

14.10.075 Relationship to Other Regulations

A. This title shall apply as an overlay and in addition to zoning and other regulations adopted by the City.

B. These critical areas regulations shall apply concurrently with review conducted under SEPA, as adopted under Chapter EMC 20.05.

C. Compliance with the provisions of this title does not constitute compliance with other federal, state, and local regulations and permit requirements that may be required (for example, Hydraulic Permit Act [HPA] permits, Section 106 of the National Historic Preservation Act, U.S. Army Corps of Engineers Section 404 permits, National Pollution Discharge Elimination System permits). The applicant is responsible for complying with these requirements, apart from the process established in this title.

D. Regulated activities that may impact critical areas and/or their buffers, but do not require any other City permits or approvals, may be reviewed as a critical areas permit, as outlined within EMC 14.10.070 (c).

14.10.080 Critical area protective measures.

A. General. All critical area tracts, conservation easements, land trust dedications, and other similarly preserved areas shall remain undeveloped in perpetuity, except as they may be allowed to be altered pursuant to this title.

B. Mitigation Sequence. Adverse impacts caused by new activities and developments shall be mitigated using the following action in order of priority:

   1. Avoiding the impact altogether by not taking a certain action or parts of an action;
2. Minimizing impacts by limiting the degree or magnitude of the action and its implementation, by using appropriate technology, or by taking affirmative steps, such as project redesign, relocation, or timing, to avoid or reduce impacts;

3. Rectifying the impact by repairing, rehabilitating, or restoring the affected environment;

4. Reducing or eliminating the impact over time by preservation and maintenance operations;

5. Compensating for the impact by replacing, enhancing, or providing substitute resources or environments; and

6. Monitoring the impact and the compensation project and taking appropriate corrective measures.

C. Identification of Critical Areas and Required Buffers on Construction Plans. Critical areas and required buffers shall be clearly identified on all construction plans such as, but not limited to, site development plans, residential building plans, commercial building plans, forest harvest plans, etc.

D. Building Setbacks.

1. Unless otherwise provided in this title, buildings and other structures shall be set back a distance of 15 feet from the edge of all critical area buffers or, where no buffers are required, the edge of the critical area.

2. The following uses and activities may be allowed in the building setback area:

   a. Landscaping;

   b. Uncovered decks;

   c. Building overhangs if such overhangs do not extend more than 18 inches into the setback area;

   d. Impervious ground surfaces, such as driveways, parking lots, roads, walkways, and patios; provided, that such improvements conform to the water quality standards set forth in the city’s adopted stormwater management manual and that construction equipment does not enter the buffer during the construction process; and

   e. Clearing and grading. (Ord. 02-200 § 2).

   f. All others are prohibited.

E. Financial Guarantees.

1. The city may require an applicant to submit one or more financial guarantees to the city, as set forth in each chapter of this title (and other titles of Edgewood’s Municipal Code as required), to guarantee any performance, mitigation, maintenance, or monitoring required as a condition of permit approval. The approval for the project will not be granted until the financial guarantee is received by the department. Projects where the city or one of its departments is the applicant shall not be required to post a financial guarantee.

2. Financial guarantee instruments required under this title shall be:

   a. In addition to any other site development guarantees required for project approval;

   b. Submitted on financial guarantee forms approved by the city;

   c. In the amount of 125 percent of the City Engineer’s estimate of the cost of mitigation or monitoring to allow for inflation and administration should the city have to complete the mitigation or monitoring, unless the provisions set forth in subsection (B)(2)(D) of this section are applicable; and
d. Released by the city only when the applicant’s appropriate technical professional has provided written confirmation that the performance, mitigation, or monitoring requirements have been met and department staff, or agent, inspected the site(s) for compliance.

3. Failure to complete any performance, mitigation, or monitoring may result in the forfeiture or release of the guarantee. Applicants who have previously defaulted will no longer be allowed to post a financial guarantee for improvements necessary for approval of a land use or critical area permit application. Applicants who have previously defaulted will be allowed to post cash guarantees for subsequent critical area mitigation work needed for approval of a land use application or critical areas permit, but the guarantee must be by cash guarantee only.

F. Title and Land Division Notification.

1. General.
   a. Title and/or land division notice shall be required to be recorded with the Pierce County auditor on each site that contains a critical area, prior to approval of any regulated activity on a site.
   b. If more than one critical area subject to the provisions of this title exists on the site, then one notice which addresses all of the critical areas shall be sufficient.
   c. Title and land division notifications and notes shall be approved by the department and shall be consistent with EMC 14.10.140, Appendix A.

2. Title Notification.
   a. When the city determines that regulated activities not exempt from this title are proposed, the property owner shall file a notice with the Pierce County auditor. The notice shall provide a public record of the presence of a critical area and associated buffer, if applicable; the application of this title to the property; and that limitations on actions in or affecting such critical area and associated buffer, if applicable, may exist.
   b. The notice shall be notarized and shall be recorded by the City at the applicant’s cost with the Pierce County auditor at the time of, but prior to approval of any regulated use or activity for the site.
   c. Notice on title is not required for utility line easements on lands not owned by the jurisdiction conducting the regulated activity (e.g., gas pipelines).

3. Land Division Notification and Notes. As referenced in EMC 14.10.140, Appendix A there shall be notes included on the face of any final plat, final binding site plan, short plat, or boundary line adjustment that contain critical areas or critical area buffers. The critical area boundaries and the boundary of any associated buffers shall be identified on the face of these documents prior to submission to the City for approval.

G. Conservation Easements. Prior to any final critical area approval, the part of the critical area and required buffer which is located on the site shall be protected with a conservation easement or other similar permanent deed restriction. The conservation easement shall indicate allowable and prohibited uses within the critical area and required buffer.

H. Tracts. Prior to final approval of any subdivisions, short subdivisions, large lot divisions, or binding site plans, the part of the critical area and required buffer which is located on the site, shall be placed in a separate tract or tracts, and the face of the plat shall include the requirement that the owners of all lots shall be required to preserve, protect and maintain the critical areas...

I. Homeowner’s Covenants. A description of the critical area and required buffer shall be placed in any required homeowner’s covenants to provide notice to the Homeowners of their responsibility to preserve, protect and maintain the critical areas in perpetuity. Such covenants shall contain a detailed description of the allowable uses within the critical area and, if applicable, associated buffer and long-term management and maintenance requirements of that critical area.
J. Markers, Fencing, and Signage.

1. Markers. Prior to final approval of any critical area application, the outer edge of the critical area boundaries or, if applicable, required buffer boundaries on the site shall be flagged by the qualified professional, as outlined in each chapter. These boundaries shall then be identified with permanent markers (rebar and cap) and flagged by a licensed surveyor, unless otherwise stated in this title. The permanent markers shall be clearly visible, durable, and permanently affixed to the ground.

2. Fencing.
   a. Temporary Construction Fencing. Temporary fencing is required when vegetation is to be retained in an undisturbed condition within the critical area and required buffer. In such cases, the applicant will be required to construct silt fencing, construction fencing, or other city-approved method of temporary fencing at the edge of the critical area or, if applicable, the edge of the required buffer prior to beginning construction on the site.
   b. Permanent Fencing. Where deemed necessary by the department to provide protection to the critical area, the applicant will be required to construct permanent, wildlife-passable fencing along the buffer boundary.

3. Signage.
   a. The department shall require permanent signage to be installed at the edge of the critical area or, if applicable, the edge of the required buffer.
   b. The sign shall indicate the type of critical area and if the area is to remain in a natural condition as permanent open space.
   c. Exact sign locations, wording, size, and design specifications shall be established by the department. Required signage shall be clearly visible, durable, and permanently affixed to the ground.
   d. Prior to final approval of any critical area application, the applicant shall submit an affidavit of posting to the department as proof that the required signs were posted on the site.

14.120.082 Critical areas reports

A. When required in accordance with this title, the applicant shall submit a critical areas report.

B. The critical areas report shall use scientifically valid methods and studies in the analysis of critical area data and field reconnaissance to evaluate the proposed development and all probable impacts to critical areas in accordance with the provisions of this title. The report shall reference the source(s) of science used in accordance with WAC 365-195-900 through WAC 365-195-925.

C. At a minimum the report shall contain the following:
   1. The name and contact information of the applicant and a description of the proposal;
   2. The site plan for the proposed development, including a map drawn to scale depicting critical areas, buffers, the proposed development, and any areas to be cleared or altered;
   3. The date of the report and names and qualifications of the persons preparing the report;
   4. Documentation of any fieldwork performed on the site;
   5. Identification and characterization of all critical areas and buffers on and adjacent to the proposed development;
   6. A statement specifying the accuracy of the report, and all assumptions made and relied upon;
Edgewood Municipal Code
Chapter 14.30 WETLANDS

14.120.083 Mitigation plans
When mitigation is required, the applicant shall submit a mitigation plan. The mitigation plan shall include all of the following:

A. Mitigation sequencing. A description of reasonable efforts made to apply mitigation sequencing pursuant to EMC 14.10.080(B) to avoid, minimize, and mitigate impacts to critical areas and buffers.

B. Mitigation details.
   1. A description of the anticipated impacts to the critical area and buffer, including impacts to critical area functions and values;
   2. The mitigating actions proposed, including: type of mitigation proposed (e.g., on-site or off-site); site selection criteria; identification of compensation goals; and identification of critical area functions.
   3. The environmental goals and objectives of the mitigation, together with specific measurable criteria and performance standards for evaluating whether or not the goals and objectives of the mitigation project have been successfully attained;
   4. A review of the best available science supporting the proposed mitigation; and
   5. An analysis of the likelihood of success of the mitigation project.

C. Construction details. The mitigation plan shall include written specifications, descriptions, and drawings of the mitigation proposed, including:
   1. Construction sequence, timing, and duration;
   2. Grading and excavation details;
   3. Erosion and sediment control features; and
   4. Planting plan specifying plant species, quantities, locations, size, spacing, density, and measures to protect and maintain plants until established. All plant species must be native to the region.

D. Monitoring details.
   1. A program for monitoring construction and assessing the outcome of the mitigation project, including the schedule for site monitoring (for example, monitoring shall occur in year 1, 3, and 5 after site construction), and how the monitoring data will be evaluated to determine if the performance standards are being met. Monitoring reports shall be submitted to document milestones, successes, problems, and contingency actions of the compensation project. The mitigation project shall be monitored for a period necessary to establish that performance standards have been met, but not for a period less than five (5) years. Mitigation monitoring shall be the responsibility of the applicant.
   2. A contingency plan with courses of action and corrective measures to be taken if monitoring or evaluation indicates project performance standards are not being met.

E. Mitigation Cost Estimate. A Mitigation Cost Estimate for the entire compensatory mitigation project, per the requirements of EMC 14.10.080(E).
F. Other requirements. The mitigation plan shall address any additional mitigation requirements relevant to the specific critical area as specified in the following chapters.

14.10.085 Variances to critical areas.

A. General. Variances are reviewed pursuant to permit type, outlined with Chapter 18.40, EMC 18.50.080, Variances. Conditions may be attached to a critical area(s) variance, which will serve to meet the goals, objectives, and policies of this title.

B. Complete Application. A complete application for a Critical Areas Variance shall consist of:

1. A completed application form, signed by the property owner or property owner’s representative. If the property owner’s representative signs the form, it must be accompanied by the signed written authorization of the property owner of record.
2. Address, parcel number, etc.
3. Description of the proposed development activity;
4. Identification of the specific requirements of this title from which the applicant desire to vary, the extent to which such variance is required (add more?)
5. Application fee, as established by City resolution.

B. Variance Criteria. A variance may be granted from the requirements of this chapter title only if the decision maker makes written findings that the applicant has demonstrated that the requested action conforms to all of the criteria set forth as follows:

1. Special conditions and circumstances exist that are peculiar to the land, the lot, or something inherent in the land, and that are not applicable to other lands in the same district; and
2. The special conditions and circumstances do not result from the actions of the applicant; and
3. A literal interpretation of the provisions of this title would deprive the applicant of all reasonable economic uses and privileges permitted to other properties in the vicinity and zone of the subject property under the terms of this title, and the variance requested is the minimum necessary to provide the applicant with such rights; and
4. Granting the variance requested will not confer on the applicant any special privilege that is denied by this title to other lands, structures, or buildings under similar circumstances; and
5. The granting of the variance is consistent with the general purpose and intent of this title, and will not further degrade the functions or values of the associated critical areas or otherwise be materially detrimental to the public welfare or injurious to the property or improvements in the vicinity of the subject property; and
6. The decision to grant the variance incorporates the best available science and gives special consideration to conservation or protection measures necessary to preserve or enhance anadromous fish habitat; and
7. The granting of the variance is consistent with the general purpose and intent of the Edgewood Comprehensive Plan and adopted development regulations.

C. Additional Criteria for Flood Hazard Area Variances. In addition to the variance criteria specified above in subsection (B) of this section, in order for the decisionmaker to approve a flood hazard variance, the decisionmaker must make written findings that the applicant has demonstrated, that the proposal satisfies all of the following:

1. Generally, the only condition under which a variance from the elevation standard may be issued is for new construction and substantial improvements to be erected on a small or irregularly shaped lot contiguous to and surrounded by lots with existing structures constructed below the base flood level. As the lot size increases the technical justification required for issuing the variance increases.
2. Variances shall not be issued within a designated floodway if any increase in flood levels during the base flood discharge would result.

3. Variances shall only be issued upon a determination that the variance is the minimum necessary, considering the flood hazard, to afford relief.

4. Variances shall only be issued upon:
   a. A showing of good and sufficient cause;
   b. A determination that failure to grant the variance would result in exceptional hardship to the applicant and that the hardship was not created by the applicant;
   c. A determination that the granting of a variance will not result in increased flood heights, additional threats to public safety, extraordinary public expense, create nuisances, cause fraud on or victimization of the public, or conflict with existing local laws or ordinances.

5. Variances as interpreted in the National Flood Insurance Program are based on the general zoning law principle that they pertain to a physical piece of property; they are not personal in nature and do not pertain to the structure, its inhabitants, economic or financial circumstances. They primarily address small lots in densely populated residential neighborhoods. As such, variances from flood elevations should be quite rare.

6. Variances may be issued for nonresidential buildings in very limited circumstances to allow a lesser degree of flood proofing than watertight or dry-flood proofing, where it can be determined that such action will have low damage potential, complies with all other variance criteria (except 4.4-1), and otherwise complies with Sections 5.1-1, 5.1-3, and 5.1-4 of the General Standards.

7. Any applicant to whom a variance is granted shall be given written notice that the permitted structure will be built with its lowest floor below the base flood elevation and that the cost of flood insurance will be commensurate with the increased risk.

D. Should a variance be denied, the applicant may submit an application for a reasonable use exception pursuant to EMC 14.20.050. (Ord. 17-492 § 2 (Exh. A); Ord. 02-200 § 2).

14.10.090 Reconsideration and appeal procedures. Procedures for appeal of a final decision on a critical areas permit, a decision relating to critical areas in the underlying permit, a critical areas variance or a critical areas flood hazard variance are set forth in chapter EMC 18.40.

14.10.100 Fees. Fees for applications and/or review of reports, studies, or plans filed pursuant to this title are set forth in the adopted fee schedule and as identified below:

A. Fee Establishment. The city, by resolution, shall establish fees for filing of critical area review processing and other services provided by the city as required by this title. These fees shall be based on the anticipated sum of direct costs incurred by the city for any individual development or action and may be established as a sliding scale that will recover all of the city costs. Basis for these fees shall include, but not be limited to, the cost of engineering and planning review time, cost of inspection time, costs for administration, and any other special costs attributable to the critical area review process.

B. Applicant Responsibilities. Unless otherwise indicated in this title, the applicant shall be responsible for the initiation, preparation, submission, and expense of all required reports, assessment(s), studies, plans, reconnaissance(s), peer review(s) by qualified consultants, and other work prepared in support of or necessary to review the application.

C. Fee Schedule. The director is charged with the responsibility of collecting appropriate fees charged to applicants for any permits or discretionary approval processes provided for in this title. The amount of the fees charged shall be
as established by resolution of the city council filed in the office of the city clerk and may be, from time to time, changed without amendment to this title.

D. Payment. Fees established in accordance with this title shall be paid upon submission of a signed application or petition for appeal, or as otherwise provided by any fee ordinance or resolution adopted by the city council. Where such an application will require substantial review time or expenditures, the mayor may, at his/her sole discretion, direct that the department initiating the permit request reimburse the community development department for some or all of costs expended for the application review.

E. Investigation Fee. To investigate violations of this title, all city fees associated with investigation of violations of this title may be assessed at the adopted billable staff hour rate in addition to any required consultant costs, legal costs, and other expenses necessary to complete the investigation of the violation. The payment of such investigation fees shall not exempt any person from compliance with all other provisions of this title, nor from penalties prescribed by law.

14.10.110 Compliance.
A. The regulations for compliance with the provisions of this title are set forth in EMC 18.30.040, Scope and compliance.

B. When a critical area or its required buffer has been altered in violation of this title, the department shall require the property owner to bring the site into compliance. The property owner shall be required to submit the appropriate critical area application and commence a departmental review, as applicable for each chapter of this title. In addition to any required site investigation, delineations, assessments, reports, etc., the property owner shall be required to submit a restoration plan that identifies the proposed mitigation to bring the subject property into compliance with the requirements of this title. (Ord. 02-200 § 2).

14.10.120 Warning and disclaimer of liability.
The degree of protection required through application of this title is deemed to be reasonable for regulatory purposes and is based on best available science; however, natural events that may exceed the geographic boundaries regulated under this title can and will occur (e.g., flood heights that are higher than anticipated). This title does not mean to imply that land outside designated hazard areas or uses permitted within such areas will be free from damages.

The express purpose of this title is to provide for the health, safety and welfare of the general public, and not to protect individuals or create or otherwise establish or designate any particular class or group of persons who will or should be especially protected or benefitted by the terms of this title. The obligation of complying with the requirements of this title and the liability for failing to do so is hereby placed upon the property owner and/or persons responsible for the condition of the property, buildings or premises.

Nothing in this title is intended to be nor shall be construed to create or form the basis for any liability on the part of the City, its officers, officials, employees or agents, for any injury or damage resulting from the failure of the owner of property or land to comply with the provisions of this title or by reason or in consequence of any inspection, notice, order, certificate, permission or approval, authorized or issued or done in connection with the implementation or enforcement of this title, or by reason of any action or inaction on the part of the City, related in any manner to the enforcement of the title by its officers, officials, employees or agents.

14.10.140 Appendix.
A. Title and Plat Notification Forms.
APPENDIX A

TITLE AND PLAT NOTIFICATION FORMS

A. Notice for Title Notification.

1. (Example: Appropriate Critical Area from EMC 14.10.030)
   Tax Parcel Number:
   Address:
   Legal Description:
   Present Owner:
   NOTICE: This property contains (e.g., wetlands or wetland buffers) as defined by EMC 14.10.030. The site was the subject of a development proposal for _________ application number filed on ___________ (date). Restrictions on use or alteration of the site may exist due to natural conditions of the property and resulting regulations. Review of such application has provided information on the location of the (e.g., wetland or wetland buffers) and any restriction on use.

    __________________
    Date     Signature of owner

Notary acknowledgment and notary seal

B. Additional Title Notification Statements.

1. Title notification for liquefaction and dynamic settlement hazard areas shall include a statement of the performance criteria (i.e., protection of life safety only, provision for minimal structural damage so that post-earthquake functionality is substantially unchanged, no structural damage for the design earthquake).

2. Title notification for fault rupture hazard areas shall include a statement that a fault rupture hazard area or associated buffer exists on the site. The title notification shall include a site plan of the subject property with the fault rupture hazard area and associated buffer identified.

3. Properties that contain flood hazard areas pursuant to Chapter 14.70 EMC shall include the following statement:

   Flood Elevation Certificates are kept on file by the department.

C. Notice for Plat Notification/Plat Notes.

1. General. The following notice shall be placed on the face of the final plat, short plat, large lot, or binding site plan documents when said subdivision contains critical areas or critical area buffers:

   Notice: This site lies within a (e.g., landslide hazard area) as defined in EMC Title 14. Restrictions on use or alteration of the site may exist due to natural conditions of the site and resulting regulation.

2. Native Vegetation Preservation Areas. The following notice shall be placed on the face of the final plat, short plat, large lot, or binding site plan documents when said subdivision contains critical areas or critical area buffers and when said critical areas or critical area buffers have been identified as native/natural vegetation preservation areas.

The Edgewood Municipal Code (Critical Areas Ordinance Update 2017)
Notice: The Critical Areas appearing on this (final site plan/preliminary plat/final plat/short plat/large lot/engineering drawing) contain areas of native vegetation intended to buffer the Critical Area from the adverse effects of development. These Critical Areas shall remain and be maintained in a natural, undeveloped, open space state. There shall be no clearing, grading, filling, or construction within the Critical Areas, except as shown on plans or documents approved by the City of Edgewood and contained in the official files for this development. Each Critical Area shall remain undisturbed except for periodic watering and hand weeding of plants designated as noxious by the State of Washington.

3. Plat Notes for Flood Hazard Areas. The following notes shall be placed on the face of any of final plat, short plat, large lot, or binding site plan documents which lie within a flood hazard area.

   a. Grading, clearing, and/or filling within the limits of the 100-year floodplain is prohibited except for watercourse related construction, repair, and/or maintenance work that is done by the city for management operations.

   b. If a higher frequency event occurs or if existing conditions upon which the flood hazard area boundaries were based were to change or occur differently than depicted, then the level of protection afforded by the existing levee, if applicable, and flood hazard area standards may not be adequate to prevent the subject site from flooding.

   c. All purchasers and developers (and/or their agents) of property within the subject development area and/or parcel shall take notice of the above conditions and hereby agree to defend, indemnify, and hold harmless Edgewood from any and all claims, losses, costs, liabilities, or damages of any nature imposed upon or asserted against Edgewood uprising out of or caused by the city’s issuance of approval or by issuance of any other permits arising out of this approval.

   d. All occupants and/or owners of property in the subject area assume the risk of flooding which may occur and waive any claims against Edgewood arising out of damage or injury to person or property resulting therefrom. (Ord. 17-492 § 2 (Exh. A); Ord. 16-461 § 3; Ord. 02-200 § 2).
Chapter 14.15
DEFINITIONS

This title shall rely on the definitions contained in Chapter 18.20 EMC, Definitions. The city also adopts by reference the definitions stated in WAC 197-11-700 through 197-11-799 as now or hereafter amended. Additional definitions that apply to this title are:

"Abutting" means bordering upon, to touch upon, in physical contact with. Sites are considered abutting even though the area of contact may be only a point.

"Activity" means any use conducted on a site.

"Addition" means an alteration to an existing structure that increases the floor area. There are two types of additions: additions affixed to the side of an existing structure and an upper story addition.

"Agricultural activities" means the production of crops and/or raising or keeping livestock, including operation and maintenance of farm and stock ponds, drainage ditches, irrigation systems, and normal operation, maintenance, and repair of existing serviceable agricultural structures, facilities, or improved areas, and the practice of aquaculture. Activities which bring an area into agricultural use are not part of an ongoing activity. An operation ceases to be ongoing when the area in which it was conducted is proposed for conversion to a non-agricultural use or has lain idle for a period of longer than five (5) years, unless the idle land is registered in a federal or state soils conservation program. Forest practices regulated under Chapter 76.09 RCW and WAC Title 222 are not included in this definition.

"Agricultural land" means land primarily devoted to the commercial production of horticultural, viticultural, floricultural, dairy, apiary, vegetable, or animal products or of berries, grain, hay, straw, turf, seed, Christmas trees not subject to the excise tax imposed by RCW 84.33.100 through 84.33.140, finfish in upland hatcheries, or livestock, and that has long-term commercial significance for agricultural production.

"Animal containment area" means a site where two or more animal units of large animals per acre or 0.75 of an animal unit of small animals per acre are kept, and where a high volume of waste material is deposited in quantities capable of impacting groundwater resources.

"Animal unit" means the equivalent of 1,000 pounds of animal.

"Appeal" means a request for a review of the interpretation of any provision of this chapter, a decision on a Critical Areas Permit or an underlying permit per EMC 14.10.090.

"Applicant" means any person or entity, including an agency, applying for a license permit or approval from an agency.

"Application" means a request for a permit or approval under this Title.

"Aquifer" means a saturated geologic formation, which will yield a sufficient quantity of water to serve as a private or public water supply.

"Area of shallow flooding" means areas designated as AO or AH zones on the FIRM(s). AO zones are characterized as sheet flows, having base flood depths that range from one to three feet above the natural ground, where a clearly defined channel does not exist, the path of flooding is unpredictable and indeterminate, and velocity flow may be evident. AH zones indicate similar depth ponding, shown with standard base flood elevations on the FIRM(s).

"Area of special flood hazard" means land in the floodplain within a community subject to a one percent or greater chance of flooding in any given year. Designation on FIRM(s) always includes the letter A or V.
“Base flood” means the flood having a one percent chance of being equaled or exceeded in any given year, also referred to as the “100-year flood,” and is designated on FIRM(s) by the letter A or V.

“Basement” means any area of the building having its floor sub-grade (below ground level) on all sides, for the purposes of this title.

“Best available science” means scientific information applicable to the critical area prepared by local, state, or federal natural resource agencies, a qualified scientific professional, or team of qualified scientific professionals that is consistent with criteria established in WAC 365-195-900 through WAC 365-195-925.

“Best management practices” means conservation practices or systems of practices and management measures that:

A. Control soil loss and reduce water quality degradation caused by high conservations of nutrients, animal waste, toxics and sediment;

B. Minimize adverse impacts to surface water and ground water flow and circulation patterns and to the chemical, physical, and biological characteristics of wetlands;

C. Protect trees and vegetation designated to be retained during and following site construction and use native plant species appropriate to the site for re-vegetation of disturbed areas; and

D. Provide standards for proper use of chemical herbicides within critical areas.

“Breakaway wall” means a wall that is not part of the structural support of the building and is intended through its design and construction to collapse under specific lateral loading forces, without causing damage to the elevated portion of the building or supporting foundation system.

“Buffer” means an area contiguous with a critical area that is required for the integrity, maintenance, function, and structural stability of the critical area.

“Building footprint” means the horizontal area measured within the outside of the exterior walls of the ground floor of all principal and accessory buildings on a lot.

“City” means the city of Edgewood.

“Classification” means defining value and hazard categories to which critical areas and land resource lands will be assigned.

“Clearing” means the removal of timber, brush, grass, ground cover, or other vegetative matter from a site, which exposes the earth’s surface on the site.

“Colluvium” means loose materials deposited by gravity on the face of or at the foot of a slope (e.g., talus, soil creep, etc.).

“Compensatory mitigation” means replacing project-induced losses or impacts to a critical area.

“Conservation easement” means a recorded deed restriction or covenant that runs in perpetuity on a parcel of land restricting the use of the property by preventing future real estate development such as residential, industrial, or commercial use. Conservation easements may allow for continued current uses (e.g., residential, recreational, agriculture, forestry, or ranching); however, conservation easements most often restrict both the current use as well as future uses of the land to some important conservation quality such as habitat preservation, open space, or scenic views. A land trust or governmental entity that manages properties for long-term goals typically holds conservation easements.

“Contaminant” means any chemical, physical, biological, or radiological substance that does not occur naturally or occurs at concentrations and duration as to be injurious to human health or welfare or shown to be ecologically damaging.
"Council" means the Edgewood city council.

"County" means Pierce County.

"Crawl space" means the shallow space beneath the bottom floor of a house with no basement; used for access and inspection of framing, electrical, plumbing, insulation, vapor barriers, or duct work. For purposes of the National Flood Insurance Program Elevation Certificate, a crawl space that has subgrade around all sides shall be considered a basement.

"Critical aquifer recharge areas" means areas with a critical recharging effect on aquifers used for potable water, including areas where an aquifer that is a source of drinking water is vulnerable to contamination that would affect the potability of the water, or is susceptible to reduced recharge.

"Critical areas" means the following areas and ecosystems: (a) Wetlands; (b) areas with a critical recharging effect on aquifers used for potable water; (c) fish and wildlife habitat conservation areas; (d) frequently flooded areas; and (e) geologically hazardous areas.

"Critical facilities" means those facilities occupied by populations or which handle dangerous substances including but not limited to hospitals, medical facilities, nursing homes; structures housing, supporting, or containing toxic or explosive substances; covered public assembly structures; school buildings through secondary, including daycare centers; buildings for colleges or adult education; police, fire, and emergency response installations; jails and detention facilities; and all structures with occupancy of greater than 5,000 people. These facilities are such that even a slight chance of flooding might be too great. Essential public facilities (as defined under EMC 18.20.080 and 18.100.050) are considered critical facilities, for floodplain management purposes.

"Debris flow" means the rapid downslope movement of a viscous mass of water-saturated sediments.

"Degraded" means to have suffered a decrease in naturally occurring functions and values due to activities undertaken or managed by persons on or off a site.

"Delineation" means a wetland study conducted in accordance with the approved federal wetland delineation manual and applicable regional supplements.

"Department" means the City of Edgewood Department of Community Development.

"Depressional pothole" means a relatively sunken or low-lying area of the earth’s surface, especially one having no natural outlet for surface drainage.

"Development" means any human-induced change to improved or unimproved real property, including but not limited to: the construction of buildings or other structures, placement of a manufactured home/mobile home, mining, dredging, clearing, filling, grading, paving, excavation, drilling operations, storage of equipment or materials located within an area of special flood hazard, or activities otherwise governed by EMC Title 16, Subdivisions.

"Development activity" means any construction, development, earth movement, clearing, or other site disturbance of the land, except as listed under exemptions.

"Director" means the director of the city of Edgewood Department of Community Development or his/her designee.

"DRASTIC" is an acronym for a computer model developed by the National Water Well Association and Environmental Protection Agency used to measure aquifer susceptibility.

"Dwelling unit" means one or more rooms designed for or occupied by one family for living or sleeping purposes and containing kitchen facilities for use solely by one family.

"Earth/earth material" means naturally occurring rock, soil, stone, sediment, or combination thereof.

"Earthflow" means a slow downslope movement of viscous, saturated sediments.
“Elevated building” means, for insurance purposes, a non-basement building that has its lowest elevated floor raised above ground level by foundation walls, shear walls, posts, piers, pilings, or columns.

“Elevation certificate” means the official form (FEMA Form 81-31) used to track development, provide elevation information necessary to ensure compliance with community floodplain management ordinances, and determine the proper insurance premium rate with Section B completed by community officials.

“Encroachment” means any development or regulated activity conducted inside the boundaries of a designated critical area and/or its associated buffer.

“Engineer” as defined by Chapter 18.43 RCW.

“Engineering geologist” means a geologist who, by reason of his or her knowledge of engineering geology, acquired by education and practical experience, is qualified to engage in the practice of engineering geology, has met the qualifications in engineering geology established under Chapter 18.220 RCW, and has been issued a license in engineering geology by the Washington State Geologist Licensing Board.

“Engineering geology” means a specialty of geology affecting the planning, design, operation, and maintenance of engineering works and other human activities where geological factors and conditions impact the public welfare or the safeguarding of life, health, property, and the environment.

“Enhancement” means actions performed within an existing degraded critical area and/or buffer to intentionally increase or augment one or more ecological functions or values of the existing area. Enhancement actions include, but are not limited to, increasing plant diversity and cover; increasing wildlife habitat and structural complexity (snags, woody debris); installing environmentally compatible erosion controls; removing non-native plant or animal species; or removing human-made structures or fill that are degrading ecological functions or values.

“Erosion” means the wearing away of the earth’s surface as a result of the movement of wind, water, or ice.

“Erosion hazard areas” means those areas that because of natural characteristics, including vegetative cover, soil texture, slope, gradient, and rainfall patterns, or human-induced changes to such characteristics, are vulnerable to erosion.

“Excavation” means the mechanical removal of earth material.

“Existing manufactured home park or subdivision” means a manufactured home park or subdivision for which the construction of facilities for servicing the lots on which the manufactured homes are to be affixed (including, at a minimum, the installation of utilities, the construction of streets, and either final site grading or the pouring of concrete pads) is completed before the effective date of the adopted floodplain management regulations.

“Expansion to an existing manufactured home park or subdivision” means the preparation of additional sites by the construction of facilities for servicing the lots on which the manufactured homes are to be affixed (including the installation of utilities, the construction of streets, and either final site grading or the pouring of concrete pads).

“Facility” means all structures, contiguous land, appurtenances, and other improvements on the land used for recycling, reusing, reclaiming, transferring, storing, treating, disposing, or otherwise handling a hazardous substance. Use of the term “facility” includes underground and aboveground tanks and operations, which handle, use, dispose of, or store hazardous substances.

“Fill/fill material” means a deposit of earth material placed by human or mechanical means.

“Filling” means the act of placing fill/fill material on any surface, including temporary stockpiling of fill material.

“Financial guarantee” means a surety bond or other security, such as a cash escrow, cash set aside, assignment of funds, letter of credit, that the City may allow a developer to utilize in lieu of completion of the actual construction of required improvements prior to the City’s approval and acceptance of the improvements. The City establishes the amount and conditions which will ensure completion within a specific time period.
“Finished floor” means the top of the next higher floor above the lowest floor. For purposes of the National Flood Insurance Program Elevation Certificate, the finished floor referenced in this regulation shall equal the top of the next higher floor.

“Fish and wildlife habitat conservation areas” means areas necessary for maintaining species in suitable habitats within their natural geographic distribution so that isolated subpopulations are not created as designated by WAC 365-190-080(5). "Fish and wildlife habitat conservation areas" does not include such artificial features or constructs as irrigation delivery systems, irrigation infrastructure, irrigation canals, or drainage ditches that lie within the boundaries of and are maintained by a port district or an irrigation district or company.

“Fisheries biologist” means a professional with a degree in fisheries or certification by the American Fisheries Society, or with five years' professional experience as a fisheries biologist.

“Flood” or “flooding” means a general and temporary condition of partial or complete inundation of normally dry land areas from:

1. The overflow of inland or tidal waters; and/or
2. The unusual and rapid accumulation of runoff of surface waters from any source.

“Flood hazard areas” means areas of flooding identified by verifiable flooded areas using:

1. Aerial photographs of the city, especially those taken in wintertime 1996 and 1997;
2. Relevant and verifiable information from the city’s capacity analysis technical review Adhoc committee (CATRAC) draft report, 2000;
3. Relevant and verifiable government and citizen photographs, notes, observations, etc. regarding historic ponding/flooding levels
4. Relevant and verifiable information available through Pierce County;
5. Relevant and verifiable information available through the Federal Emergency Management Agency (FEMA); or
6. Areas of land located in floodplains, which are subject to a one percent or greater chance of flooding in any given year, including, but not limited to, streams, rivers, lakes, ponds, wetlands, depressional potholes and the like.

“Flood Insurance Rate Map (FIRM)” means the official map on which the Federal Insurance Administration (FIA) has delineated both the areas of special flood hazard and the risk premium zones applicable to the community.

“Flood Insurance Study (FIS)” means the official report provided by the Federal Insurance Administration (FIA) that includes flood profiles, FIRM(s), and the water surface elevation of the base flood.

“Flood fringe” means the area subject to inundation by the base flood, but outside the limits of the floodway, and which may provide needed temporary storage capacity for floodwaters.

“Floodplain” means the total area subject to inundation by the base flood, including the flood fringe and the floodway areas.

“Floodway” means the channel of a river or other watercourse and the adjacent land areas that must be reserved in order to convey and discharge the base flood without cumulatively increasing the water surface elevation by more than one foot, and those areas designated as deep and/or fast-flowing water.

“Fluvial processes” means the physical interaction of flowing water and the natural channels of rivers and streams.
“Foundation footing setback” means a typical geotechnical recommendation intended to assure that a proposed structure is protected in the event of a slope failure or sloughage. A foundation footing setback is measured horizontally from the face of the foundation footing to the face of the slope. A foundation footing setback for this purpose should not be confused with a building or construction setback from a landslide hazard area buffer. A foundation footing setback is also not a buffer.

“Frequently flooded area” means lands in the floodplain subject to at least a one percent or greater chance of flooding in any given year, or within areas subject to flooding due to high groundwater. These areas include, but are not limited to, streams, rivers, lakes, wetlands, and areas where high groundwater forms ponds on the ground surface.

“Geologically hazardous areas” means areas that because of their susceptibility to erosion, sliding, earthquake, or other geological events are not suited to the siting of commercial, residential, or industrial development consistent with public health or safety concerns.

“Geologist” means engineering geologist, or hydrogeologist, registered in the state of Washington.

“Geotechnical professional” means a person with experience and training in analyzing, evaluating, and mitigating landslide, erosion, and/or seismic hazards. A geotechnical professional shall be licensed in the state of Washington as a geologist or professional engineer, and must have five or more years’ experience specializing in landslide, erosion, or seismic hazards, as applicable.

“Geotechnical report” means a report prepared by a professional engineer licensed by the state of Washington with expertise in geotechnical engineering, evaluating the site conditions and mitigating measures necessary to reduce the risks associated with development in geologically hazardous areas.

“Grading” means any excavating, filling, clearing, or creating of impervious surfaces or combination thereof.

“Groundwater” means all water found beneath the ground surface, including slowly moving subsurface water present in aquifers and recharge areas.

“Habitat management plan” means a report prepared by a professional wildlife biologist or fisheries biologist, which discusses and evaluates the measures necessary to maintain fish and wildlife habitat conservation areas on a proposed development site.

“Habitat of local importance” means an area, range, or habitat within which a species has a primary association and which, if altered, may reduce the likelihood that the species will maintain and reproduce over the long term. Examples include areas of high relative density or species richness, breeding habitat, winter range, and movement corridors. These areas may also include habitats that are of limited availability or high vulnerability to alteration.

“Hard armoring” means the use of large rock and/or human-made materials to protect property from shoreline erosion. Such techniques include cement/concrete bulkheads, steel structures, rock wall revetments, and rock gabion structures. Hard armoring typically does not utilize or integrate any of soft armoring or soil bioengineering techniques.

“Hazardous substance(s)” means any liquid, solid, gas, or sludge, including any materials, substance, product, commodity, or waste, regardless of quantity, that exhibits any of the characteristics or criteria of hazardous waste; and including waste oil and petroleum products.

“Hazardous substance processing or handling” means the use, storage, manufacture, or other land use activity involving hazardous substances, but does not include individually packaged household consumer products or quantities of hazardous substances of less than five gallons in volume per container. Hazardous substances shall not be disposed on-site unless in compliance with Dangerous Waste Regulations, Chapter 173-303 WAC, and any pertinent local ordinances such as sewer discharge standards.

“Hazardous waste” means and includes all dangerous waste and extremely hazardous waste as designated pursuant to Chapter 70.105 RCW and Chapter 173-303 WAC.
1. “Dangerous waste” means any discarded, useless, unwanted, or abandoned substances including but not limited to certain pesticides or any residues or containers of such substances which are disposed of in such quantity or concentrations as to pose a substantial present or potential hazard to human health, wildlife, or the environment because such wastes or constituents or combinations of such wastes:

   a. Have short-lived, toxic properties that may cause death, injury, or illness, or have mutagenic, teratogenic, or carcinogenic properties; or
   
   b. Are corrosive, explosive, flammable, or may generate pressure through decomposition or other means.

2. “Extremely hazardous waste” means any waste which:

   a. Will persist in a hazardous form for several years or more at a disposal site and which in its persistent form presents a significant environmental hazard and may be concentrated by living organisms through a food chain or may affect the genetic make-up of humans or wildlife; and
   
   b. Is disposed of at a disposal site in such quantities as would present an extreme hazard to humans or the environment.

“Hazardous waste treatment and storage facility” means a facility that treats and stores hazardous waste and is authorized pursuant to Chapter 70.105 RCW and Chapter 173-303 WAC. It includes all contiguous land and structures used for recycling, reusing, reclaiming, transferring, storing, treating, or disposing of hazardous waste. Treatment includes using physical, chemical, or biological processing of hazardous wastes to make such waste non-dangerous or less dangerous and safer for transport, amenable for energy or material resource recovery. Storage includes the holding of waste for a temporary period, but not the accumulation of waste on the site of generation as long as the storage complies with applicable requirements of Chapter 173-303 WAC.

“Holocene Epoch” means that part of the geologic record that post-dates the youngest deposits associated with the late Pleistocene Age Fraser Glaciation and is typically considered to be the past 10,000 years.

“Hydrogeologic assessment” means a report detailing the subsurface conditions, the design of a proposed land use action, and the facilities operation which indicates the susceptibility and potential for contamination of groundwater supplies.

“Impervious surface” means a hard surface, which prevents or retards the entry of water into the soil mantle as under natural conditions prior to development, and/or a hard surface area, which causes water to run off the surface in greater quantities or at an increased rate of flow than the flow present under natural conditions prior to development. Common impervious surfaces include, but are not limited to, roof tops, walkways, patios, driveways, parking lots or storage areas, concrete or asphalt paving, gravel roads, gravel parking lots, packed earthen materials, and oiled, macadam or other surfaces which similarly impede the natural infiltration of stormwater. Open, uncovered retention/detention facilities shall not be considered as impervious surfaces.

“Increased cost of compliance (ICC)” means a flood insurance claim payment up to $30,000 directly to a property owner for the cost to comply with floodplain management regulations after a direct physical loss caused by a flood. Eligibility for an ICC claim can be through a single instance of “substantial damage” or as a result of a “cumulative substantial damage.” (More information can be found in FEMA ICC Manual 301.)

“Lahar” means a mudflow or debris flow mobilized by water, which originates on the slopes of a volcano.

“Lakes” means impoundments of open water 20 acres or larger.

“Landfill” means a place to dispose of refuse and other waste material by burying it and covering it over with soil.

“Landslide” means the abrupt downslope movement of soil, rocks, or other surface matter on a site. Landslides may include but are not limited to slumps, debris flows, mudflows, earthflows, rockfalls, and snow avalanches.

“Landslide hazard areas” means areas which are potentially subject to risk of mass movement due to a combination of geologic, topographic, and hydrologic factors.
“Large animal” means an animal with an average weight of 100 pounds or more.

“License” means any form of written permission given to any person, organization, or agency to engage in any activity, as required by law or agency rule. A license includes all or part of a city permit, certificate, approval, registration, charter, or plat approvals or rezones to facilitate a particular proposal. The term does not include a license required solely for revenue purposes.

“LiDAR” means Light Detection and Ranging imaging.

“Liquefaction” means a process by which a water-saturated granular (sandy) soil layer loses strength because of ground shaking caused by an earthquake.

“Long-term commercial significance” means the growing capacity, productivity, and soil composition of land, which makes it suitable for long-term commercial production, in consideration with the land’s proximity to population areas, and the possibility of more intense uses of land.

“Lowest floor” means the lowest floor of the lowest enclosed area (including basement and crawl space). An unfinished or flood resistant enclosure, usable solely for parking of vehicles, building access, or storage in an area other than a basement area, is not considered a building’s lowest floor; provided, that such enclosure is not built so as to render the structure in violation of the applicable non-elevation design requirements of this title.

“Maintenance” means those usual acts to prevent a decline, lapse, or cessation from a lawfully established condition without any expansion of or significant change from that originally established condition. For the purposes of this document, activities within landscaped areas within areas subject to native vegetation retention requirements may be considered maintenance only if they maintain or enhance the canopy and understory cover.

“Manufactured home/mobile home” means a structure, transportable in one or more sections, which is built on a permanent chassis and is designed for use with or without a permanent foundation when connected to the required utilities. For floodplain management purposes, the term “manufactured home/mobile home” also includes park trailers, travel trailers, and other similar recreational vehicles placed on a site for greater than 180 consecutive days. For insurance purposes, the term “manufactured home/mobile home” does not include park trailers, travel trailers, recreational vehicles, or other similar vehicles.

“Manufactured home park or subdivision” means a parcel (or contiguous parcels) of land divided into two or more manufactured home lots for rent or sale.

“Mineral resource lands” means lands primarily devoted to the extraction of minerals or which have known or potential long-term commercial significance for the extraction of minerals.

“Minerals” include gravel, sand, or other resources that are extracted from the ground, and valuable metallic substances.

“Mitigation” means:

1. Avoiding the impact altogether by not taking a certain action or parts of an action;
2. Minimizing impacts by limiting the degree or magnitude of the action and its implementation, by using appropriate technology, or by taking affirmative steps to avoid or reduce impacts;
3. Rectifying the impact by repairing, rehabilitating, or restoring the affected environment;
4. Reducing or eliminating the impact over time by preservation and maintenance operations during the life of the action;
5. Compensating for the impact by replacing, enhancing, or providing substitute resources or environments; and
6. Monitoring the impact and taking appropriate corrective measures;
“Mudflow” means a debris flow containing an abundance of fine particles.

“Native vegetation” or “native plants” means a mix of plant species comprising herbs, grasses, grass-like plants, shrubs and trees indigenous to the Puget Sound region that reasonably could be expected to naturally occur on the site.

“Natural resource lands” means agricultural and mineral resource lands, which have long-term commercial significance.

“New construction” means structures for which the “start of construction” commenced on or after the following:

1. For the purposes of determining flood insurance rates, the effective date of an initial FIRM (i.e., August 19, 1987, or August 4, 1988, specifically for Panel 350 only), and includes any subsequent improvements to such structures.

2. For floodplain management purposes, the effective date of this floodplain management ordinance and includes any subsequent improvements to such structures.

3. For all other cases, the effective date of the applicable critical areas ordinance.

“New manufactured home park or subdivision” means a manufactured home park or subdivision for which the construction of facilities for servicing the lots on which the manufactured homes are to be affixed (including, at a minimum, the installation of utilities, the construction of streets, and either final site grading or the pouring of concrete pads) is completed on or after the effective date of the adopted floodplain management regulations.

“Ordinance” means the ordinance, resolution, or other procedure used by the city to adopt regulatory requirements.

“Ordinary high water mark (OHWM)” means the mark on all lakes, streams and tidal waters that will be found by examining the beds and banks and ascertaining where the presence and action of waters are so common and usual, and so long continued in all ordinary years, as to mark upon the soil a character distinct from that of the abutting upland and vegetation, as that condition exists on the effective date of the ordinance codified in this title, or as it may naturally change thereafter. In any area where the ordinary high water mark cannot be found, the ordinary high water mark shall be the line of mean higher high tide in areas adjoining saltwater, and the line of mean high water in areas adjoining freshwater.

“Plat” means:

1. “Short subdivision” or “short plat” means the division or redivision of land into six or fewer lots, tracts, parcels, sites, or divisions for the purpose of sale, lease, or transfer of ownership.

2. “Subdivision” or “formal subdivision” means the division or redivision of land into seven or more lots, tracts, parcels, sites, or division for the purpose of sale, lease, or transfer of ownership. For floodplain management regulation purposes, this includes land over five acres in area situated within a flood hazard area.

“Ponds” means naturally occurring impoundments of open water less than 20 acres in size and larger than 2,500 square feet, which maintain standing water throughout the year. Also see “depressional pothole.”

“Professional engineer” means an engineer currently licensed and registered in the state of Washington.

“Reconstruction” means the rebuilding of an existing structure which has been partially or completely destroyed by any cause, such as but not limited to fire, wind, landslides, and water, without increasing the original floor area or square footage area.

“Recreational vehicle (RV)” means a vehicle built on a single chassis, 400 square feet or less when measured at the largest horizontal projection, designed to be self-propelled or permanently towable by a light duty truck, and designed primarily not for use as a permanent dwelling but as a temporary living quarters for recreational, camping, travel, or seasonal use.
“Regulated activities” means, but is not limited to, any of the following activities which are directly undertaken or originate in a regulated critical area or its buffer: building permit, commercial or residential; binding site plan; franchise right-of-way construction permit; site development permit; right-of-way permit; shoreline permits; short subdivision; use permits; subdivision; utility permits; or any subsequently adopted permit or required approval not expressly exempted by this title.

“Rehabilitation” means any improvements and repairs which are made to the interior and exterior of an existing structure, but which do not result in any increase in the floor area of the structure. This is also commonly referred to as a “remodel” of an existing structure.

“Restoration” means an action which returns habitat to a state in which its stability and functions approach its unaltered state as closely as possible. This may be accomplished through measures including, but not limited to, re-vegetation, removal of intrusive stream bank structures, and removal or treatment of toxic materials. Restoration does not imply a requirement for returning the critical area to aboriginal or pre-European settlement conditions.

“Revised Code of Washington (RCW)” means all laws of a general and permanent nature heretofore or hereafter enacted by the legislature, and assign permanent numbers as provided by law to all new titles, chapters, and sections thereof.

“Riparian” means the area adjacent to aquatic systems with flowing water that contains elements of both aquatic and terrestrial ecosystems which mutually influence each other. Riparian habitat begins at the ordinary high water mark and includes the entire extent of the floodplain and riparian areas of wetlands that are directly connected to the stream course.

“Seismic hazard areas” means areas subject to severe risk of damage as a result of earthquake-induced ground shaking, slope failure, settlement, or soil liquefaction.

“Sensitive areas” mean agricultural lands and mineral resource lands and all associated buffers.

“Shoreline” for this title means the line where a body of water and the shore meet or the strip of land along the shoreline. There are no waters within the city of Edgewood meeting the criteria of shorelines of statewide significance as defined by RCW 90.58.030.

“Single-family dwelling” means a detached building designed exclusively for occupancy by one family and containing one dwelling unit.

“Site” means a lot, parcel, tract, or combination of lots, parcels, or tracts on which a regulated activity is proposed.

“Slope” means an inclined earth surface, the inclination of which is expressed as the ratio of horizontal distance to vertical distance.

“Sludge” means a semisolid substance consisting of settled solids combined with varying amounts of water and dissolved materials generated from a wastewater treatment plant or system or other sources, including septage sludge, sewage sludge, and industrial sludge.

“Sludge land application site” means a site where stabilized sludge, septage, and other organic wastes are applied to the surface of the land in accordance with established agronomic rates for fertilization or soil conditioning.

“Slump” means the downward and outward movement of a mass of bedrock, colluvium, or other sediments along a distinct surface of failure.

“Small animal” means an animal with an average weight of less than 100 pounds.

“Special occupancy structures” means those structures that have the potential to provide capacity for large numbers of people or special groups of people or assemblies such as but not limited to schools, jails and detention facilities, and resident incapacitated patients.
“Species of local importance” means species that are of local concern due to their population status or their sensitivity to habitat manipulation.

“Soft armoring techniques” means the use of woody plants and limited structural-mechanical systems that are integrated in a structurally and environmentally sound manner to repair and protect slopes and shorelines against shallow mass wasting and surface erosion. Measures such as live stake, live fascine, brushlayer, live cribwall, vegetated geogrid, branchpackaging, live slope grading, beach berms, or earthen berms are examples of soft armoring techniques. Soft armoring techniques may also be referred to as soil bioengineering methods.

“Start of construction” includes substantial improvement, and means the date the building permit was issued, provided the actual start of construction, repair, reconstruction, placement or other improvement was within 180 days of the permit date. The “actual start” means either the first placement of permanent construction of a structure on a site, such as the pouring of slab or footings, the installation of piles, the construction of columns, or any work beyond the stage of excavation; or the placement of a manufactured home on a foundation. Permanent construction does not include land preparation, such as clearing, grading and filling; nor does it include the installation of streets and/or walkways; nor does it include excavation for a basement, footings, piers, or foundations or the erection of temporary forms; nor does it include the installation on the property of accessory buildings, such as garages or sheds not occupied as dwelling units or not part of the main structure. For a substantial improvement, the “actual start of construction” means the first alteration of any wall, ceiling, floor, or other structural part of a building, whether or not that alteration affects the external dimensions of the building.

“Stockpiling” means the placement of material with the intent to remove it later.

“Stream” means a feature where surface waters produce a defined channel or bed. A defined channel or bed is an area that demonstrates clear evidence of the passage of water and includes, but is not limited to, bedrock channels, gravel beds, sand and silt beds, and defined-channel swales. The channel or bed need not contain water year-round. This definition is not intended to include artificially created irrigation ditches, canals, storm or surface water devices, or other entirely artificial watercourses, unless they are used by salmonids or created for the purposes of stream mitigation.

“Structure” means a walled and roofed building, including a gas or liquid storage tank that is principally above ground.

“Substantial damage” means damage of any origin sustained by a structure whereby the cost of restoring the structure to its before-damaged condition would equal or exceed 50 percent of the market value of the structure before the damage occurred.

“Substantial improvement” means any repair, reconstruction, addition, rehabilitation, or other improvement of a structure, whereby the cost for the work exceeds 50 percent of the market value of the existing structure before the “start of construction” of the improvement. This term includes structures which have incurred “substantial damage,” regardless of the actual repair work performed.

The term does not, however, include either:

1. Any project for improvement of a structure to correct existing violations of state or local health, sanitary, or safety code specifications which have been identified by the local code enforcement official and which are the minimum necessary to assure safe living conditions; or

2. Any alteration of a structure listed on the National Register of Historic Places or a State Inventory of Historic Places; provided, that the alteration will not preclude the structure’s continued designation as a “historic structure.”

Except for floodplain management regulation, the “cost” and “market value” may be determined using the current permit valuation. The building official shall determine the current permit valuation based on the cost per square foot values in effect at the time of permit application. Substantial improvement shall be accumulative from the effective date of the ordinance codified in this chapter.
“Talus” means a homogenous area of rock rubble ranging in average size 0.15 to 2.0 meters (0.5 to 6.5 feet), including riprap slides and mine tailings. Talus areas may be associated with cliffs.

“Toe of slope” means a distinct topographic break in slope at the lowermost limit of the landslide or erosion hazard area.

“TPCHD” means the Tacoma-Pierce County Health Department.

“Underground storage tank” means any one or a combination of tanks (including underground pipes connected thereto) which are used to contain or dispense an accumulation of hazardous substances or hazardous wastes, and the volume of which (including the volume of underground pipes connected thereto) is 10 percent or more beneath the surface of the ground.

“Urban governmental services” means those governmental services historically and typically delivered by cities, and includes storm and sanitary sewer systems, domestic water systems, street cleaning services, and other public utilities associated with urban areas and normally not associated with nonurban areas.

“Urban growth” means growth that makes intensive use of the land for the location of buildings, structures, and impermeable surfaces to such a degree as to be incompatible with the primary use of such land for the production of food, other agricultural products, or fiber, or the extraction of mineral resources. When allowed to spread over wide areas, urban growth typically requires urban governmental services. “Characterized by urban growth” refers to land having urban growth located on it or to land located in relationship to an area with urban growth on it as to be appropriate for urban growth.

“Utility line” means pipe, conduit, cable, or other similar facility by which services are conveyed to the public or individual recipients. Such services shall include, but are not limited to, water supply, electric power, gas, communications, and sanitary sewers.

“Critical Areas Variance” means a grant of relief from the requirements of this title or that permits construction in a manner that would otherwise be prohibited by this title, per EMC 14.10.085.

“View corridor” means an area, which affords views of lakes, mountains, or other scenic amenities normally enjoyed by residential property owners.

“Violation” means the failure of a structure or other development activity to be fully compliant with the provisions of this title. With regard to the floodplain management regulations, projects without the elevation certificate, other certifications, or other evidence of compliance required in Chapter 14.70 EMC are presumed to be in violation until such time as that documentation is provided. See Chapter 1.10 EMC for penalties.

“Volcanic hazard areas” means those areas subject to pyroclastic flows, lava flows, and inundation by debris flows, mudflows, or related flooding resulting from geologic or volcanic events on Mount Rainier.

“Water dependent” means a structure for commerce or industry that cannot exist in any other location and is dependent on the water by reason of the intrinsic nature of its operations.

“Wellhead protection area” means the area within the 10-year time-of-travel zone boundary of a group A public water system well, as delineated by the water system purveyor or its designee, pursuant to WAC 246-290-135.

“Wetland” means areas that are inundated or saturated by surface water or groundwater at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands generally include swamps, marshes, bogs, and similar areas. Wetlands do not include those artificial wetlands intentionally created from non-wetland sites, including, but not limited to, irrigation and drainage ditches, grass-lined swales, canals, detention facilities, wastewater treatment facilities, farm ponds, and landscape amenities, or those wetlands created after July 1, 1990, that were unintentionally created as a result of the construction of a road, street, or highway. Wetlands may include those artificial wetlands intentionally created from non-wetland areas created to mitigate conversion of wetlands.
“Wetland category” means the numeric designation (I through IV) assigned to a wetland to indicate the wetland’s overall function and value. Wetland categories rank the city’s wetlands from highest (Category I) to lowest (Category IV) using the current version of the Washington State Wetland Rating System for Western Washington (Hruby, 2014).

“Wetland class” means the U.S. Fish and Wildlife Service wetland classification scheme that uses a hierarchy of systems, subsystems, classes, and subclasses to describe wetland habitat types (refer to USFWS, December 1979, Classification of Wetlands and Deepwater Habitats of the United States for a complete explanation of the wetland classification scheme). These include, for example: forested, scrub-shrub, emergent, and aquatic bed.

“Wetland mosaic” means a patchwork of wetlands that is considered one unit where each patch of wetland is less than one acre and the areas delineated as vegetated wetland are more than fifty percent of the total area of the wetlands and uplands together.

“Wetland specialist” means a wetland scientist with at least two years of full-time work experience as a wetlands professional, including delineating wetlands using the federal manual and supplements, preparing wetland reports, conducting function assessment, and development and implementing mitigation plans.

“Wildlife biologist” means a professional with a degree in wildlife, or certification by the Wildlife Society, or with five years’ professional experience as a wildlife biologist. (Ord. 17-492 § 2 (Exh. A); Ord. 16-461 § 2; Ord. 15-447 § 1 (Exh. A); Ord. 02-200 § 2).

The Edgewood Municipal Code (Critical Areas Ordinance Update 2017)
Chapter 14.20

USE AND ACTIVITY REGULATIONS

Sections:
14.20.010 Permitted uses.
14.20.020 Regulated uses and activities.
14.20.030 Exemptions.
14.20.040 Nonconforming uses and structures.
14.20.050 Reasonable use exceptions.
14.20.060 Current use assessment program.

14.20.010 Permitted uses.
Uses permitted on properties designated as critical areas shall be the same as those permitted in the zone classification shown in the City’s Official Zoning Map unless specifically prohibited by this title. (Ord. 02-200 § 2).

14.20.020 Regulated uses and activities.
A. Unless the requirements of this title are met, the department shall not grant any approval or permission to alter the condition of any land, water, or vegetation, or to construct or alter any structure or improvement regulated through the following: building permit; commercial or residential; binding site plan; franchise right-of-way construction permit; site development permit; right-of-way permit; short subdivision; large lots; use permits; subdivision; utility permits; Critical Areas Permit; Critical Areas Variance; or any subsequently adopted permit or approval not expressly exempted by this chapter.

B. The following activities shall comply with the requirements of this Title if such activities take place are regulated within critical areas and/or their buffers, unless exempted by EMC 14.20.030:
   1. Removing, excavating, disturbing, or dredging soil, sand, gravel, minerals, organic matter, or materials of any kind;
   2. Dumping, discharging, or filling;
   3. Draining, flooding, or disturbing the water level or water table. In addition, an activity which involves intentional draining, flooding, or disturbing the water level or water table in a wetland or stream in which the activity itself occurs outside the regulated area shall be considered a regulated activity;
   4. Driving, piling or placing obstructions, including placement of utilities;
   5. Constructing, reconstructing, installing, demolishing, or altering the size of any structure or infrastructure, including manufactured and/or mobile homes;
   6. Altering the character of a regulated area by destroying or altering vegetation through clearing, harvesting, cutting, intentional burning, shading, or planting;
   7. The division of land;
   8. The creation of hard surfaces.

14.20.030 Exemptions.
A. Individuals, organizations or associated parties shall avoid potential impacts to critical areas and their buffers to the greatest degree feasible. For an activity to be exempt from this title does not give permission to degrade a critical area or its buffer or ignore risk from natural hazards. Any incidental damage to, or alteration of, a critical area or its buffer that is not a necessary outcome of the exempted activity shall be restored, rehabilitated, or replaced at the responsible party’s expense.
B. The following activities are exempt from the provisions of this title and shall not be required to obtain any permit and/or approval under this title:

1. Operation, maintenance, or repair of existing structures, infrastructure improvements, utilities, public or private roads, dikes, levees, or drainage systems, that do not require construction permits, if the activity does not further alter or increase the impact to, or encroach further within, the critical area or buffer and there is no increased risk to life or property as a result of the proposed operation, maintenance, or repair. Operation and maintenance includes vegetation management performed in accordance with best management practices that is part of ongoing maintenance of structures, infrastructure, or utilities, provided that such management actions are part of ongoing maintenance, do not expand further into the critical area or buffer, and are not the result of an expansion of the structure or utility, and do not directly impact an endangered or threatened species. Operation and maintenance includes vegetation management performed in accordance with best management practices that is part of ongoing maintenance of structures, infrastructure, or utilities, provided that such management actions are part of ongoing maintenance, do not expand further into the critical area or buffer, and are not the result of an expansion of the structure or utility, and do not directly impact an endangered or threatened species.

2. Normal maintenance or repair of existing structures or developments, including damage by accident, fire, or elements. “Normal maintenance” includes those usual acts to prevent a decline, lapse, or cessation from a lawfully established condition. “Normal repair” means to restore a development to a state comparable to its original condition including, but not limited to, its size, shape, configuration, location, and external appearance, within a reasonable period after decay or partial destruction, except where repair causes substantial adverse effects to critical areas or their buffers. Replacement of a structure or development may be authorized as repair where such replacement is the common method of repair for the type of structure or development and the replacement structure or development is comparable to the original structure or development including, but not limited to, its size, shape, configuration, location, and external appearance and the replacement does not expand further into the critical area or buffer. Refer to EMC 14.20.040 (D) for requirements associated with repair of substantial damage of non-conforming structures.

3. Reconstruction, remodeling, or maintenance of existing single-family residential structures and accessory structures that are located outside a flood hazard area and active landslide hazard area; provided, that a one-time only expansion of the building footprint does not increase by more than 25 percent and that the new construction or related activity does not further intrude into the critical area or related buffer. The exemption shall not apply to reconstruction which is proposed as a result of structural damage associated with a critical area, such as slope failure in a landslide hazard area or flooding in a flood hazard area.

4. Reconstruction, remodeling, or maintenance of structures, other than single-family structures and accessory structures that are located outside a flood hazard area or active landslide hazard area; provided, that such reconstruction, remodeling, or maintenance does not increase the floor area nor extend beyond the existing ground coverage. The exemption shall not apply to reconstruction which is proposed as a result of site or structural damage associated with a critical area, such as slope failure in a landslide hazard area or flooding in a flood hazard area.

5. Site investigative work necessary for land use application submittals such as surveys, soil logs, percolation tests, and other related activities. Critical area impacts shall be minimized and disturbed areas shall be immediately restored.

6. Emergency actions necessary to prevent imminent threat or danger to public health or safety, or to public or private property, or serious environmental degradation.

   a. The department shall review all proposed emergency actions to determine the existence of the emergency and reasonableness of the proposed actions taken; however, post-emergency actions, such as submittal of permits, completion of city review, modification or removal of the emergency repair work, or mitigation shall be required by the department.

   b. Erosion protection measures shall only be allowed as an emergency action when the owner can demonstrate that there is an imminent threat to an existing residential, commercial, industrial, or agricultural structure. The owner shall retain either city staff or an engineering geologist to conduct a site investigation and provide adequate documentation that the situation is actually an emergency. An emergency action is not warranted when the structure is located outside the active landslide area.
c. After the emergency, the person or agency undertaking the action shall fully fund and conduct necessary restoration and/or mitigation for any impacts to the critical area and buffers resulting from the emergency action in accordance with an approved critical area report and mitigation plan. The person or agency undertaking the action shall apply for review, and the alteration, critical area report, and mitigation shall be reviewed by the department in accordance with the review procedures contained herein. Restoration and/or mitigation activities must be initiated within 90 days of the date of the emergency activity, and completed within one (1) year.

7. Installation, construction, replacement, repair, operation or alteration of natural gas, cable and telecommunication facilities, electric facilities and lines, water, sewer or storm lines, pipes, mains, equipment or appurtenances in publicly owned right-of-way (which may be within or adjacent to a critical area or its buffer), subject to full department review and approval of the department utility installation, including any mitigation and restoration requirements established by the department.

8. Removal by hand of manmade litter and control of noxious weeds that are included on the state noxious weed list (Chapter 16-750 WAC) or invasive plant species as identified by the city. Control may be conducted by clipping, pulling, or digging, or by an alternative non-mechanical method upon approval of a plan by the department.

9. Activities undertaken to comply with a United States Environmental Protection Agency superfund order, or a Washington Department of Ecology order, pursuant to the Model Toxics Control Act, including the following activities:
   a. Remediation or removal of hazardous or toxic substances;
   b. Source control; and
   c. Natural resource damage restoration.

10. Activities within a portion of a wetland buffer or fish and wildlife habitat conservation area buffer located landward of an existing, substantially developed area, such as a paved area, dike, levee, or permanent structure which eliminates or greatly reduces the impact of the proposed activities on the wetland or fish and wildlife habitat conservation area. The department shall review the proposal to determine the likelihood of associated impacts.

11. Passive recreation such as hunting, hiking, fishing, and wildlife viewing that does not involve the construction of trails.

12. Enhancement actions that do not involve clearing, grading, or construction activities (e.g., revegetation with native plants and installation of nest boxes). Enhancement activity proposals shall be reviewed by the department.

13. Forest practices conducted in accordance with the requirements of the Forest Practice Act (Chapter 76.09 RCW) and its rules, with the exception of the conversion of forest land to a use other than commercial forestry (Class IV conversions).

14. Existing and ongoing agricultural activities, provided that they implement applicable Best Management Practices (BMPs) contained in the latest editions of the USDA Natural Resources Conservation Service Field Official Technical Guide; or develop a farm conservation plan in coordinate with the local conservation district. BMPs and/or farm plans should ensure that ongoing agricultural activities minimize their effects on water quality, riparian ecology, salmonid populations, and wildlife habitat.

(Ord. 02-200 § 2).
14.20.040 Nonconforming uses and structures.

An established use or existing structure located in a wetland, fish and wildlife habitat conservation area, landslide or erosion hazard area, flood hazard area, and their associated buffers that was lawfully permitted prior to the effective date of this title, but which is not currently in compliance with this title, may continue subject to the following:

A. Nonconforming Use Expansion. Nonconforming uses shall not be expanded or changed in any way that increases the nonconformity without a permit issued pursuant to the provisions of this title.

B. Nonconforming Structure Expansion. Existing structures shall not be expanded or altered in any manner that will increase the nonconformity without a permit issued pursuant to the provisions of this title, except as provided in EMC 14.20.030(B).

C. Discontinued Uses. Activities or uses which are discontinued for twelve (12) consecutive months shall be allowed to resume only if they are in compliance with this title.

D. Substantial Damage. Nonconforming structures, except for structures located in a flood hazard area or active landslide hazard area which are damaged or destroyed by fire, explosion, flood, or other casualty, may be restored or replaced if reconstruction is commenced within one year of such damage and is substantially completed within eighteen (18) months of the date such damage occurred. The reconstruction or restoration shall not serve to expand, enlarge, or increase the nonconformity except as allowed through the provisions in EMC 14.20.030(B). Structures in a floodway or active landslide hazard area may be allowed to be restored only up to the limits of substantial improvement, as set forth in each chapter. (Ord. 02-200 § 2).

14.20.050 Reasonable use exceptions.

A. General Requirements.

1. If, after a property owner makes application for a variance, and the variance is denied, the property owner may apply for a reasonable use exception. A reasonable use exception may be requested when it is alleged that the application of this title would deny all reasonable use of a site. Approval of a reasonable use exception allows development which is consistent with the general purposes of this title and the public interest. Nothing in this title is intended to preclude all reasonable use of property.

2. The provisions outlined in this section shall only be used when application of this title would deny all reasonable use of a site.

3. Applications for a reasonable use shall automatically constitute an application for a variance to reduce front, side, or rear yard setback requirements. The decision maker shall examine the feasibility of reducing setbacks as a method of locating a structure outside a critical area or its associated buffer prior to granting a reasonable use exception for allowing construction to occur within a critical area or its associated buffer. Reductions in setback requirements shall be given preference over granting of a reasonable use exception.

4. The proposed impact to the critical area shall be the minimum necessary to allow for reasonable use of the property.

5. Mitigation may be required to assure that the proposal will result in no net loss of critical area functions and values, consistent with the best available science.

6. The creation of new lots within critical areas and their associated buffers is prohibited.

7. The proposal must comply with all provisions in Chapter 14.70 EMC, Flood Hazard Areas, and Chapter 14.80 EMC, Landslide Hazard Areas.

B. Application Requirements. A complete application for a reasonable use exception shall include the following information:

1. A description of the areas of the site that contains a critical area, buffers, or within setbacks required under this title;
2. A description of the amount of the site that is within setbacks required by other standards of the zoning code;

3. A description of the proposed development, including a site plan;

4. An analysis of the impact that the amount of development described in subsection (B)(3) of this section would have on the critical area(s);

5. An analysis of whether any other reasonable use with less impact on the critical area(s) and associated buffer(s) is possible;

6. A design of the proposal so that the amount of development proposed as reasonable use will have the least impact practicable on the critical area(s);

7. An analysis of the modifications needed to the standards of this title to accommodate the proposed development;

8. A description of any modifications needed to the required front, side, and rear setbacks; building height; and buffer widths to provide for a reasonable use while providing greater protection to the critical area(s);

9. Such other information as the department determines is reasonably necessary to evaluate the issue of reasonable use as it relates to the proposed development, such as but not limited to a wetland analysis report, mitigation plan, habitat evaluation study, and/or a buffer enhancement plan.

C. Review. A reasonable use exception is a Type III ___ permit and shall be processed according to the procedures in chapter 18.40.100____ EMC.

1. Public Hearing Required. The department shall set a date for a public hearing after all requests for additional information or plan correction, as set forth in EMC 18.40.150, have been satisfied. The public hearing shall follow the procedures set forth in EMC 18.40.190, Notice of public hearing.

2. Decision Criteria. The decisionmaker determines that the applicant has demonstrated that all of the following criteria are met:

   a. The proposed development is located on an existing lot of record that was created prior to the effective date of the ordinance codified in this title and there is no other reasonable use or feasible alternative to the proposed development with less impact on the critical area(s) and/or associated buffers including phasing or project implementation, change in timing of activities, buffer averaging or reduction, setback variance, relocation of driveway, or placement of structure; and

   b. The development cannot be located outside the critical area and/or its associated buffer due to topographic constraints of the parcel or size and/or location of the parcel in relation to the limits of the critical area and/or its associated buffer and a building setback variance or road variance has been reviewed, analyzed, and rejected as a feasible alternative; and.

   c. The proposed development does not pose a threat to the public health, safety, or welfare on or off the site, nor shall it damage nearby public or private property; and

   d. Any alteration of the critical area(s) shall be the minimum necessary to allow for reasonable use of the property; and

   e. The inability of the applicant to derive reasonable use of the property is not the result of actions by the applicant in subdividing the property or adjusting a boundary line thereby creating the undevelopable condition after February 1, 1992; and

   f. The proposal mitigates the impacts on the critical area(s) to ensure no net loss of critical area functions, while still allowing reasonable use of the site; and.

The Edgewood Municipal Code (Critical Areas Ordinance Update 2017)
g. The proposed activities will not jeopardize the continued existence of species listed by the state or federal government as endangered, threatened, sensitive, or documented priority species or priority habitats; and.

h. The proposed activities will not cause significant degradation of groundwater or surface water quality.

3. Decisionmaker’s Authority. The decisionmaker has the authority to approve an application for a reasonable use exception, approve with additional requirements above those specified in this title, require modification of the proposal to comply with specified requirements or [local conditions] or deny the application if it fails to comply with the requirements of this section.

4. Required Written Findings and Determinations. A reasonable use exception may be approved by the decisionmaker only if all of the findings are made in writing regarding the proposal and are supported by the record, as outlined in the decision criteria identified within EMC 14.20.050 (C)(8).

14.20.060 Current use assessment program.

A. An owner of agricultural land, timberland, or open space desiring current use classification under Chapter 84.34 RCW may file for such current use classification with the Pierce County assessor-treasurer’s office.

B. The department shall notify the assessor-treasurer’s office when restrictions on development occur on a particular site.

C. The assessor-treasurer’s office shall consider the critical areas and buffering requirements of this title in determining the fair market value of land. Any owner of an undeveloped buffer which has been placed in a separate tract or tracts, protective easement, public or private land trust dedication, or other similarly preserved area shall have that portion of land assessed consistent with those restrictions. (Ord. 02-200 § 2).
Chapter 14.30

WETLANDS

Sections:
14.30.010 Purpose.
14.30.020 Wetland identification, delineation, and rating.
14.30.025 Buffer standards—Wetlands
14.30.030 Wetland review procedures.
14.30.040 Allowed activities.
14.30.060 Mitigation requirements.
14.30.070 Appendices.

14.30.010 Purpose.
The purpose of this chapter is to avoid or, in appropriate circumstances, to minimize, rectify, reduce, or compensate for impacts arising from land development and other activities affecting wetlands, and to maintain and enhance the biological and physical functions and values of wetlands with respect to water quality maintenance, stormwater and floodwater storage and conveyance, fish and wildlife habitat, primary productivity, recreation, education, and historic and cultural preservation. When wetland impacts occur, mitigation will be required to achieve no net loss of wetlands in terms of acreage, function, and value. (Ord. 02-200 § 2).

14.30.020 Wetland identification, delineation, and rating.
A. Designation. All areas within the city meeting the definition of “wetland” in Chapter 14.15 EMC are hereby designated critical areas.

B. Identification and Delineation. Wetlands shall be identified and delineated by a qualified wetland scientist in accordance with the approved federal wetland delineation manual and applicable regional supplements. Wetland delineations are valid for 5 years, after which date the City shall require verification that the wetland boundaries and prior conditions have not changed.

C. Mapping. The approximate location and extent of wetlands are shown on maps maintained by the city. These maps are useful as a guide for project applicants and/or property owners but do not provide a conclusive or definitive indication of wetland presence or extent. Other wetlands may exist that do not appear on the maps, and some wetlands that appear on the maps may not meet all of the wetland designation criteria. The city shall update the maps periodically as new wetland areas are identified and as new wetland information becomes available.

D. Wetland Categories. Wetlands shall be categorized by a qualified wetland scientist in accordance with the current version of the Washington State Wetland Rating System for Western Washington (Hruby, 2014) and the appropriate rating forms approved by the Washington State Department of Ecology. The wetland shall also be classified according to the U.S. Fish and Wildlife Service “Classification of Wetlands and Deep Water Habitats in the U.S.”

A. Determining buffer widths. Buffer widths shall be measured horizontally from the perpendicular line established at the wetland edge as shown in Table 14.20.050(1).

C. Modification of Buffer Widths. The standard buffer widths of subsection (A) of this section may be modified by averaging, reducing, or increasing.

1. Buffer Averaging. Buffer width averaging may be allowed only where the applicant demonstrates all of the following:
   a. Buffer encroachment is unavoidable.
   b. The wetland contains variations in sensitivity due to existing physical characteristics.
   c. Width averaging will provide equal or greater protection of current wetland functions and values.
   d. The total buffer area after averaging is no less than the buffer area prior to averaging.
   e. The minimum width of the buffer at any given point shall be at least seventy-five percent (75%) of the standard width, or twenty-five (25) feet, whichever is greater.
   f. The averaging is accomplished within the project boundaries.

2. Buffer Width Reductions. Buffer width reduction up to a maximum of twenty-five (25) percent may be allowed when the applicant demonstrates the following circumstances:
   a. Buffer encroachment is unavoidable.
   b. All exposed areas are stabilized with native vegetation, as appropriate.
   c. The project includes a buffer enhancement plan as part of the mitigation required by EMC 14.30.060. The buffer enhancement plan shall use plant species which are native, noninvasive to the project area.
   d. Buffer reduction with enhancement will provide equal or greater protection of current wetland functions and values.
   e. Buffer reductions may not be used in combination with buffer averaging.

3. Buffer Increases. The department may require increased buffer width(s) when any of the following are identified:
   a. A larger buffer is necessary to maintain viable populations of existing species;
   b. The wetland is used by, or associated with, species listed by the federal government or the state as endangered, threatened, sensitive, or as documented priority species or habitats, or essential or outstanding potential sites such as heron rookeries or raptor nesting areas;
   c. The adjacent land is susceptible to severe erosion and erosion control measures will not effectively prevent adverse wetland impacts;
   d. The adjacent land has minimal vegetative cover, or slopes greater than 20 percent. (Ord. 02-200 § 2).
14.30.030 Wetland review procedures.
A. Wetland Report Requirements. When the department’s maps, sources, or field investigations indicate that the proposed project area is located within 300 feet of a known or suspected wetland, an applicant shall submit a wetland critical areas report prepared by a qualified wetland scientist. The requirement to provide a wetland critical areas report may be waived if the department determines that there are no potential direct and/or indirect impacts on wetlands or their buffers that would result from the proposed development. Wetland critical areas reports shall comply with the requirements established in EMC 14.30.070, Appendix A.

B. Single-Family Dwelling Wetland Review. Construction of a single-family dwelling and regulated activities accessory to a single-family dwelling (such as driveways, gardens, fences, walls, lawns, and on-site septic systems) may utilize an alternative wetland review procedure, subject to the following:

1. Prior to issuance of a building permit, site development permit, or on-site sewage system permit, the applicant shall submit a single-family wetland certification form completed by a wetland specialist that certifies either:
   a. No regulated wetlands are present within 300 feet of the project area; or
   b. Wetlands are present within 300 feet of the project area, but the buffer does not extend onto the project site.

2. The single-family certification form may be used only to authorize single-family dwellings and accessory structures. It may not be used for new agricultural activities, expansion of existing agricultural activities, forest practices activities, commercial projects, land divisions, and buffer width modifications.

C. Time Limitation. Wetland delineations and reports that have been accepted by the city shall be valid for a period of five (5) years, unless the department determines that new information warrants revision of the delineation or report.

14.30.040 Allowed activities.
A. The following wetlands are exempt from the requirement to avoid impacts in EMC 14.10.080(B) and may be altered if the impacts are fully mitigated based on the remaining mitigation sequencing actions in EMC 14.10.080(B). In order to verify the following conditions, a wetland critical areas report meeting the requirements of EMC 14.30.070, Appendix A must be submitted.

1. All isolated Category IV wetlands less than 4,000 square feet that:
   a. Are not associated with riparian areas or their buffers;
   b. Are not part of a wetland mosaic;
   c. Are not associated with shorelines of the state or their associated buffers;
   d. Do not score 5 or more points for habitat functions based on current version of the Washington State Wetland Rating System for Western Washington (Ecology, 2014);
   e. Do not contain a Priority Habitat or a Priority Area for a Priority Species identified by the Washington Department of Fish and Wildlife, federally listed species or their critical habitat, or habitats or species of local importance as identified in EMC 14.40.030(A).

2. Wetlands less than 1,000 square feet that meet the criteria specified in subsection (A)(1) of this section.

3. Utility projects within wetland buffers which have minor or short-duration impacts, as determined by the department in accordance with the criteria below, and which do not significantly impact the function or values of wetlands; provided, that such projects are constructed with best management practices and additional restoration measures are provided. Minor activities shall not result in the
transport of sediment or increased stormwater. Such allowed minor utility projects shall meet the following criteria:
   a. There is no practical alternative to the proposed activity with less impact on wetlands;
   b. The activity involves the placement of a utility pole, street signs, anchor, or vault or other small component of a utility facility; and
   c. The activity involves disturbance of an area less than 75 square feet.

B. The activities listed below are allowed in wetlands and their buffers, and do not require submission of a critical area report except where such activities would result in a loss of the functions and values of a wetland or wetland buffer. These activities include:

1. Activities in wetlands in areas managed according to a special area management plan or other plan adopted by the department and specifically designed to protect wetland resources.

2. Trimming of vegetation for purposes of providing view corridors will be allowed; provided, that trimming shall be limited to view corridors of a maximum 20-foot width and that benefit to fish and wildlife habitat are not reduced. Trimming shall be limited to hand pruning of branches and vegetation. Trimming shall not include felling, topping, or removal of trees. (Ord. 02-200 § 2).

3. Drilling for utilities/utility corridors under a wetland, with entrance/exit portal located completely outside of the wetland buffer, provided that the drilling does not interrupt the ground water connection to the wetland or percolation of surface water down through the soil column. Specified studies by a hydrologist are necessary to determine whether the ground water connection to the wetland or percolation of surface water down through the soil column will be disturbed.

14.30.060 Mitigation requirements.
A. Mitigation. Compensatory mitigation is required for all unavoidable alterations to wetlands or their buffers, except for buffer averaging when done in accordance with EMC 14.30.025(C)(1). Compensatory mitigation actions shall replace functions affected by the alteration and shall provide equal or greater functions compared to the impacted wetland. All projects must first demonstrate compliance with EMC 14.10.080(B) (Mitigation Sequencing) prior to development of compensatory mitigation plans.

B. Preference of Mitigation Actions. Compensatory wetland mitigation shall occur in the following order of preference:

1. Restoration: The manipulation of the physical, chemical, or biological characteristics of a site with the goal of returning natural or historic functions to a former or degraded wetland. For the purpose of tracking net gains in wetland acres, restoration is divided into:
   a. Re-establishment: The manipulation of the physical, chemical, or biological characteristics of a site with the goal of returning natural or historic functions to a former wetland. Re-establishment results in a gain in wetland acres (and functions). Activities could include removing fill material, plugging ditches, or breaking drain tiles.
   b. Rehabilitation: The manipulation of the physical, chemical, or biological characteristics of a site with the goal of repairing natural or historic functions of a degraded wetland. Rehabilitation results in a gain in wetland function but does not result in a gain in wetland acres. Activities could involve breaching a dike to reconnect wetlands to a floodplain or return tidal influence to a wetland

2. Creation: The manipulation of the physical, chemical, or biological characteristics of a site to develop a wetland on an upland or deepwater site where a wetland did not previously exist. Creation results in a gain in wetland acres. Activities typically involve excavation of upland soils to elevations that will produce a wetland hydroperiod, create hydric soils, and support the growth of hydrophytic plant species.

3. Enhancement: The manipulation of the physical, chemical, or biological characteristics of a wetland site to heighten, intensify, or improve specific function(s) or to change the growth stage or composition of the wetland.
vegetation present. Enhancement is undertaken for specified purposes such as water quality improvement, flood water retention, or wildlife habitat. Enhancement results in a change in some wetland functions and can lead to a decline in other wetland functions, but does not result in a gain in wetland acres. Activities typically consist of planting vegetation, controlling non-native or invasive species, modifying site elevations or the proportion of open water to influence hydroperiods, or some combination of these activities.

C. Approaches to Compensatory Mitigation. Mitigation for alterations to wetland and their buffers shall rely on the approaches listed below.

1. Wetland Mitigation Banks. Credits from a certified wetland mitigation bank may be used to compensate for impacts within the service area specified in the mitigation bank instrument. Use of credits from a wetland mitigation bank certified under Chapter 173-700 WAC is allowed if:
   a. The department determines that it would provide appropriate compensation for the proposed impacts; and
   b. The impact site is located in the service area of the bank.
   c. The proposed use of credits is consistent with the terms and conditions of the certified bank instrument.
   d. Replacement ratios for projects using bank credits is consistent with replacement ratios specified in the certified mitigation bank instrument.

2. In-Lieu Fee Mitigation. Credits from an approved in-lieu-fee program may be used when all the following apply:
   a. The approval authority determines that it would provide environmentally appropriate compensation for the proposed impacts.
   b. The proposed use of credits is consistent with the terms and conditions of the approved in-lieu-fee program instrument.
   c. Project using in-lieu-fee credits shall have debits associated with the proposed impacts calculated by the applicant’s qualified wetland scientist using the credit assessment method specified in the approved instrument for the in-lieu-fee program.
   d. The impacts are located within the service area specified in the approved in-lieu-fee instrument.

3. Permittee-responsible mitigation. In this situation, the permittee performs the mitigation after the permit is issued and is ultimately responsible for implementation and success of the mitigation. Permittee-responsible mitigation may occur at the site of the permitted impacts or at an off-site location within the same watershed. If available, the use of wetland mitigation banks and in-lieu-fee programs are preferable to permittee-responsible mitigation.

D. Wetland mitigation ratios. The ratios listed in Table 14.30.060 apply to permittee-responsible mitigation. The first number species the acreage of replacement wetlands required, and the second number specifies the acreage of wetlands altered or relocated.
Table 14.30.060

The director may increase the ratios under the following circumstances:

1. Uncertainty as to the probable success of the proposed restoration or creation;
2. Significant period of time between destruction and replication of wetland values;
3. Projected losses in functional value;
4. The compensatory mitigation is off site.

E. Wetland buffer mitigation. To mitigate unavoidable impacts to functions and values of wetland buffers, a minimum buffer ratio of 1:1 (alteration area: mitigation area) is required. This ratio assumes that creation/restoration of a wetland buffer with appropriate native vegetation is sufficient to compensate for the wetland buffer functions and values affected by alteration of an existing wetland buffer. If enhancement of an existing wetland buffer is proposed as mitigation, a higher mitigation ratio may be required. For any proposed wetland buffer activities, the applicant must demonstrate that the functions and values of the altered wetland buffer will be fully replaced by the proposed mitigation. The department may increase the buffer mitigation ratios under the following circumstances:

1. The replacement ratio needed to recover the lost functions and values of buffer area is greater than 1:1 based upon the existing type of vegetative cover of either the impact site or the proposed mitigation site.
2. Uncertainty exists as to the probable success of the proposed restoration or creation;
3. A significant period of time will elapse between impact and replication of wetland functions;
4. The impact was an unauthorized impact.

F. Wetland and buffer mitigation plans. Compensatory wetland mitigation plans shall be consistent with Wetland Mitigation in Washington State – Part 2: Developing Mitigation Plans (Ecology, 2006); and Selecting Wetland Mitigation Sites Using a Watershed Approach (Ecology, 2009), or as revised. Mitigation plans shall comply with the requirements established in EMC 14.30.070, Appendix B.

14.30.070 Appendices.
A. Wetland Report.

B. Wetland Mitigation Plan

APPENDIX A

WETLAND REPORT

A. A wetland critical areas report shall, at a minimum, include the following:

1. The general critical areas report requirements in EMC 14.10.082;

2. Map showing the location of all wetlands and required buffers within three hundred (300) feet of the proposed development;

3. An analysis of the onsite wetland(s) include the following site- and proposal-related information:

   a. Documentation of any fieldwork performed on the site, including, but not limited to, field delineation data sheets for delineations and wetland rating forms;

   b. Wetland acreage;

   c. Wetland category;

   d. A discussion of the water sources supplying the wetland and documentation of hydrologic regime (locations of inlet and outlet features, water depths throughout the wetland, evidence of recharge or discharge);

   e. A discussion of the functions of existing wetlands, including vegetative, faunal, and hydrologic conditions; and

   f. A description of the methodologies used to conduct the wetland delineations;

4. A discussion of measures, including avoidance, minimization, and mitigation, proposed to preserve existing wetlands;

5. A detailed discussion of the direct and/or indirect potential impacts on the wetland by the project; and

6. The wetland mitigation plan requirements of EMC 14.30.070, Appendix B, if the activity will result in unavoidable impacts to wetlands or their buffers.

APPENDIX B

WETLAND MITIGATION PLAN

A. A wetland mitigation plan shall, at a minimum, include the following:

1. The general mitigation plan requirements in EMC 14.10.083 and the following information:

2. Existing and proposed wetland acreage;

3. Vegetative and faunal conditions;

4. Surface and subsurface hydrologic conditions including an analysis of existing and future hydrologic regime and proposed hydrologic regime for enhanced, created, or restored mitigation areas;

5. Relationship within watershed and to existing waterbodies;

6. Soils and substrate conditions, topographic elevations;
7. Existing and proposed adjacent site conditions;

8. Required wetland buffers (including any buffer reduction or averaging and mitigation proposed to enhance buffers);

9. Property ownership;

10. A discussion of ongoing management practices that will protect wetlands after the project site has been developed, including proposed monitoring and maintenance programs;

10. A bond estimate for the installation (including site preparation, plant materials and installation, fertilizers, mulch) and the proposed monitoring and maintenance work for the required number of years, pursuant to EMC 14.10.080(E).
Chapter 14.40

FISH AND WILDLIFE HABITAT CONSERVATION AREAS

Sections:
14.40.010 Purpose.
14.40.020 Fish and wildlife habitat conservation area identification and classification.
14.40.025 Buffer standards—Fish and wildlife habitat conservation areas.
14.40.030 Fish and wildlife habitat conservation area review procedures.
14.40.040 Allowed activities.
14.40.050 Alteration of Watercourses
14.40.060 Mitigation requirements.
14.40.070 Appendix

14.40.010 Purpose.
Many land use activities can impact the habitats of fish and wildlife. Special care must be taken in the management of lands that support fish and wildlife species to ensure that development occurs in a manner that is sensitive to their habitat needs. The purpose of this chapter is to identify fish and wildlife habitat conservation areas and establish habitat protection procedures and mitigation measures that are designed to result in no net loss of habitat functions and values. (Ord. 02-200 § 2).

14.40.020 Fish and wildlife habitat conservation area identification and classification.
A. Designation. Fish and wildlife habitat conservation areas include:

1. Waters of the state. Waters of the state include lakes, rivers, ponds, streams, and all other surface waters and watercourses within jurisdiction of the state of Washington, as classified in WAC 222-16-030.

2. Areas with which federally designated endangered, threatened, and sensitive species have a primary association. The U.S. Fish and Wildlife Service and the National Marine Fisheries Service should be consulted for current federal listing status.

3. Areas with which state designated endangered, threatened, and sensitive species have a primary association. The Washington State Department of Fish and Wildlife should be consulted for current state listing status.

4. State priority habitats and areas associated with state priority species. The state Department of Fish and Wildlife should be consulted for current listing of priority habitats and species.

5. Habitats and species of local importance. The following fish and wildlife species and their associated habitat areas shall be regulated under this chapter:
   a. Fish. Coho salmon (Oncorhynchus kisutch), pink salmon (Oncorhynchus gorbuscha), chum salmon (Oncorhynchus keta), cutthroat trout (Oncorhynchus clarkia), and steelhead (Oncorhynchus mykiss).
   b. Birds. Great blue heron (Ardea herodias) and green heron (Butorides virescens).
   c. Areas with which state-listed monitor or candidate fish or wildlife species or federally listed candidate fish or wildlife species have a primary association, and which if altered may reduce the likelihood that the species will survive and reproduce over the long term.
   d. Heron rookeries.

B. Habitat boundary survey. If the department determines that a regulated habitat conservation area may be present within the project vicinity, the department may require the habitat area to be delineated and/or mapped by a qualified...
fisheries biologist or wildlife biologist who is knowledgeable of fish and wildlife habitat within western Washington, or by the Washington Department of Fish and Wildlife. The boundary of aquatic habitats shall be the ordinary high water mark of the waterbody. The management recommendations for Washington’s priority habitats and species or federal equivalent should be used as a tool for identifying and delineating wildlife habitat boundaries. The city may waive this requirement if there is adequate information available on the area proposed for development to determine the impacts of the proposed development and appropriate mitigating measures.

C. Mapping. The approximate location and extent of waters of the state and fish presence within the city are shown on maps maintained by the city. The city shall update the maps periodically as new information becomes available. The approximate location and extent of other fish and wildlife habitat conservation areas are shown on maps maintained by the Washington State Department of Fish and Wildlife and other state and federal agencies. These maps are to be used as a guide and do not provide definitive information about fish and wildlife habitat conservation area size or presence. Fish and wildlife habitat conservation areas may exist that do not appear on the maps.

D. Waters of the state classification. The city hereby adopts the water typing system specified in WAC 222-16-030, as described below:

1. Type S. All waters, within their ordinary high water mark, meeting the criteria as “shorelines of the state” and “shorelines of statewide significance” under RCW Chapter 90.58. As of the effective date of this title, there are no Type S streams within city jurisdiction.

2. Type F: segments of natural waters other than Type S Waters, which are within the bankfull widths of defined channels and periodically inundated area of their associated wetlands, or within lakes, ponds, or impoundments having a surface area of 0.5 acre or greater at seasonal low water and which in any case contain fish habitat.

3. Type Np: all segments of natural waters within the bankfull width of defined channels that are perennial non-fish habitat stream. Perennial stream waters do not go dry any time of a year of normal rainfall. However, for the purpose of water typing, Type Np Waters include the intermittent dry portions of the perennial channel below the uppermost point of perennial flow.

4. Type Ns: All segments of natural waters within the bankfull width of the defined channels that are not Type S, F, or Np waters. These are seasonal, non-fish habitat streams in which surface flow is not present for at least some portion of a year of normal rainfall and are not located downstream from any stream reach that is a Type Np Water. Ns Waters must be physically connected by an above-ground channel system to Type S, F, or Np Waters.

14.40.025 Buffer standards—Fish and wildlife habitat conservation areas.
A. Determining buffer widths. Buffers shall be required as set forth for each habitat type. The required buffers shall be delineated, both on a site plan or plat, and on the property prior to approval of any regulated activity.

1. Aquatic habitat conservation areas.

   a. Buffers for aquatic habitat conservation areas shall be based upon the water type classification of the water body as specified in WAC 22-16-030. Refer to Table 14.40.025 for the water types and the associated buffer requirements.

   b. The required buffer width shall be measured in all directions from the ordinary high water mark.

   c. The required buffer shall be extended to include any adjacent regulated wetland(s), landslide hazard areas, and/or erosion hazard areas and required buffers.

2. Non-aquatic habitat conservation areas. Appropriate buffers for critical habitat areas and species not listed in Table 14.40.025 shall be determined by the Washington Department of Fish and Wildlife or by a qualified wildlife biologist and documented in an approved habitat management plan.

1 In the event that buffers for any habitat conservation area or other critical area are contiguous or overlapping, the landward-most edge of all such buffers shall apply.

2 As of the effective date of this title, there are no Type S streams within city jurisdiction.

BC. Modification to Buffer Width Requirements. The standard buffer widths of subsection (A) of this section may be modified as follows:

1. Buffer Width Reductions. A buffer width reduction may be proposed through submittal of a habitat management plan. Buffer reductions of up to a maximum of 25 percent may be allowed when the applicant demonstrates the following circumstances:
   a. Buffer encroachment is unavoidable.
   b. The existing buffer is predominately un-vegetated, composed of nuisance species, or is in an otherwise highly disturbed condition.
   c. Buffer reduction with enhancement will provide equal or greater protection of current habitat functions and values, and will not adversely affect salmon habitat.
   d. The buffer reduction will not increase the risk of slope failure or downslope stormwater drainage impacts.
   e. The minimum width of the buffer at any given point shall be at least seventy-five (75) percent of the standard width, or twenty-five (25) feet, whichever is greater.
   f. The project includes a buffer enhancement plan as part of the mitigation required by EMC 14.40.060. The buffer enhancement plan shall use native plant species.

2. Buffer Width Increases. The department may require increased buffer width(s) when any of the following are identified:
   a. A larger buffer is necessary to maintain viable populations of existing species or protect the existing functions of the habitat area;
   b. The adjacent land is susceptible to severe erosion and erosion control measures will not effectively prevent adverse habitat impacts;
   c. The adjacent land has minimal vegetative cover or slopes greater than 20 percent; or
   d. The habitat area is in an area of high tree blow down potential. In these cases the habitat area may be expanded an additional 50 feet on the windward side.
14.40.030 Fish and wildlife habitat conservation area review procedures.

A. Habitat management plan. When the department's maps, sources, or field investigations indicate that the proposed project area is located within 300 feet of a known or suspected fish or wildlife habitat conservation area, an applicant shall submit a habitat management plan prepared by a qualified fisheries biologist or wildlife biologist. The requirement to provide a habitat conservation plan for habitat conservation areas may be waived if the department determines that there are no potential direct and/or indirect impacts on designated species or habitats that would result from the proposed development. Habitat management plans shall comply with the requirements established in EMC 14.40.070, Appendix A.

14.40.040 Allowed activities.

A. The following activities may be permitted in habitat conservation areas and/or their buffers when all reasonable measures have been taken to avoid and mitigate adverse effects on species and habitats and a net loss of habitat functions will not occur. In order to verify the following conditions, a habitat management plan meeting the requirements of EMC 14.40.070, Appendix A must be submitted.

1. Stream Erosion Control Measures. New or replacement stream erosion control measures shall be subject to the following standards:
   a. The proposal complies with the provisions set forth in Chapter 14.110 EMC.
   b. The required habitat management plan demonstrates the following:
      i. Natural stream processes will be maintained. The project will not result in increased beach erosion or alterations to, or loss of, stream substrate within one-quarter mile of the site.
      ii. The stream erosion control measure will not adversely impact fish or wildlife habitat conservation areas or associated wetlands.

2. Docks and launching ramps. Construction, reconstruction, repair, and maintenance of docks and public or private launching ramps are subject to all of the following:
   a. The dock or ramp is located and oriented and constructed in a manner that minimizes adverse effects on water quality, movement of aquatic and terrestrial life, ecological processes, spawning habitat, and wetlands.
   b. Docks and ramps shall meet or exceed all relevant state and federal permit requirements.

3. Roads, Trails, Bridges, and Rights-of-Way. Construction of trails, roadways, bridges, and culverts may be allowed subject to the following standards:
   a. There is no other feasible alternative route with less impact on the environment.
   b. The crossing minimizes interruption of downstream movement of wood, ice, and gravel and the movement of all fish and wildlife.
   c. Stream crossings, where necessary, shall only occur as near to the perpendicular with the stream as possible and be limited to the minimum width necessary.
   d. Road bridges and culverts are designed according to the latest versions of the Washington Department of Fish and Wildlife Water Crossing Design Guidelines (Washington Department of Fish and Wildlife) the Anadromous Salmonid Passage Facility Design guidelines (National Marine Fisheries Service).
   e. Trails and associated viewing platforms shall be made of pervious materials.
4. Utility Facilities. New utility lines and facilities are permitted to cross habitat conservation areas if they comply with the following standards:

   a. Avoid fish and wildlife habitat conservation areas to the maximum extent possible.

   b. Cross at an angle greater than 60 degrees to the centerline of the channel in streams or perpendicular to the channel centerline whenever boring under the channel is not feasible.

   c. Crossings are contained within the footprint of an existing road or utility crossing where possible.

   d. Avoid paralleling the stream or following a down-valley course near the channel.

   e. Do not increase or decrease the natural rate of shore migration or channel migration.

   f. Bore beneath the scour depth and hyporheic zone of the water body and channel migration zone (CMZ) where feasible.

5. Public Flood Protection Measures. New public flood protection measures and expansion of existing facilities may be approved, subject to the department’s review and approval of a habitat management plan.

6. Instream Structures. New instream structures (e.g., such as, but not limited to, high flow bypass, sediment ponds, instream ponds, retention and detention facilities, dams, weirs, etc.) shall be allowed only as part of an approved mitigation or restoration project or watershed basin plan approved by the department and upon acquisition of any required state or federal permits. The structure shall be designed to avoid modifying flows and water quality in ways that may adversely affect critical fish species. Proposals for placement of water quality, water quantity, or other instruments or structures within a stream to gather data, or as a mitigation measure, shall be exempt from the provisions of this title upon review and approval by the department.

7. Stormwater Conveyance Facilities. Conveyance structures whose sole purpose is to convey stormwater already treated for quality, or water bypassed around water quality treatment facilities pursuant to an approved stormwater plan, may be constructed subject to the following standards:

   a. No other feasible alternatives with less impact exist;

   b. Mitigation for impacts is provided;

   c. Stormwater conveyance facilities shall incorporate fish habitat features;

   d. Vegetation shall be maintained and, if necessary, added adjacent to all open channels and ponds in order to retard erosion, filter out sediments, and shade the water.

8. On-Site Sewage Systems and Wells.

   a. New on-site sewage systems and individual wells are permitted if accessory to an approved structure.

   b. Repairs to failing on-site sewage systems associated with an existing structure shall be accomplished by utilizing one of the following methods that result in the least impact:

      i. Connection to an available public sewer system;

      ii. Replacement with a new on-site sewage system located in a portion of the site that has already been disturbed by development and is located landward as far as possible, provided the proposed sewage system is in compliance with the provisions in Chapter 14.70 EMC; or

      iii. Repair to the existing on-site septic system.
B. The activities listed below are allowed in habitat conservation areas and their buffers, and do not require submission of a habitat management plan, except where such activities would result in a loss of the functions and values of habitat conservation areas or buffers.

1. Vegetation Removal, Disturbance, and Introduction. Limited vegetation removal shall be allowed subject to EMC 18.90.180 (tree preservation) and the following standards:

   a. Hazard trees may be cut; provided, that:

      i. The applicant submits a report from a certified arborist, licensed architect, or professional forester that documents the hazard and provides a replanting schedule for the replacement trees and receives written approval from the city authorizing the tree removal;

      ii. Tree cutting shall be limited to limbing and crown thinning, unless otherwise justified by the landowner’s expert. Where limbing or crown thinning is not sufficient to address the hazard, trees should be topped to remove the hazard rather than cut at or near the base of the tree. All vegetation cuttings (tree stems, branches, tops, etc.) shall be left within the habitat area or buffer unless removal is warranted due to the potential for disease transmittal to other healthy vegetation;

      iii. The landowner shall replace any trees that are felled or topped with new trees at a ratio of two replacement trees for each tree felled or topped. Tree species that are native and indigenous to the site shall be used;

      iv. Hazard trees determined to pose an imminent threat or danger to public health or safety, or to public or private property, or serious environmental degradation may be removed or topped by the landowner prior to receiving written approval from the department; provided, that within 14 days following such action, the landowner shall submit the necessary report and replanting schedule demonstrating compliance with subsections (B)(1)(a)(i) through (iii) of this section.

   b. Trimming of vegetation for purposes of providing view corridors will be allowed; provided, that trimming shall be limited to view corridors of 20 feet in width or less, that no more than 30 percent of the live crown is removed, and that benefits to fish and wildlife habitat are not reduced. Trimming shall be limited to hand pruning of branches and vegetation. Trimming shall not include felling, topping, or removal of trees.

2. Fencing. Fencing shall be placed in such a manner as to maintain wildlife movement corridors and not create any fish passage blockages. The department shall approve the location, type, and height of any proposed fencing.

14.40.050 Alteration of Watercourses

Alteration of Watercourses. Any alteration of a watercourse shall comply with the following standards:

1. The city will notify adjacent communities and the Washington State Department of Ecology prior to any alteration or relocation of a watercourse proposed by the applicant and submit evidence of such notification to the Federal Insurance Administration.

2. The city shall require that maintenance be provided within the altered or relocated portion of said watercourse, so that the flood-carrying capacity is not diminished. Therefore, if the maintenance program calls for future cutting of planted native vegetation used in performing the alteration, the system shall be oversized at the time of construction to compensate for said vegetation growth or any other natural factor that may need future maintenance.

3. Alterations and relocations, including stabilization projects, shall not degrade fish habitat and shall be subject to the following provisions:

   a. Structures that cross all watercourses and water bodies shall meet fish habitat requirements of the Washington Department of Fish and Wildlife.
b. Any culverts that are used on fish-bearing watercourses shall be arch/bottomless culverts or equivalent that provide comparable fish protection, and must meet fish habitat requirements of the latest edition of Washington Department of Fish and Wildlife’s Design Manual for Culverts.

c. Bridges or other crossings shall allow for uninterrupted downstream movement of wood and gravel, be as close to perpendicular to the watercourse as possible, and be designed to minimize fill and to pass the base flood flows.

d. Watercourse alterations shall maintain natural meander patterns, channel complexity, and floodplain connectivity. Where feasible, such characteristics shall be restored as part of the watercourse alteration.

e. The applicant shall identify the channel migration zone for the watercourse at the project site and for a reasonable reach upstream and downstream of the site, and shall not undertake actions as part of the alteration that would in any way inhibit movement of the channel.

f. Existing culverts that do not meet fish habitat requirements shall be removed or replaced as part of the approved watercourse alteration project.

g. Watercourse alteration projects shall not result in a fish blockage of side channels. Known fish barriers into side channels shall be removed as part of the approved watercourse alteration project.

h. For any watercourse alteration of a Type S or F water (pursuant to EMC 14.40.020(D)) whose channel is subject to migration, bioengineered (soft) armorning of streambanks is required to allow for woody debris recruitment, gravels for spawning, and creation of side channels. The bioengineering technique used must be designed in accordance with the latest edition of Washington Department of Fish and Wildlife’s Integrated Streambank Protection Guidelines.

4. The project engineer shall design the watercourse alteration so the activity does not increase the water surface elevation (zero-rise); decrease the capacity, storage, and conveyance of the watercourse; or cause an adverse impact to adjacent, cross-channel, or upstream or downstream properties. (Ord. 17-492 § 2 (Exh. A); Ord. 02-200 § 2).

14.40.060 Mitigation requirements.

A. Mitigation. Compensatory mitigation is required for all unavoidable alterations to fish and wildlife habitat conservation areas or their buffers. Mitigation of alteration to habitat areas shall achieve equivalent or greater functional equivalency or improvement on a per function basis. Mitigation elements to be addressed may include, but are not limited to: restoration of previously degraded areas and key habitat features, restoration of riparian vegetation communities to provide shade and large woody debris, addition of large woody debris, and installation of upland habitat features. All projects must first demonstrate compliance with EMC 14.10.080(B) (Mitigation Sequencing) prior to development of compensatory mitigation plans.

B. Type of mitigation required. In determining the extent and type of mitigation required, the department may consider all of the following:

1. The ecological processes that affect and influence habitat structure and function within the watershed or sub-basin;

2. The individual and cumulative effects of the action upon the functions of the critical area and associated watershed;

3. Observed or predicted trends regarding the gains or losses of specific habitats or species in the watershed, in light of natural and human processes;

4. The likely success of the proposed mitigation measures;

5. Effects of the mitigation actions on neighboring properties; and
6. Opportunities to implement restoration actions formally identified by an adopted shoreline restoration plan, watershed planning document prepared and adopted pursuant to Chapter 90.82 RCW, a salmonid recovery plan or project that has been identified on the Salmon Recovery Board Habitat Project List or by the Washington State Department of Fish and Wildlife as essential for fish and wildlife habitat enhancement.

C. Location. Compensatory mitigation shall be provided on-site or off-site in the location that will provide the greatest ecological benefit to the species and/or habitats affected and have the greatest likelihood of success. Mitigation shall occur as close to the impact site as possible, within the same sub-basin, and in a similar habitat type as the permitted alteration unless the applicant demonstrates to the satisfaction of the department through a watershed- or landscape-based analysis that mitigation within an alternative sub-basin of the same watershed would have greater ecological benefit.

D. Mitigation plans. When required by this chapter, the applicant shall submit a fish and wildlife habitat conservation area mitigation plan meeting the requirements of EMC 14.40.060.

APPENDIX A

HABITAT MANAGEMENT PLAN

A. A habitat management plan shall, at a minimum, include the following:

1. The general critical areas report requirements in EMC 14.10.082.
2. Identification of any endangered, threatened, sensitive, or candidate species that have a primary association with habitat on the project area;
3. Map showing the location of the ordinary high water mark and/or locations of wildlife habitat conservation area(s) and their buffers in accordance with EMC 14.40.025;
4. The vegetative, faunal, topographic, and hydrologic characteristics of the habitat conservation area;
5. A discussion of any federal, state, or local special management recommendations, including Washington Department of Fish and Wildlife habitat management recommendations, that have been developed for species or habitat located on or adjacent to the project area;
6. A detailed discussion of the direct and/or indirect potential impacts on the habitat conservation area by the project. Such discussion shall include a discussion of the ongoing management practices that will protect habitat after the project site has been developed;
7. The mitigation plan requirements of EMC 14.10.083 if the activity will result in unavoidable impacts to habitat conservation areas. Mitigation measures may include:
   a. Prohibition or limitation of use and development activities within the habitat conservation area;
   b. Retention of vegetation and/or re-vegetation of areas/habitats critically important to species;
   c. Special construction techniques;
   d. Implementation of erosion and sediment control measures;
   e. Habitat restoration or enhancement (i.e., fish passage barrier removal);
   f. Seasonal restrictions on construction activities on the subject property;
   g. Clustering of development activities on the subject property; and/or
   h. Any other requirements and/or recommendations from federal, state, or local special management recommendations, including the Washington State Department of Fish and Wildlife’s habitat management guidelines.
Chapter 14.50

CRITICAL AQUIFER RECHARGE AREAS

Sections:
14.50.010 Purpose.
14.50.030 Critical aquifer recharge area review procedures.
14.50.040 Critical aquifer recharge area standards.

14.50.010 Purpose.
The purpose of this chapter is to protect critical aquifer recharge areas from degradation or depletion resulting from new or changed land use activities. Due to the exceptional susceptibility and/or vulnerability of groundwater underlying aquifer recharge areas to contamination and the importance of such groundwater as sources of public water supply, it is the intent of this chapter to safeguard groundwater resources and wellhead protection areas by mitigating or precluding future discharges of contaminants from new land use activities. (Ord. 02-200 § 2).

A. General. Critical aquifer recharge areas are areas that have a critical recharging effect on groundwater used for potable water supplies and/or that demonstrate a high level of susceptibility or vulnerability to groundwater contamination from land use activities. These areas include the following:

1. Aquifer Recharge Areas. The boundaries of the two highest DRASTIC zones that are rated 180 and above on the DRASTIC index range, as identified in Map of Groundwater Pollution Potential, Edgewood, Washington, National Water Well Association, U.S. Environmental Protection Agency;

2. Wellhead Protection Areas. Wellhead protection areas that lie within the 10-year time of travel zone boundary of a group A public water system well, as delineated by the water system purveyor or its designee, pursuant to WAC 246-290-135; and

3. Sole Source Aquifers. Sole source aquifers are areas that have been designated by the U.S. Environmental Protection Agency pursuant to the Federal Safe Water Drinking Act. As of the effective date of this title, there are no designated sole source aquifers within city limits.

14.50.030 Critical aquifer recharge area review procedures.
A. General Requirements

1. The city’s critical aquifer recharge area map provides an indication of where critical aquifer recharge areas are located within the city and the map is updated as necessary.

2. Any proposed development located within protection critical aquifer recharge area shall comply with the standards set forth in EMC 14.50.040.

3. Any hazardous uses, as defined in EMC 14.50.040, shall require the submittal of a hydrogeologic assessment, as set forth in subsection (B) of this section.

4. The department may waive some of the critical area protective measure provisions contained in EMC 14.10.080, as deemed appropriate by the Department Director and can be shown to meet the requirements associated with Best Available Science, if required.

B. Hydrogeologic Assessment.

1. The hydrogeologic assessment shall be prepared, signed, and dated by a state licensed geologist/hydrogeologist.
The Edgewood Municipal Code (Critical Areas Ordinance Update 2017)

2. The hydrogeologic assessment shall be submitted in the form of a report detailing the subsurface conditions, the design of a proposed land use action, and the facilities operation which indicates the susceptibility and potential for contamination of groundwater supplies. The hydrogeologic assessment shall, at a minimum, include the general critical area report requirements of EMC 14.10.082 in addition to the following:

   a. Information sources;
   b. Geologic setting – includes well logs or borings used to identify information;
   c. Background water quality;
   d. Groundwater elevations;
   e. Location/depth to perched water tables;
   f. Recharge potential of facility site (permeability/transmissivity);
   g. Groundwater flow direction and gradient;
   h. Current available data on wells located within one-quarter mile of the site;
   i. Current available data on any spring within one-quarter mile of the site;
   j. Surface water location and recharge potential;
   k. Water source supply to facility (e.g., high capacity well);
   l. Any sampling schedules necessary;
   m. Discussion of the effects of the proposed project on the groundwater resource;
   n. Discussion of potential mitigation measures, should it be determined that the proposed project will have an adverse impact on groundwater resources; and
   o. Any other information as required by the TPCHD, including information required under Washington Department of Ecology Publication 97-30.

C. Storage Tank Permits. In addition to the requirements set forth in this title, the following agencies also have the authority to regulate the installation, repair, replacement, or removal of underground storage tanks:

   1. The Pierce County Fire Prevention Bureau regulates and authorizes permits for underground storage tanks, pursuant to the International Fire Code (Article 79) and this chapter.
   3. The TPCHD regulates and authorizes permits for the removal of underground storage tanks (Pierce County Code, Chapter 8.34). (Ord. 02-200 § 2).

14.50.040 Critical aquifer recharge area standards.

A. General. All regulated activities that are not exempt or prohibited under the provisions of this chapter shall ensure sufficient groundwater recharge. In order to achieve sufficient groundwater recharge, the applicant shall comply with city’s adopted stormwater manual (Chapter 13.05 EMC) and demonstrate that the total post-development infiltration rate for the project area will be equal to or better than the predevelopment rate.

B. Prohibited Uses. Landfills (other than inert and demolition landfills), Class I, III, and IV underground injection wells, metals mining, wood treatment facilities, pesticide manufacturing, petroleum refining facilities (including distilled petroleum facilities), the storage of large volumes of petroleum products, and other uses or activities
The Edgewood Municipal Code (Critical Areas Ordinance Update 2017)

determined by the department to have a significant adverse impact on ground water are prohibited within critical aquifer recharge areas.

C. Exemptions. In addition to the general exemptions listed in EMC 14.20.030, the following uses or activities are exempt from the requirements of this chapter:

1. Sewer lines and appurtenances;

2. Biosolids and sludge land application sites; provided, that these activities comply with the requirements established in Chapters 173-200, 173-216, and 173-304 WAC; and

D. Agricultural Activities. New agricultural activities that do not involve hazardous substance handling or application are allowed within an aquifer recharge or wellhead protection area subject to the following:

1. The applicant is required to submit a farm management plan prepared by the USDA, NRCS, Pierce County Conservation District, or Washington State University, Cooperative Extension Office, that certifies that water quality and quantity within the aquifer recharge area is maintained. The farm management plan shall at a minimum address the following:
   a. The limits of the proposed agricultural activities.
   b. The proposed scope of agricultural activities, including the use of any pesticides, fertilizers, or other chemicals.
   c. The existing nitrate levels on the site and any proposed increases in nitrate levels.

2. Integrated pest management (IPM) practices for pest control and best management practices (BMPs) for the use of fertilizers, as described by the Washington State University, Pierce County Cooperative Extension Office, shall be utilized.

3. Nitrate levels at down-gradient property line shall not exceed 2.5 mg/L or, if the background nitrate concentration exceeds 2.5 mg/L, that the concentration will not be increased more than 0.1 mg/L.

4. Additional protective measures may be required if deemed necessary by the department or TPCHD to protect public health or safety.

ED. Nonhazardous Uses. Subdivision of land as defined in EMC Title 16, residential structures housing three or more units and all commercial and industrial sites or activities that do not include or involve hazardous substance processing or handling in protection critical aquifer recharge area are allowed subject to the following standards:

1. Stormwater quality treatment and flow control shall be provided in conformance with the city’s adopted stormwater management manual.

2. Floor drains shall not be allowed to drain to the stormwater system and must be designed and installed to meet the Uniform Plumbing Code (UPC) Section 303.

3. If any roof venting carries contaminants, then the portion of the roof draining from this area must go through pretreatment pursuant to UPC Section 304(b).

4. All nonresidential vehicle washing must be self-contained or be discharged to a sanitary sewer system, if approved by the sewer utility, and is subject to UPC Sections 708 and 711.

5. Integrated pest management (IPM) practices for pest control and best management practices (BMPs) for the use of fertilizers as described by the Washington State University, Pierce County Cooperative Extension Office, shall be utilized.
6. For new or changes in regulated activities served by on-site sewage systems, the applicant must demonstrate to the TPCHD that nitrate levels at the down-gradient property line will not exceed 2.5 mg/L or that if the background nitrate concentration exceeds 2.5 mg/L the concentration will not be increased more than 0.1 mg/L.

7. Additional protective measures may be required if deemed necessary by the department or TPCHD to protect public health or safety.

**FE. Hazardous Uses – General.** Hazardous substance processing or handling, hazardous waste treatment and storage facilities, animal containment areas, and solid waste facilities that require a solid waste handling permit from the TPCHD, requiring approval from the city, shall be allowed only in protection critical aquifer recharge area subject to review and approval of a hydrogeologic assessment by the department and review by the TPCHD. The department has the authority to apply whatever standards deemed necessary to mitigate any negative impacts that may be associated with the proposed development and will consider comments by TPCHD.

**GF. Hazardous Uses – Storage Tanks.** In addition to the requirement to submit a hydrogeologic assessment, the following standards apply to storage tanks in protection critical aquifer recharge area:

1. **Underground Tanks.** All new underground storage facilities used or to be used for the underground storage of hazardous substances or hazardous wastes shall be designed and constructed so as to:
   a. Prevent releases due to corrosion or structural failure for the operational life of the tank;
   b. Be protected against corrosion, constructed of noncorrosive material, steel clad with a noncorrosive material, or designed to include a secondary containment system to prevent the release or threatened release of any stored substance;
   c. Use material in the construction or lining of the tank which is compatible with the substance to be stored; and
   d. The installation of underground storage tanks shall also be subject to other state and local permit requirements.

2. **Aboveground Tanks.**
   a. No new aboveground storage facility or part thereof shall be fabricated, constructed, installed, used, or maintained in any manner which may allow the release of a hazardous substance to the ground, groundwater, or surface waters of the city within a critical aquifer recharge area.
   b. A new aboveground tank that will contain a hazardous substance will require both a double-walled tank and a secondary containment system separate from the tank that will hold 110 percent of the tank’s capacity. The secondary containment system or dike system must be designed and constructed to contain material stored in the tank(s). (Ord. 16-482 § 2 (Exh. Č); Ord. 02-200 § 2).
Chapter 14.60

VOLCANIC HAZARD AREAS

Sections:
14.60.010 Purpose.
14.60.020 Volcanic hazard areas.
14.60.030 Volcanic hazard area review procedures.
14.60.040 Volcanic hazard area standards.

14.60.010 Purpose.
At over 14,411 feet high, Mount Rainier dominates the skyline of the southern Puget Sound region. This glacier-clad mountain is a dormant volcano capable of generating large floods and lahars which have historically reached the floors of the lowlands south of the city of Seattle and out to Commencement Bay in the Port of Tacoma, spewing ash from pyroclastic eruptions. The purpose of this chapter is to promote the public health, safety, and general welfare of the citizens of Edgewood by providing standards that minimize the loss of life that may occur as a result of volcanic events emanating from Mount Rainier. (Ord. 02-200 § 2).

14.60.020 Volcanic hazard areas.
A. General. Volcanic hazard areas are areas subject to pyroclastic flows, lava flows, and inundation by debris flows, mudflows, or related flooding resulting from geologic and volcanic events on Mount Rainier.

B. Volcanic Hazard Area Categories. Volcanic hazard areas are areas that have been historically inundated by Case I, Case II, or Case III lahars or other types of debris flow; affected by pyroclastic flows, pyroclastic surges, lava flows, or ballistic projectiles in future eruptions; or are located in other drainages expected to be inundated by a future Case I, Case II, or Case III debris flow. Volcanic hazard areas are classified into the following categories:

1. Inundation Zone for Case I Lahars. Areas that could be affected by cohesive lahars that originate as enormous avalanches of weak chemically altered rock from the volcano. Case I lahars can occur with or without eruptive activity. The average reoccurrence rate for Case I lahars on Mount Rainier is about 500 to 1,000 years.

2. Inundation Zone for Case II Lahars. Areas that could be affected by relatively large non-cohesive lahars, which most commonly are caused by the melting of snow and glacier ice by hot rock fragments during an eruption, but which can also have a non-eruptive origin. The average time interval between Case II lahars from Mount Rainier is near the lower end of the 100- to 500-year range, making these flows analogous to the so-called “100-year flood” commonly considered in engineering practice.

3. Inundation Zone for Case III Lahars. Areas that could be affected by moderately large debris avalanches or small non-cohesive lahars, glacial outburst floods, or other types of debris flow, all of non-eruptive origin. The average time interval between Case III lahars at Mount Rainier is about one to 100 years.

4. Pyroclastic Flow Hazard Zone. Areas that could be affected by pyroclastic flows, pyroclastic surges, lava flows, and ballistic projectiles in future eruptions. During any single eruption, some drainages may be unaffected by any of these phenomena, while other drainages are affected by some or all phenomena. The average time interval between eruptions of Mount Rainier is about 100 to 1,000 years.

C. Time Travel Zones. The ability to evacuate people from within a volcanic hazard area correlates to the distance from the source of an event (i.e., those areas closest to the event will have less time to evacuate than those areas farther away from the source of an event). The amount of time that is anticipated for a debris flow, lahar, flood, or avalanche to travel geographically has been classified into the following time travel zones:

1. Time Zone A. Time Zone A is an estimated one-hour travel distance from the source of the event.

2. Time Zone B. Time Zone B is an estimated one and one-half hour travel distance from the source of the event.
3. Time Zone C. Time Zone C is an estimated two-hour travel distance from the source of the event.

4. Time Zone D. Time Zone D is an estimated two hours or greater travel distance from the source of the event. (Ord. 02-200 § 2).

14.60.030 Volcanic hazard area review procedures.
A. The City’s Critical Areas Atlas – Volcanic Hazard Area Map provides an indication of where volcanic hazard areas are located within the city.
B. The department will complete a review of the volcanic hazard area maps for any development proposal to determine whether the proposed project area for a regulated activity falls within a volcanic hazard area.
C. When the department’s maps or sources indicate that the proposed project area for a regulated activity is located within a volcanic hazard area, the department shall apply the standards for regulated activities in volcanic hazard areas, as set forth in EMC 14.60.040.

14.60.040 Volcanic hazard area standards.
The following standards apply within the inundation zones for Case I, II, and III lahars and within the pyroclastic flow hazard zone (refer to Table 14.60.040):
A. Bonus densities, as set forth in EMC 18.90.080, Housing incentives program, shall be prohibited.
B. All critical facilities, as defined in Chapter 14.15 EMC, shall be prohibited, except sewer collection facilities and any other utilities that are located underground or not likely to cause harm to people or the environment if inundated by a lahar.
C. Special occupancy structures, as defined in Chapter 14.15 EMC, are subject to the following:

1. Time Travel Zone A. Special occupancy structures located within the Time Travel Zone A area shall be limited to a maximum 100-person occupancy.
2. Time Travel Zone B. Special occupancy structures located within the Time Travel Zone B area shall be limited to a maximum 500-person occupancy.
3. Time Travel Zone C. Special occupancy structures located within the Time Travel Zone C area shall be limited to a maximum 1,000-person occupancy.
4. Time Travel Zone D. Special occupancy structures located within the Time Travel Zone D area shall be limited to a maximum 5,000-person occupancy.

Chapter 14.70  
FLOOD HAZARD AREAS

Sections:
14.70.010 Purpose.
14.70.015 Flood Insurance Study Adoption
14.70.020 Flood hazard areas.
14.70.030 Flood hazard area review procedures.
14.70.040 Flood hazard area standards.
14.70.050 Appendices.

14.70.010 Purpose.
The purpose of this chapter is to promote the public health, safety, and general welfare of the citizens of Edgewood. The standards contained in this chapter are intended to minimize public and private losses due to flood conditions in flood hazard areas and provide special criteria necessary for regulated activities located within flood hazard areas of the city. The following statements describe the purpose of this chapter:

A. Protect human life and health;
B. Minimize expenditure of public money and costly flood control projects;
C. Minimize the need for rescue and relief efforts associated with flooding;
D. Minimize prolonged business interruptions;
E. Minimize damage to public infrastructure, facilities and utilities;
F. Minimize damage to critical fish and wildlife habitat areas;
G. Minimize net loss of ecological functions of floodplains;
H. Ensure that potential buyers are notified that property is in a flood hazard area;
I. Ensure that those who occupy flood hazard areas assume responsibility for their actions; and
J. Qualify Edgewood for participation in the National Flood Insurance Program, thereby giving the citizens of Edgewood the opportunity to purchase flood insurance with particular emphasis to those in flood hazard areas. (Ord. 02-200 § 2).

14.70.015 Flood Insurance Study Adoption
The areas of special flood hazard identified by the Federal Insurance Administration in a scientific and engineering report entitled “The Flood Insurance Study for Pierce County, Washington and Incorporated Areas” dated March 7, 2017, with accompanying FIRMs and any map amendments or corrections are hereby adopted by reference and declared to be a part of this title. The Flood Insurance Study and FIRMs are on file at Edgewood City Hall, 2224 104th Avenue East, Edgewood, Washington, 98371. The city may add or delete land from areas of special flood hazard or revise base flood elevations, utilizing best-available information for flood hazard identification in accordance with federal regulations.

14.70.020 Flood hazard areas.
Edgewood regulates the following flood hazard areas:

A. Potential Flood Hazard Areas.

1. Potential flood hazard areas, as depicted on the Critical Areas Atlas – Flood Hazard Area Map, include:
a. Detailed Study Areas.
   i. FEMA Flood Insurance Rate Map and Floodway Map AE and AH zones.
   ii. Areas within 300 feet horizontal distance from the base flood elevation established for the mapped AE and AH zones.
   iii. Areas within five feet of vertical height from the base flood elevation established for the mapped AE and AH zones.

b. Unstudied Areas. FEMA Flood Insurance Rate Map A zones and shaded X zones, and areas within 300 feet horizontal distance from said mapped areas.

c. Natural Waters/Watercourse. Areas within five feet of vertical height above the ordinary high water mark of an identified natural watercourse.

d. Groundwater Flooding Areas. Areas within 300 feet horizontal distance from a mapped groundwater flooding area.

e. Potholes. Areas not identified as a mapped flood hazard area as described above, but within 10 feet of vertical relief from the bottom of an identified pothole or within two feet of vertical relief of a potential surface water spillway or other type of outlet. Potholes may be identified by city topographic mapping, field survey, or site inspections.

f. Channel Migration Zones (CMZs). Channel migration zones shall apply only to those watercourses specifically identified by the city or listed in subsection (B)(4) of this section. In those areas where detailed CMZ studies have been completed and accepted by the department, additional horizontal and vertical review threshold criteria (i.e., 300 feet horizontal and five feet vertical) shall not apply.

2. The Critical Areas Atlas – Flood Hazard Areas Map may not show all potential flood hazard areas that may be necessary for a specific site analysis. The department may make interpretations, where needed, as to the approximate location of the boundaries of potential flood hazard areas. When there is a conflict between the elevations and the mapped potential flood hazard area boundaries, the elevations shall govern.

3. Where there is insufficient information shown on the potential flood hazard area maps, the department may require the applicant to verify that the site is out of the flood hazard area using the flood hazard area review procedures set forth in EMC 14.70.030.

B. Floodway. A floodway is an extremely hazardous area due to the depth and/or velocity of floodwaters, which carry debris, potential projectiles, and have erosion potential. The following areas are regulated by the city as floodways:

1. Regulatory Floodway. Regulatory floodway designated by flood hazard area maps.

2. Deep and/or Fast Flowing Water Areas. Areas of deep and/or fast flowing water shall be regulated as a floodway. Based on the criteria set forth in EMC 14.70.030(E), the department shall make the determination after review and approval of applicant’s analysis of whether the project site falls within the floodway area based on deep and/or fast flowing waters.

3. Potholes and Shaded X Zones. That portion of a pothole and zone area that is three feet or greater in depth shall be regulated as a floodway.

4. Channel Migration Zones (CMZs).
   a. Channel migration zones shall be regulated as a floodway.
   b. Channel migration zones are equivalent to the base flood elevation limits (i.e., 100-year floodplain limits).
C. Flood Fringe. All areas subject to inundation by the base flood, but outside the limits of the floodway as set forth in subsection (B) of this section. Those portions of the A, AE, AH, and shaded X zones not defined as floodway, and that portion of a pothole and FEMA shaded X zone area that is between zero feet (base flood elevation) and three feet in depth shall be regulated as a flood fringe.

D. Other Areas of Special Flood Hazard.

1. Groundwater Flooding Areas. Groundwater flooding areas are those areas identified by Edgewood and shown on flood hazard maps and are subject to flood inundation from subsurface waters that result from a fluctuation of the groundwater table. Groundwater flooding areas shall be regulated as a floodway or flood fringe pothole.

2. Natural Waters/Watercourse. Natural waters/watercourse as identified on city topographic, planimetric or orthophoto maps, WDNR stream classification maps, USGS quadrangle maps, or other source maps that are not identified as a flood hazard area on the FEMA maps. That portion of the natural watercourse located between the ordinary high water mark and a topographic elevation five feet above the ordinary high water mark shall be regulated as a floodway or flood fringe. If the applicant chooses to accept the five-foot topographic elevation line above the ordinary high water mark as the base flood elevation (i.e., floodplain elevation limits), a flood study shall not be required for a natural water/watercourse.

3. Frequently Flooded Areas. See EMC 14.70.030(A)(9) as the areas defined by this section. (Ord. 17-492 § 2 (Exh. A); Ord. 02-200 § 2).

14.70.030 Flood hazard area review procedures.

A. General Requirements.

1. The city’s Critical Areas MapAtlas – Flood Hazard Area Map provides an indication of where potential flood hazard areas are located within the city. The actual presence or location of a flood hazard area shall be determined using the procedures and criteria contained in this chapter.

2. The department will complete a review of the flood hazard area maps, and other source documents, for any development proposal to determine whether the proposed project area for a regulated activity falls within a potential flood hazard area. When there is a conflict between the elevations and the mapped 100- or 500-year floodplain or floodway boundaries, the elevations shall govern. In the instance where base flood elevation data has not been provided within a mapped A zone, the department shall obtain, review, and reasonably utilize any base flood elevation and floodway data available from a federal, state, or other source to complete their review.

3. When the department’s maps or sources indicate that the proposed project area for a regulated activity is or may be located within a potential flood hazard area (except for coastal flood hazard areas), the department shall require a flood boundary verification survey as outlined in subsection (C) of this section, and may require a flood study as outlined in subsection (D) of this section, a deep and/or fast flowing water analysis as outlined in subsection (E) of this section, and/or a zero-rise analysis as outlined in subsection (F) of this section.

4. Any proposed development located within a flood hazard area shall comply with the flood hazard area standards set forth in EMC 14.70.040.

5. Prior to approval of any proposed flood hazard area development, all necessary permits from those governmental agencies from which prior approval is required by federal or state law, including but not limited to Section 404 of the Federal Water Pollution Control Act Amendments of 1972, 33 U.S.C. 1334, must be provided to the city by the applicant.

6. A FEMA letter of map amendment (LOMA) or letter of map revision (LOMR) shall not be submitted to FEMA until review and approval has been granted by the department. The city shall not recognize any LOMA or LOMR as an amendment to the department’s flood hazard maps unless the department has granted prior approval.
Chapter 14.70 FLOOD HAZARD AREAS

7. Unless otherwise stated in this chapter, the critical area protective measure provisions contained in EMC 14.10.080 shall apply.

8. The Federal Emergency Management Agency (FEMA) administers the nation’s floodplain management program. FEMA has identified some of the flood prone areas in the city; however, it is generally recognized that FEMA’s Flood Insurance Rate Maps (FIRMs) may not accurately reflect the degree or frequency of flooding within all areas of the city. Therefore, information available through FEMA may not meet best available science criteria and cannot be used exclusively to address frequently flooded areas.

9. The city has determined that the following documents and sources are the most current and accurate information concerning frequently flooded areas within the city, and therefore represent best available science:
   a. The city’s Surface Water Management Plan, [1997] or as amended thereafter.
   c. The city’s two-foot elevation contour mapping performed by Nies Mapping Group, Inc., [1999] or as subsequently updated.
   e. Relevant and verifiable government and citizen photographs, notes, observations, etc., regarding historic ponding/flooding levels, including but not limited to the City of Edgewood Potholes Water Level Monitoring 2006-2007 report prepared by Robinson Engineers, LLC.
   f. Relevant and verifiable information available through Pierce County.
   g. Relevant and verifiable information available through FEMA.

10. Flooding conditions within the city generally fall into three distinct hydrologic settings: (a) upland areas within enclosed depressions, (b) streams that flow off the upland areas, and (c) valley lowlands. Accordingly, the city manages frequently flooded areas within these three zones, as described below:
   a. Upland Areas Within Enclosed Depressions. From the above list use the historic ponding elevation, determined by subsection (A)(9) of this section, or the FEMA 100-year base flood elevation, whichever is highest.
   b. Streams Which Flow Off the Upland Areas. From the above list use the historic flood elevation, determined by subsection (A)(9) of this section, or the FEMA 100-year base flood elevation, whichever is highest.
   c. Valley Lowlands. From the above list use the historic flood elevation determined by subsection (A)(9) of this section, or the FEMA 100-year base flood elevation, whichever is highest.

11. The city will provide local flood information to FEMA, and request FEMA’s assistance in accurately mapping and evaluating frequently flooded areas.

12. Warning and Disclaimer of Liability. The degree of flood protection required by this chapter is considered reasonable for regulatory purposes and is based on scientific and engineering considerations. Larger floods can and will occur on rare occasions. Flood heights may be increased by manmade or natural causes. This chapter does not imply that land outside frequently flooded areas or uses permitted within such areas will be free from flooding or flood damages. This chapter shall not create liability on the part of city, any officer or employee thereof, or the Federal Insurance Administration, for any flood damages that result from reliance on this chapter or any administrative decision lawfully made thereunder.

B. Channel Migration Zone Study.
1. In areas where Edgewood has not conducted a detailed channel migration zone study, an applicant may submit an independent channel migration zone study to demonstrate that the channel migration zone limits for those watercourses listed in EMC 14.70.020(B)(4) are located inside the 100-year floodplain limits.

2. The channel migration zone study shall be prepared, signed, and dated by a professional engineer or professional geologist with at least five years of experience in fluvial geomorphology, river dynamics, or geotechnical engineering.

3. The channel migration zone study shall, at a minimum, contain the information set forth in EMC 14.70.050, Appendix B.

4. The department shall review the channel migration zone study and either accept the new channel migration zone limits or reject the study and require the use of the 100-year floodplain limits. Once the department has reviewed and approved the channel migration zone study, the applicant shall be required to provide a flood boundary verification survey, as outlined in subsection (C) of this section, utilizing the newly established channel migration zone limits as the floodway limits.

C. Flood Boundary Verification Survey.

1. A flood boundary verification survey that delineates the horizontal and vertical limits of the base flood elevation shall be submitted to the department when the department’s maps or sources indicate that the proposed project area for a regulated activity is located within a potential flood hazard area.
   a. Where a base flood elevation has not been determined, a flood study shall be required pursuant to subsection (D) of this section.
   b. A base flood elevation that has been established through a detailed flood study accepted by the department may be used in lieu of conducting a flood study.
   c. The base flood elevation for a natural watercourse as set forth in EMC 14.70.020(D)(2) shall be established at the five-foot topographic elevation line above the ordinary high water mark.

2. The requirement to submit a flood boundary verification survey may be waived at the department’s discretion, when the department can determine, using contour elevations, base flood data, orthophotos, and parcel data, that the extent of the regulated activity is clearly above the base flood elevation.

3. The flood boundary verification survey shall be prepared, signed, and dated by a registered land surveyor.

4. The department shall review the flood boundary verification survey to determine if the proposed development is located within a flood hazard area.

5. If the proposed development lies within the flood hazard area, the limits of the floodway, as well as the base flood elevation, shall be shown on the flood boundary verification survey.

D. Flood Study.

1. A flood study shall be conducted when the department’s maps or sources indicate that the proposed project area for a regulated activity is, or may be located within, a potential flood hazard area where base flood elevation data is not available through the flood insurance study or other authoritative sources, or when an established base flood elevation is contested. A full engineering analysis to determine the base flood elevation shall be required by the department. Base flood elevations shall be determined using the detailed methods established in EMC 14.70.050, Appendix A. The department may approve alternative methods.

2. The flood study shall be prepared, signed, and dated by a professional engineer.

3. Once the department has reviewed and approved the flood study, the applicant shall be required to provide a flood boundary verification survey, utilizing the newly established base flood elevation, as outlined in subsection (C) of this section.
4. Flood studies shall not be required for coastal flood hazard areas.

E. Deep and/or Fast Flowing Water Analysis.

1. When the department determines that a proposed project area for a regulated activity is located within a flood hazard area, a deep and/or fast flowing water analysis based on EMC 14.70.050, Appendix A, shall be required to determine the floodway limits.

2. The floodway limits and flood fringe limits identified in the deep and/or fast flowing water analysis shall be depicted on the flood boundary verification survey, as outlined in subsection (C) of this section.

3. The deep and/or fast flowing water analysis shall be prepared, signed, and dated by a professional engineer.

4. Deep and/or fast flowing water analysis shall not be required for coastal flood hazard areas.

F. Zero-Rise Analysis.

1. When the department determines that a proposed project area for a regulated activity is located within a flood hazard area, a zero-rise analysis shall be required to determine that no increase in base flood elevation, displacement of flood volume, or flow conveyance reduction will occur as a result of the development.

2. The zero-rise analysis shall be conducted utilizing HEC-RAS (Hydrologic Engineering Center – River Analysis System) modeling methodology (for stream/channel floodways), the Western Washington Hydrology Model (i.e., WWHM, for pothole/closed depression floodways), or by other alternative methodologies approved by the city (see EMC 14.70.050, Appendix A). HEC-RAS can be found at the following website: http://www.hec.usace.army.mil/software/hec-ras/. WWHM can be found here: http://www.ecy.wa.gov/programs/wq/stormwater/wwhmtraining/index.html. The analysis shall show that no rise (0.01 foot or less) has occurred as a result of the proposed development. The proposed development may need to be reduced or specially engineered (such as utilizing piers or pilings) to achieve zero-rise.

3. The zero-rise analysis shall be prepared, signed, and dated by a professional engineer.

4. The zero-rise analysis shall be documented on the zero-rise analysis form, as set forth in EMC 14.70.050, Appendix A, and shall be attached to the flood hazard area permit.

5. Zero-rise analysis shall not be required for coastal flood hazard areas.

6. When structures are elevated by pier or pilings and no fill is placed in the flood hazard area, the requirement to submit a zero rise analysis may be waived at the department’s discretion. (Ord. 17-492 § 2 (Exh. A); Ord. 02-200 § 2).

14.70.040 Flood hazard area standards.

A. General.

1. New construction done by or for the city, such as bridges, roads, flood control works, revetments, retaining walls, drainage structures, sewer or water lines, parks, or other structures necessary to promote the public’s health, safety, and welfare shall be allowed in a flood hazard area when:

   a. The project is prepared, dated, and stamped by a registered professional engineer in the state of Washington and is designed so the project does not result in any increase in flood levels during the occurrence of the base flood discharge (zero-rise) and shall not obstruct the floodway or cause an adverse impact to critical fish or wildlife habitat or adjacent, cross-channel, or upstream or downstream properties; and

   b. The improvements utilize appropriate flood hazard protection standards.
2. Elevation Certificate. A Federal Emergency Management Agency (FEMA) elevation certificate shall be required for new construction, additions affixed to the side of a structure, and substantial improvements located within flood hazard areas. The most current version of the FEMA elevation certificate must be completed and certified by a professional land surveyor, currently licensed in the state of Washington, kept on file by the city for public inspection, recording the actual (as-built) elevation (in relation to mean sea level) of:

   a. The lowest floor (including basement) of all new or substantially improved structures, whether or not the structure contains a basement;

   b. For flood proofed nonresidential structures, where the structure was flood proofed (including flood proofing certifications).

B. Floodways. Any development, encroachments, filling, clearing or grading, new construction, and substantial improvements shall be prohibited within the floodway (including structures that do not require a building permit), except as allowed in the following standards:

1. Agricultural activities that do not require the installation of structures and that do not have any associated fill.

2. Park and recreational uses and facilities that do not require the installation of structures and that do not have any associated fill.

3. Individual recreational vehicles, not located in an RV park, that are licensed and ready for highway use, on wheels or jacking system, and are not permanently attached to the site (attached only by quick disconnect type utilities and security devices, with no permanently attached additions).

4. Habitat enhancement/stream restoration activities are permitted subject to the provisions outlined in subsection (D) of this section.

5. Rehabilitation, reconstruction, or an upper story addition to an existing structure that does not exceed the limits for a substantial improvement.

6. Private bridges may be allowed to cross the floodway; provided, that the structure meets the requirements contained in EMC 14.70.030 and the following:

   a. The lowest structural member of a private bridge proposed to cross a channel migration zone shall be a minimum of six feet above the base flood elevation.

   b. The lowest structural member of a private bridge proposed to cross the floodway portion of any other watercourse shall be a minimum of one foot above the base flood elevation.

C. Flood Fringe Areas. All activities allowed in subsection (B) of this section shall be permitted in a flood fringe area. Any other proposed development, encroachments, filling, clearing or grading, new construction, and substantial improvements are prohibited in a flood fringe area except as permitted under the following standards:

1. Structures that do not require a building permit and that do not have any associated fill are allowed, subject to flood hazard area review and permitting.

2. All other regulated activities shall only be allowed when the proposed development is located on an existing lot of record that was created prior to the effective date of the ordinance codified in this chapter. Applicants shall demonstrate there are no other feasible alternatives that would allow the proposed development to occur completely outside the flood hazard area. At a minimum, the following shall be demonstrated:

   a. The development cannot be located outside the flood hazard area due to topographic constraints of the parcel or size and/or location of the parcel in relation to the limits of the flood hazard area and a building setback variance has been reviewed, analyzed, and rejected as a feasible alternative to encroachment into the flood hazard area; and
b. The proposed development shall not cause an adverse impact to adjacent, cross-channel, or upstream or downstream properties.

a. Roads, bridges, driveways, trails, emergency vehicle access, and access routes and easements, where allowed, shall be constructed and armored based on the standards in subsection (C)(4) of this section and elevated a minimum of one foot above the base flood elevation.

b. Parking lots shall be elevated to a minimum of one-half foot below the base flood elevation.

4. Grading and Filling. When development is permitted under this subsection, it shall be designed to a zero-rise standard as set forth in EMC 14.70.030(F) and 14.70.050, Appendix A. Any filling, grading, or clearing associated with the permitted development shall not increase flood hazards, water velocities, or flood elevations. In addition to meeting the requirements for zero-rise, all permitted development must also meet the following requirements:

a. Compensatory Storage. New excavated storage volume shall be equivalent to the flood storage capacity eliminated by filling or grading within the flood fringe. Equivalent shall mean that the storage removed shall be replaced by equal live storage volume between corresponding one-foot contour intervals that are hydraulically connected to the floodplain through their entire depth.

b. Flow Conveyance. New excavated conveyance areas shall be equivalent to existing conveyance within the flood fringe. Equivalent shall mean a mechanism for transporting water from one point to another using an open channel system.

c. Erosion Protection. Development shall be protected from flow velocities greater than two feet per second through the use of bio-engineering methods or, when bioengineering methods have been deemed insufficient to protect development, then hard armoring may be utilized. All erosion protection shall extend one to three feet, depending on development requirements, above the base flood elevation and shall be covered with topsoil and planted with native vegetation.

5. Critical Facilities.

a. New construction, additions affixed to the side of an existing structure, and substantial improvement of hazardous facilities, and special occupancy structures are prohibited.

b. New construction of an essential facility, reconstruction of an existing essential facility, or additions to an existing essential facility that exceed the threshold for substantial improvement shall be permitted when no feasible alternative site is available outside the flood hazard area. Such regulated activities are subject to the following:

i. Essential facilities with a crawlspace elevated by fill shall have the lowest floor and any utilities and ductwork elevated a minimum of three feet above base flood elevation, or to the height of the 500-year flood, whichever is higher.

ii. Essential facilities elevated by piers or pilings shall have the finished floor and any utilities and ductwork elevated a minimum of three feet above the base flood elevation (or to the height of the 500-year flood, whichever is higher) and must be designed by a professional structural engineer.

iii. Access to and from the critical facility shall be protected to the height utilized under subsections (C)(5)(b)(i) and/or (ii) of this section. Access routes shall be elevated to or above the same elevation to the maximum extent possible.

iv. Essential facilities shall be armored based on the standards in subsection (C)(4) of this section.

v. Flood proofing and sealing measures must be taken to ensure that toxic or explosive substances will not be displaced or released into floodwaters.
6. Structures. Single-family, two-family, multifamily, mobile/manufactured homes, commercial, industrial, etc., except for critical facilities as set forth in subsection (C)(5) of this section, shall be allowed subject to the following standards:

   a. New construction, additions affixed to the side of an existing structure, and substantial improvement of any structure with a crawlspace shall have the lowest floor elevated a minimum of two feet above base flood elevation.

   b. New construction, additions affixed to the side of an existing structure, and substantial improvement of any structure elevated by piers or pilings shall have the bottom of the lowest horizontal structural member elevated a minimum of two feet above the base flood elevation and must be designed by a professional structural engineer. Electrical, heating, ventilation, plumbing, air-conditioning equipment, and other service facilities and associated ductwork shall be elevated a minimum of two feet above base flood elevation; however, the department may approve a lesser minimum distance above base flood elevation; provided, that the systems are designed to prevent floodwater from entering or accumulating within the components. Areas below the lowest horizontal structural member shall not be enclosed and shall remain free of obstructions.

   c. Mobile/manufactured homes shall be anchored to prevent flotation, collapse, or lateral movement, and shall be installed using methods and practices to minimize flood damage. Anchoring methods may include, but are not limited to, use of over-the-top or frame ties to ground anchors. This is in addition to applicable state and local anchoring requirements for resisting wind forces.

7. Agricultural Accessory Structures. The lowest floor in an agricultural accessory structure shall be located at the base flood elevation or higher; provided, that the structure be designed to automatically equalize hydrostatic flood forces on exterior walls by allowing for the entry and exit of floodwaters. Designs for meeting this requirement must either be certified by a professional engineer in the state of Washington or must meet or exceed the following minimum criteria:

   a. A minimum of two openings having a total net area of not less than one square inch for every square foot of enclosed area subject to flooding shall be provided;

   b. The bottom of all openings shall be no higher than one foot above grade; and

   c. Openings may be equipped with screens, louvers, or other covering or devices; provided, that they permit the automatic entry and exit of floodwaters.

8. Construction Standards.

   a. Construction of a basement is prohibited.

   b. Crawl spaces shall be backfilled with clean earth material and shall meet International Building Code requirements. Finished grade within the crawlspace shall be at least two feet above the base flood elevation.

   c. Flood proofing in lieu of elevating the structure is prohibited.

   d. All single-family, two-family, multifamily, mobile/manufactured homes, commercial, and industrial structures shall be placed on standard concrete stemwall/footing foundations or piles, piers, or column foundations and engineered pursuant to International Building Code requirements.

   a. New and replacement public water sources (i.e., wells and water supply lines) and public sanitary sewage conveyance systems are allowed. These systems shall be designed to withstand scour resulting from flow velocity, minimize or eliminate infiltration of floodwaters into the systems, and minimize or eliminate discharge from the systems into floodwaters
b. All replacement wells and replacement on-site sewage system (OSS) shall be designed to minimize or eliminate impairment to them or contamination from/to them during flooding (i.e., infiltration of floodwaters into or discharge out of the systems). They shall not be located in pothole or no-outlet floodplains.

c. All new individual wells and new on-site sewage system (OSS) shall be prohibited. Conveyance systems from a structure to a well or OSS located outside of the flood hazard area shall be allowed provided these systems are designed to meet the standards in subsection (C)(4) of this section.

14.70.050 Appendices.
A. Floodplain/Floodway Analysis.
B. Channel Migration Zone Study.

APPENDIX A

FLOODPLAIN/FLOODWAY ANALYSIS

This Appendix describes the flood hazard analyses and studies as required by Chapter 14.70 EMC, Flood Hazard Areas. Flood hazard studies establish the base flood elevation and delineate floodplain and/or floodway(s) when a proposed project contains or is adjacent to a river, stream, lake, or closed depression.

Flood hazard studies must conform to FEMA regulations described in Part 65 of 44 Code of Federal Regulations (CFR). In addition, the following information must be provided and procedures performed for flood hazard studies used under Chapter 14.70 EMC to examine development proposals or improvements within a floodplain.

Article I. Floodway Determination

The city recognizes two distinct floodways. The FEMA floodway describes the limit to which encroachment into the natural conveyance channel can cause one foot or less rise in water surface elevation. The deep and/or fast flowing (DFF) water floodways are hazardous areas and conditions of the floodplain for both people and habitable structures. Life safety and protection to improved properties are compromised if encroached upon. Encroachment cannot occur within these areas.

A. FEMA Floodways.

1. FEMA floodways are determined through the procedures outlined in the FEMA publication Guidelines and Specifications for Study Contractors using the one-foot maximum allowable rise criteria.

2. Transitions shall take into account obstructions to flow such as road approach grades, bridges, piers, culverts, or other restrictions. General guidelines for transitions may be found in HEC-RAS, Water Surface Profiles – User’s Manual, Appendix IV, Application of HEC-RAS Bridge Routines, published by the Hydrologic Engineering Center, Davis, California.

B. Deep and/or Fast Flowing (DFF) Floodways.

1. DFF floodways are generally assumed to include the entire 100-year floodplain until the department approves a detailed floodway analysis that defines areas of DFF within the entire floodplain area based on the criteria.

2. The hydraulic model must adequately be calibrated to known or recorded stage elevations of past flood events with computed recurrence frequency intervals for the 100-year flood recurrence interval. This is to ensure model accuracy.

Article II. Flood Study Content and Required Information
Three copies of the completed floodplain/floodway analysis study report and the modeling digital files shall be submitted. The report submittal must be stamped by a licensed professional civil engineer and include the following information in addition to that required for the drainage plan of a proposed project:

A. Floodplain/Floodway Map.

1. A scaled survey base map stamped by a licensed professional land surveyor registered in the state of Washington. The map must accurately locate the proposed development with respect to the floodplain and floodway, the channel of the subject stream, river, and/or pothole location, and the existing improvements within the subject study area. It must also supply all pertinent information such as the nature of the proposed project, legal description of the property on which the project would be located, fill quantity, limits and elevation, the building floor elevations, and use of compensatory storage.

2. The map must show elevation contours at a minimum of two-foot vertical intervals and shall comply with survey and map guidelines published in the FEMA publication Guidelines and Specifications for Study Contractors. The map must show the following:
   a. Elevations and ground contours, spot elevations, and vertical datum NAVD 88 (North American Vertical Datum of 1988) (or most recent vertical datum accepted by the department).
   b. Elevations and dimensions of existing structures, fill, and compensatory storage areas.
   c. Size, location, elevation and spatial arrangement of all proposed structures on the site.
   d. Location and elevations of roadways, drainage facilities, water supply lines, and sanitary sewer facilities.
   e. Areas of DFF must clearly be shown and plotted on the map sheet depicting the bounded area of the floodway on both sides of the study channel through the subject site. DFF floodway studies must reflect all transitions as referenced above as well.
   f. The base maps must also be accompanied by all field survey notes/computations, drawings, etc., for each cross-section with water surface elevation at the time the cross-section field survey was done.

B. Study Report.

1. Soil maps, groundcover maps, and photographs.

2. A narrative report containing the purpose of the study and description of the study area, data collection, methodology for both the hydrology and hydraulics, detailed discussion on the input parameters used, modeling results, and conclusions.

3. A floodplain/floodway analysis must include calculations and all computer analysis input and output information, supporting graphical illustrations, as well as the following additional information:
   a. Scaled cross-sections showing the current/existing conditions of the river/stream channel, the floodplain adjoining each side of the channel, the computed floodway, the cross-sectional area to be occupied by any proposed development and all historic high water information.
   b. Profiles showing the bottom of the channel, the top of both left and right banks and computed base flood water surface elevations for the 10-, 25-, 50- and 100-year events.
   c. Plans and specifications of any flood protection for structures, construction areas, filling, dredging, channel improvements, storage of materials, water supply, and sanitary facilities within the floodplain.
The Edgewood Municipal Code (Critical Areas Ordinance Update 2017)

Chapter 14.70 FLOOD HAZARD AREAS

C. Computer Modeling Information. Floodway/floodplain studies submitted to the city for review must include output summary tables and include the following (but not limited to) items:

1. Cross-section(s) identification number.
2. Range of flows being examined.
3. Computed water surface elevation at each cross-section.
4. Energy grade line at each cross-section.
5. Graphical plots of the channel cross-sections with computed water surface elevations for all model runs including calibrated model runs.
6. All model input and output printouts.
7. Graphical plots of the model output data that show the points and segments along each cross-section where deep and/or fast flowing water occurs. This shall include cross-section plots of depth and velocity in one-unit increments. The plots shall also be accompanied with a table listing the station distance (right and left bank), flow rate, area, hydraulic depth, velocity, and whether each point is a floodway.
8. A plan sheet clearly showing the graphical representation of the bounded area of the floodway based on DFF criteria through the entire study site and reach. Note that identified islands or pockets within the middle of the bounded floodway area are generally considered as part of the floodway, unless otherwise approved by the department.
9. Discussion on the starting water surface elevation for the hydraulic model.

Article III. Determining Flood Flows

The three techniques used to determine the flows used in a flood study depend on whether gauge data is available, whether a basin plan has been adopted, or a detailed flood study has been done and approved for use by the Department. The first technique is for basins with adopted basin plan areas. The second technique is used if a gauging station exists on the stream. The third technique is used on ungauged catchments or those with an insufficient length of record. In all cases, the engineer shall be responsible for assuring that the hydrologic methods used are technically reasonable, conservative, conform the to the FEMA publication, Guidelines and Specifications for Study Contractors, and are acceptable by FEMA and the department.
A. Flood Flows from Adopted Basin Plan Information. Flood flows may be determined using information from the city’s basin plan. The hydrologic model used in the basin plan shall be updated to include the latest changes in zoning or any additional information regarding the basin which has been acquired since the adoption of the basin plan.

1. This technique may be used only if data from a gauging station in the basin is available for a period of at least 10 years.

2. If the difference in the drainage area on the stream at the study site and the drainage area to a gauging station on the stream at a different location in the same basin is less than or equal to 50 percent, the flow at the study site shall be determined by transferring the calculated flow at the gauge to the study site using a drainage area ratio raised to the 0.86 power, as in the following equation:

\[ Q_{ss} = Q_G \left( \frac{A_{ss}}{A_G} \right)^{0.86} \]

where

- \( Q_{ss} \) = estimated flow for the given return frequency on the stream at the study site.
- \( Q_G \) = flow for the given return frequency on the stream at the gauge site.
- \( A_{ss} \) = drainage area tributary to the stream at the study site.
- \( A_G \) = drainage area tributary to the stream at the gauge site.

3. If the difference in the drainage area at the study site and the drainage area at a gauging station in the basin is more than 50 percent and a basin plan has not been prepared, a continuous model shall be used as described below to determine the flood flows at the study site.

4. In all cases where dams or reservoirs, floodplain development, or land use upstream may have altered the storage capacity or runoff characteristics of the basin so as to affect the validity of this technique, a continuous model shall be used to determine flood flows at the study site.

C. Flood Flows from a Calibrated Continuous Model. Flood flows may be determined by utilizing a continuous flow simulation model such as HSPF or other equivalent continuous flow simulation model, as approved by the city. Where flood elevation or stream gauging data are available, the model shall be calibrated to the known data. Otherwise, regional parameters may be used.

Article IV. Determining Flood Elevations, Profiles and Floodways (Hydraulic Model)

A. Reconnaissance. The applicant’s project engineer is responsible for the collection of all existing data with regard to flooding in the study area. This shall include a literature search of all published reports in the study area and adjacent communities and an information search to obtain all unpublished information on flooding in the immediate and adjacent areas from federal, state, and local units of government. This search shall include specific information on past flooding in the area, drainage structures such as bridges and culverts that affect flooding in the area, available topographic maps, available community maps, photographs of past flood events, and general flooding problems within the community. Documented discussions with nearby property owners should also be done to obtain a witness account of the flooding extent. A field reconnaissance shall be made by the applicant’s project engineer to determine hydraulic conditions of the study area, including type and number of structures, locations of cross-sections, and other parameters including the roughness values necessary for the hydraulic analysis.

B. Base Data. Channel cross-sections used in the hydraulic analysis shall be current/existing at the time the study is performed and shall be obtained by field survey. Topographic information obtained from aerial photographs/mapping may be used in combination with surveyed channel cross-sections in the hydraulic analysis.
The elevation datum of all information used in the hydraulic analysis shall be verified. All information shall be referenced directly to NAVD 1988 (and include local correlation to NGVD) unless otherwise approved by the city.

C. Methodology. Flood studies and analysis (including deep and/or fast flowing floodways and zero-rise analysis) shall be calculated using the U.S. Army Corps of Engineers HEC-RAS computer model (or subsequent revision) unless otherwise approved by the city.

D. Adequacy of the Hydraulic Model. Edgewood considers the following (but not limited to) factors when determining the adequacy of the hydraulic model for use in the floodway/floodplain model:

1. Cross-section of a downstream starting location and spacing.

2. Differences in energy grade line (significant differences in the energy grade line from cross-section to cross-section are an indication that cross-sections should be more closely spaced or that other inaccuracies exist in the hydraulic model).

3. Methods and results for analyzing the hydraulics of structures such as bridges and culverts.

4. Lack of flow continuity.

5. Use of a gradually varied flow model. In certain cases, rapidly varied flow techniques may need to be used in combination with a gradually varied flow model such as weir flow over a levee, flow through a spillway of a dam, or special application of bridge flow (pressure flow if bridge superstructure is shown to be submerged for the study event).

6. Manning’s “n” value.

7. Calibration of hydraulic model to known and/or observed flow stage elevations including past flood events.

8. Special applications. In some cases, steady state one-dimensional hydraulic models may not be sufficient for preparing the floodplain/floodway analysis. This may occur where sediment transport, two-dimensional flow, or other unique hydraulic circumstances affect the accuracy of the model. In these cases, the project engineer must propose and obtain department approval of alternative models for establishing the water surface elevations.

9. All reported error and/or warning messages by the model must be properly and adequately addressed and/or resolved and included in the report for review verification.

Article V. Zero-Rise Analysis (ZRA)

A. Zero-rise analysis (ZRA) is required where encroachment within the flood fringe area is allowed and approved by the department. The ZRA must show that the proposed development encroachment in the flood fringe area will not show a measurable rise in the base flood elevation (i.e., less than 0.01 foot), resulting from a comparison of existing conditions and proposed conditions. This is directly attributable to development in the floodplain but not attributable to manipulation of mathematical variables such as roughness factors, coefficients, discharge, and other hydraulic parameters.

B. In addition to those items listed in subsection (A) of this article, the following shall be included in a ZRA:

1. Floodway boundaries (based on zero-rise) are to follow the stream lines and reasonably balance the rights of property owners on either side of the floodway. Use of the automatic equal conveyance encroachment option in the model will be considered equitable.

2. The ZRA must include a sufficient number of cross-sections in order to accurately model the subject fill and compensatory storage areas of the site. In all cases, cross-sections shall be located downstream, through the subject site and upstream of the site at a very minimum. They shall also be located where changes in channel and the fill material characteristics occur, such as slope, shape, and roughness. The sections shall also be located perpendicular to the flow path in the channel and the outside overbank areas. The department shall
review and approve the proposed number and location of cross-sections. All cross-sections and surveys shall be prepared and certified by a professional land surveyor or registered professional engineer in the state of Washington.

3. The difference between two profiles of water surface elevation at the cross-section (e.g., difference between existing and encroached water surface). The model must report 0.01 feet or less an allowable change in the water surface elevation. This must be shown in the profile graphical plot as well.

4. The difference between profiles of the energy grade line at the cross-section. The model must report 0.01 feet or less. This is the allowable change in the energy grade line. This must be shown in the profile graphical plot as well.

C. Conveyance Capacity.

1. The ZRA must also show that the proposed development encroachment in the flood fringe area will not show a measurable decrease (less than 0.01 CFS) in the conveyance capacity of the channel, resulting from a comparison of existing conditions and proposed conditions, for each of the cross-sections. This is also directly attributable to development in the floodplain but not attributable to manipulation of mathematical variables such as roughness factors, coefficients, discharge, and other hydraulic parameters.

2. The analysis must provide calculations of the reduction in conveyance caused by the proposed development encroachment, assuming no change in the water surface elevation, and using the roughness coefficient value(s) appropriate for the proposed development.

3. The analysis must then provide calculations for the increase in conveyance of the proposed compensatory measure, using the roughness coefficient value(s) appropriate for the proposed development.

4. Include a comparison analysis and discussion from subsections (C)(2) and (3) of this article. The comparison must adequately show that the conveyance capacity has not measurably decreased between the existing condition and proposed development condition.

Floodplain/Floodway Zero-Rise Certification

This is to certify that I am a duly qualified professional engineer licensed to practice in the state of Washington.

This is to further certify that the attached floodplain/floodway zero-rise analysis conclusively shows that the proposed development of:

______________________________    _______________________________

APPENDIX B
CHANNEL MIGRATION ZONE STUDY REQUIREMENTS

The channel migration zone (CMZ) is the area within the lateral extent of likely stream channel movement due to stream bank destabilization and erosion, rapid stream incision, and shifts in location of stream channels. The CMZ will define areas in which, to the best information available, development should be regulated due to the dangers expected from erosion.

Article I. Determining Channel Migration Zone Limits

A. The CMZ shall be based on available historic records of channel migration, or 100 years of calculated channel migration whichever is greater, and will generally include those areas that encompass:

1. The limit of geologic controls, such as hill slope, bedrock outcrop, or abandoned floodplain terrace;
2. Side channels, abandoned channels, and oxbows; and
3. Outside edges of progressive bank erosion at meander bends.

B. Channel migration over the 100-year time frame can be estimated and predicted from geomorphic analysis of annual bank erosion rates, historic meander belt width, and measured meander bend amplitudes, potential avulsion sites, and previous river channel locations as depicted on historic aerial photographs and maps. The 100-year time span represents the time required to grow mature trees that can provide functional large woody debris to streams.

C. The CMZ boundaries will be determined using the following specific criteria:

1. The representative average annual rate of channel migration in the affected river reach is calculated by dividing the lateral distance eroded with the corresponding elapsed time shown in sequential aerial photographs or historic maps (distance/time equals channel movement). Measurements from reaches that have had some form of bank armoring shall not be included. Historical records will need to be checked closely for this information.
2. Identify the width of the channel migration zone by multiplying the representative average annual erosion rate by 100 years.

D. Areas separated from the active channel by legally existing artificial channel constraints (levees, roads, driveways, etc.) that limit bank erosion and channel avulsion to the 100-year recurrence interval flood elevation plus three feet of freeboard shall serve as a boundary for the outer limit of the CMZ.
Article II. Channel Migration Zone Study Content and Required Information

Three copies of the completed channel migration zone study shall be submitted. The study submittal must be stamped by a licensed professional engineer or professional geologist with five years’ experience in fluvial geomorphology, river dynamics, or geotechnical engineering. The CMZ study shall include the following information in addition to that required for the drainage plan of a proposed project. The CMZ study will consist of a written technical report including:

A. Detailed methods, techniques, and assumptions used in determining the location of the CMZ.

B. A vicinity map and site with scale, north arrow, and parcel number(s) or specific site being studied.

C. A clear statement of the requested revision to the county’s determination of the 100-year floodplain limits as the CMZ.

D. A clearly stated conclusion of the study results that support the requested revision. The conclusion needs to document the basis for the revision, show how the data presented refutes the 100-year floodplain limits as the CMZ, and calculates the new results using the new information.

E. A map clearly delineating the subject property and the CMZ of the adjacent watercourse. In addition to providing a hard copy of the CMZ map, the CMZ map shall also be provided in ARC-View shapefile format. Contact the city GIS department for mapping and aerial imaging standards. (Ord. 02-200 § 2).
Chapter 14.80

LANDSLIDE HAZARD AREAS

Sections:
14.80.010 Purpose.
14.80.020 Landslide hazard areas.
14.80.030 Landslide hazard area review procedures.
14.80.040 Landslide and erosion hazard area standards.
14.80.050 Buffer requirements.
14.80.060 Appendices.

14.80.010 Purpose.
The following statements describe the purpose of this chapter is to:

A. Protect human life and health.
B. Regulate uses of land in order to avoid damage to structures and property being developed and damage to neighboring land and structures.
C. Identify and map active landslide hazard areas.
D. Minimize the ill effects on wetlands and critical fish and wildlife habitat that can result from landslides.
E. Establish permit requirement and review procedures for development proposals in areas with potential landslides.

(Ord. 02-200 § 2).

14.80.020 Landslide hazard areas.
A. Landslide Hazard Areas Indicators. Landslide hazard areas are areas potentially subject to mass movement due to a combination of geologic, seismic, topographic, hydrologic, or manmade factors. Landslide hazard areas can be identified by the presence of any of the following indicators:

1. Areas of historic failures, including areas of unstable, old and recent landslides or landslide debris within a head scarp.

2. Areas with all of the following characteristics:
   a. Slopes steeper than 15 percent with a vertical relief of 20 feet or more; and
   b. Hillsides that intersect geologic contacts with a relatively permeable sediment overlying a relatively impermeable sediment or bedrock; and
   c. Springs or groundwater seepage.

3. Areas exhibiting geomorphological features indicative of past slope failure within the last 10,000 years, such as hummocky ground, back-rotated benches on slopes, tension cracks, etc.

4. Any area with a slope of 40 percent or steeper and with a vertical relief of 15 feet or more may be exempted from the requirements of this section of the code provided that it can be demonstrated by a qualified geotechnical professional that such an exemption does not result in an increased risk of landsliding or damage to the subject site, nearby properties, or existing structures and, any associated hazards to proposed structures are suitably mitigated. For the purposes of determining whether a slope is considered to be a landslide hazard area, the horizontal and vertical distance between the top and toe of slope are utilized.

5. Areas that are at risk of mass movement due to seismic events.
B. Potential Landslide Hazard Areas. Potential landslide hazard areas, as depicted on the Geologically Hazardous Areas map, are those areas where the suspected risk of slope instability and landslide is sufficient to require a geological assessment to assess the potential for active landslide activity. Potential landslide hazard areas are determined by using the following criteria:

1. Areas that possess one or more of the landslide hazard area indicators (stratigraphy, topography, emergent groundwater seepage, etc.) as set forth in subsection (A) of this section and any adjacent area within a distance of 65 feet. These areas include, but are not necessarily limited to, those areas designated on the City’s Geologically Hazardous Areas map as moderate or steep slope areas.

14.80.030 Landslide hazard area review procedures.

A. General Requirements.

1. The city’s Geologically Hazardous Areas map provides an indication of where potential landslide hazard areas are located within the city. The actual presence or location of landslide hazard areas that have not been mapped, but may be present on or adjacent to a site, shall be determined using the geological assessment procedures established in this chapter.

2. The department will complete a review of the Geologically Hazardous Areas map and other source documents for any proposed regulated activity to determine whether the site is, or may be, located within a landslide hazard area or potential landslide hazard area. Identification of a landslide hazard area or potential landslide hazard area may also occur as a result of field investigations conducted by department staff.

3. When the department’s maps or sources indicate that the site for a proposed regulated activity is or may be located within a landslide hazard area or potential landslide hazard area, the department shall require the submittal of a geological assessment as outlined in subsection (B) of this section.

4. Unless otherwise stated in this chapter, the critical protective measure provisions contained in EMC 14.10.080 shall apply.

B. Geological Assessment. A geological assessment is a site investigation process to evaluate the on-site geology affecting a subject property. The findings of the geological assessment shall be presented in a Landslide Hazard Geotechnical Verification or Geotechnical Report.

1. Geological assessments shall be submitted to the department for review and approval together with a landslide hazard area application and associated fee.

2. A geological assessment shall include a field investigation and may include the use of historical air photo analysis, LiDAR mapping, review of regional geologic mapping, review of public records and documentation, and interviews with adjacent property owners, etc.

3. The geological assessment shall include the following information and analysis:

   a. A determination of which areas on the site or within the vicinity of the site meet the criteria for a landslide hazard area as set forth in EMC 14.80.020(A).

   b. Consider the run-out hazard of landslide debris to the proposed development that starts upslope (whether part of the subject property or on a neighboring property) and/or the impacts of landslide run-out on down slope properties.

   c. The geological assessment shall include a detailed review of the field investigations, published data and references, data and conclusions from past geological assessments, or geotechnical investigations of the site, site-specific measurements, tests, investigations, or studies, as well as the methods of data analysis and calculations that support the results, conclusions, and recommendations.

4. Geological assessments shall be prepared, signed, and dated by a geotechnical professional (as defined in Chapter 14.15 EMC and established in this chapter) and the format shall be pre-approved by the department.
5. A geotechnical professional shall complete a field investigation and geological assessment to determine whether or not a landslide hazard area is likely to exist within 300 feet of the site. Where access to off-site properties is not available by the geotechnical professional, evaluation of off-site landslide hazards must include review of regional geologic mapping and LiDAR based topographic mapping.

   a. The geological assessment shall be submitted in the form of geotechnical verification when the geotechnical professional finds that no landslide hazard area exists within 300 feet of the project area. The geotechnical verification shall meet the requirements contained in EMC 14.80.060, Appendix A.

   b. The geological assessment shall be submitted in the form of a geotechnical report when the geotechnical professional finds that a landslide hazard area exists within 300 feet of the proposed project area or when a geotechnical professional determines that mitigation measures are necessary in order to construct or develop within a potential landslide hazard area. The geotechnical report shall meet the requirements contained in EMC 14.80.060, Appendix B.

6. Geological assessments that do not contain the minimum required information or comply with the landslide hazard area standards set forth in EMC 14.80.030 will be returned to the geotechnical professional for revision.

7. The department shall review the geological assessment and either:

   a. Accept the geological assessment; or

   b. Reject the geological assessment and require revisions or additional information.

8. When the geological assessment has been accepted, the department shall issue a decision on the landslide hazard area application.

9. A geological assessment for a specific site may be valid for a period of up to five years when the proposed land use activity and surrounding site conditions are unchanged. However, if any environmental conditions associated with the site change during that five-year period, the applicant may be required to submit an amendment to the geological assessment. (Ord. 02-200 § 2).

14.80.040 Landslide and erosion hazard area standards.

A. Landslide Hazard Areas. Any development, encroachment, filling, clearing or grading, building structures, impervious surfaces, and vegetation removal shall be prohibited within landslide hazard areas and associated buffers except as specified in the following standards:

1. Stormwater Conveyance. Stormwater conveyance shall be allowed when it is conveyed through a high-density polyethylene stormwater pipe with fuse-welded joints and when no other stormwater conveyance alternative is available. The pipe shall be located on the surface of the ground and be properly anchored so that it will continue to function in the event of an underlying slide.

2. Utility Lines. Utility lines will be permitted when no other conveyance alternative is available. The line shall be located above ground and properly anchored and/or designed so that it will continue to function in the event of an underlying slide.

3. Roads, Bridges, and Trails. Roads, bridges, and trails shall be allowed when all of the following conditions have been met:

   a. Mitigation measures are provided that ensure the roadway prism and/or bridge structure will not be susceptible to damage from landslide-induced ground deformation or impact/coverage by landslide debris. Mitigation measures shall be designed for static and seismic loading conditions in accordance with the most recent version of the American Association of State Highway and Transportation Officials (AASHTO) Manual.

   b. The road is not a sole access for a development.
c. The removal or disturbance of vegetation, clearing or grading shall be prohibited during the wet season (November 1st to May 1st).

B. Landslide Hazard Management Areas. All regulated activities may be allowed in areas located within 300 feet of a landslide hazard area subject to the following standards:

1. The department reviews and approves a geological assessment – geotechnical report and determines that the potential landslide hazard area is stable.

2. The proposed development is located outside of a landslide hazard area and any required buffer, as set forth in EMC 14.80.050.

3. The proposed recommendations and mitigation measures contained within the geotechnical report are adequate to reduce or mitigate risks to health and safety.

4. The proposed development shall not decrease the factor of safety for landslide occurrence below the limits of 1.5 for static conditions and 1.1 for dynamic conditions. Analysis of dynamic (seismic) conditions shall be based on a minimum horizontal acceleration as established by the current version of the International Building Code.

5. The removal and disturbance of vegetation, clearing or grading shall be limited to the area of the approved development and shall not be allowed during the wet season (November 1st through May 1st) unless adequate provisions for wet season erosion have been addressed in the geotechnical report and approved by the department.

6. Surface drainage from developed areas, including downspouts and runoff from paved or unpaved surfaces upslope, shall not be directed through a landslide hazard area or its associated buffer unless it is conveyed in conformance with the provisions in EMC 14.80.030.

7. Stormwater retention facilities, including infiltration systems utilizing perforated pipe, are prohibited unless the slope stability impacts of such systems have been analyzed and mitigated by a geotechnical professional and the impacts have been determined to be negligible.

8. The proposed development shall not create a need for larger landslide hazard area buffers and setbacks on neighboring properties unless approved through a notarized written agreement with the affected property owner(s).

9. The proposed development shall be sited far enough from regressing slope faces to project 120 years of useful life for the proposed structure(s) or infrastructure.

10. Any proposed lots must be completely located outside any identified landslide hazard areas or their associated buffers.

11. Landslide hazard areas that are directly adjacent to any riparian areas, or wetlands, may be subject to additional buffer requirements and standards as set forth in Chapter 14.40 EMC, Fish and Wildlife Habitat Conservation Areas, or wetlands as set forth in Chapter 14.30 EMC, Wetlands. (Ord. 02-200 § 2).

14.80.050 Buffer requirements.

A. Determining Buffer Widths.

1. The buffer width shall be measured on a horizontal plane from a perpendicular line established at the edge of the landslide hazard area limits (both from the top and toe of the slope).

2. A buffer of undisturbed vegetation shall be required for a landslide hazard area. The required buffer width is the greater amount of the distances described in EMC 14.80.050:

a. Fifty feet from all edges of the active landslide hazard area limits;
b. A distance of one-third the height of the slope at the top of the active landslide hazard area and a
distance of one-half the height of the slope at the bottom of an active landslide hazard area; or

c. The buffer widths may be reduced below the widths specified in EMC 14.80.050, or eliminated upon
approval by the department of a geotechnical report that demonstrates that such a reduction would not
result in an increased risk of landslide activity either on or off of the subject property.

B. Modification of Buffer Widths. The department may require a larger buffer width than the buffer distance, as
determined in subsection (A) of this section, if any of the following are identified:

1. The adjacent land is susceptible to severe erosion and erosion control measures will not effectively prevent
adverse impacts.

2. The area has a severe risk of slope failure or downslope stormwater drainage impacts. (Ord. 02-200 § 2).

14.80.060 Appendices.
A. Geological Assessment – Landslide Hazard Geotechnical Verification.

APPENDIX A

GEOLOGICAL ASSESSMENT – LANDSLIDE HAZARD GEOTECHNICAL VERIFICATION

A. A geotechnical verification shall include the following:

1. The general critical areas report requirements in EMC 14.10.082.

2. A description of the surface and subsurface geology, hydrology, soils, and vegetation at the site and a list of
the landslide hazard area indicators, as set forth in EMC 14.80.020(A), that were found on or in the vicinity of
the site.

3. A summary of the results, conclusions, and recommendations resulting from the geological assessment of the
landslide hazards on or in the vicinity of the site. This summary shall address all of the information required in
EMC 14.80.030(B). The summary should include a description of observations during the site visit and a
discussion of information obtained from review of the listed documents in EMC 14.80.030(B)(2)

4. An accurate site plan drawn at a scale of one inch equals 20 feet, one inch equals 30 feet, one inch equals 50
feet (or other scale deemed appropriate by the department) is required. The department may require that the site
plan information listed below be based on a field survey by a licensed surveyor. The site plan shall include:

   a. The limits/location of the active landslide hazard area(s).

   b. The limits/location of the required landslide hazard buffer based upon the requirements set forth in
EMC 14.80.050(A).

   c. The location of any existing and proposed structures, utilities, on-site septic systems, wells, and
stormwater management facilities.

   d. The full geographical limits of the proposed project area (area to be developed).

   e. Dimension the closest distance between the identified active landslide hazard area boundary and the
project area.

   f. Existing topography on the site presented in two-foot contours.

   g. Property lines for the site.

   h. North arrow and plan scale.
B. The geotechnical professional who prepared the verification document shall stamp the verification with his or her license stamp/seal.

C. Geotechnical verifications shall be in conformance with a format that is pre-approved by the department.

APPENDIX B

GEOLOGICAL ASSESSMENT – LANDSLIDE HAZARD GEOTECHNICAL REPORT

A. At a minimum, a geotechnical report shall include the following:

1. The general critical areas report requirements in EMC 14.10.082.

2. A description of the surface and subsurface geology, hydrology, soils, and vegetation of the site and a list of the landslide hazard area indicators, as set forth in EMC 14.80.020(A), that were found on or in the vicinity of the site.

3. A summary of the results, conclusions, and recommendations resulting from the geological assessment of the landslide hazards on or in the vicinity of the site. This summary shall address all of the information required in EMC 14.80.030(B).

4. An accurate site plan drawn at a scale of one inch equals 20 feet, one inch equals 30 feet, one inch equals 50 feet (or other scale deemed appropriate by the department) is required. The department may require that the site plan information listed below be based on a field survey by a licensed surveyor. The site plan shall include:

   a. The limits/location of the landslide hazard area(s) within the site. Delineation of the landslide hazard area limits shall identify any areas of historic landslide activity.

   b. The limits/location of the required landslide hazard buffer based upon the requirements set forth in EMC 14.80.050(A).

   d. The location of any existing and proposed structures, utilities, on-site septic systems, wells, and stormwater management facilities.

   e. The full geographical limits of the proposed project area (area to be developed).

   f. Location and unique identifier of geotechnical borings, CPT soundings, or other surveys or explorations used to characterize subsurface conditions.

   g. Extent of cross-section(s) used to evaluate the three-dimensional subsurface geologic and groundwater conditions at the site.

   h. Extent of cross-section(s) used in the evaluation of slope instability.

   i. Existing topography on the site presented in two-foot contours.

   j. Property lines for the site.

   k. North arrow and plan scale.

5. Subsurface characterization data must be provided. The data shall be based on both existing and new information that may include soil borings, test pits, geophysical surveys, or other appropriate subsurface exploration methods, development of site-specific soil and/or rock stratigraphy, and measurement of groundwater levels including variability resulting from seasonal changes, alterations to the site, etc.

   a. Geotechnical borings or CPT soundings will be advanced to a depth sufficient to characterize geologic conditions within and below the existing or potential landslide mass.
b. Other methods used for subsurface characterization shall be assigned a unique identifier, and the basic data presented in appropriate graphical and/or tabular format.

c. The three-dimensional subsurface conditions at the site shall be presented using one or more cross-sections showing location and depth penetration of geotechnical borings, CPT soundings, or other subsurface characterization methods, interpretation of the geometry of major soil units, and projected location of the static groundwater surface determined from the subsurface exploration. The cross-sections shall be presented at a scale of one inch equals 20 feet, one inch equals 30 feet, one inch equals 50 feet (or other scale deemed appropriate by the department). Each cross-section shall have a legend with a description of the various major soil units.

6. A detailed description of any prior grading activity, soil instability, or slope failure.

7. Where deemed appropriate by the geotechnical professional assessments and conclusions regarding slope stability for both the existing and developed conditions shall be presented and documented. These assessments and conclusions shall include the information provided below in EMC 14.80.060, Appendix B. The project geotechnical professional must provide justification for not including a slope stability analysis if one is excluded. The City’s geotechnical professional reserves the right to request a slope stability analysis based on site conditions. If a dispute arises between the project geotechnical professional and the City’s geotechnical professional regarding the need for a slope stability analysis, then the City reserves the right to require an independent, third party review to be paid for by the applicant to resolve the dispute.

a. Determination of the potential types of landslide failure mechanisms (e.g., debris flow, rotational slump, translational slip, etc.) that may affect the site.

b. Quantitative stability evaluation of slope conditions of the various failure mechanisms using state-of-the-practice modeling techniques. Limiting equilibrium methods of analysis shall state the stability conditions as a factor of safety. The most unstable failure geometry(ies) shall be presented in the form of a cross-section(s), with the least stable failure geometry for each failure mechanism clearly indicated. The stability evaluation shall also consider dynamic (earthquake) loading, and shall use a minimum horizontal acceleration as established by the current version of the International Building Code.

c. An analysis of slope regression rate shall be presented in those cases where stability is impacted or influenced by erosional processes (e.g., wave cutting, stream meandering, etc.) acting on the toe of the slope.

8. Mitigation recommendations using engineered measures to protect the proposed structure(s) and any adjacent structures, infrastructure, adjacent wetlands, or critical fish and wildlife habitat from damage or destruction as a result of proposed construction activities shall be designed by a professional engineer. Design plans and detailed geotechnical recommendations may be provided in a document separate from the geotechnical report. When appropriate, such recommendations/plans may include, but are not necessarily limited to:

a. Design plans and associated design calculations for engineered structures or drainage systems (e.g., structural foundation requirements, retaining wall design, etc.).

b. Recommendations and requirements pertaining to the handling of surface and subsurface runoff in the developed condition.

c. Identification of necessary geotechnical inspections to assure conformance with the report mitigation and recommendations.

d. Proposed angles of cut and fill slopes, site grading requirements, final site topography (shown as two-foot contours), and the location of any proposed structures, on-site septic systems, wells, and stormwater management features or facilities associated with the development detailed within the body of the report and shown on a site map at the same scale as that required in subsection (A)(8) of this appendix.
e. Soil compaction criteria and compaction inspection requirements.

f. An analysis that indicates how the proposal meets the standards outlined in EMC 14.80.040.

g. Structural foundation requirements and estimated foundation settlement shall be provided if structures are proposed.

h. Lateral earth pressures.

i. Suitability of on-site soil for use as fill.

j. Mitigation measures for building construction on each lot for short plats, large lots, or formal plats such that additional geotechnical professional involvement is minimized during building construction.

B. The geotechnical report shall be prepared by an engineering geologist and shall be co-written by both an engineering geologist and professional engineer where both geological interpretations and engineering analyses and designs are necessary or prudent in the mitigation of the landslide hazard.

C. The geotechnical professional(s) who prepared the geotechnical report shall stamp the report with his or her license stamp/seal.

D. The department may request a geotechnical professional to provide additional information in the geotechnical report based upon existing conditions, changed conditions, or unique circumstances occurring on a case-by-case basis.

E. Geotechnical reports shall be in conformance with a format that is pre-approved by the department. (Ord. 05-247 § 1; Ord. 02-200 § 2).
Chapter 14.90

SEISMIC (EARTHQUAKE) HAZARD AREAS

Sections:
14.90.010 Purpose.
14.90.020 Seismic hazard areas.
14.90.030 Seismic hazard area review procedures.
14.90.040 Seismic hazard area standards.
14.90.050 Buffer requirements.
14.90.060 Appendices.

14.90.010 Purpose.
Earthquakes have historically occurred throughout the Puget Sound region. Large earthquakes have caused loss of life and over a billion dollars in property damage. The purpose of this chapter is to protect the public health, safety, and general welfare of the citizens of Edgewood from the damaging effects of earthquakes. This chapter provides standards to ensure life safety and minimize public and private losses that may occur within a seismic hazard area. (Ord. 02-200 § 2).

14.90.020 Seismic hazard areas.
A. General. Seismic hazard areas are areas subject to severe risk of damage as a result of earthquake-induced landsliding, seismic ground shaking, dynamic settlement, fault rupture, or soil liquefaction.

B. Potential Seismic Hazard Areas. Potential seismic hazard areas are those areas where the suspected risk of earthquake induced landsliding, dynamic settlement, fault rupture, ground deformation caused by soil liquefaction, or flooding is sufficient to require a further seismic hazard area review as set forth in EMC 14.90.030. These potential seismic hazard areas are determined using the following criteria:

1. Earthquake Induced Landslide Hazard Areas. Areas identified as potential landslide hazard areas in EMC 14.80.020.

2. Liquefaction and/or Dynamic Settlement Hazard Areas. Areas identified as high and moderate liquefaction and dynamic settlement hazard areas on the Geologically Hazardous Areas map.

3. Fault Rupture Hazard Areas.

C. Seismic Hazard Area Categories.

1. Earthquake Induced Landslide Hazard Areas. Earthquake induced landslide hazard areas include slopes that can become unstable as a result of strong ground shaking, even though these areas may be stable under non-seismic conditions.

2. Liquefaction and/or Dynamic Settlement Hazard Areas.

a. Liquefaction hazard areas are areas underlain by unconsolidated (corrected Standard Penetration Test blow counts, [(N1)60] less than 30) sandy or silt soils (Unified Soil Classification System S or M soil-types) and a shallow groundwater table (static groundwater depth less than 30 feet) capable of liquefying in response to earthquake shaking.

b. Dynamic settlement hazard areas are areas underlain by a significant thickness (more than 10 feet) of loose or soft soil not susceptible to liquefaction (e.g., peats or organic silts and clays, unsaturated loose sands or silts), but that could result in vertical settlement of the ground surface in response to earthquake shaking.

3. Fault Rupture Hazard Areas. Fault rupture hazard areas include:
a. Active fault rupture hazard areas are areas where displacement (movement up, down, or laterally) of the 
ground surface has occurred during past earthquake(s) in the Holocene Epoch; and 
b. Areas adjacent to the active fault rupture hazard area that may be potentially subject to ground surface 
displacement in a future earthquake.

14.90.030 Seismic hazard area review procedures.
A. General Requirements.

1. The city’s Geologically Hazardous Areas map provides an indication of where potential seismic hazard areas 
are located within the city.

2. The department will complete a review of the Critical Areas Atlas – Seismic Hazard Area Map for any 
regulated activity to determine whether the site for a proposed regulated activity is located within a seismic 
hazard area.

3. When the department’s maps indicate that the site for a proposed regulated activity is located within a 
potential liquefaction or dynamic settlement hazard area, the department shall require the submittal of a 
geological assessment as outlined in subsection (B) of this section.

4. When the department’s maps indicate that the site for a proposed regulated activity is located within a 
potential fault rupture hazard area, the department shall require the submittal of a geological assessment as 
outlined in subsection (B) of this section. The requirement to submit a geological assessment may be waived at 
the department’s discretion when it is determined that the proposed project area for the regulated activity is 
located outside the potential fault rupture hazard area.

5. When the department’s maps indicate that the site for a proposed regulated activity is or may be located 
within a potential earthquake-induced landslide hazard area, the department shall conduct a review pursuant to 
the requirements set forth in EMC 14.80.030.

6. Unless otherwise stated in this chapter, the critical area protective measure provisions contained in EMC 
14.10.080 shall apply.

B. Geological Assessments. A geological assessment is a site investigation process to evaluate the on-site geology 
affecting a subject property and define the extent and severity of potential seismic hazards.

1. A geological assessment shall be required when the department’s maps, sources, or field investigation 
indicate a site contains a potential liquefaction, dynamic settlement, or fault rupture hazard area. Geological 
assessments shall be submitted to the department for review and approval together with a seismic hazard area 
application.

2. A geotechnical professional(s) shall complete a field investigation and geological assessment to determine 
whether or not the site for a proposed regulated activity is located within a liquefaction or dynamic settlement 
hazard area.

   a. The geological assessment shall be submitted in the form of a geotechnical verification when the 
geotechnical professional(s) finds that no liquefaction or dynamic settlement hazard area exists within the 
proposed project area. The geotechnical verification shall meet the requirements contained in EMC 
14.90.060, Appendix A.

   b. The geological assessment shall be submitted in the form of a geotechnical report when the geotechnical 
professional(s) finds that a liquefaction or dynamic settlement hazard area exists within the proposed 
project area. The geotechnical report shall meet the requirements contained in EMC 14.90.060, Appendix 
A.

3. A geotechnical professional shall complete a field investigation and geological assessment presented in the 
form of a geotechnical report to determine whether or not the site for a proposed regulated activity is located 
within a fault rupture hazard area. The geological assessment shall meet the requirements contained in EMC
14.90.060, Appendix B. Any structural recommendations proposed to mitigate the fault rupture hazard that are included in the geotechnical report shall be prepared by an engineer.

4. All geological assessments for seismic hazards submitted under this chapter shall include, at a minimum, the following:

   a. The dates when the geological assessment was conducted and when the assessment was prepared.
   b. The parcel number(s) of the subject property.
   c. Site address, if the city has assigned one.
   d. A brief description of the project (including the proposed land use) and the area to be developed.
   e. A map showing the property lines for the site, existing two-foot contours of the existing site topography, and the location of any existing structures, utilities, wells, stormwater or septic systems, or other developments.
   f. A site plan delineating the limits of the proposed development and the location of all areas of the site subject to potential seismic hazards based on the Geologically Hazardous Areas map and, if applicable, limits of associated buffers.
   g. A description of the surface and subsurface geology, hydrology, soils, and vegetation of the site.
   h. A detailed overview of the field investigations, published data and references, data and conclusions from past geological assessments or geotechnical investigations of the site, site-specific measurements, tests, investigations, or studies, as well as the methods of data analysis and calculations that support the determination regarding whether liquefaction and/or dynamic settlement hazards are present on the site.
   i. The results, conclusions, and recommendations resulting from the geological assessment of the liquefaction and/or dynamic settlement hazards on the subject property as prepared by a geotechnical professional(s).

5. Geological assessments shall be prepared, signed, stamped, and dated by the appropriate geotechnical professional(s) (as defined in Chapter 14.15 EMC and established in this chapter) and the format shall be pre-approved by the department.

6. Geological assessments that do not contain the minimum required information will be returned to the geotechnical professional(s) for revision.

7. The department shall review the geological assessment and either:
   a. Accept the geological assessment and approve the application; or
   b. Reject the geological assessment and require revisions or additional information.

8. A geological assessment for a specific site may be valid for a period of up to five years when the proposed land use activity and surrounding site conditions are unchanged. However, if any environmental conditions associated with the site change during that five-year period, the applicant may be required to submit an amendment to the geological assessment. (Ord. 02-200 § 2).

14.90.040 Seismic hazard area standards.

A. Earthquake Induced Landslide Hazard Areas. All standards set forth in Chapter 14.80 EMC shall apply to earthquake induced landslide hazard areas.

B. Liquefaction and/or Dynamic Settlement Hazard Areas.
   1. All building structures shall conform to the standards set forth in EMC Title 15, Buildings and Construction.
The Edgewood Municipal Code (Critical Areas Ordinance Update 2017)

Chapter 14.80 SEISMIC (EARTHQUAKE) HAZARD AREAS

2. Utility Lines. Utility lines, except for gas pipelines, which are prohibited, will be permitted when no other conveyance alternative is available. The line shall be located above ground and properly anchored and/or designed so that it will continue to function in the event of seismically induced ground deformation. Provision for automatic shut-off of utilities in a ground-rupturing event will be required.

3. Roads, Bridges, and Trails. Roads, bridges, and trails shall be allowed when mitigation measures are provided that ensure the roadway prism and/or bridge structure will not be susceptible to damage from seismic induced ground deformation. Mitigation measures shall be designed for static and seismic loading conditions in accordance with the most recent version of the American Association of State Highway and Transportation Officials (AASHTO) Manual and also for an estimated range of ground surface offset presented in the geotechnical report.

C. Fault Rupture Hazard Areas. Any development, encroachment, filling, grading, or building structures shall be prohibited within fault rupture hazard areas and associated buffers except as specified in the following standards:

1. Utility Lines. Utility lines, except for gas pipelines, which are prohibited, will be permitted when no other conveyance alternative is available. The line shall be located above ground and properly anchored and/or designed so that it will continue to function in the event of seismically-induced ground deformation. Provision for automatic shutoff of utilities in a ground-rupturing event will be required.

2. Roads, Bridges, and Trails. Roads, bridges, and trails shall be allowed when all of the following conditions have been met:
   a. Mitigation measures are provided that ensure the roadway prism and/or bridge structure will not be susceptible to damage from seismically-induced ground deformation. Mitigation measures shall be designed for static and seismic loading conditions in accordance with the most recent version of the American Association of State Highway and Transportation Officials (AASHTO) Manual and also for an estimated range of ground surface offset presented in the geotechnical report.
   b. The road is not a sole access for a development. (Ord. 02-200 § 2).

14.90.050 Buffer requirements.
A. Determining Buffer Widths.
   1. The buffer width shall be measured on a horizontal plane from a perpendicular line established at the edge of the fault rupture hazard area limits.
   2. A buffer is an area that is adjacent to a fault rupture hazard area that may be potentially subject to ground surface displacement in a future earthquake. No development shall be permitted within a fault rupture hazard area and its associated buffer. The required buffer width is the greater amount of the following distances:
      a. Fifty feet from all edges of a fault rupture hazard area, except for high occupancy or essential facilities, where the minimum buffer distance shall be 100 feet; or
      b. The required buffer width is the minimum distance recommended by the geotechnical professional(s).

B. Modification of Buffer Widths. The Department may require a larger buffer width than the buffer distance, as determined in subsection (A) of this section, if the department determines the standard or proposed buffer is not adequate to protect the health, safety, or welfare of any proposed development. (Ord. 02-200 § 2).

14.90.060 Appendices.
A. Geological Assessments – Liquefaction or Dynamic Settlement Hazard Areas.

APPENDIX A
GEOLOGICAL ASSESSMENTS – LIQUEFACTION OR DYNAMIC SETTLEMENT HAZARD AREAS

The Edgewood Municipal Code (Critical Areas Ordinance Update 2017)
Article I. Geotechnical Verification

A. A geotechnical verification shall, at a minimum, include the following:

1. The general critical areas report requirements in EMC 14.10.082.

2. The geotechnical verification shall include all mandatory items listed in EMC 14.90.030(B)(4).

3. The geological assessment must include a determination that no liquefaction and/or dynamic settlement hazard exists within the proposed project area.

4. The verification shall include an accurate site plan drawn at a scale of one inch equals 20 feet, one inch equals 30 feet, one inch equals 50 feet (or other scale deemed appropriate by the department) is required. The department may require that the site plan information be based on a field survey by a licensed surveyor. The site plan shall include:

   a. Property lines for the site, and the location of any existing structures.

   b. The full geographical limits of the proposed project area or conceptual project area (i.e., area to be developed) and the location of any proposed structures, on-site septic systems, wells, and stormwater management features or facilities associated with the development, if known.

B. The geotechnical professional(s) who prepared the geotechnical verification shall stamp the verification with his or her license stamp/seal.

C. Hold harmless clauses, disclaimers, and limitations are not allowed within a geotechnical verification.

Article II Geotechnical Report

A. A geotechnical report shall, at a minimum, include the following:

1. The general critical areas report requirements in EMC 14.10.082.

2. The document shall include all mandatory items listed in EMC 14.90.030(B)(4). The report shall be prepared by an engineer and shall be co-written by an engineering geologist where geological interpretations and conclusions critical to the assessment of liquefaction and/or dynamic settlement hazard and potential effects are necessary or prudent. The report shall specify the desired performance level of the structures and other development facilities (e.g., safety to building occupants, minimal damage to structure, post-earthquake serviceability for pre-earthquake operations, no damage, etc.).

3. The results, conclusions, and recommendations resulting from the geological assessment of the liquefaction and/or dynamic settlement hazards on the subject property as prepared by the geotechnical professional(s).

4. The geological assessment-geotechnical report shall include:

   a. A statement that the proposed project area falls within a liquefaction and/or dynamic settlement hazard area.

   b. A detailed engineering evaluation of expected ground displacements or other liquefaction and/or dynamic settlement effects (e.g., bearing failures, flotation of buried tanks, etc.) and proposed mitigation measures to ensure an acceptable level of risk for the proposed structure type or other development facilities, as well as the proposed land use type (i.e., occupancy category). The minimum level of acceptable risk for any proposed structure or development facility shall ensure the life safety of any occupant. Where appropriate, a range of mitigation options should be considered depending on site conditions, the intended use of the structures, and acceptable levels of settlement.

5. The report shall include a site plan drawn to scale. The department may require that the site plan information be based on a field survey by a licensed surveyor. The site plan shall include:
a. Property lines for the site and the location of any existing structures.

b. The limits/location of any liquefaction and/or dynamic settlement hazard area(s) as set forth in EMC 14.90.020(C)(2).

c. The full geographical limits of the proposed project area or conceptual project area (i.e., area to be developed) and the location of any proposed structures, on-site septic systems, wells, and stormwater management features or facilities associated with the development, if known.

d. Location and unique identifier of geotechnical explorations used to characterize subsurface conditions.

6. The geotechnical study shall include field exploration sufficient to assess the potential for liquefaction or dynamic settlement hazards and options for mitigation of those hazards. Copies of the exploration logs shall be provided in the report. The geotechnical study shall include field exploration sufficient to assess the potential for liquefaction or dynamic settlement hazards and options for mitigation of those hazards. Copies of the exploration logs shall be included in the report. The project geotechnical professional must provide justification for the scope of the field exploration program. The City’s geotechnical professional reserves the right to request additional exploration if deemed appropriate. If a dispute arises between the City’s geotechnical professional and the project geotechnical professional regarding the scope of the field exploration, the City reserves the right to require an independent, third party review to be paid for by the applicant to resolve the dispute.

7. If beneficial to the assessment of seismic hazards for the project, the three-dimensional subsurface conditions at the site shall be presented using one or more cross-sections showing location and depth penetration of borings or CPT soundings, interpretation of the geometry of major soil units, and projected location of the static groundwater surface determined from the subsurface exploration. The cross-sections shall be presented at a scale of one inch equals 20 feet, one inch equals 30 feet, one inch equals 50 feet (or other scale deemed appropriate by the department). Each cross-section shall have a legend with a description of the various major soil units. The City’s geotechnical professional reserves the right to request inclusion of one or more cross sections in the geotechnical report. If a dispute arises between the project geotechnical professional and the City’s geotechnical professional regarding this issue, then the City reserves the right to require an independent, third party review to be paid for by the applicant to resolve the dispute.

8. All assessments of liquefaction and/or dynamic settlement hazards and effects will be based on a design earthquake using ground motion parameters consistent and equivalent to those specified in the most current version of the International Building Code. These assessments shall use the shallowest groundwater table observed during or inferred from subsurface exploration and characterization (e.g., the measured depth of static groundwater immediately prior to abandonment of borings, observation of iron-oxide mottling of soils samples, etc.).

9. Results of laboratory testing of samples retrieved during drilling and sampling shall be presented in order to support the values of fines contents used in subsequent analysis of liquefaction and/or dynamic settlement hazard. Where only CPT methods are used in site assessment, the correlation between fines content and CPT measurements will be discussed and documented. This documentation will require rigorous correlation of CPT and fines content measurements from similar geological deposits within the Puget Sound region.

10. The geotechnical report shall include a detailed assessment of the liquefaction and/or dynamic settlement hazard based on analysis of available subsurface data using state-of-the-practice methodologies. The results of the analysis shall be documented, and all results of intermediate and final calculations and results, including factors of safety, shall be included.

11. When appropriate, the geotechnical report shall include an assessment of the potential for large lateral spreads or flow failures, bearing failures, settlement, limited lateral displacement, and flotation of buried facilities. The methodologies used must be, at a minimum, state-of-the-practice, and the conclusions regarding the potential and severity of the possible liquefaction and/or dynamic settlement induced failure modes shall be presented.
12. Alternative mitigative measures including structural and foundation design options and/or soil improvement techniques shall be evaluated and compared for their effectiveness in reaching the level of performance specified in the report introduction. Effectiveness of soil improvement techniques shall be specified in terms of post-treatment densification or strength improvement as measured by appropriate subsurface investigation and testing. The extent of the post-treatment verification testing shall be provided on a site map at the same scale as the map presented in subsection (A)(4) of this article. Geotechnical review of all final plans is required and the findings of the review shall be documented in writing.

B. The geotechnical professional(s) who prepared the geotechnical report shall stamp the report with his or her license stamp/seal.

C. Hold harmless clauses, disclaimers, and limitations are not allowed within a geotechnical report.

APPENDIX B

GEOLOGICAL ASSESSMENTS – FAULT RUPTURE HAZARD AREA GEOTECHNICAL REPORT

A. A geotechnical report shall, at a minimum, include the following:

1. The general critical areas report requirements in EMC 14.10.082.

2. The document shall include all mandatory items listed in EMC 14.90.030(B)(4). The report shall be prepared by an engineer and shall be co-written by an engineering geologist where geological interpretations and conclusions critical to the assessment of liquefaction and/or dynamic settlement hazard and potential effects are necessary or prudent.

3. The following topics should be considered and addressed in detail where essential to support opinions, conclusions, and recommendations in any geologic report on faults. It is not expected that all the topics or investigative methods would be necessary in a single investigation. In specific cases, it may be necessary to extend some of the investigative methods well beyond the site or property being investigated.

   a. Purpose and scope of investigation; description of proposed development.

   b. Geologic and tectonic setting. Include seismicity and earthquake history.

   c. Site description and conditions, including dates of site visits and observations. Include information on geologic units, graded and filled areas, vegetation, existing structures, and other factors that may affect the choice of investigative methods and interpretation of data.

   d. Methods of Investigation.

      i. Review of published and unpublished literature, maps, and records concerning geologic units, faults, groundwater barriers, and other factors.

      ii. Stereoscopic interpretation of aerial photographs, review of LiDAR based topography, and other remotely sensed images to detect fault-related topography (geomorphic features), vegetation and soil contrasts, and other lineaments of possible fault origin. The area interpreted usually should extend beyond the site boundaries.

      iii. Surface observations, including mapping of geologic and soil units, geologic structures, geomorphic features and surfaces, springs, deformation of engineered structures due to fault creep, both on and beyond the site.

      iv. Subsurface Investigations.

      (A) Trenching and other excavations to permit detailed and direct observation of continuously exposed geologic units, soils, and structures; must be of adequate depth and be carefully logged (Taylor & Cluff 1973, Hatheway & Leighton 1979, McCulkin 1996b).
(B) Borings and test pits to permit collection of data on geologic units and groundwater at specific locations. Data points must be sufficient in number and spaced adequately to permit valid correlations and interpretations.

(C) Cone penetrometer testing (CPT) (Grant et al., 1997, Edelman et al., 1996). CPT must be done in conjunction with continuously logged borings to correlate CPT results with on-site materials. The number of borings and spacing of CPT soundings should be sufficient to adequately image site stratigraphy. The existence and location of a fault based on CPT data are interpretative.

v. Geophysical Investigations. These are indirect methods that require a knowledge of specific geologic conditions for reliable interpretations. They should seldom, if ever, be employed alone without knowledge of the geology (Chase & Chapman 1976). Geophysical methods alone never prove the absence of a fault nor do they identify the recency of activity. The types of equipment and techniques used should be described and supporting data presented (California Board of Registration for Geologists and Geophysicists, 1993).

(A) High-resolution seismic reflection (Stephenson et al., 1995, McCalpin, 1996b).

(B) Ground penetrating radar (Cai et al., 1996).

(C) Other methods include: seismic refraction, magnetic profiling, electrical resistivity, and gravity (McCalpin, 1996b).

vi. Age-dating techniques are essential for determining the ages of geologic units, soils, and surfaces that bracket the time(s) of faulting (Pierce 1986, Birkeland et al., 1991, Rutter & Catto, 1995, McCalpin, 1996a).

(A) Radiometric dating (especially 14C).

(B) Soil-profile development.

(C) Rock and mineral weathering.

(D) Landform development.

(E) Stratigraphic correlation of rocks/minerals/fossils.

(F) Other methods – artifacts, historical records, tephrochronology, fault scarp modeling, thermoluminescence, lichenometry, paleomagnetism, dendrochronology, etc.

vii. Other methods should be included when special conditions permit or requirements for critical structures demand a more intensive investigation.

(A) Aerial reconnaissance overflights.

(B) Geodetic and strain measurements.

(C) Microseismicity monitoring.

e. Conclusions.

i. Location and existence (or absence) of hazardous faults on or adjacent to the site; ages of past rupture events.

ii. Type of faults and nature of anticipated offset, including sense and magnitude of displacement, if possible.

iii. Distribution of primary and secondary faulting (fault zone width) and fault-related deformation.
iv. Probability of, or relative potential for, future surface displacement. The likelihood of future ground rupture seldom can be stated mathematically, but may be stated in semiquantitative terms such as low, moderate, or high, or in terms of slip rates determined for specific fault segments.

v. Degree of confidence in, and limitations of data and conclusions.

f. Recommendations.

i. The recommended increase from the standard buffer distance (50 feet) of proposed structures from fault rupture hazard areas. The recommended buffer distance generally will depend on the quality of data and type and complexity of fault(s) encountered at the site and the proposed land use type (i.e., occupancy). In order to establish an appropriate buffer distance from a fault located by indirect or interpretative methods (e.g., borings or cone penetrometer testing), the area between data points also should be considered underlain by a fault unless additional data are used to more precisely locate the fault. Additional measures (e.g., strengthened foundations, engineering design, and flexible utility connections) to accommodate warping and distributive deformation associated with faulting (Lazarte and others, 1994).

ii. Risk evaluation relative to the proposed development.

iii. Limitations of the investigation; need for additional studies.

g. References.

i. Literature and records cited or reviewed; citations should be complete.

ii. Aerial photographs or images interpreted – list type, data, scale, source, and index numbers.

iii. Other sources of information, including well records, personal communications, and other data sources.

h. Illustrations. The following illustrations should be provided:

i. A location map that identifies site locality, significant faults, geographic features, regional geology, seismic epicenters, and other pertinent data; 1:24,000 scale is recommended.

ii. A site development map that shows site boundaries, existing and proposed structures and limits of the proposed project area, graded areas, streets, exploratory trenches, borings geophysical traverses, locations of faults, and other data; recommended scale is 1:2,400 (one inch equals 200 feet), or larger.

iii. A geologic map that shows the distribution of geologic units (if more than one), faults and other structures, geomorphic features, aerial photographic lineaments, and springs; on topographic map 1:24,000 scale or larger; can be combined with subsection (B)(h)(i) or (ii) of this appendix.

iv. Geologic cross-sections, if needed, to provide three-dimensional picture.

v. Logs of exploratory trenches and borings that show details of observed features and conditions (note: these should not be generalized or diagrammatic). Trench logs should show topographic profile and geologic structure at a 1:1 horizontal to vertical scale; scale should be 1:60 (one inch equals five feet) or larger.

vi. Geophysical data and geologic interpretations.

i. Appendix. Attach any supporting data not included above (e.g., water well data, photographs, aerial photographs).

4. The geotechnical professional who prepared the geotechnical shall stamp the report with his or her license stamp/seal.
5. The department may request a geotechnical professional to provide additional information in the geotechnical report based upon existing conditions, changed conditions, or unique circumstances occurring on a case-by-case basis.

6. Hold harmless clauses, disclaimers, and limitations are not allowed to be included, neither expressly nor implied, within a geological assessment. (Ord. 02-200 § 2).
Chapter 14.110

EROSION HAZARD AREAS

Sections:
14.110.010 Purpose.
14.110.020 Erosion hazard areas.
14.110.030 Erosion hazard area review procedures.
14.110.040 Erosion hazard area standards.
14.110.050 Buffer requirements.
14.110.060 Appendices.

14.110.010 Purpose.
The following statements describe the purpose of this chapter:

A. Protect human life and health;
B. Regulate uses of land in order to avoid damage to structures and property being developed and damage to neighboring land and structures;
C. Identify and map erosion hazard areas;
D. Minimize impacts on wetlands and critical fish and wildlife species and their associated habitat that can result from erosion;
E. Establish a permit requirement and review procedures for development proposals in areas with potential erosion hazards;
F. Strike a balance between the need to maintain natural shoreline erosion/regression processes and the need to protect existing and proposed development. (Ord. 02-200 § 2).

14.110.020 Erosion hazard areas.
A. Shoreline Erosion Hazard Indicators. Shoreline erosion hazard areas are areas potentially subject to land regression or retreat due to a combination of geologic, seismic, and/or hydrologic or manmade factors. Shoreline hazard areas can be identified by indicators of active land retreat as a result of fluvial processes.

B. Erosion Hazard Area Categories.
1. Potential Erosion Hazard Areas. Potential erosion hazard areas, as depicted on the Geologically Hazardous Areas map, are those areas where the suspected risk of erosion through either loss of soil, slope instability, or land regression is sufficient to require additional review to assess the potential for active erosion activity or apply additional standards. These potential erosion hazard areas are determined using the following criteria:
   a. Shoreline Erosion Hazard Areas. Areas within 200 feet of a freshwater (lake, pond, or shoreline) as measured landward perpendicularly from the edge of the ordinary high water mark.
   b. Riverine Erosion Hazard Areas. The rivers subject to regulation as a channel migration zone listed in EMC 14.70.020(B)(4).
   c. Soil Erosion Hazard Areas. Areas identified as having slopes of 20 percent or greater and that are classified as having severe, or very severe erosion potential by the Soil Conservation Service, United States Department of Agriculture (USDA).

2. Active Shoreline Erosion Hazard Areas. Land areas located directly adjacent to surface water bodies that, through the geological assessment process, are identified as regressing, retreating, or potentially unstable as a result of undercutting by wave action or bluff erosion. The limits of the active shoreline erosion hazard area...
shall extend landward to include that land area that is calculated, based on the rate of regression, to be subject to erosion processes within the next 10-year time period.

3. Riverine Erosion Hazard Areas. Riverine erosion hazard areas are located within the lateral extent of likely watercourse channel movement due to bank destabilization and erosion, rapid incision, and shifts in location of watercourse channels. Riverine erosion hazard areas are also referred to as channel migration zones (CMZs). Rivers and streams subject to erosion are regulated as a CMZ as listed in EMC 14.70.020(B)(4).

4. Soil Erosion Hazard Areas. Soil erosion hazard areas are identified by the presence or absence of natural vegetative cover, soil texture condition, slope, and rainfall patterns, or man-induced changes to such characteristics that create site conditions which are vulnerable to erosion of the upper soil horizon. Soil erosion hazard areas include those areas with slopes of 20 percent or greater and that are classified as having severe, or very severe erosion potential by the USDA Natural Resources Conservation Service. (Ord. 02-200 § 2).

14.110.030 Erosion hazard area review procedures.

A. General Requirements.

1. The City’s Geologically Hazardous Areas map provides an indication of where potential erosion hazard areas are located. The actual presence or location of an erosion hazard area and/or additional potential erosion hazard area that have not been mapped, but may be present on or adjacent to a site, shall be determined using the procedures and criteria established in this chapter.

2. The department will complete a review of the Geologically Hazardous Areas map, and any other source documents for any proposed regulated activity to determine whether the site for the regulated activity is located within a potential erosion hazard area.

3. When the department’s maps, sources, or field investigations indicate that the site for a proposed regulated activity is located within a potential shoreline erosion hazard area, the department shall require a geological assessment as outlined in subsection (B) of this section.

4. When the department’s maps, sources, or field investigations indicate that the proposed project area for a regulated activity is located within a potential riverine erosion hazard area (channel migration zone), the department shall conduct a review pursuant to the requirements set forth in EMC 14.70.030. All standards set forth in Chapter 14.70 EMC shall apply to riverine erosion hazard areas (CMZs).

5. When the department’s maps, sources, or field investigations indicate that the proposed project area for a regulated activity is located within a potential soil erosion hazard area, the department shall require submittal of an erosion control plan pursuant to the requirements set forth in EMC Title 15, Buildings and Construction.

6. Applicants requesting to develop a bulkhead along a shoreline shall be required to submit a geotechnical report. The geotechnical report shall comply with the requirements established in EMC 14.110.060, Appendix C.

7. Unless otherwise stated in this chapter, the critical area protective measure provisions contained in EMC 14.10.080 shall apply.

B. Geological Assessment. A geological assessment is a site investigation process to evaluate the on-site geology affecting a subject property and proposed development.

1. Geological assessments shall be submitted to the department for review and approval together with a shoreline erosion hazard area application.

2. The geological assessment shall include a field investigation and may also include review of public records and documentation, analysis of historical air photos, LiDAR mapping, published data and references, etc.

3. The geological assessment shall include the following information and analysis:
a. An analysis of the shoreline erosion processes on and in the vicinity of the site including an evaluation of erosion and shoreline retreat that has occurred over the past decade and an estimated probable rate of erosion based upon the historic rate of erosion that has occurred on the site.

b. A determination of which areas on the site meet the criteria for an active shoreline erosion hazard area as set forth in EMC 14.110.020(B)(2).

c. A determination of the area on the site or in the vicinity of the site that will experience regression in the next 120 years given natural processes.

4. Geological assessments shall be prepared, signed, and dated by a geotechnical professional (as defined in Chapter 14.15 EMC and established in this chapter) and the format shall be pre-approved by the department.

5. A geotechnical professional shall complete a field investigation and geological assessment to determine whether or not an active shoreline erosion hazard area exists within 200 feet of the site.

   a. The geological assessment shall be submitted in the form of a geotechnical letter when the geotechnical professional finds that no active shoreline erosion hazard area exists within 200 feet of the site. The geotechnical letter shall meet the requirements contained in EMC 14.110.060, Appendix A.

   b. The geological assessment shall be submitted in the form of geotechnical verification when the geotechnical professional finds that an active shoreline erosion hazard area exists but is located more than 200 feet away from the proposed project area. The geotechnical verification shall meet the requirements contained in EMC 14.110.060, Appendix B.

   c. The geological assessment shall be submitted in the form of a geotechnical report when the geotechnical professional finds that an active shoreline erosion hazard area exists within 200 feet of the proposed project area or when a geotechnical professional determines that mitigation measures, such as a bulkhead, are necessary in order to construct or develop within a potential shoreline erosion hazard area. The geotechnical report shall meet the requirements contained in EMC 14.110.060, Appendix C.

6. The department shall review the geological assessment and either:

   a. Accept the geological assessment and approve the application; or

   b. Reject the geological assessment and require revisions or additional information.

7. A geological assessment for a specific site may be valid for a period of up to five years when the proposed land use activity and surrounding site conditions are unchanged. However, if any environmental conditions associated with the site change during that five-year period, the applicant may be required to submit an amendment to the geological assessment.

C. Riverine Erosion Hazard Area (Channel Migration Zones) Review. Riverine erosion hazard areas shall be reviewed pursuant to the requirements set forth in EMC 14.70.030.

D. Soil Erosion Hazard Area Review. Soil erosion hazard areas shall be reviewed pursuant to the requirements set forth in EMC Title 15, Buildings and Construction. (Ord. 02-200 § 2).

14.110.040 Erosion hazard area standards.

A. Active Shoreline Erosion Hazard Areas. Any development, encroachment, filling, clearing, or grading, timber harvest, building structures, impervious surfaces, and vegetation removal shall be prohibited within active shoreline erosion hazard areas and associated buffers except as specified in the following standards:

1. Shoreline Erosion Protection Measures. Shoreline erosion protection measures located within or adjacent to freshwater or marine shorelines shall be allowed subject to the following:

   a. The proposed shoreline protection measure shall comply with the standards set forth in Chapter 14.40 EMC, Fish and Wildlife Habitat Conservation Areas.
b. A geological assessment-shoreline erosion geotechnical report has been conducted in accordance with the provisions set forth in EMC 14.110.030(B) that indicates that the shoreline is currently experiencing active erosion (i.e., land retreat or regression).

c. The use of the shoreline erosion protection measure will not cause a significant adverse impact on adjacent properties or critical fish and wildlife species and their associated habitat (i.e., increase erosion on adjacent properties).

d. The use of soft armoring techniques (soil bioengineering erosion control measures) is the preferred method for shoreline protection.

e. Hard armoring shoreline erosion control measures shall be approved only when a geological assessment-shoreline erosion geotechnical report, as set forth in EMC 14.110.030(B), has been completed and indicates the following:

i. The regression has been monitored on a yearly interval for a period of at least five consecutive years prior to allowing a bulkhead to be constructed. This monitoring shall be conducted by field survey measurements of a licensed surveyor. The department may shorten or eliminate the monitoring period if there are indicators that the regression rate is rapid and an existing structure may be threatened prior to completion of the monitoring period;

ii. The use of beach nourishment alone or in combination with soft armoring techniques is not adequate to protect the property from shoreline erosion processes; and

iii. The property contains an existing structure(s) that will be threatened within the next 10 years or the buildability of an undeveloped site will be threatened within the next 10 years if a hard armoring method of shoreline erosion protection is not provided.

f. Hard armoring shoreline protection measures shall not be allowed when structures can be located landward of the 120-year rate of regression area.

2. Stormwater Conveyance. Surface drainage into an active shoreline erosion hazard area should be avoided. If there are no other alternatives for discharge, then drainage must be collected upland of the top of the active shoreline erosion hazard area and directed downhill in a high density polyethylene stormwater pipe with fuse welded joints that includes an energy dissipating device at the base of the active landslide hazard area. The pipe shall be located on the surface of the ground and be properly anchored so that it will continue to function in the event of an underlying slide. The number of these pipes should be minimized along the slope frontage.

3. Utility Lines. Utility lines will be permitted when no other conveyance alternative is available. The line shall be located above ground and properly anchored and/or designed so that it will continue to function in the event of an underlying slide.

4. Roads, Bridges, and Trails. Roads, bridges, and trails shall be allowed when all of the following conditions have been met:

a. Mitigation measures are provided that ensure the roadway prism and/or bridge structure will not be susceptible to damage from active erosion.

b. The road is not a sole access for a development.

B. Shoreline Erosion Hazard Management Area. All regulated activities such as but not limited to building structures, impervious surfaces, vegetation removal, timber harvest, and clearing or grading activities may be allowed in areas located within 200 feet of an active shoreline erosion hazard area subject to the following standards:

1. The department reviews and approves a geological assessment – shoreline erosion hazard geotechnical report and determines that the proposed project area is located outside an active shoreline hazard area and the required buffer, as set forth in EMC 14.110.050.
2. The proposed recommendations and mitigation measures contained within the geotechnical report are adequate to reduce or mitigate risks to the natural environment, health, and safety.

3. Surface drainage from the proposed project area, including downspouts, landscape irrigation systems, and runoff from paved or unpaved surfaces upland of the shoreline, shall not be directed through an active shoreline erosion hazard area or its associated buffer unless it is conveyed in conformance with the provisions in subsection (A)(2) of this section.

4. Stormwater retention and detention systems, such as dry wells and infiltration systems utilizing buried pipe or french drains, shall not be permitted unless such systems are designed by a professional engineer and the geotechnical report indicates that such a system will not affect the stability of the shoreline.

5. Proposed developments, with the exception of shoreline erosion protection measures, shall be sited far enough from regressing shorelines to ensure 120 years of useful life for any proposed structures or infrastructure.

C. Riverine Erosion Hazard Area (Channel Migration Zones) Review. Riverine erosion hazard areas shall be reviewed pursuant to the requirements set forth in EMC 14.70.030.

D. Soil Erosion Hazard Area Review. Soil erosion hazard areas shall be reviewed pursuant to the requirements set forth in EMC Title 15, Buildings and Construction. (Ord. 02-200 § 2).

14.110.050 Buffer requirements.

A. Determining Buffer Widths.

1. The buffer width shall be measured on a horizontal plane from a perpendicular line established at the edge of the active shoreline erosion hazard area limits.

2. An undisturbed buffer of existing vegetation shall be required for an active shoreline erosion hazard area. The required standard buffer width is the greatest amount of the distances in EMC 14.110.050(A)(2)(a) and (b):
   a. Fifty feet from all edges of the active shoreline erosion hazard area limits;
   b. A distance of one-third the height of the slope at the top of the slope and a distance of one-half the height at the bottom of the slope; or
   c. The buffer width may be reduced below the widths specified in EMC 14.110.050(A)(2)(a) and (b) or eliminated upon approval by the Department of a geotechnical report that demonstrates that such a reduction would not result in an increased risk of erosion either on or off of the subject property.

B. Modification of Buffer Widths. The department may require a larger buffer width than the standard buffer distance, as determined in subsection (A) of this section, if any of the following are identified through the geological assessment process:

1. The adjacent land is susceptible to severe erosion and erosion control measures will not effectively prevent adverse impacts.

2. The area has a severe risk of slope failure or downslope stormwater drainage impacts. (Ord. 02-200 § 2).

14.110.060 Appendices.

A. Geological Assessment – Shoreline Erosion Hazard Geotechnical Letter.

APPENDIX A

The Edgewood Municipal Code (Critical Areas Ordinance Update 2017)
GEOLOGICAL ASSESSMENT – SHORELINE EROSION HAZARD GEOTECHNICAL LETTER

A. A geotechnical letter shall, at a minimum, include the following:
   1. The general critical areas report requirements in EMC 14.10.082.
   2. A summary of the findings of the site visit, a site plan, and a summary of the findings from the review of documents listed in EMC 14.110.030(B)(2). The appropriate professional preparing the geotechnical letter shall provide conclusions and recommendations as to shoreline stability for the proposed development.

B. The geotechnical professional who prepared the geotechnical letter shall stamp the letter with his or her seal.

C. Hold harmless clauses, disclaimers, and limitations are not allowed within a geotechnical letter.

APPENDIX B

GEOLOGICAL ASSESSMENT – SHORELINE EROSION HAZARD GEOTECHNICAL VERIFICATION

A. A geotechnical verification shall, at a minimum, include the following:
   1. The general critical areas report requirements in EMC 14.10.082.
   2. A summary of the results, conclusions, and recommendations resulting from the geological assessment, as set forth in EMC 14.110.030(B). The verification will also include a summary of the findings of the site visit, a site plan, and a summary of the findings from the review of the documents listed in EMC 14.110.030(B)(2).
   3. An accurate site plan drawn at a scale of one inch equals 20 feet, one inch equals 30 feet, one inch equals 50 feet (or other scale deemed appropriate by the department) is required. The department may require that the site plan information listed below be based on a field survey by a licensed surveyor. The site plan shall include:
      a. The limits/location of the active shoreline erosion hazard area(s) set forth in EMC 14.110.020(B)(2).
      b. The limits of the required shoreline erosion hazard buffer based upon the requirements set forth in EMC 14.110.050(A).
      c. The limits/location of the shoreline erosion hazard management area.
      d. The limits/location of the 120-year regression area.
      e. The location of any existing structures, utilities, on-site septic systems, wells, and stormwater management facilities.
      f. The location of any proposed structures, utilities, on-site septic systems, wells, and stormwater management facilities.
      g. The full geographical limits of the proposed project area (area to be developed).
      h. Dimension of the closest distance between the identified active shoreline hazard area boundary and the proposed project area.
      i. Dimension of the closest distance between the 120-year regression line and the proposed project area.
      j. Existing contours on the site at two-foot intervals.
      k. Property lines for the site.
      l. North arrow and scale.
B. The geotechnical professional who prepared the geotechnical verification shall stamp the verification with his or her seal.

C. Hold harmless clauses, disclaimers, and limitations are not allowed within a geotechnical verification.

APPENDIX C

GEOLOGICAL ASSESSMENT – SHORELINE EROSION HAZARD GEOTECHNICAL REPORT

A. A geotechnical report shall, at a minimum, include the following:

1. The general critical areas report requirements in EMC 14.10.082.

2. A summary of the results, conclusions, and recommendations resulting from the geological assessment, as set forth in EMC 14.110.030(B). The report will also include a summary of the findings of the site visit, a site plan, and a summary of the findings from the review of documents listed in EMC 14.110.030(B)(2). The summary shall specifically address:
   a. Whether it is possible given the physical constraints of the property (size, shape, building setbacks, utility requirements, etc.) to locate the proposed development outside of the 120-year area of regression based on natural shoreline processes.
   b. If it is not possible to locate the development outside of the 120-year area of regression (based on natural processes), determine whether beach nourishment and/or soft armoring techniques can be used to slow the rate of regression such that the proposed development is no longer within the 120-year regression area.
   c. If it is not possible to locate the development outside of the 120-year area of regression (based on the use of beach nourishment and/or soft armoring techniques), outline the strategy, as set forth in EMC 14.110.040(A)(1), to monitor the rate of regression on the site.
   d. Determine whether any proposed shoreline erosion protection measures will cause an increase in the rate of regression on neighboring properties.

3. An accurate site plan drawn at a scale of one inch equals 20 feet, one inch equals 30 feet, one inch equals 50 feet (or other scale deemed appropriate by the department) is required. The department may require that the site plan information listed below be based on a field survey by a licensed surveyor. The site plan shall include:
   a. The limits/location of the active shoreline erosion hazard area(s) set forth in EMC 14.110.020(B)(2).
   b. The limits of the required shoreline erosion hazard buffer based upon the requirements set forth in EMC 14.110.050(A).
   c. The limits/location of the shoreline erosion hazard management area.
   d. The limits/location of the 120-year regression area based on natural shoreline processes and, if applicable, based upon proposed shoreline protection measures.
   e. The location of any existing structures, utilities, on-site septic systems, wells, and stormwater management facilities.
   f. The location of any proposed structures, utilities, on-site septic systems, wells, and stormwater management facilities.
   g. The full geographical limits of the proposed project area (area to be developed).
   h. Dimension of the closest distance between the identified active shoreline hazard area boundary and the proposed project area.
i. Dimension of the closest distance between the 120-year regression line and the proposed project area.

j. Existing contours on the site at two-foot intervals.

k. Property lines for the site.

l. North arrow and scale.

4. A discussion of any proposed shoreline protection measures including design and construction drawings is required.

5. A list of references utilized in preparation of the report.

B. The geotechnical professional(s) who performed the geological assessment shall stamp the report with his or her license stamp/seal. The report must be co-authored by a licensed professional engineer when engineering designs or interpretations are necessary to address the report requirements. The engineer must also stamp the report with his or her license stamp/seal.

C. The department may request a geotechnical professional to provide additional information in the geotechnical report based upon existing conditions, changed conditions, or unique circumstances occurring on a case-by-case basis.

D. Hold harmless clauses, disclaimers, and limitations are not allowed within a geotechnical report.

E. Geotechnical reports shall be in conformance with a format that is pre-approved by the department. (Ord. 02-200 § 2).
Chapter 14.500
NATURAL RESOURCE LANDS

Sections:
14.500.010 Purpose.
14.500.020 Intent.
14.500.030 Applicability.
14.500.040 Natural resource lands noticing requirements.
14.500.050 Current use assessment.
14.500.060 Variances and appeals.
14.500.070 Review process.
14.500.080 Title, plat, and regulated activities notification.
14.500.090 Permitted uses.
14.500.100 Appendices.

14.500.010 Purpose.
This chapter establishes requirements and regulations to protect natural resource lands and is established pursuant to WAC 197-11-908 and RCW 36.70A.170 and 36.70A.060. The city therefore designates agricultural lands and mineral resource lands, and all associated buffers as being environmentally sensitive areas and designated natural resource lands. By regulating development within 500 feet of natural resource lands, this title seeks to implement the following goals and policies to:

A. Inform the public of the existence, location and potential incompatibility impacts of development on, or within 500 feet of, these environmentally sensitive areas within the city.
B. Encourage the retention of open space, development of recreational opportunities, conserve priority habitat, increase access to natural resource lands and water, and develop parks.
C. Assure the conservation of resource lands and related activities by limiting encroachment of incompatible development thereon.
D. Promote the conservation of mineral resource lands through inclusion of known deposits of minerals and materials.
E. Assure that undeveloped mineral and material resources will not be forever lost by prior development of the land for other purposes.
F. Allow for the necessary mineral processing to convert such minerals and materials into marketable products.
G. Protect the environment and enhance the state’s high quality of life, including air and water quality and the availability of water.
H. Maintain and enhance the biological and physical functions and values of wetlands. (Ord. 02-200 § 2).

14.500.020 Intent.
Resource lands are of special concern to the citizens, the city, and the state. The intent of this chapter is to conserve resource lands by establishing standards for development of sites which contain, or are within 500 feet of, resource lands to promote the public health, safety, and welfare by:

A. Noticing of property on, or within, natural resource land areas;
B. Mitigating unavoidable impacts by regulating development;
C. Protecting from development impacts;

The Edgewood Municipal Code (Critical Areas Ordinance Update 2017)
D. Protecting the public against losses from:

1. Costs of public emergency rescue and relief operations where the causes are avoidable;

2. Degradation of the natural environment and the expense associated with repair or replacement;

E. Preventing adverse impacts on water availability, water quality, wetlands, and streams;

F. Protecting unique, fragile, and valuable elements of the environment, including fish and wildlife habitat;

G. Providing sufficient information to show that critical areas are adequately protected prior to approving, conditioning, or denying public or private development activity;

H. Providing the public with sufficient information and notice of potential risks associated with development in critical and sensitive areas;

I. Implementing the goals and requirements of the Growth Management Act (RCW 36.70A.060), the city of Edgewood comprehensive plan, and all updates and amendments, functional plans, and other land use policies formally adopted or accepted by the city. (Ord. 02-200 § 2).

14.500.030 Applicability. This chapter shall apply to all properties designated as resource lands (agricultural lands or mineral resource lands) or properties within 500 feet of designated resource lands within Edgewood. When the requirements of this title are more stringent than those of other local, state or federal law, codes, or regulations, the requirements of this title shall apply.

A. Agricultural Lands. Lands that are not already characterized by urban growth and that have long-term significance for the commercial production of food or other agricultural products. Agricultural lands are those lands meeting all of the following criteria:

1. Lands in parcels which are 10 acres or larger in size;

2. Lands which are on prime or unique soils as identified in:
   a. United States Department of Agriculture (USDA), Soil Conservation Service, February 1979, Soil Survey of Pierce County Area, Washington; or
   b. USDA, Soil Conservation Service, June 1981, Important Farmlands of Pierce County, Washington;
   c. Lands which are primarily devoted to the commercial production of horticultural, viticultural, floricultural, dairy, apiary, vegetable, or animal products or of berries, grain, hay, straw, turf, seed, Christmas trees not subject to the excise tax imposed by RCW 84.33.100 through 84.33.140, or livestock, and which have long-term commercial significance for agricultural production; and
   d. Lands which are not within 500 feet of lots of record of one acre or less on more than 50 percent of the perimeter of the parcel.

B. Mineral Resource Lands. Mineral resource lands shall be identified by the city using the criteria set forth in WAC 365-190-070 as now exists or as may hereafter be amended or modified.

C. Property Adjacent to Resource Lands. All plats, short plats, development permits, and building permits issued for development activities within 500 feet of lands designated as natural resource lands shall contain a notice that a variety of commercial activities may occur that are not compatible with residential development for certain periods of limited duration. (Ord. 04-221 § 1; Ord. 02-200 § 2).

A. The city has classified the following areas as potential mineral resource lands based on the criteria in EMC 14.500.030(B).
14.500.040 Natural resource lands noticing requirements.

Pursuant to RCW 36.70A.060, the city shall require that all plats, development applications, or permits issued for development activities on, abutting, or within 500 feet of lands designated as natural resource lands contain a notice (see Appendices A through C).

A. General. If more than one natural resource land subject to the provisions of this title intersects the subject parcel, then one notice addressing all of the natural resource areas shall be sufficient.

B. Title Notification.

1. When the city determines that activities not exempt from this title are proposed, the owner shall file a notice with the Pierce County auditor (Appendices A through C). The notice shall provide a public record of the presence of the sensitive area(s); the application of this title to the property; and any limitations on activity in or affecting such sensitive area.

2. The notice shall be notarized and recorded with the Pierce County auditor before approval of any regulated use or activity on the site.

C. Plat Notification. For all proposals requiring a plat within sensitive areas, the applicant shall note the face of the plat consistent with the language set forth in Appendices A through C.

D. Permit Notification. The department shall require that all permits issued for regulated activities on or within 500 feet of natural resource lands contain a notice as set forth in Appendices A through C. (Ord. 02-200 § 2).

14.500.050 Current use assessment.

A. An owner of natural resource lands or open space desiring current use classification under Chapter 84.40 RCW may file for such current use classification.

B. An owner of undeveloped land with critical areas which has been placed in a separate tract or tracts, protective easement, public or private land trust dedication, or other similarly preserved area for the protection of these critical areas may have that portion of land reviewed for reassessment by the assessor-treasurer’s office consistent with those restrictions to determine the fair market value of the land pursuant to RCW 84.40.030.

C. The owner shall notify the assessor-treasurer’s office when restrictions on development occur on a particular site, and shall provide a plat map in addition to the following, or other special study documents as may be required by the department.

14.500.060 Variances and appeals.

Procedures for variances and appeals of an administrative decision issued pursuant to this chapter are set forth in EMC 18.40.050, Process II, Administrative action. (Ord. 02-200 § 2).
**14.500.070 Review process.**

A. The department shall review any permit or application requested for any regulated activity, including, but not limited to, those set forth in EMC 14.500.010 on a site which includes, or is within 500 feet of, one or more resource land is located, unless otherwise provided in this title.

B. As part of all development applications, the department shall review the information submitted by the applicant to:

1. Confirm the nature and type of the resource land and evaluate any required title, plat, and/or regulated activity notification;
2. Determine whether the development proposal is consistent with this title; and
3. Determine whether any proposed alterations to the site containing resource lands are necessary.

C. The city may approve, approve with conditions, or deny any development proposal in order to comply with the requirements and carry out the goals, purposes, objectives, and requirements of this title.

D. Approval of a development proposal does not discharge the obligation of the applicant to comply with the provisions of this title. (Ord. 02-200 § 2).

**14.500.080 Title, plat, and regulated activities notification.**

A. If more than one resource land subject to the provisions of this title exists on the site, then one notice addressing all of the resource lands shall be sufficient.

B. Notification shall be approved by the department and shall be consistent with the forms set forth in EMC 14.500.100, Appendices A through C as applicable.

C. Title notifications shall be notarized and recorded with the Pierce County auditor prior to approval of any regulated use or activity for the site. (Ord. 02-200 § 2).

**14.500.090 Permitted uses.**

Uses permitted on designated resource land sites shall be the same as those permitted in the zone classifications shown on the city zoning map. (Ord. 02-200 § 2).

**14.500.100 Appendices.**

A. Property Adjacent to Resource Lands.

B. Agriculture Lands Noticing.

APPENDIX A

**PROPERTY ADJACENT TO RESOURCE LANDS**

A. Title Notification.

**Parcel Number: __________________**

**Site Address: __________________**

NOTICE: This parcel lies within 500 feet of land designated resource lands by Edgewood. A variety of commercial and industrial activities occur in the area that may be inconvenient or cause discomfort to area residents. This may arise from the use of chemicals, or from spraying or extraction which occasionally generates dust, smoke, noise, and odor. The city has established resource uses as priority uses on productive resource lands, and residents of
adjacent property should be prepared to accept such inconveniences or discomfort from normal, necessary commercial resource lands operations.

Signature of Owner

_________________________________

(NOTARY ACKNOWLEDGMENT)

B. Plat Notification. The owner of any site within 500 feet of land designated as resource lands on which a large lot, short subdivision, or formal subdivision is submitted, shall record a notice on the face of the plat. Such notification shall be in the form as set forth below:

PROPERTY ADJACENT TO RESOURCE LANDS PLAT NOTIFICATION. This property lies within 500 feet of land designated resource lands by Edgewood. A variety of commercial and industrial activities occur in the area that may be inconvenient or cause discomfort to area residents. This may arise from the use of chemicals, or from spraying or extraction which occasionally generates dust, smoke, noise, and odor. The city has established resource uses as priority uses on productive resource lands, and residents of adjacent property should be prepared to accept such inconveniences or discomfort from normal, necessary commercial resource lands operations.

C. Regulated Activities Notification. The department shall require that permits issued for regulated activities, as defined in Chapter 14.500 EMC, within 500 feet of lands designated as resource lands, contain a notice as set forth below.

REGULATED ACTIVITIES NOTIFICATION. This property lies within 500 feet of land designated resource lands by Edgewood. A variety of commercial and industrial activities occur in the area that may be inconvenient or cause discomfort to area residents. This may arise from the use of chemicals, or from spraying or extraction which occasionally generates dust, smoke, noise, and odor. The city has established resource uses as priority uses on productive resource lands, and residents of adjacent property should be prepared to accept such inconveniences or discomfort from normal, necessary commercial resource lands operations.

APPENDIX B

AGRICULTURAL LANDS NOTICING

A. Title Notification.

Parcel Number: ____________________

Site Address: ______________________

NOTICE: This parcel lies within 500 feet of an area identified as agricultural lands by Edgewood. A variety of commercial agricultural activities occur in the area that may be inconvenient or cause discomfort to area residents. This may arise from the use of agricultural chemicals, including herbicides, pesticides, and fertilizers; or from spraying, pruning, and harvesting which occasionally generate dust, smoke, noise, and odor. Edgewood has established agriculture as a priority use on productive agricultural lands, and residents of adjacent property should be prepared to accept such inconveniences or discomfort from normal, necessary farm operations.

Signature of Owner
B. Plat Notification. The owner of any site within this designation on which a large lot, short subdivision, or formal subdivision is submitted, shall record a notice on the face of the plat. Such notification shall be in the form as set forth below.

AGRICULTURAL LANDS PLAT NOTIFICATION. This parcel lies within an area identified as agricultural lands by Edgewood. A variety of commercial agricultural activities occur in the area that may be inconvenient or cause discomfort to area residents. This may arise from the use of agricultural chemicals, including herbicides, pesticides, and fertilizers; or from spraying, pruning, and harvesting which occasionally generate dust, smoke, noise, and odor. The city has established agriculture as a priority use on productive agricultural lands, and residents of adjacent property should be prepared to accept such inconveniences or discomfort from normal, necessary farm operations.

C. Regulated Activities Notification. The department shall require that all permits issued for regulated activities, as defined in Chapter 14.500 EMC, within this zone classification contain a notice as set forth below.

REGULATED ACTIVITIES NOTIFICATION. This parcel lies within 500 feet of an area identified as agricultural lands by Edgewood. A variety of commercial agricultural activities occur in the area that may be inconvenient or cause discomfort to area residents. This may arise from the use of agricultural chemicals, including herbicides, pesticides, and fertilizers; or from spraying, pruning, and harvesting which occasionally generate dust, smoke, noise, and odor. The city has established agriculture as a priority use on productive agricultural lands, and residents of adjacent property should be prepared to accept such inconveniences or discomfort from normal, necessary farm operations.

APPENDIX C

MINERAL RESOURCE LANDS NOTICING

A. Title Notification.

Parcel Number: ____________________

Site Address: ______________________

NOTICE: This parcel lies within 500 feet of an area of land designated mineral resource lands by the city. A variety of commercial mineral extraction activities occur in the area that may be inconvenient or cause discomfort to area residents. This may arise from the use of heavy equipment, chemicals, and spraying which may generate dust, smoke, and noise associated with the extraction of mineral resources. Edgewood has established mineral resource extraction as a priority use on productive mineral resource lands, and residents of adjacent property should be prepared to accept such inconveniences or discomfort from normal, necessary mineral resource extraction operations.

Signature of Owner

_________________________________  
(NOTARY ACKNOWLEDGMENT)

The Edgewood Municipal Code (Critical Areas Ordinance Update 2017)
B. Plat Notification. The owner of any site within this overlay district on which a large lot, short subdivision, or formal subdivision is submitted, shall record a notice on the face of the plat. Such notification shall be in the form as set forth below:

MINERAL RESOURCE LANDS PLAT NOTIFICATION. This property lies within 500 feet of an area of land designated mineral resource lands by the city of Edgewood. A variety of mineral resource extraction activities occur in the area that may be inconvenient or cause discomfort to area residents. This may arise from the use of heavy equipment, chemicals, and spraying which may generate dust, smoke, and noise associated with the extraction of mineral resources. Edgewood has established mineral resource extraction as a priority use on productive mineral resource lands, and residents of adjacent property should be prepared to accept such inconveniences or discomfort from normal, necessary mineral resource extraction lands.

C. Regulated Activities Notification. The department shall require that all permits issued for regulated activities, as defined in Chapter 14.500 EMC, within this designation contain a notice as set forth below:

REGULATED ACTIVITIES NOTIFICATION. This property lies within 500 feet of an area of land designated mineral resource lands by Edgewood. A variety of mineral resource extraction activities occur in the area that may be inconvenient or cause discomfort to area residents. This may arise from the use of chemicals and extraction of minerals, which occasionally generates dust, smoke, noise, and odor. The city has established mineral resource extraction as a priority use on productive mineral resource lands, and residents of adjacent property should be prepared to accept such inconveniences or discomfort from normal, necessary mineral resource extraction lands.

(Ord. 02-200 § 2).

14.500120 Natural Resource Lands
Chapter 14.10

GENERAL PROVISIONS

Sections:
14.10.010 Authority.
14.10.030 Purpose.
14.10.040 Interpretation.
14.10.050 Applicability.
14.10.070 Administration.
14.10.075 Relationship to Other Regulations.
14.10.080 Critical Areas protective measures.
14.10.085 Mitigation plans.
14.10.090 Variances to Critical Areas.
14.10.100 Reconsideration and appeal procedures.
14.10.120 Fees.
14.10.130 Compliance.
14.10.135 Warning and disclaimer of liability.
14.10.140 Appendix.

14.10.010 Authority.
A. This title is established and adopted pursuant to the Growth Management Act (RCW 36.70A.060).

B. As provided herein, the Director or their designee is given the authority to interpret and apply, and the responsibility to enforce this title to accomplish the purposes identified in EMC 14.10.030.

14.10.030 Purpose.
A. The purpose of this title is to protect environmentally sensitive Critical Areas of Edgewood from the impacts of development and vice versa protect development from the impacts of hazard areas by establishing minimum standards for development of sites which contain or adjoin Critical Areas or its Buffer(s). Further, the purpose of these regulations is to mitigate the potential hazard(s) to development in and near Critical Areas.

B. The purpose is further envisioned to and thus promote the public health, safety, and welfare by:
1. Avoiding impacts to critical areas;
2. Mitigating unavoidable impacts by regulating development of Regulated Activities;
3. Protecting Critical Areas from impacts of development;
4. Protecting the public against losses from:
   a. Costs of public emergency rescue and relief operations where the causes are avoidable; and
   b. Degradation of the natural environment and the expense associated with repair or replacement;
5. Preventing adverse impacts on water availability, water quality, wetlands, and streams;
6. Protecting unique, fragile, and valuable elements of the environment, including critical Fish and Wildlife Habitat Conservation Areas;
G7. Providing Department staff with sufficient information to adequately protect Critical Areas and proposed Development Activity when approving, conditioning, or denying public or private Regulated Activities development proposals;

G8. Providing the public with sufficient information and notice of potential risks associated with Development in natural hazard Critical Areas; and

G9. Implementing the goals and requirements of the Growth Management Act (RCW 36.70A.060), the State Environmental Policy Act (SEPA), and the City’s comprehensive plan, and all updates, amendments, functional plans, and other land use policies formally adopted or accepted by the City of Edgewood.

14.10.0430 Interpretation.
A. In the interpretation and application of this title, all provisions shall be:

A1. Considered the minimum necessary for compliance; and

B2. Liberally construed to serve the purposes of this title; and

C3. Nothing contained herein shall be deemed either to limit or repeal any other powers under state statute.

(Ord. 02-200 § 2).

Critical area reports and decisions to alter critical areas shall be based on the best available science to protect the functions and values of critical areas and must give special consideration to conservation or protection measures necessary to preserve or enhance anadromous fish, such as salmon and bull trout, and their habitat (WAC 365-195-900).

14.10.0540 Applicability.
A. This title shall apply to all lands and waters within Edgewood that are designated as Critical Areas and their corresponding buffers and setbacks.

B. No Development Activity (see “development” definition or Regulated Activities shall hereafter take place without full compliance with the terms of this title.

C. When the requirements of this title are more stringent than those of other Edgewood City codes and regulations, including the adopted International Building Code (EMC 15.05), the requirements of this title shall apply.

D. Compliance with these regulations does not remove an applicant’s obligation to comply with applicable provisions of any other federal, state, or local law or regulation.

E. Criteria for determining the presence of a Critical Area is contained within each chapter of this title.

F. When a site contains two or more Critical Areas, the site shall meet the minimum standards and requirements for each identified critical area as set forth in this title.

G. Critical Areas, as defined and regulated by this title, are identified on, but may not be limited to, the following Edgewood critical areas maps:

1. Wetlands;
2. Geologically Hazardous Areas;
3. Critical Aquifer Recharge Areas;
4. Streams; and
5. Frequently Flooded Areas.
H. The exact boundary of each mapped Critical Area depicted on the City’s critical areas maps is approximate and is only intended to provide an indication of the presence of a Critical Area on a particular site. Additional Critical Areas that have not been mapped may also be present on a site. The actual presence of a Critical Area and the applicability of these regulations shall be determined based upon the classification or categorization criteria and review procedures established for each Critical Area. City staff and/or the City’s consultant(s) may request the ability to perform an on-site inspection to assess the site in order to determine if additional studies or reports shall be included with any Development Application identified in this title are necessary. An inspection report of findings shall be written after the on-site inspection and will become a part of any site development application as a future reference.

I. The Edgewood Critical Areas atlas maps shall be updated and maintained by the Department of Community Development’s Geospatial Information System (GIS) division.

14.10.0750 Administration.

A. Critical Areas Permit or Approval Required. In order to conduct any Development Activity or Regulated Activity on any property located within three hundred (300) feet of a Critical Area, as each Critical Area is defined in this Title or as shown on the City’s Critical Areas Map(s), a Critical Areas Permit or an Approval must be obtained from the City.

B. Critical Areas Approval.

1. If the City requires that another permit application be submitted under a different code chapter in order to allow the proposed Development Activity or Regulated Activity, then a separate Critical Areas Permit is not required. Instead, the City shall review the underlying application, together with the application materials required herein, to determine compliance or noncompliance with this title. The determination on such compliance or noncompliance shall be incorporated within the decision on the underlying application.

2. In addition to the materials required to make the underlying application complete as required by the City’s code outside of this Title, the applicant shall also submit the materials set forth herein, where the subject property is within three hundred (300) feet of a Critical Area. The City shall not issue a determination that the underlying application is complete until all materials have been submitted.

3. The Critical Areas materials shall be reviewed following the same process as the underlying application.

C. Critical Areas Permit.

1. If the City does not require any other permit in order to allow the proposed Development Activity or Regulated Activity, the applicant shall be required to obtain a separate Critical Areas Permit in order for the proposed development activity to proceed.

2. A complete application for a Critical Areas Permit shall consist of the materials set forth in EMC Section 14.10.050.D.

3. The process for review of a Critical Area Permit where there is no underlying application is the Type II Process, as set forth within EMC Section 18.40.090.

D. Elements of a Complete Permit Application. A complete application for Approval of a Critical Areas Permit under this Title shall consist of the following materials:

1. A completed permit application form, which must be signed by the record owner of the property (the person(s) whose name is on the most recently recorded deed or contract purchaser with written permission from the record owner). An application form may be signed by an agent for the record owner, as long as the application is also accompanied by a verified statement signed by the record owner, which specifically authorizes the agent to submit the application on the record owner’s behalf.

2. The subject site’s street address, legal description, or both items if necessary for property identification.
3. A complete description of the proposed development activity;

4. All items identified in this title that are necessary to complete the application for the specific Critical Area; and

5. The required application fee.

A. Approvals Required. An approval must be obtained from the city when the department determines that the site or project area is or may be located within 300 feet of a critical area, as set forth in each chapter.

B. Application Requirements.

1. Preliminary Review. The provisions for conducting a preliminary review of an application are set forth in EMC 18.40.070, Process types.

2. Application Filing.

a. Applications shall be reviewed for completeness in accordance with department submittal standards, checklists and pursuant to EMC 18.40.150, Determination of completeness or as outlined within section c. below.

b. Applications and associated Critical Areas reports shall not be submitted without an accompanying permit for an underlying action, such as, but not limited to, a building permit, subdivision or boundary line adjustment- alteration action, site development application, TPCHD permit, or an administrative, conditional, or special use permit, with the exception of reports required by the department as a result of an enforcement action, or reports required by TPCHD for septic design approval, or associated with a request for under the Pierce County Open Space public benefit rating system or a Valuation program.

c. In cases where no accompany permit applications are required for potentially regulated activities within a critical area, a separate critical areas permit application shall be filed and include the following items in order to be deemed a complete application:

   i. A completed Critical Area Permit Application;

   ii. Submittal and review criteria and standards of this title, as outlined within each section of the specific critical area potentially being impacted;

   iii. Associated Critical Area Permit Fee, as outlined within EMC 14.10.100.

   iv. Review for a Critical Area Permit shall follow a Type II Process, as outlined within EMC 18.40.0980.

D. Modifications. The Department may request an update of any required assessment, report, or delineation, etc., due to the potential for change in the existing environment that may have been caused by a natural event, e.g., seismic event, landslides, or flooding, etc., or human induced activity that degraded the existing conditions that occurred after the original document was initially submitted.

C. Public Notice. Public notice provisions for notice of an application, public hearing, if applicable; and final decision pursuant to this title are outlined in EMC Section 18.40.190, Notice of public hearing.

D. Review.

1. Initial Review. The Department shall conduct an initial review of an application in accordance with the provisions outlined in EMC Section 18.40.150, Determination of Completeness.

2. Review Responsibilities.
a. The Department is responsible for administration, circulation, and review of any Applications and approvals required by this title.

b. The City Council shall be the decision authority for Any Reasonable Use Exception Applications shall follow EMC Section 14.20.050.

c. Other City or Pierce County departments and state agencies, as determined by the Department, may review an Application and forward their respective recommendations to the Director or Hearing Examiner, as appropriate.

a. The Department shall perform a Critical Area review for any building or land use Application submitted for a Regulated Activity, including, but not limited to, those set forth in EMC 14.20.020. Reviews for multiple Critical Areas shall occur concurrently.

b. The Department shall, to the extent reasonable, consolidate the processing of related aspects of other City regulatory programs which affect activities in any regulated Critical Areas, such as subdivision or site development, with the approval process established herein so as to provide a timely and coordinated review process.

c. As part of the initial review of all development or related permits, or permit Applications, the Department shall review the information submitted by the applicant to:

   i. Confirm the nature and type of the Critical Area and evaluate whether any required assessments, reports, or studies are required;

   ii. Determine whether the development proposal is consistent with this title;

   iii. Determine whether any proposed alterations to the site containing Critical Areas are necessary; and

   iv. Determine if the mitigation and monitoring plans submitted by the applicant are sufficient to protect the public health, safety, and welfare consistent with the goals, purposes, objectives, and requirements of this title.

d. Regulated Activities subject to SEPA shall also be reviewed with consideration for impacts on Critical Areas as identified in this title. Regulated Activities that pose a significant adverse impact which are not addressed by the standards and criteria established in this title (gaps), may be subject to additional mitigation measures as determined through the SEPA process. A threshold determination issued pursuant to EMC Title 20, SEPA, may not be made prior to the Department's review of any special studies or technical reports required by this title, except where the applicant requests a declaration of significance so that environmental review is required.

d. Critical Area Applications required under this title shall be approved prior to approval of any underlying permit action such as, but not limited to, a building permit, subdivision approval, site development forest practice application, or identified use permit.

e. The Department may waive the requirement to submit a Critical Area Report Assessment, report, etc., required under this title, outlined within each critical area heading herein, may be waived at the department's discretion when the proposed project area for a regulated activity is located in an area that has been the subject of a previously submitted and approved assessment or report, etc., if all of the following conditions have been met:

   i. The provisions of this title have been previously addressed as part of another approval;

   ii. There has been no material change in the potential impact to the Critical Area or required buffer since the prior review;
iii. There is no new information available that is applicable to any critical review of the site or particular critical area;

iv. The permit or approval has not expired or, if there is no expiration date, no more than five years have elapsed since the issuance of that permit or approval; and

v. Compliance with any standards or conditions placed upon the prior permit or approval has been achieved or secured.

4. Burden of Proof. The applicant has the burden of proving that a proposed application complies with the standards set forth in this title.

5. Final Decision.

a. The Department may approve, approve with conditions, or deny any critical area application or underlying application for development within any critical area in order to comply with the requirements and carry out the goals, purposes, objectives, and requirements of this title based on the decision makers' evaluation of the ability of any proposed mitigation measures to reduce risks associated with the critical area and compliance with required standards. Approval of a development proposal does not discharge the obligation of the applicant to comply with the provisions of this title.

b. Applicants shall comply with the recommendations and/or mitigation measures contained in final approved assessments or reports and any final decision and conditions of approval.

c. Approval of an application required under this title must be given prior to the start of any development activity on a site.

6. Time Period for Final Decision. The provisions for issuing a notice of final decision on any application filed pursuant to this title is set forth in EMC Section 18.40.040, Coordination of development permit procedures.

E. Time Limitations.

1. Expiration of Approval.

a. Approvals granted under this title shall be valid for the same time period as the underlying permit (e.g., preliminary plat, site development, building permit). If the underlying permit does not contain a specified expiration date, then approvals granted under this title shall be valid for a period of three (3) years from the date of issue, unless a longer or shorter period is specified in the final decision.

b. The approval shall be considered null and void upon expiration, unless a time extension is requested and granted as set forth in EMC subsection 14.10.050 E.2 (E)(2) of this section.

2. Time Extensions.

a. The applicant or owner(s) may request in writing a one-time, one-year extension of the original approval. To receive the extension, the applicant must upon demonstrating to the Director that circumstances beyond their control dictated the need for the extension, set a new expiration date one year later than the initial expiration.

b. Knowledge of the expiration date and initiation of a request for a time extension is the responsibility of the applicant or owner(s).

c. A written request for a time extension shall be filed with the Department at least sixty (60) days prior to the expiration of the approval.

d. Upon filing of a written request for a time extension, a copy shall be sent to each party of record together with governmental departments or agencies that were involved in the original approval process.
By letter, the Department shall request written comments be delivered to the department within 30 days of the date of the letter.

e. Prior to the granting of a time extension, the Department may require a new Application(s), updated study(ies), and fee(s) if:

i. The original intent of the approval is altered or enlarged by the renewal;

ii. The circumstances relevant to the review and issuance of the original approval have changed substantially; or

iii. The applicant failed to abide by the terms of the original approval.

f. If approved, the one-year time extension shall be calculated from the date of granting said approval.

F. Recording.

1. Approvals.
   a. Critical Area regulation Approvals to modify a Critical Area or which otherwise require mitigation and monitoring shall be recorded on the title of the project parcel(s) at the Pierce County auditor’s office by City of Edgewood Staff prior to issuance of any permit authorizing the project to proceed and at the sole expense of Applicant. Also refer to EMC Section 14.10.070.F80(F), Title and Land Division Notification for additional recording requirements.

b. Work within a recorded, existing utility easement is not required to meet EMC Section 14.10.050.F.1 Recording of a wetland approval for work completed within utility line easements on lands not owned by the jurisdiction conducting the regulated activity shall be required.

2. Right of Entry Agreement.
   a. When an Application has been submitted, the City shall have a right of entry to verify the submitted information is correct, to ensure any applicable condition(s) of approval were satisfied, to confirm any required monitoring is being performed, or to attest that all outstanding items subject to a performance bond were completed.

b. The right of entry shall extend until the last condition in the permit has been satisfied.

The city may require the applicant to record a right of entry agreement, which shall be consistent with a format approved by the department. The right of entry agreement shall:

a. Allow the department and agents of the department to access the site for purposes of inspection during the course of application review, construction, and post-construction monitoring.

b. Allow the department and agents of the department to enter a property to construct required improvements, mitigation measures, or monitoring that have been financially guaranteed.

c. Run with the land, and be binding on all parties having or acquiring any right, title, interest, or any part thereof of the site, including the grantor, heirs, successors, and assigns. (Ord. 02-200 § 2).

14.10.075 Relationship to Other Regulations
A. This title shall apply as an overlay and in addition to zoning and other regulations adopted by the City and concurrently with review conducted under SEPA.

B. These critical areas regulations shall apply concurrently with review conducted under SEPA, as adopted under Chapter EMC 20.05.

C. Compliance with the provisions of this title does not constitute compliance with other federal, state, and local regulations and permit requirements that may be required (for example, Hydraulic Permit Act [HPA] permits).
Section 106 of the National Historic Preservation Act, U.S. Army Corps of Engineers Section 404 permits, National Pollution Discharge Elimination System permits). The applicant is responsible for complying with all other these requirements, apart from the process established in this title.

Activities that may impact Critical Areas and/or their buffers, but do not require any other City permits or approvals, may be reviewed as a Critical Areas Permit, as outlined within EMC 14.10.070(c).

14.10.0870 Critical Area protective measures.
A. General. All Critical Area tracts, Conservation Easements, land trust dedications, and other similarly preserved areas shall remain undeveloped in perpetuity, except as they may be allowed to be altered pursuant to this title.

1. Conservation Easements and other similarly preserved areas restrict both the current use as well as future uses of the land to some important conservation quality such as habitat preservation, open space, or scenic views.

2. A land trust or governmental entity that manages properties for long-term goals typically holds the Conservation Easement or other similarly preserved area.

B. Mitigation Sequence. Adverse impacts caused by new activities and developments shall be mitigated using the following action(s) in order of priority:

1. Avoiding the impact altogether by not taking a certain action or parts of an action;

2. Minimizing impacts by limiting the degree or magnitude of the action and its implementation, by using appropriate technology, or by taking affirmative steps, such as project redesign, relocation, or timing, to avoid or reduce impacts;

3. Rectifying the impact by repairing, rehabilitating, or restoring the affected environment;

4. Reducing or eliminating the impact over time by preservation and maintenance operations;

5. Compensating for the impact by replacing, enhancing, or providing substitute resources or environments; and

6. Monitoring the impact and the compensation project and taking appropriate corrective measures.

C. Identification of Critical Areas and Required Buffers on Construction Plans. Critical Areas and required buffers shall be clearly identified on all construction plans such as, but not limited to, site development plans, residential building plans, commercial building plans, forest harvest plans, etc.

D. Building Setbacks.

1. Unless otherwise provided in this title, buildings and other structures shall be set back a distance of 15 feet from the edge of all Critical Area buffers, or, where no buffers are required, the edge of the Critical Area.

2. The following uses and activities may be allowed in the building setback area:

   a. Landscaping;

   b. Uncovered decks;

   c. Building overhangs extending if such overhangs do not extend more than 18 inches into the setback area;

   d. Impervious ground surfaces, such as driveways, parking lots, roads, walkways, and patios; provided, that such improvements conform to the water quality standards set forth in the city’s adopted stormwater
management manual and that construction equipment does not enter the buffer during the construction process; and

c. Clearing and grading; or

d. Any combination of items a-e. (Ord. 02-200 § 2).

E. Financial Guarantees.

1. The city may require an applicant to submit one or more financial guarantees, e.g., surety bond, cash escrow, cash set aside, assignment of funds, or letter of credit, to the city, as set forth in each chapter of this title (and other titles of Edgewood’s Municipal Code as required), to guarantee any performance, mitigation, maintenance, or monitoring required as a condition of permit approval. The approval for the project will not be granted until the financial guarantee is received by the department. Projects where the city or one of its departments is the applicant shall not be required to post a financial guarantee.

2. Financial guarantee instruments required under this title shall be:

a. In addition to any other site development guarantees required for project approval;

b. Submitted on financial guarantee forms approved by the city;

c. In the amount of 125 percent of the City Engineer’s estimate of the cost of mitigation or monitoring to allow for inflation and administration should the city have to complete the mitigation or monitoring, unless the provisions set forth in subsection (B)(2)(D) of this section are applicable; and

d. Released by the city only when the applicant’s appropriate technical professional has provided written confirmation that the performance, mitigation, or monitoring requirements have been met and the department has inspected the site(s) for compliance.

3. Failure to complete any performance, mitigation, or monitoring may result in the forfeiture or release of the guarantee. Applicants who have previously defaulted will no longer be allowed to post a bond guarantee for improvements necessary for approval of a land use application. Applicants who have previously defaulted will be allowed to post cash guarantees for subsequent critical area mitigation work needed for approval of a land use application or permit, but the guarantee must be by cash guarantee only.

F. Title and Land Division Notification.

1. General.

a. Title and/or land division notice(s) shall be required to be recorded with the Pierce County auditor on each site that contains a critical area, prior to or at the time of approval of any regulated activity on a site.

b. If more than one critical area subject to the provisions of this title exists on the site, then one notice which addresses all of the critical areas shall may be sufficient.

c. Title and/or land division notifications and notes shall be approved by the department and shall be consistent with EMC Section 14.10.170, Appendix A.

d. Applicant shall be responsible for the recording costs of the notice.

e. Notice on title is not required for utility line easements on lands not owned by the jurisdiction conducting the regulated activity, e.g., gas pipelines.

2. Title Notification.
a. When the city determines that regulated activities not exempt from this title are proposed, the property owner shall file a notice with the Pierce County auditor. The notice shall provide a public record of the presence of a critical area and associated buffer, if applicable, the application of this title to the property, and that limitations on actions in or affecting such critical area and associated buffer, if applicable, may exist.

b. The notice shall be notarized and shall be recorded by the City at the applicant’s cost with the Pierce County auditor at the time of, but prior to approval of any regulated use or activity for the site.

c. Notice on title is not required for utility line easements on lands not owned by the jurisdiction conducting the regulated activity (e.g., gas pipelines).

32. Land Division Notification and Notes. As referenced in EMC 14.10.17040, Appendix A there shall be notes included on the face of any final plat, final binding site plan, short plat, or boundary line adjustment that contain any critical areas or critical area buffer. The critical area boundaries and the boundary of any associated buffer shall be identified on the face of these documents prior to submission to the City for approval.

G. Conservation Easements.

1. Prior to any final critical area approval, the part of the critical area and required buffer which is located on the site shall be protected with a conservation easement or other similar permanent deed restriction.

2. The conservation easement shall indicate allowable and prohibited uses within the critical area and required buffer.

H. Tracts. Critical Area tracts must adhere to the provisions in EMC Section 16.01.100 and the face of the plat shall include the requirement that the owners of all lots shall be required to preserve, protect, and maintain the Critical Areas.

Prior to final approval of any subdivisions, short subdivisions, large lot divisions, or binding site plans, the part of the critical area and required buffer which is located on the site, shall be placed in a separate tract or tracts, and the face of the plat shall include the requirement that the owners of all lots shall be required to preserve, protect and maintain the critical areas...

I. Homeowner’s Covenants.

1. A description of the critical area and required buffer shall be placed in any required homeowner’s covenants to provide notice to the homeowners of their responsibility to preserve, protect, and maintain the critical areas in perpetuity.

2. Such covenants shall contain a detailed description of the allowable uses within the critical area and, if applicable, associated buffer, and the long-term management and maintenance requirements of these critical areas.

J. Markers, Fencing, and Signage.

1. Markers.

a. Prior to final approval of any critical area application, the outer edge of the critical area boundaries or, if applicable, required buffer boundaries on the site shall be flagged by the qualified professional, as outlined in each chapter.

b. These boundaries shall then be identified with permanent markers (rebar and cap, permanent markers) and flagged by a licensed surveyor, unless otherwise stated in this title. The permanent markers shall be clearly visible, durable, and permanently affixed to the ground.
2. Fencing.
   a. Temporary Construction Fencing.
      i. Temporary fencing is required when vegetation is to be retained in an undisturbed condition within the Critical Area and required buffer.
      ii. When temporary fencing is required in such cases, the applicant shall construct silt fencing, construction fencing, or other City-approved method of temporary fencing at the edge of the Critical Area or, if applicable, the edge of the required buffer prior to beginning construction on the site.
   b. Permanent Fencing. Where deemed necessary by the Department to provide protection to the Critical Area, the applicant will be required to construct permanent, wildlife-passable fencing along the buffer boundary.

3. Signage.
   a. The Department shall require permanent signage to be installed at the edge of the Critical Area or, if applicable, the edge of the required buffer.
   b. The sign shall indicate the type of Critical Area and if the area is to remain in a natural condition as permanent open space.
   c. Exact sign locations, wording, size, and design specifications shall be established by the Department.
   d. Prior to final approval of any Critical Area Application, the applicant shall submit an affidavit of posting to the Department as proof that the required signs were posted on the site.

14.120.0820 Critical Areas Reports.
A. When required in accordance with this title, the applicant shall submit a Critical Areas report as required per this Title.
B. The Critical Areas report shall use scientifically valid methods and studies in the analysis of Critical Area data and field reconnaissance to evaluate the proposed development and all probably impacts to Critical Areas in accordance with the provisions of this title. The report shall reference the source(s) of science used in accordance with WAC 365-195-900 through WAC 365-195-925.
C. At a minimum the report shall contain the following ten (10) items:
   1. The name and contact information of the applicant;
   2. A description of the proposal;
   3. The site plan for the proposed development, including a map drawn to scale depicting Critical Areas, buffers, the proposed development, and any areas to be cleared or altered;
   4. The date of the report and names and qualifications of the persons preparing the report;
   5. Documentation of any fieldwork performed on the site;
   6. Identification and characterization of all Critical Areas and buffers on and adjacent to the proposed development;
   7. A statement specifying the accuracy of the report, and all assumptions made and relied upon;
A discussion of the performance standards applicable to the Critical Area and proposed development;

8.9. A mitigation plan in accordance with EMC Section 14.10.090, if mitigation is required; and

9.10. Any additional report information required for the Critical Area as specified herein and the following chapters.

14.120.083 Mitigation plans.

A. When mitigation is required, the applicant shall submit a mitigation plan.

B. The mitigation plan shall include all of the following details outlined in paragraphs 1-6:

1. Mitigation sequencing. A description of reasonable efforts made to apply mitigation sequencing pursuant to EMC Section 14.10.070.B to avoid, minimize, and mitigate impacts to Critical Areas and buffers.

2. Mitigation details.
   a. A description of the anticipated impacts to the Critical Area and buffers, including impacts to Critical Area functions and values;
   b. The mitigating actions proposed, including type of mitigation proposed, e.g., on-site or off-site; site selection criteria; identification of compensation goals; and identification of Critical Area functions.
   c. The environmental goals and objectives of the mitigation, together with specific measurable criteria and performance standards for evaluating whether or not the goals and objectives of the mitigation project have been successfully attained;
   d. A review of the best available science supporting the proposed mitigation; and
   e. An analysis of the likelihood of success of the mitigation project.

3. Construction details. The mitigation plan shall include written specifications, descriptions, and drawings of the mitigation proposed, including:
   a. Construction sequence, timing, and duration;
   b. Grading and excavation details;
   c. Erosion and sediment control features; and
   d. Planting plan specifying plant species, quantities, locations, size, spacing, density, and measures to protect and maintain plants until established. All plant species must be native to the region.

   a. A program for monitoring construction and assessing the outcome of the mitigation project, including the schedule for site monitoring, e.g., (for example, monitoring shall occur in year 1, 3, and 5 after site construction), and how the monitoring data will be evaluated to determine if the performance standards are being met. Monitoring reports shall be submitted to document milestones, successes, problems, and contingency actions of the compensation project. The mitigation project shall be monitored for a period necessary to establish that performance standards have been met, but not for a period less than five (5) years. For example, ten years or more of monitoring are needed for forested and scrub-shrub communities. Mitigation monitoring shall be the responsibility of the applicant.
   b. A contingency plan with courses of action and corrective measures to be taken if monitoring or
evaluation indicates project performance standards are not being met.

5. Mitigation Cost Estimate. A Mitigation Cost Estimate for the entire compensatory Mitigation project, per the requirements of EMC Section 14.10.070(E).

6. Other requirements. The mitigation plan shall address any additional mitigation requirements relevant to the specific Critical area as specified in the following chapters.

14.10.085 Variances to Critical Areas.
A. General. Variances are reviewed pursuant to the same permit process as a general variance, permit type, as outlined in EMC Chapter 18.40, and 18.50.080. The criteria for approval for a Critical Area Variances are contained herein, and are not subject to the criteria for general variances contained in EMC 18.50.080(D)(2).

B. Variance Criteria. A variance may be granted only if the decision maker makes written findings that the applicant has demonstrated that the requested action conforms to all of the criteria set forth as follows:

1. Special conditions and circumstances exist that are peculiar to the land, the lot, or something inherent in the land, and that are not applicable to other lands in the same district; and

2. The special conditions and circumstances do not result from the actions of the applicant; and

3. A literal interpretation of the provisions of this title would deprive the applicant of all reasonable economic uses and privileges permitted to other properties in the vicinity and zone of the subject property under the terms of this title, and the variance requested is the minimum necessary to provide the applicant with such rights; and

4. Granting the variance requested will not confer on the applicant any special privilege that is denied by this title to other lands, structures, or buildings under similar circumstances; and

5. The granting of the variance is consistent with the general purpose and intent of this title, and will not further degrade the functions or values of the associated Critical Areas or otherwise be materially detrimental to the public welfare or injurious to the property or improvements in the vicinity of the subject property; and

6. The decision to grant the variance incorporates the best Available Science and gives special consideration to conservation or protection measures necessary to preserve or enhance anadromous fish habitat; and

7. The granting of the variance is consistent with the general purpose and intent of the Edgewood Comprehensive Plan and adopted development regulations.

C. Additional Criteria for Flood Hazard Area Variances. Refer to EMC Chapter 14.80 – Flood Hazard Areas for specific criteria. In addition to the variance criteria specified above in subsection (B) of this section, in order for the decision maker to approve a flood hazard variance, the decision maker must make written findings that the applicant has demonstrated that the proposal satisfies all of the following:

1. Generally, the only condition under which a variance from the elevation standard may be issued is for new Construction and Substantial Improvements to be erected on a small or irregularly shaped lot contiguous to and surrounded by lots with existing structures constructed below the Base flood level. As the lot size increases the technical justification required for issuing the variance increases.

2. Variances shall not be issued within a designated floodway if any increase in flood levels during the Base flood discharge would result.

3. Variances shall only be issued upon a determination that the variance is the minimum necessary, considering the flood hazard, to afford relief.

4. Variances shall only be issued upon...
a. A showing of good and sufficient cause;

b. A determination that failure to grant the variance would result in exceptional hardship to the applicant and that the hardship was not created by the applicant;

c. A determination that the granting of a variance will not result in increased flood heights, additional threat to public safety, extraordinary public expense, create nuisances, cause fraud on or victimization of the public, or conflict with existing local laws or ordinances.

5. Variances as interpreted in the National Flood Insurance Program are based on the general zoning law principle that they pertain to a physical piece of property; they are not personal in nature and do not pertain to the structure, its inhabitants, economic or financial circumstance. They primarily address small lots in densely populated residential neighborhoods. As such, variances from flood elevations should be quite rare.

6. Variances may be issued for nonresidential buildings in very limited circumstances to allow a lesser degree of flood proofing than watertight or dry flood proofing, where it can be determined that such action will have low damage potential, comply with all other variance criteria (except 4.1-4), and otherwise comply with Sections 5.1-1, 5.1-3, and 5.1-4 of the General Standards.

7. Any applicant to whom a variance is granted shall be given written notice that the permitted structure will be built with its lowest floor below the base flood elevation and that the cost of flood insurance will be commensurate with the increased risk.

D.C.D. Should a variance be denied, the applicant may submit a Reasonable Use Exception Application for a reasonable use exception pursuant to EMC 14.20.050. (Ord. 17-492 § 2 (Exh. A); Ord. 02-200 § 2).

14.10.090 Reconsideration and appeal procedures.

Procedures for appeal of a final decision on a Critical Areas permit, a decision relating to Critical Areas in the underlying permit, a Critical Areas variance, or a Critical Areas flood hazard variance are set forth in EMC Chapter 18.40.

14.10.100 Fees.

A. Fees for an Application and/or reviews of reports, studies, or plans filed pursuant to this title are set forth in the adopted fee schedule and as identified hereinbelow:

B. Fee Establishment. The City, by resolution, shall establish fees for filing of a Critical Areas review processing and other services provided by the City as required by this title. These fees shall be based on the anticipated sum of direct costs incurred by the city for any individual development or action and may be established as a sliding scale that will recover all of the city costs. Basis for these fees shall include, but not be limited to, the cost of engineering and planning review time, cost of inspection time, costs for administration, and any other special costs attributable to the critical area review process.

C. Applicant Responsibilities. Unless otherwise indicated in this title, the applicant shall be responsible for the initiation, preparation, submission, and expense of all required reports, assessment(s), studies, plans, reconnaissance(s), peer review(s) by qualified consultants, and other work prepared in support of or necessary to review the Application. For those items initiated by the City, e.g., peer review(s), the applicant is responsible for the expense and both the preparation and submission of the application materials and not initiation of the review or preparation of the package submitted to the respective Peer Reviewer.

D. Payment. Fees established in accordance with this title shall be paid upon submission of a signed Application or petition for appeal, or as otherwise provided by any fee ordinance or resolution adopted by the City Council. Where such an application will require substantial review time or expenditures, the mayor may, at his/her sole discretion:

The Edgewood Municipal Code (EMC)
Critical Areas Ordinance Update 2018
discretion, direct that the department initiating the permit request to reimburse the community development department for some or all of costs expended for the application review.

E. Investigation Fee. To investigate violations of this title, all city fees associated with investigation of violations of this title may be assessed at the adopted billable staff hour rate in addition to any required consultant costs, legal costs, and other expenses necessary to complete the investigation of the violation. The payment of such investigation fees shall not exempt any person from compliance with all other provisions of this title, nor from penalties prescribed by law.

14.10.1130 Compliance.
A. The regulations for compliance with the provisions of this title are set forth in EMC Section 18.30.040, Scope and compliance.

B. When a critical area or its required buffer has been altered in violation of this title, the department shall require the property owner to bring the site into compliance. The property owner shall be required to submit the appropriate application and commence a departmental review, as applicable for each chapter of this title. In addition to any required site investigation, delineations, assessments, or reports, the property owner shall be required to submit a restoration plan that identifies the proposed mitigation to bring the subject property into compliance with the requirements of this title. (Ord. 02-200 § 2).

14.10.1240 Warning and disclaimer of liability.
A. The degree of protection required through application of this title is deemed to be reasonable for regulatory purposes and is based on best available science; however, natural events that may exceed the geographic boundaries regulated under this title can and will occur, e.g., flood heights that are higher than anticipated. This title does not mean to imply that land outside designated hazard areas or uses permitted within such areas will be free from damages.

B. The express purpose of this title is to provide for the health, safety and welfare of the general public, and not to protect individuals or create or otherwise establish or designate any particular class or group of persons who will or should be especially protected or benefitted by the terms of this title. The obligation of complying with the requirements of this title and the liability for failing to do so is hereby placed upon the property owner and/or persons responsible for the condition of the property, buildings or premises.

C. Nothing in this title is intended to be nor shall be construed to create or form the basis for any liability on the part of the City, its officers, officials, employees or agents, for any injury or damage resulting from the failure of the owner of property or land to comply with the provisions of this title or by reason or in consequence of any inspection, notice, order, certificate, permission or approval, authorized or issued or done in connection with the implementation or enforcement of this title, or by reason of any action or inaction on the part of the City, related in any manner to the enforcement of the title by its officers, officials, employees or agents.

14.10.1450 Appendix.
A. Title and Plat Notification Forms.

APPENDIX A

TITLE AND PLAT NOTIFICATION FORMS

A. Notice for Title Notification.

1. (Example: Appropriate Critical Area from EMC 14.10.030)

Tax Parcel Number:

Address:
Legal Description:

Present Owner:

NOTICE: This property contains [identify Critical Area, e.g., wetlands or wetland buffer] as defined by EMC Title 14.10.030. The site was the subject of a development proposal for [insert case file number] filed on [insert date]. Restrictions on use or alteration of the site may exist due to natural conditions of the property and resulting regulations. Review of such application has provided information on the location of the [identify Critical Area, e.g., Wetlands or Wetland Buffers] and any restriction on use.

Date __________________ Signature of owner

Notary acknowledgment and notary seal

B. Additional Title Notification Statements.

1. Title notification for liquefaction and dynamic settlement hazard areas shall include a statement of the performance criteria, i.e., protection of life safety only, provision for minimal structural damage so that post-earthquake functionality is substantially unchanged, no structural damage for the design earthquake.

2. Title notification for fault rupture hazard areas shall include a statement that a fault rupture hazard area or associated buffer exists on the site. The title notification shall include a site plan of the subject property with the fault rupture hazard area and associated buffer identified.

3. Properties that contain flood hazard areas pursuant to EMC Chapter 14.8070 EMC shall include the following statement:

   a. Flood Elevation Certificates are kept on file by the Department.

C. Notice for Plat Notification/Plat Notes.

1. General. The following notice shall be placed on the face of the final plat, short plat, large lot, or binding site plan documents when said subdivision contains any critical areas or critical area buffer.

   Notice: This site lies within a [insert type of Critical Area] as defined in EMC Title 14. Restrictions on use or alteration of the site may exist due to natural conditions of the site and resulting regulation.

2. Native Vegetation Preservation Areas. The following notice shall be placed on the face of the final plat, short plat, large lot, or binding site plan documents when said subdivision contains any critical areas or critical area buffers and when said critical areas or critical area buffers have been identified as native, or natural vegetation preservation areas.

   Notice: The Critical Areas appearing on this [final site plan/preliminary plat/final plat/short plat/large lot/engineering drawing] contain areas of native vegetation intended to buffer the Critical Area from the adverse effects of development. These Critical Areas shall remain and be maintained in a natural, undeveloped, open space state. There shall be no clearing and grading, filling, or construction within the Critical Areas, except as shown on plans or documents approved by the City of Edgewood and contained in the official files for this development. Each Critical Area shall remain undisturbed except for periodic watering and hand weeding of plants designated as noxious by the State of Washington.

3. Plat Notes for Flood Hazard Areas. The following notes shall be placed on the face of any of final plat, short plat, large lot, or binding site plan documents which lie within a flood hazard area.

The Edgewood Municipal Code (EMC)
Critical Areas Ordinance Update 2018
a. Clearing and Grading, clearing, and/or filling within the limits of the 100-year floodplain is prohibited, except for watercourse related construction, repair, and/or maintenance work that is done by the City for management operations.

b. If a higher frequency event occurs or if existing conditions upon which the Flood Hazard Area boundaries were based were to change or occur differently than depicted, then the level of protection afforded by the existing levee, if applicable, and Flood Hazard Area standards may not be adequate to prevent the subject site from flooding.

c. All purchasers, and developers, and/or their agents of property within the subject development area and/or parcel shall take notice of the above conditions and hereby agree to defend, indemnify, and hold harmless the City of Edgewood from any and all claims, losses, costs, liabilities, or damages of any nature imposed upon or asserted against Edgewood arising out of or caused by the City’s issuance of approval or by issuance of any other permits arising out of this approval.

d. All occupants and/or owners of property in the subject area assume the risk of flooding which may occur and waive any claims against the City of Edgewood arising out of damage or injury to person or property resulting therefrom. (Ord. 17-492 § 2 (Exh. A); Ord. 16-461 § 3; Ord. 02-200 § 2).
Chapter 14.1520

DEFINITIONS

A. This title shall rely on the definitions contained in EMC Chapter 18.20 - Definitions. Any word or phrase not contained herein shall be first referenced to EMC Chapter 18.20 for meaning. The City also adopts by reference the definitions stated in WAC 197-11-700 through 197-11-799 as now or hereafter amended.

1. For any word or term not defined herein, the latest edition of Webster's Dictionary shall be used.

2. The Director, or their designee, has the final authority to determine the interpretation or usage of terms used in this Chapter.

B. Additional definitions not contained in EMC Chapter 18.20 that apply to this title are:

1. Abutting - bordering upon, to touch upon, in physical contact with. Sites are considered abutting even though the area of contact may be only a point.

2. Activity - any use conducted on a site.

3. Addition - an alteration to an existing structure that increases the floor area, either. There are two types of additions: additions affixed to the structure’s side of an existing structure and/or an upper story addition.

4. Agricultural Activities - the production of crops and/or raising or keeping livestock, including operation and maintenance of farm and stock ponds, drainage ditches, irrigation systems, and normal operation, maintenance, and repair of existing serviceable agricultural structures, facilities, or improved areas, and the practice of aquaculture. Activities which bring an area into agricultural use are not part of an ongoing activity. An operation ceases to be ongoing when the area in which it was conducted is proposed for conversion to a non-agricultural use or has lain idle for a period of longer than five (5) years, unless the idle land is registered in a federal or state soil conservation program. Forest practices regulated under RCW Chapter 76.09 RCW and/or WAC Title 222 are not included in this definition.

5. Agricultural Land(s) - land primarily devoted to the commercial production of horticultural, viticultural, floricultural, dairy, apiary, vegetable, or animal products or of berries, grain, hay, straw, turf, seed, Christmas trees not subject to the excise tax imposed by RCW Sections 84.33.100 through 84.33.140, finfish in upland hatcheries, or livestock, and that has Long-term Commercial Significance for agricultural production.

6. Animal Containment Area - a site keeping where at least 2,000 pounds two or more animal units of large animals per acre or 0.75 750 pounds of an animal unit of small animals per acre are kept, and/or where a high volume of waste material is deposited in quantities capable of impacting groundwater resources.

7. Animal, Large - an animal weighing 100 pounds or more.

8. Animal, Small - an animal with an average weight of less than 100 pounds.

9. Animal Unit - the equivalent of 1,000 pounds of animal.

10. Appeal - a request for a review of the interpretation of any provision of this chapter, per EMC 14.10.090.

11. Application - a request for a license.

12. Aquifer - a saturated geologic formation, which will yield a sufficient quantity of water to serve as a private or public water supply.
12. **Area of Shallow Flooding** – areas designated as AO or AH zones on the FIRM(s). AO zones are characterized by sheet flows, having base flood depths that range from one to three feet above the natural ground, where a clearly defined channel does not exist, the path of flooding is unpredictable and indeterminate, and velocity flow may be evident. AH zones indicate similar depth ponding, shown with standard base flood elevations on the FIRM(s).

13. **Area of Special Flood Hazard** – land in the floodplain within a community subject to a one percent or greater chance of flooding in any given year. Designation on FIRM(s) always includes the letter A or V.

14. **Base Flood** – the flood having a one percent chance of being equaled or exceeded in any given year, also referred to as the “100-year flood,” and is designated on FIRM(s) by the letter A or V.

15. **Basement** – any area of the building having its floor sub-grade (below ground level) on all sides, for the purposes of this title.

16. **Best Available Science** – scientific information applicable to the critical area prepared by local, state, or federal natural resource agencies, a qualified scientific professional, or team of qualified scientific professionals that is consistent with criteria established in WAC Sections 365-195-900 through WAC 365-195-925.

17. **Best Management Practices (BMP)** – conservation practices or systems of practices and management measures that:
   a. Control soil loss and reduce water quality degradation caused by high conservations of nutrients, animal waste, toxics and sediment;
   b. Minimize adverse impacts to surface water and ground water flow and circulation patterns and to the chemical, physical, and biological characteristics of wetlands;
   c. Protect trees and vegetation designated to be retained during and following site construction and use native plant species appropriate to the site for re-vegetation of disturbed areas; and
   d. Provide standards for proper use of chemical herbicides within critical areas.

18. **Breakaway Wall** – a wall that is not part of the structural support of the building and is intended through its design and construction to collapse under specific lateral loading forces, without causing damage to the elevated portion of the building or supporting foundation system.

19. **Buffer** – an area contiguous with critical areas that are required for the integrity, maintenance, function, and structural stability of the said critical areas.

20. **Building Footprint** – the horizontal area measured within the outside of the exterior walls of the ground floor of all principal and accessory buildings on a lot.

21. **City** – the city of Edgewood municipal corporation.

22. **City Council** – the Edgewood City Council.

23. **Classification** – defining value and hazard categories to which critical areas and land resource lands will be assigned.

24. **Clearing** – the removal of timber, brush, grass, ground cover, or other vegetative matter from a site, which exposes the earth’s surface on the site.

25. **Colluvium** – loose materials deposited by gravity on the face or at the foot of a slope, e.g., talus or soil creep.

The Edgewood Municipal Code (EMC) Critical Areas Ordinance Update 2018
25.15. Compensatory Mitigation – replacing project-induced losses or impacts to a Critical Area.

26.16. Conservation Easement – a recorded deed restriction or covenant that runs in perpetuity on a parcel of land restricting the use of the property by preventing future real estate development such as residential, industrial, or commercial use. Conservation easements may allow for continued current uses, (e.g., residential, recreational, agriculture, forestry, or ranching); however, conservation easements most often restrict both the current use as well as future uses of the land to some important conservation quality such as habitat preservation, open space, or scenic views. A land trust or governmental entity that manages properties for long-term goals typically holds conservation easements.

27.17. Contaminant – any chemical, physical, biological, or radiological substance that does not occur naturally or occurs at concentrations and durations as to be injurious to human health or welfare or shown to be ecologically damaging.

29. County – means Pierce County.

30.18. Crawl Space – the shallow space beneath the bottom floor of a house with no basement; used for access and inspection of framing, electrical, plumbing, insulation, vapor barriers, or duct work. For purposes of the National Flood Insurance Program Elevation Certificate, this definition does not include spaces and an area that has subgrade around all sides, which shall be considered a basement.

31.19. Critical Aquifer Recharge Areas – areas with a critical recharging effect on aquifers used for potable water, including areas where an aquifer that is a source of drinking water is vulnerable to contamination that would affect the potability of the water, or is susceptible to reduced recharge.

32.20. Critical Areas – land that contains any of the following area, areas, and/or ecosystems: Aquifer Recharge Areas; Fish and Wildlife Habitat Conservation Areas; Frequently Flooded Areas; Geologically Hazardous Areas, or Wetlands; as defined in RCW 36.70A, as it now exists or may be hereinafter amended, and this Chapter (a) Wetlands, (b) areas with a critical recharging effect on aquifers used for potable water, (c) fish and wildlife habitat conservation areas; (d) frequently flooded areas; and (e) geologically hazardous areas.

33.21. Critical Facilities – those facilities occupied by populations or which handle dangerous substances including but not limited to hospitals, medical facilities, nursing homes; structures housing, supporting, or containing toxic or explosive substances; covered public assembly structures; school buildings through secondary, including daycare centers; buildings for colleges or adult education; police, fire, and emergency response installations; jails and detention facilities; and all structures with occupancy of greater than 5,000 people. These facilities are such that even a slight chance of flooding might be too great. Essential public facilities (as defined under EMC 18.20.080 and 18.100.050) are considered critical facilities for floodplain management purposes.

34.22. Debris Flow – the rapid downslope movement of a viscous mass of water-saturated sediments.

35.23. Degraded – to have suffered a decrease in naturally occurring functions and/or value due to activities undertaken or managed by persons on or off a site.

36.24. Delineation – a wetland study conducted in accordance with the approved federal wetland delineation manual and applicable regional supplements.

37. Department – the City of Edgewood Department of Community Development.

38.25. Depressional Pothole – a relatively sunken or low-lying area of the earth’s surface, especially one having no natural outlet for surface drainage.

39.26. Development – any human-induced change to improved or unimproved real property, including, but not limited to, the construction of buildings or other structures, placement of a manufactured...
40.27. Development activity – any construction, development, earth movement, clearing, or other site disturbance of the land, except as listed under exemptions. See EMC Section 18.20.070.

41.28. Director – the director head of the City of Edgewood Department of Community Development or his/her designee.

42.29. DRASIC – an acronym for a computer model developed by the National Water Well Association and Environmental Protection Agency used to measure aquifer susceptibility.

43. Dwelling Unit – one or more rooms designed for or occupied by one family for living or sleeping purposes and containing kitchen facilities for use solely by one family.

44.30. Earth or Earth Material – naturally occurring rock, soil, stone, sediment, or combination thereof.

45.31. Earthflow – a slow downslope movement of viscous, saturated sediments.

46. Elevated Building – a non-basement building that has its lowest elevated floor raised above ground level by foundation walls, shear walls, piers, pilings, or columns.

47.32. Elevation Certificate – the official form (FEMA Form 81-31) used to track development, provide elevation information necessary to ensure compliance with community floodplain management ordinances, and determine the proper insurance premium rate with Section B completed by community officials.

48.33. Encroachment – any development or regulated activity conducted inside the boundaries of any designated Critical Area and/or its associated buffer.

49.34. Engineer – as defined by RCW Chapter 18.43.

50.35. Engineering Geologist – a geologist who, by reason of his or her knowledge of engineering geology, acquired by education and practical experience, is qualified to engage in the practice of engineering geology, has met the qualifications in engineering geology established under Chapter 18.220 RCW, and has been issued a license in engineering geology by the Washington State Geologist Licensing Board.

51. Engineering Geology – a specialty of geology affecting the planning, design, operation, and maintenance of engineering works and other human activities where geological factors and conditions impact the public welfare or the safeguarding of life, health, property, and the environment.

52.36. Enhancement – actions performed within an existing degraded Critical Area and/or buffer to intentionally increase or augment one or more ecological functions or values of the existing area. Enhancement actions include, but are not limited to, increasing plant diversity and cover; increasing wildlife habitat and structural complexity with snags or woody debris; installing environmentally compatible erosion controls; removing non-native plant or animal species; or removing human-made structures or fill that are degrading ecological functions or values.

53. Erosion – the wearing away of the earth’s surface as a result of the movement of wind, water, or ice.

54.37. Erosion Hazard Areas – those areas that because of natural characteristics, including vegetative cover, soil texture, slope, gradient, and rainfall patterns, or human-induced changes to such characteristics, are vulnerable to erosion.

55. Excavation – the mechanical removal of earth material.
56. **Existing Manufactured Home Park or Subdivision**—a manufactured home park or subdivision for which the construction of facilities for servicing the lots on which the manufactured homes are to be affixed (including, at a minimum, the installation of utilities, the construction of streets, and either final site grading or the pouring of concrete pads) is completed before the effective date of the adopted floodplain management regulations.

57. **Expansion to an Existing Manufactured Home Park or Subdivision**—the preparation of additional sites by the construction of facilities for servicing the lots on which the manufactured homes are to be affixed (including the installation of utilities, the construction of streets, and either final site grading or the pouring of concrete pads).

58. **Facility**—all structures, contiguous land, appurtenances, and other improvements on the land used for recycling, reusing, reclaiming, transferring, storing, treating, disposing, or otherwise handling a hazardous substance. Use of the term “facility” includes underground and aboveground tanks and operations, which handle, use, dispose of, or store hazardous substances.

59. **Fill or Fill Material**—a deposit of earth material placed by human or mechanical means.

60. **Filling**—the act of placing fill or fill material on any surface, including temporary stockpiling of fill material.

61. **Financial Guarantee**—a surety bond or other security, e.g., cash escrow, cash set aside, assignment of funds, or letter of credit, which the City may allow a developer to utilize in lieu of completing the construction of required improvements prior to the City’s approval and acceptance of the improvements. The City establishes the amount and conditions which will ensure completion within a specific time period.

62. **Finished Floor**—the top of the next higher floor above the lowest floor. For purposes of the National Flood Insurance Program Elevation Certificate, the finished floor referenced in this regulation shall equal the top of the next higher floor.

63. **Fish and Wildlife Habitat Conservation Areas**—areas necessary for maintaining species in suitable habitats within their natural geographic distribution so that isolated subpopulations are not created as designated by WAC 365-190-080(5). “Fish and wildlife habitat conservation areas” does not include such artificial features or constructs as irrigation delivery systems, irrigation infrastructure, irrigation canals, or drainage ditches that lie within the boundaries of and are maintained by a port district or an irrigation district or company.

64. **Fisheries Biologist**—a professional with a degree in fisheries or certification by the American Fisheries Society, or with five (5) years of professional experience as a fisheries biologist.

65. **Flood or Flooding**—a general and temporary condition of partial or complete inundation of normally dry land areas from:
   a. The overflow of inland or tidal waters; or
   b. The unusual and rapid accumulation of runoff of surface waters from any source.

66. **Flood Hazard Areas**—areas of flooding identified by verifiable flooded areas using:
   a. Aerial photographs of the city, especially those taken in wintertime 1996 and 1997;
   b. Relevant and verifiable information from the city’s capacity analysis technical review Ad-hoc committee (CATRAC) draft report, 2000;
   c. Relevant and verifiable government and citizen photographs, notes, observations, etc. regarding historic ponding/flooding levels;
d. Relevant and verifiable information available through Pierce County;
e. Relevant and verifiable information available through the Federal Emergency Management Agency (FEMA), or
f. Areas of land located in floodplains, which are subject to a one percent or greater chance of flooding in any given year, including, but not limited to, streams, rivers, lakes, ponds, wetlands, or depressional areas and the like.

67.43. Flood Insurance Rate Map (FIRM) – the official map on which the Federal Insurance Administration (FIA) has delineated both the areas of special flood hazard and the risk premium zones applicable to the community.

68. Flood Insurance Study (FIS) – the official report provided by the Federal Insurance Administration (FIA) that includes flood profiles, FIRM(s), and the water surface elevation of the Base Flood.

69. Flood Fringe – the area subject to inundation by the Base Flood, but outside the limits of the Floodway, and which may provide needed temporary storage capacity for floodwaters.

70. Floodway – the channel of a river or other watercourse and the adjacent land areas that must be reserved in order to convey and discharge the Base Flood without cumulatively increasing the water surface elevation by more than one foot, and those areas designated as deep and/or fast-flowing water.

71. Fluvial Processes – the physical interaction of flowing water and the natural channels of rivers and streams.

72. Foundation Footing Setback – a typical geotechnical recommendation intended to ensure that a proposed structure is protected in the event of a slope failure or sloughage. A foundation footing setback is measured horizontally from the face of the foundation footing to the face of the slope. A foundation footing setback for this purpose should not be confused with a building or construction setback from a landslide hazard area buffer. A foundation footing setback is also not a buffer.

73. Frequently Flooded Area – lands in the floodplain subject to at least a one percent or greater chance of flooding in any given year, or within areas subject to flooding due to high groundwater. These areas include, but are not limited to, streams, rivers, lakes, wetlands, and areas where high groundwater forms ponds on the ground surface.

74. Geologically Hazardous Areas – areas that because of their susceptibility to erosion, sliding, earthquake, or other geological events are not suited to the siting of commercial, residential, or industrial development consistent with public health or safety concerns.

75. Geologist – an engineering geologist, or hydrogeologist, that is registered in the state of Washington.

76. Geotechnical Professional – a person with experience and training in analyzing, evaluating, and mitigating landslide, erosion, and/or seismic hazards. A geotechnical professional shall be licensed in the state of Washington as a geologist or professional engineer, and must have five or more years’ experience specializing in landslide, erosion, or seismic hazards, as applicable.

77. Geotechnical Report – a report prepared by a Geologist or Professional Engineer, licensed by the state of Washington with expertise in geotechnical engineering, evaluating the site conditions and mitigating measures necessary to reduce the risks associated with development in geologically hazardous areas.

Commented [JM9]: Moved to 14.80 since definition is not used anywhere else in Title 14.
29.53. **Grading or Clearing and Grading** – any excavating, filling, clearing, or creating of impervious surfaces, or any combination thereof of these items.

80. **Groundwater** – all water found beneath the ground surface, including slowly moving subsurface water present in aquifers and recharge areas.

81.54. **Habitat Management Plan** – a report prepared by a professional Wildlife or Fisheries biologist, which discusses and evaluates the measures necessary to maintain fish and wildlife habitat conservation areas on a proposed development site.

82.55. **Habitat of Local Importance** – an area, range, or habitat within which a species has a primary association and which, if altered, may reduce the likelihood that the species will maintain and reproduce over the long term. Examples include areas of high relative density or species richness, breeding habitat, winter range, and movement corridors. These areas may also include habitats that are of limited availability or high vulnerability to alteration.

83.56. **Hard Armoring** – the use of large rock and/or human-made materials to protect property from shoreline erosion. Such techniques include cement or concrete bulkheads, steel structures, rock wall revetments, and rock gabion structures. Hard armoring typically does not utilize or integrate any of soft armoring or soil bioengineering techniques.

84. **Hazardous Substance** – any liquid, solid, gas, or sludge, including any materials, substance, product, commodity, or waste, regardless of quantity, that exhibit any of the characteristics or criteria of hazardous waste; and including waste oil and petroleum products.

85. **Hazardous Substance Processing or Handling** – the use, storage, manufacture, or other land use activity involving hazardous substances, but does not include individually packaged household consumer products or quantities of hazardous substances of less than five gallons in volume per container. Hazardous substances shall not be disposed on-site unless in compliance with Dangerous Waste Regulations, Chapter 173-303 WAC, and any pertinent local ordinances such as sewer discharge standards.

86. **Hazardous Waste** – all dangerous waste and extremely hazardous waste as designated pursuant to RCW Chapter 70.105 and WAC Chapter 173-303.

1. “Dangerous waste” means any discarded, useless, unwanted, or abandoned substances including but not limited to certain pesticides or any residues or containers of such substances which are disposed of in such quantity or concentrations as to pose a substantial present or potential hazard to human health, wildlife, or the environment because such wastes or constituents or combinations of such wastes:
   a. Have short-lived, toxic properties that may cause death, injury, or illness, or have mutagenic, teratogenic, or carcinogenic properties or
   b. Are corrosive, explosive, flammable, or may generate pressure through decomposition or other means.

2. “Extremely hazardous waste” means any waste which:
   a. Will persist in a hazardous form for several years or more at a disposal site and which in its persistent form poses a significant environmental hazard and may be concentrated by living organisms through a food chain or may affect the genetic make up of human or wildlife, and
   b. Is disposed of at a disposal site in such quantities as would present an extreme hazard to humans or the environment.

87. **Hazardous Waste Treatment and Storage Facility** – a facility that treats and stores hazardous waste and is authorized pursuant to Chapter 70.105 RCW and Chapter 173-303 WAC. It includes all contiguous land and structures used for recycling, reusing, reclaiming, transferring, storing, treating, or disposing of hazardous waste. Treatment includes using physical, chemical, or biological processing of hazardous wastes to make such waste non-dangerous or less dangerous and safer for transport, amendable for energy or...
material resource recovery. Storage includes the holding of waste for a temporary period, but not the accumulation of waste on the site of generation as long as the storage complies with applicable requirements of Chapter 173-303 WAC.

88.57. **Holocene Epoch**—that part of the geologic record that post-dates the youngest deposits associated with the late Pleistocene Age Fraser Glaciation and is typically considered to be the past 10,000 years.

89.58. **Hydrogeologic Assessment**—a report detailing the subsurface conditions, the design of a proposed land use action, and the facilities operation which indicates the susceptibility and potential for contamination of groundwater supplies.

90. **Impervious Surface**—a hard surface, which prevents or retards the entry of water into the soil mantle under natural conditions prior to development, and/or a hard surface area, which causes water to run off the site in greater quantities or at an increased rate of flow than the flow present under natural conditions prior to development. Common impervious surfaces include, but are not limited to, roof tops, walkways, patios, driveways, parking lots or storage areas, concrete or asphalt paving, gravel roads, gravel parking lots, packed earthen materials, and oiled, macadam or other surfaces which similarly impede the natural infiltration of stormwater. Open, uncovered retention/detention facilities shall not be considered as impervious surfaces.

91. **Increased Cost of Compliance (ICC)**—a flood insurance claim payment up to $30,000 directly to a property owner for the cost to comply with floodplain management regulations after a direct physical loss caused by a flood. Eligibility for an ICC claim can be through a single instance of “substantial damage” or as a result of a “cumulative substantial damage.” (More information can be found in FEMA ICC Manual 201.)

92. **Lahar**—a mudflow or debris flow mobilized by water, which originates on the slopes of a volcano.

93. **Lake**—any impoundments of open water 20 acres or larger.

94. **Landslide**—the abrupt downslope movement of soil, rocks, or other surface matter on a site. Landslides may include but are not limited to slumps, debris flows, mudflows, earthflows, rockfalls, and snow avalanches.

95. **Landslide Hazard Areas**—any areas which are potentially subject to risk of mass movement due to a combination of geologic, topographic, and hydrologic factors.

96. **Large Animal**—an animal with an average weight of 100 pounds or more.

97. **License**—any form of written permission given to any person, organization, or agency to engage in any activity, as required by law or agency rule. A license includes all or part of a city permit, certificate, approval, registration, charter, or plat approvals or rezones to facilitate a particular proposal. The term does not include a license required solely for revenue purposes.

98. **LiDAR**—an acronym that stands for Light Detection and Ranging imaging.

99. **Liquefaction**—a process by which a water-saturated granular (sandy) soil layer loses strength because of ground shaking caused by an earthquake.

100. **Long-Term Commercial Significance**—the growing capacity, productivity, and soil composition of land, which makes it suitable for long-term commercial production, in consideration with the land’s proximity to population areas, and the possibility of more intense uses of land.

101. **Lowest Floor**—the lowest floor of the lowest enclosed area (including basement and crawl space). An unfinished or flood resistant enclosure, usable solely for parking of vehicles, building access, or storage in an area other than a basement area, is not considered a building’s lowest floor; provided, that such

Commented [JM10]: FEMA Definition moved to 14.80

The Edgewood Municipal Code (EMC) Critical Areas Ordinance Update 2018
enclosure is not built so as to render the structure in violation of the applicable non-elevation design requirements of this title.

103. Maintenance – those usual acts to prevent a decline, lapse, or cessation from a lawfully established condition without any expansion of or significant change from that originally established condition. For the purposes of this document, activities within landscaped areas within areas subject to native vegetation retention requirements may be considered maintenance only if they maintain or enhance the canopy and understory cover.

104. Manufactured Home or Mobile Home – a structure, transportable in one or more sections, which is built on a permanent chassis and is designed for use with or without a permanent foundation when connected to the required utilities. For floodplain management purposes, the term “manufactured home/mobile home” also includes park trailers, travel trailers, and other similar recreational vehicles placed on a site for greater than 180 consecutive days. For insurance purposes, the term “manufactured home/mobile home” does not include park trailers, travel trailers, recreational vehicles, or other similar vehicles.

105. Manufactured Home Park or Subdivision – a parcel (or contiguous parcels) of land divided into two or more manufactured home lots for rent or sale.

106. Mineral Resource Lands – those lands primarily devoted to the extraction of minerals or which have known or potential long-term commercial significance for the extraction of minerals.

107. Minerals – gravel, sand, valuable metallic substances, or other resources that are extracted from the ground.

108. Mitigation – means:
   a. Avoiding the impact altogether by not taking a certain action or parts of an action;
   b. Minimizing impacts by limiting the degree or magnitude of the action and its implementation, by using appropriate technology, or by taking affirmative steps to avoid or reduce impacts;
   c. Rectifying the impact by repairing, rehabilitating, or restoring the affected environment;
   d. Reducing or eliminating the impact over time by preservation and maintenance operations during the life of the action;
   e. Compensating for the impact by replacing, enhancing, or providing substitute resources or environments; and
   f. Monitoring the impact and taking appropriate corrective measures.

109. Mudflow – a debris flow containing an abundance of fine particles.

110. Native Vegetation or Native Plants – a mix of plant species comprising herbs, grasses, grass-like plants, shrubs and trees indigenous to the Puget Sound region that reasonably could be expected to naturally occur on the site.

111. Natural Resource Lands – agricultural and mineral resource lands, which have long-term commercial significance.

112. New Construction – structures for which the “Start of Construction” commenced on or after the following:

   For the purposes of determining flood insurance rates, the effective date of an initial FIRM (i.e., August 19, 1987, or August 4, 1988, specifically for Panel 350 only), and includes any subsequent improvements to such structures.

The Edgewood Municipal Code (EMC)
(Critical Areas Ordinance Update 2018)
114. For floodplain management purposes, the effective date of this floodplain management ordinance and includes any subsequent improvements to such structures.

115. For all other cases, the effective date of this Critical Areas ordinance.

116. New Manufactured Home Park or Subdivision – a manufactured home park or subdivision for which the construction of facilities for servicing the lots on which the manufactured homes are to be affixed (including, at a minimum, the installation of utilities, the construction of streets, and either final site grading or the pouring of concrete pads) is completed on or after the effective date of the adopted floodplain management regulations.

117. Ordinance – the ordinance, resolution, or other procedure used by the city to adopt regulatory requirements.

118. Ordinary High Water Mark (OHWM) – the mark on all lakes, streams and tidal waters that will be found by examining the beds and banks and ascertaining where the presence and action of waters are so common and usual, and so long continued in all ordinary years, as to mark upon the soil a character distinct from that of the abutting upland and vegetation, as that condition existed on the effective date of the ordinance codified in this title, or as it may naturally change thereafter. In any area where the ordinary high water mark cannot be found, the ordinary high water mark shall be the line of mean higher high tide in areas adjoining saltwater, and the line of mean high water in areas adjoining freshwater.

“Plat” means:

1. “Short subdivision” or “short plat” means the division or redivision of land into six or fewer lots, tracts, parcels, sites, or divisions for the purpose of sale, lease, or transfer of ownership.

2. “Subdivision” or “formal subdivision” means the division or redivision of land into seven or more lots, tracts, parcels, sites, or division for the purpose of sale, lease, or transfer of ownership. For floodplain management regulation purposes, this includes land over five acres in area situated within a flood hazard area.

119. Pond – naturally occurring impoundments of open water less than 20 acres in size and larger than 2,500 square feet, which maintain standing water throughout the year. See also Depressional Pothole.

120. Professional Engineer – an engineer currently licensed and registered in the state of Washington.

121. Reconstruction – the rebuilding of an existing structure which has been partially or completely destroyed by any cause, such as but not limited to fire, wind, landslide, and water, without increasing the original floor area or square footage area.

122. Recreational Vehicle (RV) – a vehicle built on a single chassis, 400 square feet or less when measured at the largest horizontal projection, designed to be self-propelled or permanently towable by a light duty truck, and designed primarily not for use as a permanent dwelling but as a temporary living quarters for recreational, camping, travel, or seasonal use.

123. Regulated Activities – means, but is not limited to, any of the following activities which are directly undertaken or originate in a regulated critical area or its buffer, building permit, commercial or residential, binding site plan, franchise right of way construction permit, site development permit, right of way permit, shoreline permits, short subdivision, use permits, subdivision, utility permits, or any subsequently adopted permit required approval not expressly exempted by this title. See EMC Section 14.30.020.

124. Rehabilitation – any improvements and repairs which are made to the interior and exterior of an existing structure, but which do not result in any increase in the floor area of the structure. This is also commonly referred to as a “remodel” of an existing structure.

125. Restoration – an action which returns habitat to a state in which its stability and functions approach its unaltered state as closely as possible. This may be accomplished through measures including,
but not limited to, re-vegetation, removal of intrusive stream bank structures, and removal or treatment of toxic materials. Restoration does not imply a requirement for returning the Critical Area to aboriginal or pre-European settlement conditions.

126.71. Revised Code of Washington (RCW) – an acronym that stands for Revised Code of Washington, all laws of a general and permanent nature heretofore or hereafter enacted by the legislature, and assigns permanent numbers as provided by law to all new titles, chapters, and sections thereof.

127.72. Riparian – the area adjacent to aquatic systems with flowing water that contains elements of both aquatic and terrestrial ecosystems which mutually influence each other. Riparian habitat begins at the ordinary high water mark and includes the entire extent of the floodplain and riparian areas of wetlands that are directly connected to the stream course.

128.73. Seismic Hazard Areas – areas subject to severe risk of damage as a result of earthquake-induced ground shaking, slope failure, settlement, or soil liquefaction.

129.74. Sensitive Areas – agricultural lands and mineral resource lands and all associated buffer zones. 

130.75. Shoreline – the line where a body of water and the shore meet or the strip of land along the shoreline. There are no waters within the City of Edgewood meeting the criteria of shorelines of statewide significance as defined by RCW 90.58.030.

131. Single-Family Dwelling – a detached building designed exclusively for occupancy by one family and containing one dwelling unit.

132.76. Site – a lot, parcel, tract, or combination of lots, parcels, or tracts on which a regulated activity is proposed.

133. Slope – an inclined earth surface, the inclination of which is expressed as the ratio of horizontal distance to vertical distance.

134.77. Sludge – a semi-solid substance consisting of settled solids combined with varying amounts of water and dissolved materials generated from a wastewater treatment plant or system or other sources, including septage sludge, sewage sludge, and industrial sludge.

135.78. Sludge Land Application Site – a site where stabilized sludge, septage, and other organic wastes are applied to the surface of the land in accordance with established agronomic rates for fertilization or soil conditioning.

136. Slump – the downward and outward movement of a mass of bedrock, colluvium, or other sediments along a distinct surface of failure.

137. Small Animal – an animal with an average weight of less than 100 pounds.

138.79. Special Occupancy Structures – those structures that have the potential to provide capacity for large numbers of people or special groups of people or assemblies such as but not limited to schools, jails and detention facilities, and resident incapacitated patients.

139.80. Species of Local Importance – species that are of local concern due to their population status or their sensitivity to habitat manipulation.

140.81. Soft Armoring Techniques or Soil Bioengineering Methods – the use of woody plants and limited structural-mechanical systems that are integrated in a structurally and environmentally sound manner to repair and protect slopes and shorelines against shallow mass wasting and surface erosion. Examples include, but are not limited to Measures such as live stake, live fascine, brushlayer, live cribwall, vegetated geogrid, branchpacking, live slope grading, beach berms, or earthen berms are examples of soft armoring techniques. Soft armoring techniques may also be referred to as soil bioengineering methods.

141. **Start of Construction** – includes substantial improvement, and means the date the building permit was issued, provided the actual start of construction, repair, reconstruction, placement or other improvement was within 180 days of the permit date. The “actual start” means either the first placement of permanent construction of a structure on a site, such as the pouring of slab or footings, the installation of piles, the construction of columns, or any work beyond the stage of excavation, or the placement of a manufactured home on a foundation. Permanent construction does not include land preparation, such as clearing, grading, and filling, nor does it include the installation of streets and/or walkways, nor does it include excavation for basements, footings, piers, or foundations, or the erection of temporary forms, nor does it include installation of access to buildings, such as garages or sheds not occupied as dwelling units, or not part of the main structure. For a substantial improvement, the “actual start of construction” means the first alteration of any wall, ceiling, floor, or other structural part of a building, whether or not that alteration affects the external dimensions of the building.

142. **82. Stockpiling** – the placement of material with the intent to remove it later.

143. **Stream** – a feature where surface waters produce a defined channel or bed. A defined channel or bed is an area that demonstrates clear evidence of the passage of water and includes, but is not limited to, bedrock channels, gravel beds, sand and silt beds, and defined-channel swales. The channel or bed need not contain water year-round. This definition is not intended to include artificially created irrigation ditches, canals, storm or surface water devices, or other entirely artificial watercourses, unless they are used by salmonids or created for the purposes of stream mitigation.

144. **Structure** – a walled and roofed building, including a gas or liquid storage tank that is principally above ground.

145. **Substantial Damage** – damage of any origin sustained by a structure whereby the cost of restoring the structure to its before-damaged condition would equal or exceed fifty (50) percent of the market value of the structure before the damage occurred.

146. **Substantial Improvement** – any repair, reconstruction, addition, rehabilitation, or other improvement of a structure, whereby the cost for the work exceeds fifty (50) percent of the market value of the existing structure before the “start of construction” of the improvement. The building official shall determine the current permit valuation based on the cost per square foot values in effect at the time of permit application. Substantial improvement shall be cumulative from the effective date of the ordinance codified in this chapter. This term includes structures which have incurred “substantial damage,” regardless of the actual repair work performed. The term does not, however, include either:

   a. Any project for improvement of a structure to correct existing violations of state or local health, sanitary, or safety code specifications which have been identified by the local code enforcement official and which are the minimum necessary to assure safe living conditions; or

   b. Any alteration of a structure listed on the National Register of Historic Places or a State Inventory of Historic Places; provided, that alteration will not preclude the structure’s continued designation as a “historic structure.”

147. **Talus** – a homogenous area of rock rubble ranging in average size 0.15 to 2.0 meters (0.5 to 6.5 feet), including riprap slides and mine tailings. Talus areas may be associated with cliffs.

148. **Toe of Slope** – a distinct topographic break in slope at the lowermost limit of the landslide or erosion hazard area.

149. **TPCHD** – an acronym that stands for the Tacoma-Pierce County Health Department.

Commented [JM16]: FEMA Definition – not used elsewhere in Title 14, so moved to 14.80.

Commented [JM17]: FEMA Definition – moved to 14.80.
149.87. Underground Storage Tank or UST – one tank or a combination of multiple tanks, including the underground pipes connected thereto, which are used to contain or dispense an accumulation of hazardous substances or hazardous wastes, and the total volume of which (including the volume of underground pipes connected thereto) is 10 percent or more beneath the surface of the ground.

150. Urban Governmental Services – those governmental services historically and typically delivered by cities, and includes storm and sanitary sewer systems, domestic water systems, street cleaning services, and other public utilities associated with urban areas and normally not associated with nonurban areas.

151.88. Urban Growth – growth that makes intensive use of the land for the location of buildings, structures, and impermeable surfaces to such a degree as to be incompatible with the primary use of such land for the production of food, other agricultural products, or fiber, or the extraction of mineral resources. When allowed to spread over wide areas, urban growth typically requires urban governmental services.

152. Utility Line – pipe, conduit, cable, or other similar facility by which services are conveyed to the public or individual recipients. Such services shall include, but are not limited to, water supply, electric power, gas, communications, and sanitary sewage.

153. Variance – a grant of relief from the requirements of this title that permit construction in a manner that would otherwise be prohibited by this title, per EMC 14.10.085.

154.89. View Corridor – an area, which affords views of lakes, mountains, or other scenic amenities normally enjoyed by residential property owners.

155.90. Violation – the failure of a structure or other development activity to be fully compliant with the provisions of this Title. With regard to the floodplain management regulations, projects without the elevation certificate, other certifications, or other evidence of compliance required in Chapter 14.70 EMC are presumed to be in violation until such time as that documentation is provided. See EMC Chapter 1.10 for penalties.

156.91. Volcanic Hazard Areas – those areas subject to pyroclastic flows, lava flows, and inundation by debris flows, mudflows, or related flooding resulting from geologic or volcanic events on Mount Rainier.

158. Water Dependent – a structure for commerce or industry that cannot exist in any other location and is dependent on the water by reason of the intrinsic nature of its operations.

159.93. Wellhead Protection Area – the area within the 10-year time-of-travel zone boundary or zone of contribution area of a Group A public water system well, as delineated on the Critical Aquifer Recharge Areas Critical Area Map, by the water system purveyor or its designee, pursuant to WAC 246-290-135.

160.94. Wetland – areas that are inundated or saturated by surface water or groundwater at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands generally include swamps, marshes, bogs, and similar areas. Wetlands do not include those artificial wetland sites, including, but not limited to, irrigation and drainage ditches, grass-lined swales, canals, detention facilities, wastewater treatment facilities, farm ponds, and landscape amenities, or those wetlands created after July 1, 1990, that were unintentionally created as a result of the construction of a road, street, or highway. Wetlands may include those artificial wetlands intentionally created from non-wetland areas created to mitigate conversion of wetland.
161.95. Wetland Category – the numeric designation (I through IV) assigned to a wetland to indicate the wetland’s overall function and value. Wetland categories rank the city’s wetlands from highest (Category I) to lowest (Category IV) using the current version of the Washington State Wetland Rating System for Western Washington (Hruby, 2014).

162. Wetland Class – the U.S. Fish and Wildlife Service wetland classification scheme that uses a hierarchy of systems, subsystems, classes, and subclasses to describe wetland habitat types (refer to USFWS, December 1979, Classification of Wetlands and Deepwater Habitats of the United States for a complete explanation of the wetland classification scheme). These include, for example, forested, scrub-shrub, emergent, and aquatic bed.

163.96. Wetland Mosaic – a patchwork of wetlands that is considered one unit where each patch of wetland is less than one acre and the areas delineated as vegetated wetland are more than fifty percent of the total area of the wetland and uplands together.

97. Wetland Specialist – a person that obtained Professional Wetland Scientist (PWS) or Wetland Professional In-Training (WPIT) certification from the Society of Wetland Scientists or a qualified wetland professional with experience and training in Wetlands issues and with experience in performing a Delineation, analyzing Wetland functions and values, analyzing Wetland impacts, and recommending Wetland mitigation and Restoration. A Qualified Wetland Professional is a person with experience and training that includes, at a minimum:

a. A B.S., B.A., or equivalent degree in biology, botany, environmental studies, fisheries, soil science, wildlife, agriculture, or related field; and

b. Two years of related work experience; and

c. One-year experience delineating Wetlands using the federal delineation manual and applicable regional supplement; Unified Federal Manual and preparing Wetland reports and mitigation plans; OR.

d. Four years of related work experience and training; and

e. Two years of experience delineating Wetlands using the Unified Federal Manual and preparing Wetland reports, and mitigation plans.

A Wetland Specialist with at least two years of full-time work experience as a wetlands professional, including delineating wetlands, using the federal manual and supplements, preparing wetland reports, conducting function assessment, and development and implementing mitigation plans.

164.98. Wildlife Biologist – a professional with a degree in wildlife, or certification by the Wildlife Society, or with five (5) years professional experience as a wildlife biologist. (Ord. 17-492 § 2 (Exh. A); Ord. 16-461 § 2; Ord. 15-447 § 1 (Exh. A); Ord. 02-200 § 2).

The Edgewood Municipal Code (EMC)
Critical Areas Ordinance Update 2018

07/10/18 Regular Council Meeting
Page 407 of 634
Chapter 14.230

USE AND ACTIVITY REGULATIONS

Sections:
14.230.010 Permitted uses.
14.230.020 Regulated uses and activities.
14.230.040 Nonconforming uses and structures.
14.230.050 Reasonable use exceptions.
14.230.060 Current use assessment program.

14.230.010 Permitted uses.
Uses permitted on properties designated as Critical Areas shall be the same as those permitted in the zone classification shown in the City’s Official Zoning Map unless specifically prohibited by this title. (Ord. 02-200 § 2).

14.230.020 Regulated uses and activities.
A. Unless the requirements of this title are met, the Department shall not grant any approval or permission to alter the condition of any land, water, or vegetation, or to construct or alter any structure or improvement regulated through the following: building permit, commercial or residential; binding site plan; franchise right-of-way construction permit; site development permit; right-of-way permit; short subdivision; large lots; use permits; subdivision; utility permits; or any subsequently adopted permit or required approval not expressly exempted by this chapter.

B. The following activities are regulated within any Critical Areas and its and/or their buffer, unless exempted by EMC 14.230.030:
   1. Removing, excavating, disturbing, or dredging soil, sand, gravel, minerals, organic matter, or materials of any kind;
   2. Dumping, discharging, or filling, Grading, or Clearing and Grading;
   3. Draining, flooding, or disturbing the water level or water table. In addition, an activity which involves intentional draining, flooding, or disturbing the water level or water table in a wetland or stream in which the activity itself occurs outside the regulated area shall be considered a regulated activity;
   4. Driving, piling, or placing obstructions, including placement of utilities;
   5. Constructing, reconstructing, installing, demolishing, or altering the size of any structure or infrastructure, including manufactured and/or mobile homes;
   6. Altering the character of a regulated area by destroying or altering vegetation through clearing, harvesting, cutting, intentional burning, shading, or planting;
   7. The division of land;
   8. The creation of hard surfaces; and,

A. Individuals, organizations, or associated parties shall avoid potential impacts to Critical Areas and their buffer to the greatest degree feasible. To be exempt from this title does not give permission to degrade a Critical Area or its buffer or ignore risk from natural hazards. Any incidental damage to, or alteration of, a
The Edgewood Municipal Code (EMC)
Chapter 14.30 WETLANDS

2. Critical Area or its buffer that is not a necessary outcome of the exempted activity shall be restored, rehabilitated, or replaced at the responsible party’s expense.

B. The following activities are exempt from the provisions of this title:

1. Operation, maintenance, or repair of existing structures, infrastructure improvements, utilities, public or private roads, dikes, levees, or drainage systems, that do not require construction permits, if the activity does not further alter or increase the impact to, or encroach further within, the Critical Area or buffer and there is no increased risk to life or property as a result of the proposed operation, maintenance, or repair.

Operation and maintenance includes vegetation management performed in accordance with best management practices BMPs that are a part of ongoing maintenance of structures, infrastructure, or utilities, provided that such management actions are part of ongoing maintenance, do not expand further into the Critical Area or buffer, are not the result of an expansion of the structure or utility, and do not directly impact an endangered or threatened species.

2. Normal maintenance or repair of existing structures or developments, including damage by accident, fire, or elements, within the past three (3) years. “Normal maintenance” includes those usual acts to prevent a decline, lapse, or cessation from a legally established condition. “Normal repair” means to restore a development to a state comparable to its original condition including, but not limited to, its size, shape, configuration, location, and external appearance, within three (3) years reasonable period after decay or partial destruction, except where repair causes substantial adverse effects to Critical Areas or their buffers. Replacement of a structure or development may be authorized as repair where such replacement is the common method of repair for the type of structure or development and the replacement structure or development is comparable to the original structure or development including, but not limited to, its size, shape, configuration, location, and external appearance and the replacement does not expand further into the Critical Area or buffer.

Refer to EMC Section 14.230.040.D (D) for requirements associated with repair of substantial damage of non-conforming structures.

3. Reconstruction, remodeling, or maintenance of existing single-family residential structures and accessory structures that are located outside a Flood Hazard Area and active Landslide Hazard Area; provided, that a one-time only expansion of the building footprint does not increase by more than 25 percent and that the new construction or related activity does not further intrude into the Critical Area or related buffer. The exemption shall not apply to reconstruction which is proposed as a result of structural damage associated with a Critical Area, such as slope failure in a landslide hazard area or flooding in a flood hazard area.

4. Reconstruction, remodeling, or maintenance of structures, other than single-family structures and accessory structures that are located outside a Flood Hazard Area or active Landslide Hazard Area; provided, that such reconstruction, remodeling, or maintenance does not increase the floor area nor extend beyond the existing ground coverage. The exemption shall not apply to reconstruction which is proposed as a result of site or structural damage associated with a Critical Area, such as slope failure in a Landslide Hazard Area or flooding in a Flood Hazard Area.

5. Site investigative work necessary for land use application submittals such as surveys, soil logs, percolation tests, and other related activities. Critical Area impacts shall be minimized and disturbed areas shall be immediately restored.

6. Emergency actions necessary to prevent imminent threat or danger to public health or safety, or to public or private property, or serious environmental degradation.

   a. The Department shall review all proposed emergency actions to determine the existence of the emergency and reasonableness of the proposed actions taken; however, post-emergency actions, such as submittal of permits, completion of City review, modification or removal of the emergency repair work, or mitigation shall be required by the City.

   b. Erosion protection measures shall only be allowed as an emergency action when the owner can demonstrate that there is an imminent threat to an existing residential, commercial, industrial, or agricultural structure. The owner shall retain either a City staff or an Engineering Geologist to conduct
$\text{Edgewood Municipal Code (EMC) }$

**Chapter 14.30 WETLANDS**

Page 35

The Edgewood Municipal Code (EMC) 

The Critical Areas Ordinance Update 20187

---

a site investigation and provide adequate documentation that the situation is actually an emergency. An emergency action is not warranted when the structure is located outside the active landslide area.

c. After the emergency, the person or agency undertaking the action shall fully fund and conduct necessary restoration and/or mitigation for any impacts to the Critical Area and buffers resulting from the emergency action in accordance with an approved Critical Area report and mitigation plan. The person or agency undertaking the action shall apply for review, and the alteration, Critical Area report, and mitigation shall be reviewed by the department in accordance with the review procedures contained herein. Restoration and/or mitigation activities must be initiated within 90 days of the date of the emergency activity, and both must be fully completed within one (1) year.

7. Installation, construction, replacement, repair, operation or alteration of natural gas, cable and telecommunication facilities, electric facilities and lines, water, sewer or storm lines, pipes, mains, equipment, or appurtenances in publicly owned right-of-way, which may be within or adjacent to any Critical Area or its buffers, subject to full review and approval of the department, including any mitigation and/or restoration requirements established by the department.

8. Removal by hand of manmade litter and control of noxious weeds that are included on the state noxious weed list (Chapter 16-750 WAC) or invasive plant species as identified by the city. Control may be conducted by clipping, pulling, or digging, or by an alternative non-mechanical method upon approval of a plan by the department.

9. Activities undertaken to comply with a United States Environmental Protection Agency superfund order, or a Washington Department of Ecology order, pursuant to the Model Toxics Control Act, including the following activities:

a. Remediation or removal of hazardous or toxic substances;

b. Source control; and

c. Natural resource damage restoration.

10. Activities within a portion of a wetland buffer or fish and wildlife habitat conservation area located landward of an existing, substantially developed area, such as a paved area, dike, levee, or permanent structure which eliminates or greatly reduces the impact of the proposed activities on the wetland or fish and wildlife habitat conservation area. The department shall review the proposal to determine the likelihood of associated impacts.

11. Passive recreation such as hunting, hiking, fishing, and wildlife viewing that does not involve the construction of trails.

12. Enhancement actions that do not involve clearing, grading, or construction activities, e.g., revegetation with native plants and installation of nest boxes. Enhancement activity proposals shall be reviewed by the department.

13. Forest practices conducted in accordance with the requirements of the Forest Practice Act (Chapter 76.09 RCW) and its rules, with the exception of the conversion of forest land to a use other than commercial forestry (Class IV conversions).

14. Existing and ongoing Agricultural activities, provided that they comply with the provisions of Chapter 14.80 EMC, Flood Hazard Areas, and implement applicable Best Management Practices (BMPs) contained in the latest editions of the USDA Natural Resources Conservation Service Field Official Technical Guide; or develop a farm conservation plan in coordinate with the local conservation district. The BMPs and/or farm plans should address potential impacts to Critical Areas from livestock, nutrient and farm chemicals, soil erosion and sediment control, and agricultural drainage infrastructure. The BMPs and/or farm plans should ensure that ongoing Agricultural activities minimize their effects on water quality, riparian ecology, salmonid populations, and wildlife habitat.

---
14.230.040 Nonconforming uses and structures.

A. An established use or existing structure located in a wetland, fish and wildlife habitat conservation area, landslide or erosion hazard area, flood hazard area, and their associated buffers that was lawfully permitted prior to the effective date of this title, but which is not currently in compliance with this title, may continue subject to the following:

A1. Nonconforming Use Expansion. Nonconforming uses shall not be expanded or changed in any way that increases the nonconformity without a permit issued pursuant to the provisions of this title.

B2. Nonconforming Structure Expansion. Existing structures shall not be expanded or altered in any manner that will increase the nonconformity without a permit issued pursuant to the provisions of this title, except as provided in EMC 14.230.030(B).

C3. Discontinued Uses. Activities or uses which are discontinued for twelve (12) consecutive months shall be allowed to resume only if they are in compliance with this title.

D4. Substantial Damage. Nonconforming structures, except for structures located in a floodway or landslide hazard area which are damaged or destroyed by fire, explosion, flood, or other casualty, may be restored or replaced if reconstruction is commenced within one year of such damage and is substantially completed within 18 months of the date such damage occurred. The reconstruction or restoration shall not serve to expand, enlarge, or increase the nonconformity except as allowed through the provisions in EMC 14.230.030(B). Structures in a floodway or landslide hazard area may be allowed to be restored only up to the limits of substantial improvement, as set forth in each chapter. (Ord. 02-200 § 2).

B. The provisions of EMC Section 18.90.110 may also apply to nonconformities not expressly described in this chapter.

14.230.050 Reasonable use exceptions.

A. General Requirements.

If the application of this chapter would deny all reasonable use of the property, the applicant may apply for a Reasonable Use Exception pursuant to this subsection. The Hearing Examiner may approve alterations to a Critical Area or its Buffers to allow a reasonable use not otherwise allowed by this chapter when the following criteria are met:

1. The application of this chapter would deny all reasonable use of the property;

2. There is no other reasonable use with less impact on the Critical Area;

3. The proposed development does not pose an unreasonable threat to the public health, safety, or welfare on or off the development proposal site and is consistent with the general purposes of this title and the public interest; and

4. Any alterations permitted to the Critical Area or its Buffer shall be the minimum necessary to allow for reasonable use of the property; and any authorized alteration of a Critical Area under this subsection shall be subject to conditions established by the Department including, but not limited to, mitigation under an approved mitigation plan.

If, after a property owner makes application for a variance, and the variance is denied, the property owner may apply for a reasonable use exception. A reasonable use exception may be requested when it is alleged that the application of this title would deny all reasonable use of a site. Approval of a reasonable use exception allows development which development which is consistent with the general purposes of this title and the public interest. Nothing in this title is intended to preclude all reasonable use of property.

2. The provisions outlined in this section shall only be used when application of this title would deny all reasonable use of a site.
3. Applications for a reasonable use shall automatically constitute an application for a variance to reduce front, side, or rear yard setback requirements. The decision maker shall examine the feasibility of reducing setbacks as a method of locating a structure outside a critical area or its associated buffer prior to granting a reasonable use exception for allowing construction to occur within a critical area or its associated buffer. Reductions in setback requirements shall be given preference over granting of a reasonable use exception.

5. The proposed impact to the critical area shall be the minimum necessary to allow for reasonable use of the property.

6. Mitigation may be required to assure that the proposal will result in no net loss of critical area functions and values, consistent with the best available science.

7. The creation of new lots within critical areas and their associated buffers is prohibited.

8. The proposal must comply with all provisions in Chapter 14.70 EMC, Flood Hazard Areas, and Chapter 14.80 EMC, Landslide Hazard Areas.

B. Application Requirements. A complete application for a reasonable use exception shall include the following information:

1. A description of the areas of the site that contains a critical area, buffer, or within setbacks required under this title;

2. A description of the amount of the site that is within setbacks required by other standards of the zoning code;

3. A description of the proposed development, including a site plan;

4. An analysis of the impact that the amount of development described in subsection (B)(3) of this section would have on the critical area(s);

5. An analysis of whether any other reasonable use with less impact on the critical area(s) and associated buffer(s) is possible;

6. A design of the proposal so that the amount of development proposed as reasonable use will have the least impact practicable on the critical area(s);

7. An analysis of the modifications needed to the standards of this title to accommodate the proposed development;

8. A description of any modifications needed to the required front, side, and rear setbacks; building height; and buffer widths to provide for a reasonable use while providing greater protection to the critical area(s);

9. Such other information as the department determines is reasonably necessary to evaluate the issue of reasonable use as it relates to the proposed development, such as but not limited to a wetland analysis report, mitigation plan, habitat evaluation study, and/or a buffer enhancement plan.

C. Review. A reasonable use exception is a Type III permit and shall be processed according to the procedures in EMC chapter Section 18.40.080.00. Notice of public hearing.

1. Public Hearing Required. The department shall set a date for a public hearing after all requests for additional information or plan correction, as set forth in EMC 18.40.150, have been satisfied. The public hearing shall follow the procedures set forth in EMC 18.40.190. Notice of public hearing.

2. Decision Criteria. The decisionmaker may approve a reasonable use exception if the decisionmaker determines that the applicant has demonstrated all of the following criteria are met:

   a. The proposed impact to the critical area shall be the minimum necessary to allow for reasonable use of the property.
   b. Mitigation may be required to assure that the proposal will result in no net loss of critical area functions and values, consistent with the best available science.
   c. The creation of new lots within critical areas and their associated buffers is prohibited.
   d. The proposal must comply with all provisions in Chapter 14.70 EMC, Flood Hazard Areas, and Chapter 14.80 EMC, Landslide Hazard Areas.

The Edgewood Municipal Code (EMC) Critical Areas Ordinance Update 2018
a. The proposed development is located on an existing lot of record that was created prior to the effective date of the ordinance codified in this title and there is no other reasonable use or feasible alternative to the proposed development with less impact on the critical area(s) and/or associated buffers including phasing of project implementation, change in timing of activities, buffer averaging or reduction, setback variance, relocation of driveway, or placement of structure; and

b. The development cannot be located outside the critical area and/or its associated buffer due to topographic constraints of the parcel or size and/or location of the parcel in relation to the limits of the critical area and/or its associated buffer and a building setback variance or road variance has been reviewed, analyzed, and rejected as a feasible alternative; and

c. The proposed development does not pose a threat to the public health, safety, or welfare on or off the site, nor shall it damage nearby public or private property; and

d. Any alteration of the critical area(s) shall be the minimum necessary to allow for reasonable use of the property; and

e. The inability of the applicant to derive reasonable use of the property is not the result of actions by the applicant in subdividing the property or adjusting a boundary line thereby creating the undevelopable condition after February 1, 1992; and

f. The proposal mitigates the impacts on the critical area(s) to ensure no net loss of critical area functions, while still allowing reasonable use of the site; and

g. The proposed activities will not jeopardize the continued existence of species listed by the state or federal government as endangered, threatened, sensitive, or documented priority species or priority habitats; and

h. The proposed activities will not cause significant degradation of groundwater or surface water quality.

3. Decisionmaker’s Authority. The decisionmaker has the authority to approve an application for a reasonable use exception, approve with additional requirements above those specified in this title, require modification of the proposal to comply with specified requirements or local conditions, or deny the application if it fails to comply with the requirements of this section.

4D. Required Written Findings and Determinations. A reasonable use exception may be approved by the decisionmaker only if all of the findings are made in writing and supported by the record, as outlined in the decision criteria identified within EMC 14.20.050 (C)(2).

14.230.060 Current use assessment program.

A. An owner of an Agricultural and timberland, or open space desiring current use classification under Chapter 84.34 RCW may file for such current use classification with the Pierce County assessor-treasurer’s office.

B. The department shall notify the assessor-treasurer’s office when restrictions on development occur on a particular site.

C. The assessor-treasurer’s office shall consider the Critical Areas and buffer requirements of this title in determining the fair market value of land. Any owner of an undeveloped buffer which has been placed in a separate tract or tracts, protective easement, public or private land trust dedication, or other similarly preserved area shall have that portion of land assessed consistent with those restrictions. (Ord. 02-200 § 2).
Chapter 14.340

WETLANDS

Sections:
14.340.010 Purpose.
14.340.025 Buffer standards—Wetlands
14.340.040 Allowed activities.
14.340.050 Mitigation requirements.
14.340.060 Appendices.

14.340.010 Purpose.

A. The purpose of this chapter is to avoid or, in appropriate circumstances, to minimize, rectify, reduce, or compensate for impacts arising from land development and other activities affecting wetlands, and to maintain and enhance the biological and physical functions and values of wetlands with respect to water quality maintenance, stormwater and floodwater storage and conveyance, fish and wildlife habitat, primary productivity, recreation, education, and historic and cultural preservation. When wetland impacts occur, mitigation will be required to achieve no net loss of wetland in terms of acreage, function, and value. (Ord. 02-200 § 2).

B. This Chapter is intended to be consistent with the requirements of RCW Chapter 36.70A and to implement the goals and policies of the City’s Comprehensive Plan for protecting Wetlands.

A. Designation. All areas within the city meeting the definition of wetland in EMC Chapter 14.2015 EMC are hereby designated as Critical Areas.

B. Identification and Delineation.

1. Wetlands shall be identified and delineated by a qualified wetland specialist in accordance with the approved federal wetland delineation manual and applicable regional supplements.

2. A Wetland Delineation is valid for five (5) years, after which date the City shall require verification that the wetland boundaries and prior conditions have not changed to determine whether a revision or additional assessment is needed.

C. Mapping.

1. The approximate location and extent of wetlands are shown on maps maintained by the City.

2. These maps are useful as a guide for project applicants and property owners, but the maps do not provide a conclusive or definitive indication of wetland presence or its extent.

3. Other wetlands may exist that do not appear on the maps, and some wetlands that appear on the maps may not meet all of the wetland designation criteria. The City shall update the maps periodically as new wetland areas are identified and as new wetland information becomes available

D. Wetland Categories Rating. Wetlands shall be rated according to the Washington Department of Ecology Wetland rating system, as set forth in the guidelines and approved by the Department of Ecology.

The Edgewood Municipal Code (EMC)
Critical Areas Ordinance Update 2018
E. Illegal Modifications. Wetland rating categories shall not change due to illegal modifications made by the applicant or with the applicant’s knowledge.

A. Determining buffer widths. Buffer widths shall be measured horizontally from the perpendicular line established at the wetland edge as shown in Table 14.340.0530.1(1). Note that Table 1 is Reduced Wetland Buffers with minimization of impacts. See Table 3 for buffers that apply without minimization techniques.

B. The following buffer widths have been established in accordance with the best available science. They are based on the category of wetland and the habitat score as determined by a qualified wetland professional using the Washington State Wetland Rating System for Western Washington: 2014 Update (Ecology Publication #14-06-029, or as revised and approved by Ecology). The adjacent land use intensity is assumed to be high.

1. For wetlands that score 5 points or more for habitat function, the buffers in Table 14.30.050.1 can be used if both of the following criteria are met:
   i. A relatively undisturbed, vegetated corridor at least 100 feet wide is protected between the wetland and any other Priority Habitats as defined by the Washington State Department of Fish and Wildlife.
   1. The latest definitions of priority habitats and their locations are available on the WDFW web site at: http://wdfw.wa.gov/hab/phshabs.htm
   2. The corridor must be protected for the entire distance between the wetland and the Priority Habitat by some type of legal protection such as a conservation easement.
   3. Presence or absence of a nearby habitat must be confirmed by a qualified biologist. If no option for providing a corridor is available, Table 14.30.050.1 may be used with the required measures in Table 14.030.050.2 alone.
   ii. The measures in Table 14.30.050.2 are implemented, where applicable, to minimize the impacts of the adjacent land uses.

2. For wetlands that score 3-4 habitat points, only the measures in Table 14.30.050.2 are required for the use of Table 14.30.050.1

CD. Modification of Buffer Widths. The standard buffer widths of subsection (A) of this section may be modified by averaging, reducing, or increasing.

1. Buffer Averaging. Buffer width averaging may be allowed only where the applicant demonstrates all of the following through the submittal of a Wetland Report that is prepared by a qualified professional:
   a. Buffer Encroachment is unavoidable;
   b. The wetland contains variations in sensitivity due to existing physical characteristics.

The Edgewood Municipal Code (EMC) Critical Areas Ordinance Update 2018
c. Width averaging will provide equal or greater protection of current wetland functions and values.

f. The total buffer area after averaging is no less than the buffer area prior to averaging.

g. The minimum width of the buffer at any given point shall be at least seventy-five percent (75%) of the standard width, or twenty-five (25) feet, whichever is greater. The width of the Buffer at any given point after averaging shall be no smaller than 75 percent of the standard Buffer.

h. The averaging is accomplished within the project boundaries; and.

i. Measures will be taken to ensure that there is no loss of Wetland function due to the Buffer averaging.

2. Buffer Width Reductions. Buffer width reduction up to a maximum of twenty-five (25) percent may be allowed when the applicant demonstrates the following circumstances:

a. Buffer encroachment is unavoidable.

b. All exposed areas are stabilized with native vegetation, as appropriate.

c. The project includes a buffer enhancement plan as part of the mitigation required by EMC 14.30.060.

The buffer enhancement plan shall use plant species which are native, noninvasive to the project area.

d. Buffer reduction with enhancement will provide equal or greater protection of current wetland functions and values.

Buffer reductions may not be used in combination with buffer averaging.

a. The department may require increased buffer width(s) when any of the following are identified:

aj. A larger buffer is necessary to maintain viable populations of existing species;

bj. The wetland is used by, or associated with, species listed by the federal government or the state as endangered, threatened, sensitive, or as documented priority species or habitats, or essential or outstanding potential sites such as heron rookeries or raptor nesting areas;

cj. The adjacent land is susceptible to severe erosion and erosion control measures will not effectively prevent adverse wetland impacts;

dj. The adjacent land has minimal vegetative cover, or slopes greater than 20 percent. (Ord. 02-200 § 2).

b. If an applicant chooses not to apply the Wetland Impact Minimization Measures identified in Table 14.40.030.2, then the Wetland Buffers applicable to the site shall be per Table 14.40.030.3.

Commented [DG22]: Per a conversation with the DoE, their buffer standards in the table above were already reduced. If we propose another 25 percent reduction, then we are no longer in line with their best available science supported buffer distances. See Page 13 of the Wetlands Guidance for Small Cities, Western WA Version. Buffer Width Reductions section removed.

A. Wetland Report Requirements. When the Department’s maps, sources, or field investigations indicate that the proposed project area may be located within 300 feet of a known or suspected wetland, the applicant shall submit a wetland critical areas report prepared by a qualified wetland scientist. The report requirement may be waived if the Department determines that there are no potential direct or indirect impacts on the wetlands or their buffers that would result from the proposed development. Wetland critical areas reports shall comply with the requirements of this Chapter established in EMC 14.30.070, Appendix A.

B. Single-Family Dwelling Wetland Review. Construction of a single-family dwelling and regulated activities accessory to a single-family dwelling, such as driveways, gardens, fences, walls, lawns, and on-site septic systems, may utilize an alternative wetland review procedure, subject to the following:

1. Prior to issuance of a building permit, site development permit, or on-site sewage system permit, the applicant shall submit a single-family wetland certification form completed by a wetland scientist that certifies either:
   a. No regulated wetlands are present within 300 feet of the project area; or
   b. Wetlands are present within 300 feet of the project area, but the buffer does not extend onto the project site.

2. The single-family certification form may be used only to authorize single-family dwellings and accessory structures. It may not be used for new agricultural activities, expansion of existing agricultural activities, forest practices activities, commercial projects, land divisions, and buffer width modifications.

C. Time Limitation. Wetland delineations and reports that have been accepted by the city shall be valid for a period of five (5) years, unless the department determines that new information warrants revision of the delineation or report.

14.340.0450 Allowed activities.

A. The three (3) types of wetlands identified in the paragraphs 1-3 The following wetlands are exempt from the requirement to avoid impacts in EMC 14.10.070 (B) and may be altered if the impacts are fully mitigated based on the remaining mitigation sequencing actions in EMC 14.10.070 (B). In order to verify
conditions, a Critical Areas Report meeting the requirements of EMC 14.340.070, Appendix A must be submitted.

1. All isolated Category IV wetlands less than 4,000 square feet that:
   a. Are not associated with any riparian areas or their buffers;
   b. Are not part of a wetland mosaic;
   c. Are not associated with shorelines of the state or their associated buffers;
   d. Do not score 5 or more points for habitat functions based on the current version of the Washington State Wetland Rating System for Western Washington (Ecology, 2014);
   e. Do not contain a Priority Habitat or a Priority Area for a Priority Species identified by the Washington Department of Fish and Wildlife, federally listed species or their critical habitat, or Habitats or Species of Local Importance as identified in EMC 14.450.0340(A).

2. Wetlands less than 1,000 square feet that meet the criteria specified in subsection (A)(1) of this section.

3. Utility projects within the outer 25 percent of any wetland buffer which have minor or short-duration impacts, as determined by the Department in accordance with the criteria below, and which do not significantly impact the function or values of wetlands; provided, that such projects are constructed with best management practices BMPs and additional restoration measures are provided. Minor activities shall not result in the transport of sediment or increased stormwater. Such allowed minor utility projects shall meet the following criteria:
   a. There is no practical alternative to the proposed activity with less impact on wetlands;
   b. The activity involves the placement of a utility pole, street signs, anchor, or vault or other small component of a utility facility; and
   c. The activity involves disturbance of an area less than 75 square feet.

B. The activities listed below are allowed in wetlands and their buffers, and do not require submission of a Critical Areas Report, except where such activities would result in a loss of the functions and values of wetlands; provided, that such activities would result in a loss of the functions and values of wetlands; a Critical Areas Report must be submitted to the Department to determine if function or value will be lost. These activities include:

1. Activities in wetlands in areas managed according to a special area management plan or other plan adopted by the Department and specifically designed to protect wetland resources.

   2. Trimming of vegetation for purposes of providing view corridors will be allowed. Provided, that trimming is limited to view corridors of a maximum 20-foot width and the benefit to fish and wildlife habitat may not be reduced. No more than thirty (30) percent of the live crown of a tree may be removed. Trimming shall be limited to hand pruning of branches and vegetation and does not include felling, topping, or the removal of trees. (Ord. 02-200 § 2).

   a. The activity will not increase the risk of landslide or erosion.

3. Drilling for utilities or other utility corridors under a wetland, with an entrance or exit portal located completely outside of the wetland buffer, provided that the drilling does not interrupt the ground water connection to the wetland or percolation of surface water down through the soil column. Specified studies by a hydrologist are necessary to determine whether the ground water connection to the wetland or percolation of surface water down through the soil column will be disturbed.

14.340.060 Mitigation requirements.
A. Mitigation. Compensatory mitigation is required for all unavoidable alterations to wetlands or their buffers, except for buffer averaging when done in accordance with this Chapter EMC 14.30.025(C)(1). Compensatory mitigation actions shall replace functions affected by the alteration and shall provide equal or greater functions compared to the impacted wetland. All projects must first demonstrate compliance with EMC Section 14.10.0800.070(B)(4) (Mitigation Sequencing) prior to development of compensatory mitigation plans.
B. Preference of Mitigation Actions. Compensatory wetland mitigation of wetland areas shall occur in the following order of preference:

1. Restoration: The manipulation of the physical, chemical, or biological characteristics of a site with the goal of returning natural or historic functions to a former or degraded wetland. For the purpose of tracking net gains in wetland acres, restoration is divided into:
   a. Re-establishment: The manipulation of the physical, chemical, or biological characteristics of a site with the goal of returning natural or historic functions to a former wetland. The re-establishment must result in a gain in wetland acres (and functions). Activities could include removing fill material, plugging ditches, or breaking drain tiles.
   b. Rehabilitation: The manipulation of the physical, chemical, or biological characteristics of a site with the goal of repairing natural or historic functions of a degraded wetland. The rehabilitation must result in a gain in wetland function but does not result in a gain in wetland acres. Activities could involve breaching a dike to reconnect wetlands to a floodplain or return tidal influence to a wetland.

2. Creation: The manipulation of the physical, chemical, or biological characteristics of a site to develop a wetland on an upland or deepwater site where a wetland did not previously exist. Creation results in a gain in wetland acres. Activities typically involve excavation of upland soils to elevations that will produce a wetland hydroperiod, create hydric soils, and support the growth of hydrophytic plant species.

3. Enhancement: The manipulation of the physical, chemical, or biological characteristics of a wetland site to heighten, intensify, or improve specific function(s) or to change the growth stage or composition of the vegetation present. Enhancement is undertaken for specified purposes such as water quality improvement, flood water retention, or wildlife habitat. Enhancement results in a change in some wetland functions and can lead to a decline in other wetland functions, but does not result in a gain in wetland acres. Activities typically consist of planting vegetation, controlling non-native or invasive species, modifying site elevations or the proportion of open water to influence hydroperiods, or some combination of these activities.

C. Approaches to Compensatory Mitigation. Mitigation for alterations to wetland and their buffers shall rely on the approaches listed below.

1. Wetland Mitigation Banks. Credits from a certified wetland mitigation bank may be used to compensate for impacts within the service area specified in the mitigation bank instrument. Use of credits from a wetland mitigation bank certified under Chapter 173-700 WAC is allowed if:
   a. The department determines that it would provide appropriate compensation for the proposed impacts, and
   b. The impact site is located in the service area of the bank.
   c. The proposed use of credits is consistent with the terms and conditions of the certified bank instrument.
   d. Replacement ratios for projects using bank credits is consistent with replacement ratios specified in the certified mitigation bank instrument.

2. In-Lieu Fee Mitigation. Credits from an approved in-lieu-fee program may be used when all the following apply:
   a. The approval authority determines that it would provide environmentally appropriate compensation for the proposed impacts.
b. The proposed use of credits is consistent with the terms and conditions of the approved in-lieu-fee program instrument.

c. Project using in-lieu-fee credits shall have debits associated with the proposed impacts calculated by the applicant's qualified Wetland Specialist using the credit assessment method specified in the approved instrument for the in-lieu-fee program.

d. The impacts are located within the service area specified in the approved in-lieu-fee instrument.

3. Permittee-responsible mitigation. In this situation, the permittee performs the mitigation after the permit is issued and is ultimately responsible for implementation and success of the mitigation. Permittee-responsible mitigation may occur at the site of the permitted impacts or at an off-site location within the same watershed. If available, the use of mitigation banks and in-lieu-fee programs are preferable to permittee-responsible mitigation.

D. Wetland mitigation ratios. The ratios listed in Table 14.340.060 apply to permittee-responsible mitigation. The first number specifies the acreage of replacement wetland required, and the second number specifies the acreage of wetland altered or relocated.

The Director may increase the ratios under the following circumstances:

1. Uncertainty as to the probable success of the proposed restoration or creation;
2. Significant period of time between destruction and replication of wetland values;
3. Projected losses in functional value; or
4. The compensatory mitigation is off-site.

E. Wetland buffer mitigation. To mitigate unavoidable impacts to functions and values of wetland, a minimum buffer ratio of 1:1 (alteration area: mitigation area) is required. This ratio assumes that creation or restoration of a Wetland buffer with appropriate native vegetation is sufficient to compensate for the functions and values affected by alteration of an existing wetland buffer. If enhancement of an existing wetland buffer is proposed as mitigation, a
higher mitigation ratio may be required. For any proposed wetland buffer activities, the applicant must demonstrate that the functions and values of the altered wetland buffer will be fully replaced by the proposed mitigation. The Department may increase the buffer mitigation ratios under the following circumstances:

1. The replacement ratio needed to recover the lost functions and values of buffer area is greater than 1:1 based upon the existing type of vegetative cover of either the impact site or the proposed mitigation site.
2. Uncertainty exists as to the probable success of the proposed restoration or creation;
3. A significant period of time will elapse between impact and replication of wetland functions; or
4. The impact was an unauthorized impact.

F. Wetland and buffer mitigation plans. Compensatory wetland mitigation plans shall be consistent with Wetland Mitigation in Washington State – Part 2: Developing Mitigation Plans (Ecology, 2006); and Selecting Wetland Mitigation Sites Using a Watershed Approach (Ecology, 2009), or as revised. Mitigation plans shall comply with the requirements established in EMC 14.340.070, Appendix B.

14.340.070 Appendices.
A. Wetland Report.
B. Wetland Mitigation Plan

APPENDIX A

WETLAND REPORT

A. A wetland Critical areas report shall, at a minimum, include the following:

1. The general Critical areas report requirements in EMC Chapter 14.10.080;
2. Map showing the location of all wetlands and required buffers within three hundred (300) feet of the proposed development;
3. An analysis of the onsite wetland(s) include the following site- and proposal-related information:
   a. Documentation of any fieldwork performed on the site, including, but not limited to, field delineation data sheets for delineations and wetland rating forms;
   b. Wetland acreage;
   c. Wetland category;
   d. A discussion of the water sources supplying the wetland and documentation of hydrologic regime (locations of inlet and outlet features, water depths throughout the wetland, evidence of recharge or discharge);
   e. A discussion of the functions of existing wetlands, including vegetative, faunal, and hydrologic conditions; and
   f. A description of the methodologies used to conduct the wetland delineations;
4. A discussion of measures, including avoidance, minimization, and mitigation, proposed to preserve existing wetlands;

The Edgewood Municipal Code (EMC)
Critical Areas Ordinance Update 2018+4
5. A detailed discussion of the direct and/or indirect potential impacts on the wetland by the project; and

6. The wetland mitigation plan requirements of EMC Chapter 14.340.070, Appendix B, if the activity will result in unavoidable impacts to wetlands or their buffers.

APPENDIX B

WETLAND MITIGATION PLAN

A. A wetland mitigation plan shall, at a minimum, include the general mitigation plan requirements in EMC Chapter 14.10.090 and the following information:

1. The general mitigation plan requirements in EMC 14.10.083 and the following information:
   1.1. Existing and proposed wetland acreage;
   1.2. Vegetative and faunal conditions;
   1.3. Surface and subsurface hydrologic conditions including an analysis of existing and future hydrologic regime and proposed hydrologic regime for enhanced, created, or restored mitigation areas;
   1.4. Relationship within watershed and to existing waterbodies;
   1.5. Soils and substrate conditions, topographic elevations;
   1.6. Existing and proposed adjacent site conditions;
   1.7. Required wetland buffer (including any buffer reduction or averaging and mitigation proposed to enhance buffer);
   1.8. Property ownership;
   1.9. A discussion of ongoing management practices that will protect wetlands after the project site has been developed, including proposed monitoring and maintenance programs;

10. A bond estimate for the installation, including site preparation, plant materials and installation, fertilizers, mulch, and the proposed monitoring and maintenance work for the required number of years, pursuant to EMC Chapter 14.10.080.070.
Chapter 14.450 CRITICAL FISH AND WILDLIFE HABITAT CONSERVATION AREAS

Sections:
14.450.010 Purpose.
14.450.020 Fish and wildlife habitat conservation area identification and classification.
14.450.025 Buffer standards—Fish and wildlife habitat conservation areas.
14.450.030 Fish and wildlife habitat conservation area review procedures.
14.450.040 Allowed activities.
14.450.050 Mitigation requirements.
14.450.060 Alternate of Watercourses.
14.450.070 Appendix.

14.450.010 Purpose.

Many land use activities can impact the habitats of fish and wildlife. Special care must be taken in the management of lands that support fish and wildlife species to ensure that development occurs in a manner that is sensitive to their habitat needs. The purpose of this chapter is to identify fish and wildlife habitat conservation areas and establish habitat protection procedures and mitigation measures that are designed to result in no net loss of habitat functions and values. These areas are necessary for maintaining species within their natural geographic distribution so that isolated subpopulations are not created as designated by WAC 365-190-080(5). (Ord. 02-200 § 2).

14.450.020 Fish and wildlife habitat conservation area identification and classification.

A. Designation. Fish and wildlife habitat conservation areas include:

1. Waters of the state. Waters of the state include lakes, rivers, ponds, streams, and all other surface waters and watercourses within jurisdiction of the state of Washington, as classified in WAC 222-16-030.

2. Areas with which federally designated endangered, threatened, and sensitive species have a primary association. The U.S. Fish and Wildlife Service and the National Marine Fisheries Service should be consulted for current federal listing status.

3. Areas with which state designated endangered, threatened, and sensitive species have a primary association. The Washington State Department of Fish and Wildlife should be consulted for current state listing status.

4. State priority habitats and areas associated with state priority species. The state Department of Fish and Wildlife should be consulted for current state listing status.

5. State priority habitats and areas associated with state priority species. The state Department of Fish and Wildlife should be consulted for current listing of priority habitats and species.

6. Habitats of end of lo c i mportance. The following fish and wildlife species and their associated habitat areas shall be regulated under this chapter:

   a. Fish. Coho salmon (Oncorhynchus kisutch), pink salmon (Oncorhynchus gorbuscha), chum salmon (Oncorhynchus keta), cutthroat trout (Oncorhynchus clarkia), and steelhead (Oncorhynchus mykiss).

   b. Birds. Great blue heron (Ardea herodias) and green heron (Butorides virescens).

   c. Areas with which state-listed monitor or candidate fish or wildlife species or federally listed candidate fish or wildlife species have a primary association, and which if altered may reduce the likelihood that the species will survive and reproduce over the long term.

   d. Heron rookeries.
6. Areas not included. Fish and wildlife habitat conservation areas does not include such artificial features or constructs as irrigation delivery systems, irrigation infrastructure, irrigation canals, or drainage ditches that lie within the boundaries of and are maintained by a port district or an irrigation district or company.

B. Habitat boundary survey. If the department determines that a regulated habitat conservation area may be present within the project vicinity, the department may require the habitat area to be delineated and/or mapped by a qualified Fisheries biologist or Wildlife biologist who is knowledgeable of fish and wildlife habitat within western Washington, or by the Washington Department of Fish and Wildlife. The boundary of aquatic habitats shall be the ordinary high water mark of the waterbody. The management recommendations for Washington’s priority habitats and species or federal equivalent should be used as a tool for identifying and delineating wildlife habitat boundaries. The city may waive this requirement if there is adequate information available on the area proposed for development to determine the impacts of the proposed development and appropriate mitigating measures.

C. Mapping. The approximate location and extent of waters of the state and fish presence within the city are shown on maps maintained by the city. The city shall update the maps periodically as new information becomes available. The approximate location and extent of other fish and wildlife habitat conservation areas are shown on maps maintained by the Washington State Department of Fish and Wildlife and other state and federal agencies. These maps are to be used as a guide and do not provide definitive information about fish and wildlife habitat conservation area size or presence. Fish and wildlife habitat conservation areas may exist that do not appear on the maps.

D. Waters of the state classification. The city hereby adopts the water typing system specified in WAC 222-16-030, as described below:

1. Type S. All waters, within their ordinary high water mark, meeting the criteria as “shorelines of the state” and “shorelines of statewide significance” under RCW Chapter 90.58. As of the effective date of this title, there are no Type S streams within the city’s jurisdiction.

2. Type F: segments of natural waters other than Type S Waters, which are within the bankfull widths of defined channels and periodically inundated area of their associated wetlands, or within lakes, ponds, or impoundments having a surface area of 0.5 acre or greater at seasonal low water and which in any case contain fish habitat.

3. Type Np: all segments of natural waters within the bankfull width of defined channels that are perennial non-fish habitat stream. Perennial stream waters do not go dry any time of a year of normal rainfall. However, for the purpose of water typing, Type Np Waters include the intermittent dry portions of the perennial channel below the uppermost point of perennial flow.

4. Type Ns: All segments of natural waters within the bankfull width of the defined channels that are not Type S, F, or Np waters. These are seasonal, non-fish habitat streams in which surface flow is not present for at least some portion of a year of normal rainfall and are not located downstream from any stream reach that is a Type Np Water. Ns Waters must be physically connected by an above-ground channel system to Type S, F, or Np Waters.

14.450.025 Buffer standards—Fish and wildlife habitat conservation areas.
A. Determining buffer widths. Buffers shall be delineated, both on a site plan or plat, and on the property prior to approval of any regulated activity.

1. Aquatic habitat conservation areas.

   a. Buffers for aquatic habitat conservation areas shall be based upon the water type classification of the water body as specified in WAC 22-16-030. Refer to Table 14.450.025 for the water types and the associated buffer requirements.
b. The required buffer width shall be measured in all directions from the ordinary high water mark.

c. The required buffer shall be extended to include any adjacent regulated wetland(s), landslide hazard areas, and/or erosion hazard areas and require buffer their respective buffers.

2. Non-aquatic habitat conservation areas. Appropriate buffers for critical habitat areas and species not listed in Table 14.450.02530 shall be determined by the Washington Department of Fish and Wildlife or by a qualified wildlife biologist and documented in an approved habitat management plan.

</tbody>
</table>

1 In the event that buffers for any habitat conservation area or other critical area are contiguous or overlapping, the landward-most edge of all such buffers shall apply.

2 As of the effective date of this title, there are no Type S streams within the City’s jurisdiction.

BG. Modification to Buffer Width Requirements. The standard buffer widths of subsection (A) of this section may be modified as follows:

1. Buffer Width Reductions. A buffer reduction may be proposed through submittal of a habitat management plan. Buffer reductions of up to a maximum of 25 percent may be allowed when the applicant demonstrates the following circumstances:
   a. Buffer encroachment is unavoidable.
   b. The existing buffer is predominately un-vegetated, composed of nuisance species, or is in an otherwise highly disturbed condition.
   c. Buffer reduction with enhancement will provide equal or greater protection of current habitat functions and values, and will not adversely affect salmon habitat.
   d. The buffer reduction will not increase the risk of slope failure or downslope stormwater drainage impacts.
   e. The minimum width of the buffer at any given point shall be at least seventy-five (75) percent of the standard width, or twenty-five (25) feet, whichever is greater.
   f. The project includes a buffer enhancement plan as part of the mitigation required by EMC, Chapter 14.450.060070. The buffer enhancement plan shall use native plant species.

2. Buffer Width Increases. The department may require increased buffer width(s) when any of the following are identified:
   a. A larger buffer is necessary to maintain viable populations of existing species or protect the existing functions of the habitat area;
b. The adjacent land is susceptible to severe erosion and erosion control measures will not effectively prevent adverse habitat impacts;

c. The adjacent land has minimal vegetative cover or slopes greater than 20 percent; or

d. The habitat area is in an area of high tree blow down potential. In these cases the habitat area may be expanded an additional 50 feet on the windward side.

14.450.0340 Fish and wildlife habitat conservation area review procedures.

A. Habitat management plan. When if the Department’s maps, sources, or field investigations indicate that the proposed project area is located within 300 feet of a known or suspected fish or wildlife habitat conservation area, then the applicant shall submit a habitat management plan prepared by a qualified fisheries biologist or wildlife biologist. The requirement to provide a habitat conservation plan for habitat conservation areas may be waived if the Department determines that there are no potential direct and/or indirect impacts on designated species or habitats that would result from the proposed development activity. Habitat management plans shall comply with the requirements established in EMC 14.450.0280, Appendix A.

14.450.0450 Allowed activities.

A. The following activities may be permitted in habitat conservation areas and/or their buffers when all reasonable measures have been taken to avoid and mitigate adverse effects on species and habitats and a net loss of habitat functions will not occur. In order to verify the following conditions, a habitat management plan meeting the requirements of EMC 14.450.0280, Appendix A must be submitted.

1. Stream Erosion Control Measures. New or replacement stream erosion control measures shall be subject to the following standards:

a. The proposal complies with the provisions set forth in EMC Chapter 14.110. EMC.

b. The required habitat management plan demonstrates the following:

i. Natural stream processes will be maintained. The project will not result in increased beach erosion or alterations to, or loss of, stream substrate within one-quarter mile of the site.

ii. The stream erosion control measure will not adversely impact fish or wildlife habitat conservation areas or associated wetlands.

2. Docks and launching ramps. Construction, reconstruction, repair, and maintenance of docks and public or private launching ramps are subject to all of the following:

a. The dock or ramp is located and oriented and constructed in a manner that minimizes adverse effects on water quality, movement of aquatic and terrestrial life, ecological processes, spawning habitat, and wetlands.

b. Docks and ramps shall meet or exceed all relevant state and federal permit requirements.

3. Roads, Trails, Bridges, and Rights-of-Way. Construction of trails, roadways, bridges, and culverts may be allowed subject to the following standards:

a. There is no other feasible alternative route with less impact on the environment.

b. The crossing minimizes interruption of downstream movement of wood, ice, and gravel and the movement of all fish and wildlife.

c. Stream crossings, where necessary, shall only occur as near to the perpendicular with the stream as possible and be limited to the minimum width necessary.
d. Road bridges and culverts are designed according to the latest versions of the Washington Department of Fish and Wildlife Water Crossing Design Guidelines (Washington Department of Fish and Wildlife) the Anadromous Salmonid Passage Facility Design guidelines (National Marine Fisheries Service).

e. Trails and associated viewing platforms shall be made of pervious materials.

4. Utility Facilities. New utility lines and facilities are permitted to cross habitat conservation areas if they comply with the following standards

   a. Avoid fish and wildlife habitat conservation areas to the maximum extent possible.

   b. Cross at an angle greater than 60 degrees to the centerline of the channel in streams or perpendicular to the channel centerline whenever boring under the channel is not feasible.

   c. Crossings are contained within the footprint of an existing road or utility crossing where possible.

   d. Avoid paralleling the stream or following a down-valley course near the channel.

   e. Do not increase or decrease the natural rate of shore migration or channel migration.

   f. Bore beneath the scour depth and hyporheic zone of the water body and channel migration zone (CMZ) where feasible.

5. Public Flood Protection Measures. New public flood protection measures and expansion of existing facilities may be approved, subject to the department’s review and approval of a Habitat Management Plan.

6. Instream Structures. New instream structures (e.g., such as, but not limited to, high flow bypass, sediment ponds, instream ponds, retention and detention facilities, dams, weirs, etc.) shall be allowed only as part of an approved mitigation or restoration project or watershed basin plan approved by the department and upon acquisition of any required state or federal permits. The structure shall be designed to avoid modifying flows and water quality in ways that may adversely affect critical fish species. Proposals for placement of water quality, water quantity, or other instruments or structures within a stream to gather data, or as a mitigation measure, shall be exempt from the provisions of this title upon review and approval by the department.

7. Stormwater Conveyance Facilities. Conveyance structures whose sole purpose is to convey stormwater already treated for quality, or water bypassed around water quality treatment facilities pursuant to an approved stormwater plan, may be constructed subject to the following standards:

   a. No other feasible alternatives with less impact exist;

   b. Mitigation for impacts is provided;

   c. Stormwater conveyance facilities shall incorporate fish habitat features;

   d. Vegetation shall be maintained and, if necessary, added adjacent to all open channels and ponds in order to retard erosion, filter out sediments, and shade the water.

8. On-Site Sewage Systems and Wells.

   a. New on-site sewage systems and individual wells are permitted if accessory to an approved structure.

   b. Repairs to failing on-site sewage systems associated with an existing structure shall be accomplished by utilizing one of the following methods that result in the least impact:

      i. Connection to an available public sewer system;
ii. Replacement with a new on-site sewage system located in a portion of the site that has already been disturbed by development and is located landward as far as possible, provided the proposed sewage system is in compliance with the provisions in EMC Chapter 14.8070 EMC; or

iii. Repair to the existing on-site septic system.

B. The activities listed below are allowed in habitat conservation areas and their buffers, and do not require submission of a habitat management plan, except where such activities would result in a loss of the functions and values of habitat conservation areas or buffers.

1. Vegetation Removal, Disturbance, and Introduction. Limited vegetation removal shall be allowed subject to EMC Section 18.90.180 - (t) Tree Preservation and the following standards in paragraphs a-b:

   a. Hazard trees may be cut; provided, that:
   
   i. The applicant submits a report from a certified arborist, licensed architect, or professional forester that documents the hazard and provides a replanting schedule for the replacement trees and receives written approval from the city approving the tree removal;
   
   ii. Tree cutting shall be limited to limb and crown thinning, unless otherwise justified by the landowner’s expert. Where limb or crown thinning is not sufficient to address the hazard, trees should be topped to remove the hazard rather than cut at or near the base of the tree. All vegetation cuttings (tree stems, branches, tops, etc.) shall be left within the habitat area or buffer unless removal is warranted due to the potential for disease transmittal to other healthy vegetation;
   
   iii. The landowner shall replace any trees that are felled or topped with new trees at a ratio of two replacement trees for each tree felled or topped. Tree species that are native and indigenous to the site shall be used;
   
   iv. Hazard trees determined to pose an imminent threat or danger to public health or safety, or to public or private property, or serious environmental degradation may be removed or topped by the landowner prior to receiving written approval from the department; provided, that within 14 days following such action, the landowner shall submit the necessary report and replanting schedule demonstrating compliance with subsections (B)(1)(a)(i) through (iii) of this section.

   b. Trimming of vegetation for purposes of providing a view corridor will be allowed; provided, that the trimming is limited to view corridors of a maximum 20-foot width, that no more than 30 percent of the live crown is removed, and the benefits to fish and wildlife habitat are not reduced. No more than 30 percent of the live crown may be removed. Trimming shall not include felling, topping, or the removal of trees.

2. Fencing. Fencing shall be placed in such a manner as to maintain wildlife movement corridors and not create any fish passage blockages. The department shall approve the location, type, and height of any proposed fencing.

14.450.0560 Alteration of Watercourses

Alteration of Watercourses. Any alteration of a watercourse shall comply with the following standards:

1. The city will notify adjacent communities and the Washington State Department of Ecology prior to any alteration or relocation of a watercourse proposed by the applicant and submit evidence of such notification to the Federal Insurance Administration.

2. The city shall require that maintenance be provided within the altered or relocated portion of said watercourse, so that the flood-carrying capacity is not diminished. Therefore, if the maintenance program calls for future cutting of planted vegetation used in performing the alteration, the system shall be oversized at the time of construction to compensate for said vegetation growth or any other natural factor that may need future maintenance.
3. Alterations and relocations, including stabilization projects, shall not degrade fish habitat and shall be subject to the following provisions:

   a. Structures that cross all watercourses and water bodies shall meet fish habitat requirements of the Washington Department of Fish and Wildlife.

   b. Any culverts that are used on fish-bearing watercourses shall be arch/bottomless culverts or equivalent that provide comparable fish protection, and must meet fish habitat requirements of the latest edition of Washington Department of Fish and Wildlife’s Design Manual for Culverts.

   c. Bridges or other crossings shall allow for uninterrupted downstream movement of wood and gravel, be as close to perpendicular to the watercourse as possible, and be designed to minimize fill and to pass the bankfull flows.

   d. Watercourse alterations shall maintain natural meander patterns, channel complexity, and floodplain connectivity. Where feasible, such characteristics shall be restored as part of the watercourse alteration.

   e. The applicant shall identify the channel migration zone for the watercourse at the project site and for a reasonable reach upstream and downstream of the site, and shall not undertake actions as part of the alteration that would in any way inhibit movement of the channel.

   f. Existing culverts that do not meet fish habitat requirements shall be removed or replaced as part of the approved watercourse alteration project.

   g. Watercourse alteration projects shall not result in a fish blockage of side channels. Known fish barriers into side channels shall be removed as part of the approved watercourse alteration project.

   h. For any watercourse alteration of a Type S or F water (pursuant to EMC 14.450.020.D) whose channel is subject to migration, bioengineered (soft) armoring of streambanks is required to allow for woody debris recruitment, gravels for spawning, and creation of side channels. The bioengineering technique used must be designed in accordance with the latest edition of Washington Department of Fish and Wildlife’s Integrated Streambank Protection Guidelines.

4. The project Engineer shall design the watercourse alteration so the activity does not increase the water surface elevation (zero-rise); decrease the capacity, storage, and conveyance of the watercourse; or cause an adverse impact to adjacent, cross-channel, or upstream or downstream properties. (Ord. 17-492 § 2 (Exh. A); Ord. 02-200 § 2).

14.450.0670 Mitigation requirements.

A. Mitigation. Compensatory mitigation is required for all unavoidable alterations to fish and wildlife habitat conservation areas or their buffers. Mitigation of alteration to habitat areas shall achieve equivalent or greater biological functions. Mitigation shall address each functional attribute affected by the alteration to achieve functional equivalency or improvement on a per function basis. Mitigation elements to be addressed may include, but are not limited to: restoration of previously degraded areas and key habitat features, restoration of riparian vegetation communities to provide shade and large woody debris, addition of large woody debris, and installation of upland habitat features. All projects must first demonstrate compliance with EMC 14.10.080070.B (Mitigation Sequencing) prior to development of compensatory mitigation plans.

B. Type of mitigation required. In determining the extent and type of mitigation required, the department may consider all of the following:

1. The ecological processes that affect and influence habitat structure and function within the watershed or sub-basin;

2. The individual and cumulative effects of the action upon the functions of the Critical Area and associated watershed;
3. Observed or predicted trends regarding the gains or losses of specific habitats or species in the watershed, in light of natural and human processes;

4. The likely success of the proposed mitigation measures;

5. Effects of the mitigation actions on neighboring properties; and

6. Opportunities to implement restoration actions formally identified by an adopted shoreline restoration plan, watershed planning document prepared and adopted pursuant to Chapter 90.82 RCW, a salmonid recovery plan or project that has been identified on the Salmon Recovery Board Habitat Project List or by the Washington State Department of Fish and Wildlife as essential for fish and wildlife habitat enhancement.

C. Location. Compensatory mitigation shall be provided on-site or off-site in the location that will provide the greatest ecological benefit to the species and/or habitats affected and have the greatest likelihood of success. Mitigation shall occur as close to the impact site as possible, within the same sub-basin, and in a similar habitat type as the permitted alteration, unless the applicant demonstrates, to the satisfaction of the department through a watershed- or landscape-based analysis that demonstrates mitigation within an alternative sub-basin of the same watershed would have greater ecological benefit, then the Director may approve the demonstrated alternate mitigation.

D. Mitigation plans. When required by this chapter, the applicant shall submit a fish and wildlife habitat conservation area mitigation plan meeting the requirements of this Chapter EMC 14.40.060.
APPENDIX A

HABITAT MANAGEMENT PLAN

A. A habitat management plan shall, at a minimum, include the following:

1. The general Critical Areas report requirements in EMC 14.10.082;
2. Identification of any endangered, threatened, sensitive, or candidate species that have a primary association with habitat on the project area;
3. Map showing the location of the ordinary high water mark and/or locations of wildlife habitat conservation area(s) and their buffers in accordance with EMC 14.40.025;
4. The vegetative, faunal, topographic, and hydrologic characteristics of the habitat conservation area;
5. A discussion of any federal, state, or local special management recommendations, including Washington Department of Fish and Wildlife habitat management recommendations, that have been developed for species or habitat located on or adjacent to the project area;
6. A detailed discussion of the direct and/or indirect potential impacts on the habitat conservation area by the project. Such discussion shall include a discussion of the ongoing management practices that will protect habitat after the project site has been developed;
7. The mitigation plan requirements of EMC 14.10.083 if the activity will result in unavoidable impacts to habitat conservation areas. Mitigation measures may include:
   a. Prohibition or limitation of use and development activities within the habitat conservation area;
   b. Retention of vegetation and/or re-vegetation of areas/habitats critically important to species;
   c. Special construction techniques;
   d. Implementation of erosion and sediment control measures;
   e. Habitat restoration or enhancement, i.e., fish passage barrier removal;
   f. Seasonal restrictions on construction activities on the subject property;
   g. Clustering of development activities on the subject property; and/or
   h. Any other requirements and/or recommendations from federal, state, or local special management recommendations, including the Washington State Department of Fish and Wildlife’s habitat management guidelines.

The Edgewood Municipal Code (Critical Areas Ordinance Update 2017)
Chapter 14.560 CRITICAL AQUIFER RECHARGE AND WELLHEAD PROTECTION AREAS

Sections:
14.560.010 Purpose.
14.560.030 Critical AQUIFER RECHARGE Areas review procedures.
14.560.040 Critical AQUIFER RECHARGE Areas standards.

14.560.010 Purpose.
The purpose of this chapter is to protect Critical AQUIFER RECHARGE Areas from degradation or depletion resulting from new or changed land use activities. Due to the exceptional susceptibility and vulnerability of groundwater underlying aquifer recharge areas to contamination and the importance of such groundwater as sources of public water supply, it is the intent of this chapter to safeguard groundwater resources and Wellhead Protection Areas by mitigating or precluding future discharges of any contaminants from new land use activities. (Ord. 02-200 § 2).

A. General. Critical AQUIFER RECHARGE Areas are areas that have a critical recharging effect on groundwater used for potable water supplies and/or that demonstrate a high level of susceptibility or vulnerability to groundwater contamination from land use activities. These areas include the following:
1. Aquifer Recharge Areas, which are the boundaries of the two highest DRASTIC zones that are rated 180 and above on the DRASTIC index range, as identified in Map of Groundwater Pollution Potential, Edgewood, Washington, National Water Well Association, U.S. Environmental Protection Agency (EPA);
2. Wellhead Protection Areas, as defined in Chapter 14.20. Wellhead protection areas that lie within the 10-year time of travel zone boundary of a group A public water system well, as delineated by the water system purveyor or its designee, pursuant to WAC 246-290-135; and
3. Sole Source Aquifers, which are areas that have been designated by the U.S. Environmental Protection Agency pursuant to the Federal Safe Water Drinking Act. As of the effective date of this title, there are no designated Sole Source Aquifers within city limits.

14.560.030 Critical AQUIFER RECHARGE Areas review procedures.
A. General Requirements
1. The city’s Critical AQUIFER RECHARGE Areas map provides an indication of where Critical AQUIFER RECHARGE Areas are located within the city and the map is updated as necessary.
2. Any proposed development located within protection Critical AQUIFER RECHARGE Areas shall comply with the standards set forth in EMC Chapter 14.560.040.
3. Any hazardous uses, as defined in EMC 14.50.040, shall require the submittal of a Hydrogeologic Assessment, as set forth in subsection (B) of this section.
4. The Department may waive some of the Critical AQUIFER Area protective measure provisions contained in EMC Chapter 14.10.080, as deemed appropriate by the Department Director and can be shown to meet the requirements associated with Best Available Science, if required.

B. Hydrogeologic Assessment.
1. The Hydrogeologic Assessment shall be prepared, signed, and dated by a state licensed Geologist or Hydrogeologist.
2. The hydrogeologic assessment shall be submitted in the form of a report detailing the subsurface conditions, the design of a proposed land use action, and the facilities operation which indicates the susceptibility and potential for contamination of groundwater supplies. The hydrogeologic assessment shall, at a minimum, include the general critical area report requirements of EMC Chapter 14.10.082 in addition to the following fifteen (15) items listed in paragraphs a-o:

a. Information sources;

b. Geologic setting – includes well logs or borings used to identify information;

c. Background water quality;

d. Groundwater elevations;

e. Location and depth to perched water tables;

f. Recharge potential of a facility site, e.g., the permeability and transmissivity;

g. Groundwater flow direction and gradient;

h. Current available data on wells located within one-quarter mile of the site;

i. Current available data on any spring within one-quarter mile of the site;

j. Surface water location and recharge potential;

k. Water source supply to a facility, e.g., a high capacity well;

l. Any sampling schedules necessary;

m. Discussion of the effects of the proposed project on the groundwater resource;

n. Discussion of potential mitigation measures, should it be determined that the proposed project will have an adverse impact on groundwater resources; and

o. Any other information as required by the TPCHD, including information required under Washington Department of Ecology Publication 97-30.

C. Storage Tank Permits. In addition to the requirements set forth in this title, the following agencies also have the authority to regulate the installation, repair, replacement, or removal of any underground storage tanks:

1. The Pierce County Fire Prevention Bureau regulates and authorizes permits for all underground storage tanks, pursuant to the International Fire Code (Article 79) and this chapter.

2. The Washington Department of Ecology regulates and authorizes permits for all underground storage tanks (Chapter 173-360 WAC).

3. The TPCHD regulates and authorizes permits for the removal of any underground storage tanks (Pierce County Code, Chapter 8.34), (Ord. 02-200 § 2).

A. General. All regulated activities that are not exempt or prohibited under the provisions of this chapter shall ensure sufficient groundwater recharge. In order to achieve sufficient groundwater recharge, the applicant shall comply with the city’s adopted stormwater manual, EMC Chapter 13.05, (Chapter 13.05 EMC) and demonstrate that the total post-development infiltration rate for the project area will be equal to or better than the predevelopment rate.

B. Prohibited Uses. Landfills (other than inert and demolition landfills), Class I, III, and IV underground injection wells, metals mining, wood treatment facilities, pesticide manufacturing, petroleum refining facilities (including
distilled petroleum facilities), the storage of large volumes of petroleum products, and other uses or activities determined by the department to have a significant adverse impact on ground water are prohibited within Critical Aquifer Recharge Areas.

C. Exemptions. In addition to the general exemptions listed in EMC Section 14.210.030, the following uses or activities are exempt from the requirements of this chapter:

1. Sewer lines and appurtenances;
2. Biosolids and sludge application sites; provided, that these activities comply with the requirements established in Chapters 173-200, 173-216, and 173-304 WAC; and

D. Agricultural Activities. New agricultural activities that do not involve hazardous substance handling or application are allowed within an aquifer recharge or wellhead protection area subject to the following:

1. The applicant is required to submit a farm management plan prepared by the USDA, NRCS, Pierce County Conservation District, or Washington State University, Cooperative Extension Office, that certifies that water quality and quantity within the aquifer recharge area is maintained. The farm management plan shall at a minimum address the following:
   a. The limits of the proposed agricultural activities.
   b. The proposed scope of agricultural activities, including the use of any pesticides, fertilizers, or other chemicals.
   c. The existing nitrate levels on the site and any proposed increases in nitrate levels.
2. Integrated pest management (IPM) practices for pest control and best management practices (BMPs) for the use of fertilizers, as described by the Washington State University, Pierce County Cooperative Extension Office, shall be utilized.
3. Nitrate levels at down-gradient property line shall not exceed 2.5 mg/L or, if the background nitrate concentration exceeds 2.5 mg/L, that the concentration will not be increased more than 0.1 mg/L.
4. Additional protective measures may be required if deemed necessary by the department or TPCHD to protect public health or safety.

E. Nonhazardous Uses. Subdivision of land as defined in EMC Title 16, residential structures housing three or more units, and all commercial and industrial sites or activities that do not include or involve hazardous substance processing or handling in protection of Critical Aquifer Recharge Areas are allowed subject to the following standards:

1. Stormwater quality treatment and flow control shall be provided in conformance with the city’s adopted stormwater management manual.
2. Floor drains shall not be allowed to drain to the stormwater system and must be designed and installed to meet the Uniform Plumbing Code (UPC) Section 303.
3. If any roof venting carries contaminants, then the portion of the roof draining from this area must go through pretreatment pursuant to UPC Section 304(b).
4. All nonresidential vehicle washing must be self-contained or be discharged to a sanitary sewer system, if approved by the sewer utility, and is subject to UPC Sections 708 and 711.
5. Integrated pest management (IPM) practices for pest control and best management practices (BMPs) for the use of fertilizers as described by the Washington State University, Pierce County Cooperative Extension Office, shall be utilized.

6. For new or changes in regulated activities served by on-site sewage systems, the applicant must demonstrate to the TPCHD that nitrate levels at the down-gradient property line will not exceed 2.5 mg/L or that if the background nitrate concentration exceeds 2.5 mg/L the concentration will not be increased more than 0.1 mg/L.

7. Additional protective measures may be required if deemed necessary by the department or TPCHD to protect public health or safety.

FE. Hazardous Uses – General. Hazardous substance processing or handling, hazardous waste treatment and storage facilities, animal containment areas, and solid waste facilities that require a solid waste handling permit from the TPCHD, requiring approval from the city, shall be allowed only in protection of critical aquifer recharge areas subject to review and approval of a hydrogeologic assessment by the department and review by the TPCHD. The department has the authority to apply whatever standards deemed necessary to mitigate any negative impacts that may be associated with the proposed development and will consider comments by TPCHD.

GF. Hazardous Uses – Storage Tanks. In addition to the requirement to submit a hydrogeologic assessment, the following standards apply to storage tanks in protection of critical aquifer recharge areas:

1. Underground Tanks. All new underground storage facilities used or to be used for the underground storage of hazardous substances or hazardous wastes shall be designed and constructed so as to:
   a. Prevent releases due to corrosion or structural failure for the operational life of the tank;
   b. Be protected against corrosion, constructed of noncorrosive material, steel clad with a noncorrosive material, or designed to include a secondary containment system to prevent the release or threatened release of any stored substance;
   c. Use material in the construction or lining of the tank which is compatible with the substance to be stored; and
   d. The installation of any UST underground storage tanks shall also be subject to other state and local permit requirements.

2. Aboveground Tanks.
   a. No new aboveground storage facility or part thereof shall be fabricated, constructed, installed, used, or maintained in any manner which may allow the release of a hazardous substance to the ground, groundwater, or surface waters of the city within any critical aquifer recharge area.
   b. A new aboveground tank that will contain a hazardous substance will require both a double-walled tank and a secondary containment system separate from the tank that will hold 110 percent of the tank’s capacity. The secondary containment system or dike system must be designed and constructed to contain material stored in the tank(s). (Ord. 16-482 § 2 (Exh. C); Ord. 02-200 § 2).
Chapter 14.670

VOLCANIC HAZARD AREAS

Sections:
14.670.010 Purpose.
14.670.030 Volcanic Hazard Area review procedures.

14.670.010 Purpose.
At over 14,411 feet high, Mount Rainier dominates the skyline of the southern Puget Sound region. This glacier-clad mountain is a dormant volcano capable of generating large floods and lahars which have historically reached the floors of the lowlands south of the city of Seattle and out to Commencement Bay in the Port of Tacoma, spewing ash from pyroclastic eruptions. The purpose of this chapter is to promote the public health, safety, and general welfare of the citizens of Edgewood by providing standards that minimize the loss of life that may occur as a result of volcanic events emanating from Mount Rainier. (Ord. 02-200 § 2).

A. General. Volcanic Hazard Areas are areas subject to pyroclastic flows, lava flows, and inundation by debris flows, mudflows, or related flooding resulting from geologic and volcanic events on Mount Rainier.

B. Volcanic Hazard Area Categories. Volcanic Hazard Areas are areas that have been historically inundated by Case I, Case II, or Case III lahars or other types of debris flows; affected by pyroclastic flows, pyroclastic surges, lava flows, or ballistic projectiles in future eruptions; or are located in other drainages expected to be inundated by a future Case I, Case II, or Case III debris flow. Volcanic Hazard Areas are classified into the following categories:

1. Inundation Zone for Case I Lahars. Areas that could be affected by cohesive lahars that originate as enormous avalanches of weak chemically altered rock from the volcano. Case I lahars can occur with or without eruptive activity. The average reoccurrence rate for Case I lahars on Mount Rainier is about 500 to 1,000 years.

2. Inundation Zone for Case II Lahars. Areas that could be affected by relatively large non-cohesive lahars, which most commonly are caused by the melting of snow and glacier ice by hot rock fragments during an eruption, but which can also have a non-eruptive origin. The average time interval between Case II lahars from Mount Rainier is near the lower end of the 100- to 500-year range, making these flows analogous to the so-called “100-year flood” commonly considered in engineering practice.

3. Inundation Zone for Case III Lahars. Areas that could be affected by moderately large debris avalanches or small non-cohesive lahars, glacial outburst floods, or other types of debris flows, all of non-eruptive origin. The average time interval between Case III lahars at Mount Rainier is about one to 100 years.

4. Pyroclastic Flow Hazard Zone. Areas that could be affected by pyroclastic flows, pyroclastic surges, lava flows, and ballistic projectiles in future eruptions. During any single eruption, some drainages may be unaffected by any of these phenomena, while other drainages are affected by some or all phenomena. The average time interval between eruptions of Mount Rainier is about 100 to 1,000 years.

C. Time Travel Time Zones. The ability to evacuate people from within a Volcanic Hazard Area correlates to the distance from the source of an event, i.e., those areas closest to the event will have less time to evacuate than those areas farther away from the source of an event. The amount of time that is anticipated for a debris flow, lahars, or avalanche to travel geographically has been classified into the following time-travel time zones:

1. Time Zone A. Time Zone A is an estimated one-hour travel distance from the source of the event.
The Edgewood Municipal Code (Critical Areas Ordinance Update 2017)

Chapter 14.60 VOLCANIC HAZARD AREAS

2. Time Zone B. Time Zone B is an estimated one and one-half hour travel distance from the source of the event.

3. Time Zone C. Time Zone C is an estimated two-hour travel distance from the source of the event.

4. Time Zone D. Time Zone D is an estimated two hours or greater travel distance from the source of the event.

(Ord. 02-200 § 2).

14.670.030 Volcanic Hazard Area review procedures.
A. The City’s Critical Areas Atlas – Volcanic Hazard Area Map provides an indication of where Volcanic Hazard Areas are located within the city.
B. The department will complete a review of the Volcanic Hazard Area maps for any development proposal to determine whether the proposed project area for a regulated activity falls within a Volcanic Hazard Area.
C. When the department’s maps or sources indicate that the proposed project area for a regulated activity is located within a Volcanic Hazard Area, the department shall apply the standards for Regulated Activities in Volcanic Hazard Areas, as set forth in EMC Chapter 14.670.040.

The following standards apply within the inundation zones for Case I, II, and III lahars and within the pyroclastic flow hazard zone (refer to Table 14.670.040):
A. Bonus densities, as set forth in EMC 18.90.080, Housing incentives program, shall be prohibited.
B. All Critical Facilities, as defined in Chapter 14.15 EMC, shall be prohibited, except sewer collection facilities and any other utilities that are located underground or not likely to cause harm to people or the environment if inundated by a lahar.
C. Special Occupancies, as defined in EMC Chapter Section 14.1520.107 EMC, are subject to the following:

Chapter 14.780
FLOOD HAZARD AREAS

Sections:
14.780.010 Purpose.
14.780.020 Flood Insurance Study Adoption
14.780.030 Definitions.
14.780.040 Flood Hazard Areas.
14.780.050 Flood Hazard Area review procedures.
14.780.060 Flood Hazard Area standards.
14.780.070 Variances to Flood Hazard Areas
14.780.080 Appendices.

14.780.010 Purpose.
The purpose of this chapter is to promote the public health, safety, and general welfare of the citizens of Edgewood. The standards contained in this chapter are intended to minimize public and private losses due to flood conditions in Flood Hazard Areas and provide special criteria necessary for regulated activities located within Flood Hazard Areas of the city. The following statements describe the purpose of this chapter:

A. Protect human life and health;
B. Minimize expenditure of public money and costly flood control projects;
C. Minimize the need for rescue and relief efforts associated with flooding;
D. Minimize prolonged business interruptions;
E. Minimize damage to public infrastructure, facilities and utilities;
F. Minimize damage to critical fish and wildlife habitat areas;
G. Minimize net loss of ecological functions of floodplains;
H. Ensure that potential buyers are notified that property is in a Flood Hazard Area;
I. Ensure that those who occupy Flood Hazard Areas assume responsibility for their actions; and
J. Qualify Edgewood for participation in the National Flood Insurance Program, thereby giving the citizens of Edgewood the opportunity to purchase flood insurance with particular emphasis to those in Flood Hazard Areas.

14.780.020 Flood Insurance Study Adoption
The areas of special flood hazard identified by the Federal Insurance Administration in a scientific and engineering report entitled “The Flood Insurance Study for Pierce County, Washington and Incorporated Areas” dated March 7, 2017, with accompanying FIRMs and any map amendments or corrections are hereby adopted by reference and declared to be a part of this title. The Flood Insurance Study and FIRMs are on file at Edgewood City Hall, 2224 104th Avenue East, Edgewood, Washington, 98371. The City of Edgewood may add or delete land from areas of special flood hazard or revise base flood elevations, utilizing best-available information for flood hazard identification in accordance with federal regulations.
14.80.030 Definitions.
A. Refer to Chapter 14.20 for definitions of any word or phrase not otherwise contained herein. For this Chapter (EMC 04.80) shall rely first on the definitions listed below shall apply:

1. **Appeal** – a request for a review of the interpretation of any provision of this chapter, per EMC 14.10.110, or request for a Flood Hazard Area Variance per EMC 14.80.070.

2. **Area of Shallow Flooding** – areas designated as AO or AH zones on the FIRM(s). AO zones are characterized as sheet flows, having base flood depths that range from one to three feet above the natural ground, where a clearly defined channel does not exist, the path of flooding is unpredictable and indeterminate, and velocity flow may be evident. AH zones indicate similar depth ponding, shown with standard base flood elevations on the FIRM(s).

3. **Area of Special Flood Hazard** – land in the floodplain within a community subject to a one percent or greater chance of flooding in any given year. Designation on FIRM(s) always includes the letter A or V.

4. **Basement** – any area of the building having its floor sub-grade (below ground level) on all sides, for the purposes of this title.

5. **Breakaway Wall** – a wall that is not part of the structural support of the building and is intended through its design and construction to collapse under specific lateral loading forces, without causing damage to the elevated portion of the building or supporting foundation system.

6. **Critical Facilities** – See EMC 14.20 B.22. For floodplain management purposes, Essential public facilities as defined under EMC 18.20.080 and 18.100.050 are considered Critical Facilities.

7. **Development** – any human-induced change to improved or unimproved real estate, including but not limited to: the construction of buildings or other structures, placement of a manufactured home/mobile home, mining, dredging, clearing, filling, grading, paving, excavation, drilling operations, storage of equipment or materials located within an area of special flood hazard, or activities otherwise governed by EMC Title 16, Subdivisions.

8. **Elevated Building** – a non-basement building that has its lowest elevated floor raised above ground level by foundation walls, shear walls, posts, piers, pilings, or columns.

9. **Existing Manufactured Home Park or Subdivision** – a manufactured home park or subdivision for which the construction of facilities for servicing the lots on which the manufactured homes are to be affixed, (including, at a minimum, the installation of utilities, the construction of streets, and either final site grading or the pouring of concrete pads) is completed before the effective date of the adopted floodplain management regulations.

10. **Expansion to an Existing Manufactured Home Park or Subdivision** – the preparation of additional sites by the construction of facilities for servicing the lots on which the manufactured homes are to be affixed, (including the installation of utilities, the construction of streets, and either final site grading or the pouring of concrete pads).

11. **Flood or Flooding** – a general and temporary condition of partial or complete inundation of normally dry land areas from:
   a. The overflow of inland or tidal waters; or
   b. The unusual and rapid accumulation of runoff of surface waters from any source.

12. **Flood Insurance Study (FIS)** – the official report provided by the Federal Insurance Administration (FIA) that includes flood profiles, FIRM(s), and the water surface elevation of the Base Flood.

13. **Increased Cost of Compliance (ICC)** – a flood insurance claim payment up to $30,000 directly to a property owner for the cost to comply with floodplain management regulations after a direct physical loss.
caused by a flood. Eligibility for an ICC claim can be through a single instance of “substantial damage” or as a result of a “cumulative substantial damage.” (More information can be found in FEMA ICC Manual 301.)

14. **Manufactured Home or Mobile Home** – a structure, transportable in one or more sections, which is built on a permanent chassis and is designed for use with or without a permanent foundation when connected to the required utilities. For floodplain management purposes, the term “manufactured home/mobile home” also includes park trailers, travel trailers, and other similar recreational vehicles placed on a site for greater than 180 consecutive days. For insurance purposes, the term “manufactured home/mobile home” does not include park trailers, travel trailers, recreational vehicles, or other similar vehicles.

15. **Manufactured Home Park or Subdivision** – a parcel (or contiguous parcels) of land divided into two or more manufactured home lots for rent or sale.

16. **New Construction** – structures for which the Start of Construction commenced on or after the following:
   a. For the purposes of determining flood insurance rates, the effective date of an initial FIRM (i.e., August 19, 1987, or specifically for Panel 350 August 4, 1988), and includes any subsequent improvements to such structures;
   b. For floodplain management purposes, March 7, 2017 (the effective date of this floodplain management ordinance), including any subsequent improvements to such structures.

17. **New Manufactured Home Park or Subdivision** – a manufactured home park or subdivision for which the construction of facilities for servicing the lots on which the manufactured homes are to be affixed, (including, at a minimum, the installation of utilities, the construction of streets, and either final site grading or the pouring of concrete pads) is completed on or after March 7, 2017 (the effective date of this floodplain management regulation).

18. **Recreational Vehicle (RV)** – a vehicle built on a single chassis, 400 square feet or less when measured at the largest horizontal projection, designed to be self-propelled or permanently towable by a light duty truck, and designed primarily not for use as a permanent dwelling but as a temporary living quarters for recreational, camping, travel, or seasonal use.

19. **Start of Construction** – includes Substantial Improvement, and means the date the building permit was issued, provided the actual Start of Construction, repair, reconstruction, placement or other improvement was within 180 days of the permit date. The “actual start” means either the first placement of permanent construction of a structure on a site, such as the pouring of slab or footings, the installation of piles, the construction of columns, or any work beyond the stage of excavation; or the placement of a manufactured home on a foundation. Permanent construction does not include land preparation, such as clearing, grading and filling; nor does it include the installation of streets and/or walkways; nor does it include excavation for a basement, footings, piers, or foundations or the erection of temporary forms; nor does it include the installation on the property of accessory buildings, such as garages or sheds not occupied as dwelling units or not part of the main structure. For a Substantial Improvement, the “actual Start of Construction” means the first alteration of any wall, ceiling, floor, or other structural part of a building, whether or not that alteration affects the external dimensions of the building.

20. **Structure** – a walled and roofed building, including a gas or liquid storage tank that is principally above ground.

21. **Substantial Improvement** – any repair, reconstruction, or improvement of a structure, the cost of which equals or exceeds fifty (50) percent of the market value of the structure either:
   a. before the improvement or repair is started; or
   b. if the structure has been damaged and is being restored, before the damage occurred. For the purposes of this definition “Substantial Improvement” is considered to occur when the first
alteration of any wall, ceiling, floor, or other structural part of the building commences, whether or not that alteration affects the external dimensions of the structure.

The term “Substantial Improvement” does not, however, include either:

a. Any project for improvement of a structure to correct pre-cited existing Violations of state or local health, sanitary, or safety code specifications which have been previously identified by the local code enforcement official and which are the minimum necessary to assure safe living conditions, or

b. Any alteration of a structure listed on the National Register of Historic Places or a State Inventory of Historic Places, provided, that the alteration will not preclude the structure’s continued designation as a historic structure.

22. *Variance* – a grant of relief from the requirements of this chapter that permits construction in a manner that would otherwise be prohibited, per EMC 14.80.070.

23. *Violation* – See 14.20 B.88. With regard to floodplain management, projects without an Elevation Certificate, other certifications, or other evidence of compliance required in EMC Chapter 14.80 are presumed to be in violation until such time as said documentation is provided.

24. *Water Dependent* – a structure for commerce or industry that cannot exist in any other location and is dependent on the water by reason of the intrinsic nature of its operations.

**14.780.040 Flood Hazard Areas.**

Edgewood regulates the following Flood Hazard Areas:

A. Potential Flood Hazard Areas.

1. Potential Flood Hazard Areas, as depicted on the Critical Areas Atlas – Flood Hazard Area Map, include:

   a. Detailed Study Areas.

      i. FEMA Flood Insurance Rate Map (*FIRM*) and Floodway Floodway Map AE and AH zones.

      ii. Areas within 300 feet horizontal distance from the Base Flood elevation established for the mapped AE and AH zones.

      iii. Areas within five feet of vertical height from the Base Flood elevation established for the mapped AE and AH zones.

   b. Unstudied Areas. FEMA Flood Insurance Rate Map (*FIRM*) A zones and shaded X zones, and areas within 300 feet horizontal distance from said mapped areas.

   c. Natural Waters or Watercourse. Areas within five feet of vertical height above the ordinary high water mark of an identified natural watercourse.

   d. Groundwater Flooding Areas. Areas within 300 feet horizontal distance from a mapped groundwater flooding area.

   e. Potholes. Areas not identified as a mapped Flood Hazard Area as described above, but within 10 feet of vertical relief from the bottom of an identified pothole or within two feet of vertical relief of a potential surface water spillway or other type of outlet. Potholes may be identified by *City* topographic mapping, field survey, or site inspections.

   f. Channel Migration Zones (CMZs). Channel migration zones shall apply only to those watercourses specifically identified by the *City* or listed in subsection (B)(4) of this section. In those areas where detailed CMZ studies have been completed and accepted by the *Department*, additional horizontal and vertical review threshold criteria (i.e., 300 feet horizontal and five feet vertical) shall not apply.
2. The Critical Areas Atlas – Flood Hazard Areas Map may not show all potential flood hazard areas that may be necessary for a specific site analysis. The Department may make interpretations, where needed, as to the approximate location of the boundaries of potential flood hazard areas. When there is a conflict between the elevations and the mapped potential flood hazard area boundaries, the elevations shall govern.

3. Where there is insufficient information shown on the potential flood hazard area maps, the Department may require the applicant to verify that the site is out of the flood hazard area using the flood hazard area review procedures set forth in EMC Chapter 14.780.030.

B. Floodway. A floodway is an extremely hazardous area due to the depth and velocity of floodwaters, which carry debris, potential projectiles, and have erosion potential. The following areas are regulated by the city as floodways:

1. Regulatory Floodway designated by flood hazard area maps.

2. Deep and/or Fast Flowing Water Areas. Areas of deep and/or fast flowing water shall be regulated as a floodway. Based on the criteria set forth in EMC Chapter 14.280.030, the Department shall make the determination after review and approval of applicant’s analysis of whether the project site falls within the floodway area based on deep and/or fast flowing waters.

3. Potholes and Shaded X Zones. That portion of a pothole and shaded X zone area that is three feet or greater in depth shall be regulated as a floodway.

4. Channel Migration Zones (CMZs).
   a. CMZs shall be regulated as a floodway.
   b. CMZs are equivalent to the Base flood elevation limits, i.e., 100-year floodplain limits.

C. Flood Fringe. All areas subject to inundation by the Base flood, but outside the limits of the floodway as set forth in subsection (B) of this section. Those portions of the A, AE, AH, and shaded X zones not defined as floodway, and that portion of a pothole and FEMA shaded X zone area that is between zero feet (Base flood elevation) and three feet in depth shall be regulated as a flood fringe.

D. Other Areas of Special Flood Hazard.

1. Groundwater Flooding Areas. Groundwater flooding areas are those areas identified by Edgewood and shown on flood hazard maps and are subject to flood inundation from subsurface waters that result from a fluctuation of the groundwater table. Groundwater flooding areas shall be regulated as a floodway or flood fringe pothole.

2. Natural Waters or Watercourses. Natural waters or watercourses as identified on city topographic, planimetric or orthophoto maps, WDNR stream classification maps, USGS quadrangle maps, or other source maps that are not identified as a flood hazard area on the FEMA maps. That portion of the natural watercourse located between the ordinary high water mark and a topographic elevation five feet above the ordinary high water mark shall be regulated as a floodway or flood fringe. If the applicant chooses to accept the five-foot topographic elevation line above the ordinary high water mark as the Base flood elevation (i.e., floodplain elevation limits), a flood study shall not be required for a natural watercourse.

3. Frequently Flooded Areas. See EMC Chapter 14.280.035 as the areas defined by this section.

14.280.030 Flood hazard area review procedures.
A. General Requirements.
1. The City’s Critical Areas – Flood Hazard Area Map provides an indication of where potential flood hazard areas are located within the city. The actual presence or location of a flood hazard area shall be determined using the procedures and criteria contained in this chapter.

2. The Department will complete a review of the flood hazard area maps, and other source documents, for any development proposal to determine whether the proposed project area for a regulated activity falls within a potential flood hazard area. When there is a conflict between the elevations and the mapped 100- or 500-year floodplain or floodway boundaries, the elevations shall govern. In the instance where base flood elevation data has not been provided within a mapped A zone, the Department shall obtain, review, and reasonably utilize any base flood elevation and floodway data available from a federal, state, or other source to complete their review.

3. When the Department’s maps or sources indicate that the proposed project area for a regulated activity is or may be located within a potential flood hazard area, except for coastal flood hazard areas, the Department shall require a flood boundary verification survey as outlined in subsection (C) of this section, and may require a flood study as outlined in subsection (D) of this section, a deep and/or fast flowing water analysis as outlined in subsection (E) of this section, and/or a zero-rise analysis as outlined in subsection (F) of this section.

4. Any proposed development located within a flood hazard area shall comply with the flood hazard area standards set forth in EMC Chapter 14.780.040.

5. Prior to approval of any proposed flood hazard area development, all necessary permits from those governmental agencies from which prior approval is required by federal or state law, including but not limited to Section 404 of the Federal Water Pollution Control Act Amendments of 1972, 33 U.S.C. 1344, must be provided to the city by the applicant.

6. A FEMA letter of map amendment (LOMA) or letter of map revision (LOMR) shall not be submitted to FEMA until review and approval has been granted by the Department. The city shall not recognize any LOMA or LOMR as an amendment to the Department’s flood hazard maps unless the Department has granted prior approval.

7. Unless otherwise stated in this chapter, the critical area protective measure provisions contained in EMC Section 14.10.070 shall apply.

8. The Federal Emergency Management Agency (FEMA) administers the nation’s floodplain management program. FEMA has identified some of the flood prone areas in the city; however, it is generally recognized that FEMA’s Flood Insurance Rate Maps (FIRMs) may not accurately reflect the degree or frequency of flooding within all areas of the city. Therefore, information available through FEMA may not meet best available science criteria and cannot be used exclusively to address frequently flooded areas.

9. The city has determined that the following documents and sources are the most current and accurate information concerning frequently flooded areas within the city, and therefore represent best available science:
   a. The city’s Surface Water Management Plan, 1997, or as amended thereafter.
   c. The city’s two-foot elevation contour mapping performed by Nies Mapping Group, Inc., 1999, or as subsequently updated.
   e. Relevant and verifiable government and citizen photographs, notes, observations, etc., regarding historic ponding/flooding levels, including but not limited to the City of Edgewood Potholes Water Level Monitoring 2006-2007 report prepared by Robinson Engineers, LLC.
f. Relevant and verifiable information available through Pierce County.

g. Relevant and verifiable information available through FEMA.

10. Flooding conditions within the city generally fall into three distinct hydrologic settings: (a) upland areas within enclosed depressions, (b) streams that flow off the upland areas, and (c) valley lowlands. Accordingly, the City manages frequently flooded areas within these three zones, as described below:

a. Upland Areas Within Enclosed Depressions. From the above list use the historic ponding elevation, determined by subsection (A)(9) of this section, or the FEMA 100-year Base Flood elevation, whichever is highest.

b. Streams Which Flow Off the Upland Areas. From the above list use the historic flood elevation, determined by subsection (A)(9) of this section, or the FEMA 100-year Base Flood elevation, whichever is highest.

c. Valley Lowlands. From the above list use the historic flood elevation determined by subsection (A)(9) of this section, or the FEMA 100-year Base Flood elevation, whichever is highest.

11. The City will provide local flood information to FEMA, and request FEMA’s assistance in accurately mapping and evaluating frequently flooded areas.

12. Warning and Disclaimer of Liability. The degree of flood protection required by this chapter is considered reasonable for regulatory purposes and is based on scientific and engineering considerations. Larger floods can and will occur on rare occasions. Flood heights may be increased by manmade or natural causes. This chapter does not imply that land outside frequently flooded areas or uses permitted within such areas will be free from flooding or flood damages. This chapter shall not create liability on the part of the City, any officer or employee thereof, or the Federal Insurance Administration, for any flood damages that result from reliance on this chapter or any administrative decision lawfully made hereunder.

B. Channel Migration Zone Study.

1. In areas where Edgewood has not conducted a detailed channel migration zone study, an applicant may submit an independent channel migration zone study to demonstrate that the channel migration zone limits for those watercourses listed in EMC Chapter 14.780.020(B)(4) are located inside the 100-year floodplain limits.

2. The channel migration zone study shall be prepared, signed, and dated by a professional engineer or professional engineering geologist with at least five years of experience in fluvial geomorphology, river dynamics, or geotechnical engineering.

3. The channel migration zone study shall, at a minimum, contain the information set forth in EMC Section 14.780.060.050, Appendix B.

4. The department shall review the channel migration zone study and either accept the new channel migration zone limits or reject the study and require the use of the 100-year floodplain limits. Once the department has reviewed and approved the channel migration zone study, the applicant shall be required to provide a flood boundary verification survey, as outlined in subsection (C) of this section, utilizing the newly established channel migration zone limits as the floodway limits.

C. Flood Boundary Verification Survey.

1. A flood boundary verification survey that delineates the horizontal and vertical limits of the Base Flood elevation shall be submitted to the department when the department’s maps or sources indicate that the proposed project area for a regulated activity is located within a potential Flood Hazard area.

a. Where a Base Flood elevation has not been determined, a flood study shall be required pursuant to subsection (D) of this section.
b. A base flood elevation that has been established through a detailed flood study accepted by the department may be used in lieu of conducting a flood study.

c. The base flood elevation for a natural watercourse as set forth in EMC Chapter 14.280.020(D)(2) shall be established at the five-foot topographic elevation line above the ordinary high water mark.

2. The requirement to submit a flood boundary verification survey may be waived at the department's discretion, when the department can determine, using contour elevations, base flood data, orthophotos, and parcel data, that the extent of the regulated activity is clearly above the base flood elevation.

3. The flood boundary verification survey shall be prepared, signed, and dated by a registered land surveyor.

4. The department shall review the flood boundary verification survey to determine if the proposed development is located within a flood hazard area.

5. If the proposed development lies within the flood hazard area, the limits of the floodway, as well as the base flood elevation, shall be shown on the flood boundary verification survey.

D. Flood Study.

1. A flood study shall be conducted when the department's maps or sources indicate that the proposed project area for a regulated activity is, or may be located within, a potential flood hazard area where base flood elevation data is not available through the flood insurance study or other authoritative sources, or when an established base flood elevation is contested. A full engineering analysis to determine the base flood elevation shall be required by the department. Base flood elevations shall be determined using the detailed methods established in EMC Section 14.280.020, Appendix A. The department may approve alternative methods.

2. The flood study shall be prepared, signed, and dated by a professional engineer.

3. Once the department has reviewed and approved the flood study, the applicant shall be required to provide a flood boundary verification survey, utilizing the newly established base flood elevation, as outlined in subsection (C) of this section.

4. Flood studies shall not be required for coastal flood hazard areas.

E. Deep and/or Fast Flowing Water Analysis.

1. When the department determines that a proposed project area for a regulated activity is located within a flood hazard area, a deep and/or fast flowing water analysis based on EMC Section 14.280.020, Appendix A, shall be required to determine the floodway limits.

2. The floodway limits and flood fringe limits identified in the deep and/or fast flowing water analysis shall be depicted on the flood boundary verification survey, as outlined in subsection (C) of this section.

3. The deep and/or fast flowing water analysis shall be prepared, signed, and dated by a professional engineer.

4. Deep and/or fast flowing water analysis shall not be required for coastal flood hazard areas.

F. Zero-Rise Analysis.

1. When the department determines that a proposed project area for a regulated activity is located within a flood hazard area, a zero-rise analysis shall be required to determine that no increase in base flood elevation, displacement of flood volume, or flow conveyance reduction will occur as a result of the development.
2. The zero-rise analysis shall be conducted utilizing HEC-RAS (Hydrologic Engineering Center – River Analysis System) modeling methodology for stream and channel floodways, the Western Washington Hydrology Model (i.e., WWHM, for pothole or closed depression floodways), or by another alternative methodology approved by the City (see EMC Section 14.780.10560, Appendix A). HEC-RAS can be found at the following website: http://www.hec.usace.army.mil/software/hec-ras/. WWHM can be found here: http://www.ecy.wa.gov/programs/wq/stormwater/wwhmtraining/index.html. The analysis shall show that no rise greater than 0.01 foot or less has occurred as a result of the proposed development. The scope of the proposed development may need to be reduced or specially engineered, e.g., utilizing piers or pilings to achieve zero-rise.

3. The zero-rise analysis shall be prepared, signed, and dated by a Professional Engineer.

4. The zero-rise analysis shall be documented on the zero-rise analysis form, as set forth in EMC Section 14.780.10560, Appendix A, and shall be attached to the Flood Hazard Area permit.

5. Zero-rise analysis shall not be required for coastal Flood Hazard Areas.

6. When structures are elevated by pier or pilings and no fill is placed in the Flood Hazard Area, the requirement to submit a zero rise analysis may be waived at the Department's discretion. (Ord. 17-492 § 2 (Exh. A); Ord. 02-200 § 2).

14.780.060 Flood Hazard Area Standards.

A. General.

1. All subdivision proposals shall:
   a. be consistent with the need to minimize flood damage;
   b. have public utilities and facilities such as sewer, gas, electrical, and water systems located and constructed to minimize flood damage;
   c. have adequate drainage provided to reduce exposure to flood damage; and

2. Where base flood elevation data has not been provided or is not available from another authoritative source, it shall be generated for subdivision proposals and other proposed developments which contain at least 50 lots or five acres (whichever is less).

3. New construction done by or for the City, such as bridges, roads, flood control works, revetments, retaining walls, drainage structures, sewer or water lines, parks, or other structures necessary to promote the public’s health, safety, and welfare shall be allowed in a Flood Hazard Area when:
   a. The project is prepared, dated, and stamped by a registered Professional Engineer in the state of Washington and is designed so the project does not result in any increase in flood levels during the occurrence of the base flood discharge (zero-rise) and shall not obstruct the floodway or cause an adverse impact to critical fish or wildlife habitat or adjacent, cross-channel, or upstream or downstream properties; and

   b. The improvements utilize appropriate flood hazard protection standards.

24. Elevation Certificate. A Federal Emergency Management Agency (FEMA) Elevation Certificate shall be required for new construction, any additions affixed to the side of a structure, and substantial improvements located within Flood Hazard Areas. The most current version of the FEMA Elevation Certificate must be completed and certified by a professional land surveyor, currently licensed in the state of Washington, kept on file by the City for public inspection, recording the actual (as-built) elevation (in relation to mean sea level) of:
a. The lowest floor, (including basement,) of all new or substantially improved structures, whether or not the structure contains a basement;

b. For flood proofed nonresidential structures, where the structure was flood proofed (including flood proofing certifications).

B. Floodways. Any development, encroachments, filling, clearing and grading, new construction, and or substantial improvements, including structures that do not require a building permit, shall be prohibited within the floodway (including structures that do not require a building permit), except as allowed in the following standards:

1. Agricultural activities that do not require the installation of structures and that do not have any associated fill.

2. Park and recreational uses and facilities that do not require the installation of structures and that do not have any associated fill.

3. Individual recreational vehicles, not located in an RV park, that are licensed and ready for highway use, on wheels or jacking system, and are not permanently attached to the site (i.e., attached only by quick disconnect type utilities and security devices, with no permanently attached additions).

4. Habitat enhancement or stream restoration activities are permitted subject to the provisions outlined in subsection (D) of this section.

5. Rehabilitation, reconstruction, or an upper story addition to an existing structure that does not exceed the limits for a substantial improvement.

6. Private bridges may be allowed to cross the floodway; provided, that the structure meets the requirements contained in EMC Section 14.78.03450 and the following:

   a. The lowest structural member of a private bridge proposed to cross a channel migration zone shall be a minimum of six (6) feet above the base flood elevation.

   b. The lowest structural member of a private bridge proposed to cross the floodway portion of any other watercourse shall be a minimum of one foot above the base flood elevation.

C. Flood Fringe Areas. All activities allowed in subsection (B) of this section shall be permitted in a flood fringe area. Any other proposed development, encroachments, filling, clearing and grading, new construction, and or substantial improvements are prohibited in a flood fringe area, except as permitted under the following standards:

1. Structures that do not require a building permit and that do not have any associated fill are allowed, subject to flood hazard area review and permitting.

2. All other regulated activities shall only be allowed when the proposed development is located on an existing lot of record that was created prior to the effective date of the ordinance codified in this chapter. Applicants shall demonstrate there are no other feasible alternatives that would allow the proposed development to occur completely outside the flood hazard area. At a minimum, the following shall be demonstrated:

   a. The development cannot be located outside the flood hazard area due to topographic constraints of the parcel or its size and location of the parcel in relation to the limits of the flood hazard area and a building setback variance has been reviewed, analyzed, and rejected as a feasible alternative to encroachment into the flood hazard area; and

   b. The proposed development shall not cause an adverse impact to adjacent, cross-channel, or upstream or downstream properties.

   a. Roads, bridges, driveways, trails, emergency vehicle access, and access routes and easements, where allowed, shall be constructed and armored based on the standards in subsection (C)(4) of this section and elevated a minimum of one foot above the Base Flood elevation.

   b. Parking lots shall be elevated to a minimum of one-half foot below the Base Flood elevation.

4. Clearing and Grading and Filling. When development is permitted under this subsection, it shall be designed to a zero-rise standard as set forth in EMC 14.70.030(E) and 14.70.050, Appendix A. Any filling, grading, associated with the permitted development shall not increase flood hazards, water velocities, or flood elevations. In addition to meeting the requirements for zero-rise, all permitted development must also meet the following requirements:

   a. Compensatory Storage. New excavated storage volume shall be equivalent to the flood storage capacity eliminated by filling or grading within the Flood Fringe. Equivalent shall mean that the storage removed shall be replaced by equal live storage volume between corresponding one-foot contour intervals that are hydraulically connected to the floodplain through their entire depth.

   b. Flow Conveyance. New excavated conveyance areas shall be equivalent to existing conveyance within the Flood Fringe. Equivalent shall mean a mechanism for transporting water from one point to another using an open channel system.

   c. Erosion Protection. Development shall be protected from flow velocities greater than two feet per second through the use of bio-engineering methods or, when bioengineering methods have been deemed insufficient to protect development, then Hard Armoring may be utilized. All erosion protection shall extend one to three feet, depending on development requirements, above the Base Flood elevation and shall be covered with topsoil and planted with Native Vegetation.

5. Critical Facilities.

   a. New Construction, Additions affixed to the side of an existing structure, and Substantial Improvement of hazardous facilities, and Special Occupancy Structures are prohibited.

   b. New Construction of an essential Critical Facility, reconstruction of an existing Critical essential Facility, or any Additions to an existing Critical essential Facility that exceed the threshold for Substantial Improvement shall be permitted when no feasible alternative site is available outside the Flood Hazard Area. Such Regulated Activities are subject to the following:

      i. Essential Critical Facilities with a Crawl Space elevated by fill shall have the Lowest Floor and any utilities and ductwork elevated a minimum of three feet above Base Flood elevation, or to the height of the 50-year flood, whichever is higher.

      ii. Essential Critical Facilities elevated by piers or pilings shall have the Finished Floor and any utilities and ductwork elevated a minimum of three feet above the Base Flood elevation or to the height of the 50-year flood, whichever is higher and must be designed by a professional structural Engineer.

      iii. Access to and from the Critical Facility shall be protected to the height utilized under Subsections (C)(5)(b)(i) and (b)(ii) of this section. Access routes shall be elevated to or above the same elevation to the maximum extent possible.

      iv. Critical Essential Facilities shall be armored based on the standards in subsection (C)(4) of this section.

      v. Flood proofing and sealing measures must be taken to ensure that toxic or explosive substances will not be displaced or released into floodwaters.
6. Structures. Single-family, two-family, multifamily, mobile/manufactured homes, commercial, industrial, etc., except for critical facilities as set forth in subsection (C)(5) of this section, shall be allowed subject to the following standards:

a. New construction, additions affixed to the side of an existing structure, and substantial improvement of any structure with a crawl space shall have the lowest floor elevated a minimum of two feet above base flood elevation.

b. New construction, additions affixed to the side of an existing structure, and substantial improvement of any structure elevated by piers or pilings shall have the bottom of the lowest horizontal structural member elevated a minimum of two feet above the base flood elevation and must be designed by a professional structural engineer. Electrical, heating, ventilation, plumbing, air-conditioning equipment, and other service facilities and associated ductwork shall be elevated a minimum of two feet above base flood elevation; however, the department may approve a lesser minimum distance above base flood elevation; provided, that the systems are designed to prevent floodwater from entering or accumulating within the components. Areas below the lowest horizontal structural member shall not be enclosed and shall remain free of obstructions.

c. Mobile or manufactured homes shall be anchored to prevent flotation, collapse, or lateral movement, and shall be installed using methods and practices to minimize flood damage. Anchoring methods may include, but are not limited to, use of over-the-top or frame ties to ground anchors. This is in addition to applicable state and local anchoring requirements for resisting wind forces.

7. Agricultural Accessory Structures. The lowest floor in an agricultural accessory structure shall be located at the base flood elevation or higher; provided, that the structure be designed to automatically equalize hydrostatic flood forces on exterior walls by allowing for the entry and exit of floodwaters. Designs for meeting this requirement must either be certified by a professional engineer in the state of Washington or must meet or exceed the following minimum criteria:

a. A minimum of two openings having a total net area of not less than one square inch for every square foot of enclosed area subject to flooding shall be provided;

b. The bottom of all openings shall be no higher than one foot above grade; and

c. Openings may be equipped with screens, louvers, or other coverings or devices; provided, that they permit the automatic entry and exit of floodwaters.

8. Construction Standards.

a. Construction of a basement is prohibited.

b. Crawl spaces shall be backfilled with clean earth material and shall meet International Building Code requirements. Finished grade within the crawlspace shall be at least two feet above the base flood elevation.

c. Flood proofing in lieu of elevating the structure is prohibited.

d. All single-family, two-family, multifamily, mobile or manufactured homes, commercial, and industrial structures shall be placed on standard concrete stemwall or footing foundations or piles, piers, or column foundations and engineered pursuant to International Building Code requirements.

a. New and replacement public water sources, i.e., wells and water supply lines and public sanitary sewage conveyance systems are allowed. These systems shall be designed to withstand scour resulting from flow velocity, minimize or eliminate infiltration of floodwaters into the systems, and minimize or eliminate discharge from the systems into floodwaters.
b. All replacement wells and replacement on-site sewage system (OSS) shall be designed to minimize or eliminate impairment to them or contamination from/to them during flooding, i.e., infiltration of floodwaters into or discharge out of the systems. They shall not be located in pothole or no-outlet floodplains.

c. All new individual wells and new on-site sewage system (OSS) shall be prohibited. Conveyance systems from a structure to a well or OSS located outside of the Flood Hazard Area shall be allowed provided these systems are designed to meet the standards in subsection (C)(4) of this section.

14.80.070 Variances to Flood Hazard Areas.
A. General. Variances are reviewed pursuant to the process and criteria outlined in EMC 14.10.100, Variances to Critical Areas.

B. Additional Criteria for Flood Hazard Area Variances. In addition to the variance criteria referenced above in subsection (A) of this section, in order for the decision maker to approve a Flood Hazard Area variance, there must be written findings that the applicant has demonstrated the proposal satisfies all of the following:

1. Generally, the only condition under which a variance from the elevation standard may be issued is for New Construction and Substantial Improvements to be erected on a small or irregularly shaped lot contiguous to and surrounded by lots with existing structures constructed below the Base Flood level. As the lot size increases the technical justification required for issuing the variance increases.

2. Variances shall not be issued within a designated Floodway if any increase in flood levels during the Base Flood discharge would result.

3. Variances shall only be issued upon a determination that the variance is the minimum necessary, considering the flood hazard, to afford relief.

4. Variances shall only be issued upon:
   a. A showing of good and sufficient cause;
   b. A determination that failure to grant the variance would result in exceptional hardship to the applicant and that the hardship was not created by the applicant;
   c. A determination that the granting of a variance will not result in increased flood heights, additional threats to public safety, extraordinary public expense, create nuisances, cause fraud or victimization of the public, or conflict with existing local laws or ordinances.

5. Variances as interpreted in the National Flood Insurance Program are based on the general zoning law principle that they pertain to a physical piece of property, they are not personal in nature and do not pertain to the structure, its inhabitants, economic or financial circumstances. They primarily address small lots in densely populated residential neighborhoods. As such, variances from flood elevations should be quite rare.

6. Variances may be issued for nonresidential buildings in very limited circumstances to allow a lesser degree of flood proofing than watertight or dry-flood proofing, where it can be determined that such action will have low damage potential, complies with all other variance criteria except B.1, above, and otherwise complies with EMC 14.80.060, Flood Hazard Area Standards.

7. Any applicant to whom a variance is granted shall be given written notice that the permitted structure will be built with its Lowest Floor below the Base Flood elevation and that the cost of flood insurance will be commensurate with the increased risk.

14.280.080 Appendices.
A. Floodplain/Floodway Analysis.

B. Channel Migration Zone Study.

APPENDIX A

FLOODPLAIN/FLOODWAY ANALYSIS

This Appendix describes the flood hazard analyses and studies as required by EMC Chapter 14.780, Flood Hazard Areas. Flood hazard studies establish the Base Flood elevation and delineate floodplain and/ or floodway when a proposed project contains or is adjacent to a river, stream, lake, or closed depression.
Edgewood Municipal Code
Chapter 14.70 FLOOD HAZARD AREAS

Flood hazard studies must conform to FEMA regulations described in Part 65 of 44 Code of Federal Regulations (CFR). In addition, the following information must be provided and procedures performed for flood hazard studies used under EMC Chapter 14.7800 EMC to examine development proposals or improvements within a floodplain.

Article I. Floodway Determination

The City recognizes two distinct floodways. The FEMA floodway describes the limit to which encroachment into the natural conveyance channel can cause one foot or less rise in water surface elevation. The deep and/or fast flowing (DFF) floodway are hazardous areas and conditions of the floodplain for both people and habitable structures. Life safety and protection to improved properties are compromised if encroached upon. Encroachment cannot occur within these areas.

A. FEMA Floodways.

1. FEMA floodways are determined through the procedures outlined in the FEMA publication Guidelines and Specifications for Study Contractors using the one-foot maximum allowable rise criteria.

2. Transitions shall take into account obstructions to flow such as road approach grades, bridges, piers, culverts, or other restrictions. General guidelines for transitions may be found in HEC-RAS, Water Surface Profiles – User’s Manual, Appendix IV, Application of HEC-RAS Bridge Routines, published by the Hydrologic Engineering Center, Davis, California.

B. Deep and/or Fast Flowing (DFF) Floodways.

1. DFF floodways are generally assumed to include the entire 100-year floodplain until the Department approves a detailed floodway analysis that defines areas of DFF within the entire floodplain area based on the criteria.

2. The hydraulic model must adequately be calibrated to known or recorded stage elevations of past flood events with computed recurrence frequency intervals for the 100-year flood recurrence interval. This is to ensure model accuracy.

Article II. Flood Study Content and Required Information

Three copies of the completed floodplain analysis study report and the modeling digital files shall be submitted. The report submittal must be stamped by a licensed professional civil engineer and include the following information in addition to that required for the drainage plan of a proposed project:

A. Floodplain/Floodway Map.

1. A scaled survey base map stamped by a licensed professional land surveyor registered in the state of Washington. The map must accurately locate the proposed development with respect to the floodplain and floodway, the channel of the subject stream, river, and/or pothole location, and the existing improvements within the subject study area. It must also supply all pertinent information such as the nature of the proposed project, legal description of the property on which the project would be located, fill quantity, limits and elevation, the building floor elevations, and use of compensatory storage.

2. The map must show elevation contours at a minimum of two-foot vertical intervals and shall comply with survey and map guidelines published in the FEMA publication Guidelines and Specifications for Study Contractors. The map must show the following:

   a. Elevations and ground contours, spot elevations, and vertical datum NAVD 88 (North American Vertical Datum of 1988) (or most recent vertical datum accepted by the Department).

   b. Elevations and dimensions of existing structures, fill, and compensatory storage areas.

   c. Size, location, elevation and spatial arrangement of all proposed structures on the site.

The Edgewood Municipal Code (Critical Areas Ordinance Update 2017)
d. Location and elevations of roadways, drainage facilities, water supply lines, and sanitary sewer facilities.

e. Areas of DFF must clearly be shown and plotted on the map sheet depicting the bounded area of the floodway on both sides of the study channel through the subject site. DFF floodway studies must reflect all transitions as referenced above as well.

f. The base maps must also be accompanied by all field survey notes/computations, drawings, etc., for each cross-section with water surface elevation at the time the cross-section field survey was done.

B. Study Report.

1. Soil maps, groundcover maps, and photographs.

2. A narrative report containing the purpose of the study and description of the study area, data collection, methodology for both the hydrology and hydraulics, detailed discussion on the input parameters used, modeling results, and conclusions.

3. A floodplain analysis must include calculations and all computer analysis input and output information, supporting graphical illustrations, as well as the following additional information:

   a. Scaled cross-sections showing the current, existing conditions of the river or stream channel, the floodplain adjoining each side of the channel, the computed floodway, the cross-sectional area to be occupied by any proposed development and all historic high water information.

   b. Profiles showing the bottom of the channel, the top of both left and right banks and computed flood water surface elevations for the 10-, 25-, 50- and 100-year events.

   c. Plans and specifications of any flood protection for structures, construction areas, clearing, dredging, channel improvements, storage of materials, water supply, and sanitary facilities within the floodplain.

   d. Complete printout of input and output data of the model that was used for the analysis. Liberal use of comments and written discussion will assist considerably in understanding the model logic and minimize misinterpretations and/or questions.

   e. A map, showing the graphical/plotted location and limits of the computed floodway and floodplain.

   f. Three copies of ready-to-run digital files of both the hydrologic and hydraulic model and its input and output files used in the study. Data shall be submitted on a disk in standard ASCII format, ready to use on an IBM-compatible personal computer and in the applicable software application, i.e. HEC-RAS, HSPF – Hydrological Simulation Program – FORTRAN, SBUH, or similar application, etc.

   g. A section on the flood flow including computer modeling and/or calculations (see below for additional requirements on flood flow determinations).

   h. Aerial photographs of the site including pre-February 1996 and post-February 1996 photos of the site.

   i. All field survey notes/computations, maps, and drawings for each cross-section with water surface elevation at the time of the cross-section field survey.

C. Computer Modeling Information. Floodway/floodplain studies submitted to the city for review must include output summary tables and include the following (but not limited to) items:

1. Cross-section(s) identification number.

2. Range of flows being examined.
3. Computed water surface elevation at each cross-section.
4. Energy grade line at each cross-section.
5. Graphical plots of the channel cross-sections with computed water surface elevations for all model runs including calibrated model runs.
6. All model input and output printouts.
7. Graphical plots of the model output data that show the points and segments along each cross-section where deep and/or fast flowing water occurs. This shall include cross-section plots of depth and velocity in one-unit increments. The plots shall also be accompanied with a table listing the station distance (right and left bank), flow rate, area, hydraulic depth, velocity, and whether each point is a floodway.
8. A plan sheet clearly showing the graphical representation of the bounded area of the floodway based on DFF criteria through the entire study site and reach. Note that identified islands or pockets within the middle of the bounded floodway area are generally considered as part of the floodway, unless otherwise approved by the department.
9. Discussion on the starting water surface elevation for the hydraulic model.

Article III. Determining Flood Flows

The three techniques used to determine the flows used in a flood study depend on whether gauge data is available, whether a basin plan has been adopted, or a detailed flood study has been done and approved for use by the Department. The first technique is for basins with adopted basin plan areas. The second technique is used if a gauging station exists on the stream. The third technique is used on ungauged catchments or those with an insufficient length of record. In all cases, the engineer shall be responsible for assuring that the hydrologic methods used are technically reasonable, conservative, conform to the FEMA publication, Guidelines and Specifications for Study Contractors, and are acceptable by FEMA and the department.

A. Flood Flows from Adopted Basin Plan Information. Flood flows may be determined using information from the city’s basin plan. The hydrologic model used in the basin plan shall be updated to include the latest changes in zoning or any additional information regarding the basin which has been acquired since the adoption of the basin plan.

1. This technique may be used only if data from a gauging station in the basin is available for a period of at least 10 years.

2. If the difference in the drainage area on the stream at the study site and the drainage area to a gauging station on the stream at a different location in the same basin is less than or equal to 50 percent, the flow at the study site shall be determined by transferring the calculated flow at the gauge to the study site using a drainage area ratio raised to the 0.86 power, as in the following equation:

\[ Q_{ss} = Q_G \left( \frac{A_{ss}}{A_G} \right)^{0.86} \]

where

- \( Q_{ss} \) = estimated flow for the given return frequency on the stream at the study site.
- \( Q_G \) = flow for the given return frequency on the stream at the gauge site.
- \( A_{ss} \) = drainage area tributary to the stream at the study site.
- \( A_G \) = drainage area tributary to the stream at the gauge site.
3. If the difference in the drainage area at the study site and the drainage area at a gauging station in the basin is more than 50 percent and a basin plan has not been prepared, a continuous model shall be used as described below to determine the flood flows at the study site.

4. In all cases where dams or reservoirs, floodplain development, or land use upstream may have altered the storage capacity or runoff characteristics of the basin so as to affect the validity of this technique, a continuous model shall be used to determine flood flows at the study site.

C. Flood Flows from a Calibrated Continuous Model. Flood flows may be determined by utilizing a continuous flow simulation model such as HSPF or other equivalent continuous flow simulation model, as approved by the city. Where flood elevation or stream gauging data are available, the model shall be calibrated to the known data. Otherwise, regional parameters may be used.

Article IV. Determining Flood Elevations, Profiles and Floodways (Hydraulic Model)

A. Reconnaissance. The applicant’s project engineer is responsible for the collection of all existing data with regard to flooding in the study area. This shall include a literature search of all published reports in the study area and adjacent communities and an information search to obtain all unpublished information on flooding in the immediate and adjacent areas from federal, state, and local units of government. This search shall include specific information on past flooding in the area, drainage structures such as bridges and culverts that affect flooding in the area, available topographic maps, available community maps, photographs of past flood events, and general flooding problems within the community. Documented discussions with nearby property owners should also be done to obtain a witness account of the flooding extent. A field reconnaissance shall be made by the applicant’s project engineer to determine hydraulic conditions of the study area, including type and number of structures, locations of cross-sections, and other parameters including the roughness values necessary for the hydraulic analysis.

B. Base Data. Channel cross-sections used in the hydraulic analysis shall be current/existing at the time the study is performed and shall be obtained by field survey. Topographic information obtained from aerial photographs/mapping may be used in combination with surveyed channel cross-sections in the hydraulic analysis. The elevation datum of all information used in the hydraulic analysis shall be verified. All information shall be referenced directly to NAVD 1988 (and include local correlation to NGVD) unless otherwise approved by the city.

C. Methodology. Flood studies and analysis (including deep and/or fast flowing floodways and zero-rise analysis) shall be calculated using the U.S. Army Corps of Engineers HEC-RAS computer model (or subsequent revision) unless otherwise approved by the city.

D. Adequacy of the Hydraulic Model. Edgewood considers the following (but not limited to) factors when determining the adequacy of the hydraulic model for use in the floodway/floodplain model:

1. Cross-section of a downstream starting location and spacing.

2. Differences in energy grade line (significant differences in the energy grade line from cross-section to cross-section are an indication that cross-sections should be more closely spaced or that other inaccuracies exist in the hydraulic model).

3. Methods and results for analyzing the hydraulics of structures such as bridges and culverts.

4. Lack of flow continuity.

5. Use of a gradually varied flow model. In certain cases, rapidly varied flow techniques may need to be used in combination with a gradually varied flow model such as weir flow over a levee, flow through a spillway of a dam, or special application of bridge flow (pressure flow if bridge superstructure is shown to be submerged for the study event).

6. Manning’s “n” value.
7. Calibration of hydraulic model to known and/or observed flow stage elevations including past flood events.

8. Special applications. In some cases, steady state one-dimensional hydraulic models may not be sufficient for preparing the floodplain floodway analysis. This may occur where sediment transport, two-dimensional flow, or other unique hydraulic circumstances affect the accuracy of the model. In these cases, the project engineer must propose and obtain department approval of alternative models for establishing the water surface elevations.

9. All reported error and/or warning messages by the model must be properly and adequately addressed and/or resolved and included in the report for review verification.

Article V. Zero-Rise Analysis (ZRA)

A. Zero-rise analysis (ZRA) is required where encroachment within the flood fringe area is allowed and approved by the department. The ZRA must show that the proposed development encroachment in the flood fringe area will not create a measurable more than a 0.01-foot rise in the base flood elevation resulting from a comparison of existing conditions and proposed conditions. This is directly attributable to development in the floodplain but not attributable to manipulation of mathematical variables such as roughness factors, coefficients, discharge, and other hydraulic parameters.

B. In addition to those items listed in subsection (A) of this article, the following shall be included in a ZRA:

1. Floodway boundaries (based on zero-rise) are to follow the stream lines and reasonably balance the rights of property owners on either side of the floodway. Use of the automatic equal conveyance encroachment option in the model will be considered equitable.

2. The ZRA must include a sufficient number of cross-sections in order to accurately model the subject fill and compensatory storage areas of the site. In all cases, cross-sections shall be located downstream, through the subject site and upstream of the site at a very minimum. They shall also be located where changes in channel and the fill material characteristics occur, such as slope, shape, and roughness. The sections shall also be located perpendicular to the flow path in the channel and the outside overbank areas. The department shall review and approve the proposed number and location of cross-sections. All cross-sections and surveys shall be prepared and certified by a professional land surveyor or registered professional engineer in the state of Washington.

3. The difference between two profiles of water surface elevation at the cross-section, (e.g., difference between existing and encroached water surfaces). The model must report 0.01 feet or less an allowable change in the water surface elevation. This must be shown in the profile graphical plot as well.

4. The difference between profiles of the energy grade line at the cross-section. The model must report 0.01 feet or less. This is the allowable change in the energy grade line. This must be shown in the profile graphical plot as well.

C. Conveyance Capacity.

1. The ZRA must also show that the proposed development encroachment in the flood fringe area will not show a measurable decrease (less than 0.01 CFS) in the conveyance capacity of the channel, resulting from a comparison of existing conditions and proposed conditions, for each of the cross-sections. This is also directly attributable to development in the floodplain but not attributable to manipulation of mathematical variables such as roughness factors, coefficients, discharge, and other hydraulic parameters.

2. The analysis must provide calculations of the reduction in conveyance caused by the proposed development encroachment, assuming no change in the water surface elevation, and using the roughness coefficient value(s) appropriate for the proposed development.

3. The analysis must then provide calculations for the increase in conveyance of the proposed compensatory measure, using the roughness coefficient value(s) appropriate for the proposed development.
4. Include a comparison analysis and discussion from subsections (C)(2) and (3) of this article. The comparison must adequately show that the conveyance capacity has not measurably decreased between the existing condition and proposed development condition.

**Floodplain/Floodway Zero-Rise Certification**

This is to certify that I am a duly qualified professional Engineer licensed to practice in the state of Washington.

This is to further certify that the attached floodplain/floodway zero-rise analysis conclusively shows that the proposed development of:

(Name of Development) (Parcel Number) will not increase the 100-year Base Flood elevation(s) and widths nor reduce the conveyance capacity of the floodplain/floodway, and its associated channel to the

(Name of River, Stream, Pothole or other Watercourse)

**Supporting Data**

Base Flood Elevation (Pre-Development) = ___________ FT (NAVD 88)

Base Flood Elevation (Post-Development) = ___________ FT (NAVD 88)

Conveyance Capacity (Pre-Development) = ___________ CFS

Conveyance Capacity (Post-Development = ___________ CFS

with compensatory storage)

**APPENDIX B**

**CHANNEL MIGRATION ZONE STUDY REQUIREMENTS**

The channel migration zone (CMZ) is the area within the lateral extent of likely stream channel movement due to stream bank destabilization and erosion, rapid stream incision, and shifts in location of stream channels. The CMZ will define areas in which, to the best information available, development should be regulated due to the dangers expected from erosion.
Article I. Determining Channel Migration Zone Limits

A. The CMZ shall be based on available historic records of channel migration, or 100 years of calculated channel migration whichever is greater, and will generally include those areas that encompass:

1. The limit of geologic controls, such as hill slope, bedrock outcrop, or abandoned floodplain terrace;
2. Side channels, abandoned channels, and oxbows; and
3. Outside edges of progressive bank erosion at meander bends.

B. Channel migration over the 100-year time frame can be estimated and predicted from geomorphic analysis of annual bank erosion rates, historic meander belt width, and measured meander bend amplitudes, potential avulsion sites, and previous river channel locations as depicted on historic aerial photographs and maps. The 100-year time span represents the time required to grow mature trees that can provide functional large woody debris to streams.

C. The CMZ boundaries will be determined using the following specific criteria:

1. The representative average annual rate of channel migration in the affected river reach is calculated by dividing the lateral distance eroded with the corresponding elapsed time shown in sequential aerial photographs or historic maps (distance/time equals channel movement). Measurements from reaches that have had some form of bank armoring shall not be included. Historical records will need to be checked closely for this information.
2. Identify the width of the channel migration zone by multiplying the representative average annual erosion rate by 100 years.

D. Areas separated from the active channel by legally existing artificial channel constraints (levees, roads, driveways, etc.) that limit bank erosion and channel avulsion to the 100-year recurrence interval flood elevation plus three feet of freeboard shall serve as a boundary for the outer limit of the CMZ.

Article II. Channel Migration Zone Study Content and Required Information

Three copies of the completed channel migration zone study shall be submitted. The study submittal must be stamped by a licensed professional engineer or professional geologist with five (5) years' of experience in fluvial geomorphology, river dynamics, or geotechnical engineering. The CMZ study shall include the following information in addition to that required for the drainage plan of a proposed project. The CMZ study will consist of a written technical report including:

A. Detailed methods, techniques, and assumptions used in determining the location of the CMZ.

B. A vicinity map and site with scale, north arrow, and parcel number(s) or specific site being studied.

C. A clear statement of the requested revision to the Pierce County’s determination of the 100-year floodplain limits as the CMZ.

D. A clearly stated conclusion of the study results that support the requested revision. The conclusion needs to document the basis for the revision, show how the data presented refutes the 100-year floodplain limits as the CMZ, and calculates the new results using the new information.

E. A map clearly delineating the subject property and the CMZ of the adjacent watercourse. In addition to providing a hard copy of the CMZ map, the CMZ map shall also be provided in ARC-View shapefile format. Contact the city GIS Department for mapping and aerial imaging standards. (Ord. 02-200 § 2).
Chapter 14.890

LANDSLIDE HAZARD AREAS

Sections:
14.890.010 Purpose.
14.890.020 Landslide Hazard Areas.
14.890.030 Landslide Hazard Area review procedures.
14.890.050 Buffer requirements.
14.890.060 Appendices.

14.890.010 Purpose.
The following statements describe the purpose of this chapter is to:

A. Protect human life and health.

B. Regulate uses of land in order to avoid damage to structures and property being developed and damage to neighboring land and structures.

C. Identify and map active Landslide Hazard Areas.

D. Minimize the ill effects on wetland and critical fish and wildlife habitat that can result from landslides.

E. Establish permit requirement and review procedures for development proposals in areas with potential landslides. (Ord. 02-200 § 2).

14.890.020 Landslide Hazard Areas.
A. Landslide Hazard Areas Indicators. Landslide Hazard Areas are areas potentially subject to mass movement due to a combination of geologic, seismic, topographic, hydrologic, or manmade factors. Landslide Hazard Areas can be identified by the presence of any of the following five (5) indicators:

1. Areas of historic failures, including areas of unstable, old and recent landslides or landslide debris within a head scarp.

2. Areas with all three (3) of the following characteristics:
   a. Slopes steeper than 15 percent with a vertical relief of 20 feet or more; and
   b. Hillsides that intersect geologic contacts with a relatively permeable sediment overlying a relatively impermeable sediment or bedrock; and
   c. Springs or groundwater seepage.

3. Areas exhibiting geomorphological features indicative of past slope failure within the last 10,000 years, such as hummocky ground, back-rotated benches on slopes, tension cracks, etc.

4. Any area with a slope of 40 percent or steeper and with a vertical relief of 15 or more feet. 
   a. Slopes of 40 percent or steeper with a vertical relief of 15 feet or more may be exempted from the requirements of this section of the code provided that it can be demonstrated by a qualified geotechnical professional that such an exemption does not result in an increased risk of landsliding or damage to the subject site, nearby properties, or and existing structures, and that any associated hazards to proposed structures are must be suitably mitigated.
b. For the purposes of determining whether a slope is considered to be a landslide hazard area, the horizontal and vertical distance between the top of slope and toe of slope are utilized.

5. Areas that are at risk of mass movement due to seismic events.

B. Potential Landslide Hazard Areas. Potential landslide hazard areas, as depicted on the Geologically Hazardous Areas map, are those areas where the suspected risk of slope instability and landslide is sufficient to require a geological assessment to assess the potential for active landslide activity. Potential landslide hazard areas are determined by using the following criteria:

1. Areas that possess one or more of the landslide hazard area indicators (stratigraphy, topography, emergent groundwater seepage, etc.) as set forth in subsection (A) of this section and any adjacent area within a distance of 65 feet. These areas include, but are not necessarily limited to, those areas designated on the City’s Geologically Hazardous Areas map as moderate or steep slope areas.

14.890.030 Landslide hazard area review procedures.

A. General Requirements.

1. The City’s Geologically Hazardous Areas map provides an indication of where potential landslide hazard areas are located within the city. The actual presence or location of landslide hazard areas that have not been mapped, but may be present on or adjacent to a site, shall be determined using the geological assessment procedures established in this chapter.

2. The department will complete a review of the Geologically Hazardous Areas map and other source documents for any proposed regulated activity to determine whether the site is, or may be, located within a landslide hazard area or potential landslide hazard area. Identification of a landslide hazard area or potential landslide hazard area may also occur as a result of field investigations conducted by department staff.

3. When the department’s maps or sources indicate that the site for a proposed regulated activity is or may be located within a landslide hazard area or potential landslide hazard area, the department shall require the submittal of a geological assessment as outlined in subsection (B) of this section.

4. Unless otherwise stated in this chapter, the critical protective measure provisions contained in EMC Chapter 14.10.080 shall apply.

B. Geological Assessment. A geological assessment is a site investigation process to evaluate the on-site geology affecting a subject property. The findings of the geological assessment shall be presented in a Landslide Hazard Geotechnical Verification or Geotechnical Report.

1. Geological assessments shall be submitted to the department for review and approval together with a landslide hazard area application and associated fee.

2. A geological assessment shall include a field investigation and may include the use of historical air photo analysis, LiDAR mapping, review of regional geologic mapping, review of public records and documentation, and interviews with adjacent property owners, etc.

3. The geological assessment shall include the following information and analysis contained in paragraphs a-d:

   a. A determination of which areas on the site or within the vicinity of the site meet the criteria for a landslide hazard area as set forth herein EMC 14.80.020(A).

   b. Consider the run-out hazard of landslide debris to the proposed development that starts upslope (whether part of the subject property or on a neighboring property) and/or the impacts of landslide run-out on down slope properties.

   c. The geological assessment shall include a detailed review of the field investigations, published data and references, data and conclusions from past geological assessments, or geotechnical investigations of the
site, site-specific measurements, tests, investigations, or studies, as well as the methods of data analysis and calculations that support the results, conclusions, and recommendations.

d. All of the information required per EMC Section 14.10.080.C.

4. Geological assessments shall be prepared, signed, and dated by a geotechnical professional, as defined in Chapter 14.15 EMC and established in this chapter and The format shall be pre-approved by the department.

5. A geotechnical professional shall complete a field investigation and geological assessment to determine whether or not a landslide hazard area is likely to exist within 300 feet of the site. Where access to off-site properties is not available by the geotechnical professional, evaluation of off-site landslide hazards must include review of regional geologic mapping and LiDAR based topographic mapping.

   a. The geological assessment shall be submitted in the form of geotechnical verification when the geotechnical professional finds that no landslide hazard area exists within 300 feet of the project area. The geotechnical verification shall meet the requirements contained in EMC 14.80.060, Appendix A.

   b. The geological assessment shall be submitted in the form of a geotechnical report when the geotechnical professional finds that a landslide hazard area exists within 300 feet of the proposed project area or when a geotechnical professional determines that mitigation measures are necessary in order to construct or develop within a potential landslide hazard area. The geotechnical report shall meet the requirements contained in EMC 14.80.060, Appendix B.

6. Geological assessments that do not contain the minimum required information or comply with the landslide hazard area standards set forth in EMC 14.80.030 will be returned to the geotechnical professional for revision.

7. The department shall review the geological assessment and either:

   a. Accept the geological assessment; or

   b. Reject the geological assessment and require revisions or additional information.

8. When the geological assessment has been accepted, the department shall issue a decision on the landslide hazard area application.

9. A geological assessment for a specific site may be valid for a period of up to five years when the proposed land use activity and surrounding site conditions are unchanged. However, if any environmental conditions associated with the site change during that five-year period, the applicant may be required to submit an amendment to the geological assessment. (Ord. 02-200 § 2).

14.890.040 Landslide and erosion hazard area standards.
A. Landslide Hazard Areas. Any development, encroachment, clearing or grading, building structures, impervious surfaces, and/or vegetation removal shall be prohibited within landslide hazard areas and associated buffers except as specified in the following standards:

1. Stormwater Conveyance. Stormwater conveyance shall be allowed when it is conveyed through a high-density polyethylene stormwater pipe with fuse-welded joints and when no other stormwater conveyance alternative is available. The pipe shall be located on the surface of the ground and be properly anchored so that it will continue to function in the event of an underlying slide.

2. Utility Lines. Utility lines will be permitted when no other conveyance alternative is available. The line shall be located above ground and properly anchored and/or designed so that it will continue to function in the event of an underlying slide.

3. Roads, Bridges, and Trails. Roads, bridges, and trails shall be allowed when all of the following conditions have been met:
a. Mitigation measures are provided that ensure the roadway prism and/or bridge structure will not be susceptible to damage from landslide-induced ground deformation or impact/coverage by landslide debris. Mitigation measures shall be designed for static and seismic loading conditions in accordance with the most recent version of the American Association of State Highway and Transportation Officials (AASHTO) Manual.

b. The road is not a sole access for a development.

c. The removal or disturbance of vegetation and clearing or grading activities shall be prohibited during the wet season from November 1st to May 1st.

B. Landslide Hazard Management Areas. All activities may be allowed in areas located within 300 feet of a landslide hazard area subject to the following standards:

1. The department reviews and approves a geological assessment – geotechnical report and determines that the potential landslide hazard area is stable.

2. The proposed development is located outside of a landslide hazard area and any required buffer, as set forth in EMC 14.80.050.

3. The proposed recommendations and mitigation measures contained within the geotechnical report are adequate to reduce or mitigate risks to health and safety.

4. The proposed development shall not decrease the factor of safety for landslide occurrence below the limits of 1.5 for static conditions and 1.1 for dynamic conditions. Analysis of dynamic (seismic) conditions shall be based on a minimum horizontal acceleration as established by the current version of the International Building Code.

5. The removal and disturbance of vegetation and clearing or grading activities shall be limited to the area of the approved development and shall not be allowed during the wet season from November 1st through May 1st unless adequate provisions for wet season erosion have been addressed in the geotechnical report and approved by the department.

6. Surface drainage from developed areas, including downspouts and runoff from paved or unpaved surfaces up slope, shall not be directed through a landslide hazard area or its associated buffer, unless it is conveyed in conformance with the provisions in EMC 14.890.030.

7. Stormwater retention facilities, including infiltration systems utilizing perforated pipe, are prohibited unless the slope stability impacts of such systems have been analyzed and mitigated by a geotechnical professional and the impacts have been determined to be negligible.

8. The proposed development shall not create a need for larger landslide hazard area buffers and setbacks on neighboring properties unless approved through a notarized written agreement with the affected property owner(s).

9. The proposed development shall be sited far enough from regressing slope faces to project 120 years of useful life for the proposed structure(s) or infrastructure.

10. Any proposed lots must be completely located outside any identified landslide hazard areas or their associated buffers.

11. Landslide hazard areas that are directly adjacent to any riparian areas, or wetlands, may be subject to additional buffer requirements and standards. See as set forth in EMC Chapter 14.450, Critical Fish and Wildlife Habitat Areas; EMC, Fish and Wildlife Habitat Conservation Areas, or wetlands as set forth in, and EMC Chapter 14.340, Wetlands; EMC, Wetlands for additional details. (Ord. 02-200 § 2).
1. The buffer width shall be measured on a horizontal plane from a perpendicular line established at the edge of the landslide hazard area limits (both from the top and toe of the slope).

2. A buffer of undisturbed vegetation shall be required for a landslide hazard area. The required buffer width is the greater amount of the distances described in EMC Chapter 14.80.050:
   a. Fifty feet from all edges of the active landslide hazard area limits;
   b. A distance of one-third the height of the slope at the top of the active landslide hazard area and a distance of one-half the height of the slope at the bottom of an active landslide hazard area; or
   c. The buffer widths may be reduced below the widths specified in EMC 14.80.050, or eliminated upon approval by the department of a geotechnical report that demonstrates that such a reduction would not result in an increased risk of landslide activity either on or off of the subject property.

B. Modification of Buffer Widths. The department may require a larger buffer width than the buffer distance, as determined in subsection (A) of this section, if any of the following are identified:
   1. The adjacent land is susceptible to severe erosion and erosion control measures will not effectively prevent adverse impacts.
   2. The area has a severe risk of slope failure or downslope stormwater drainage impacts. (Ord. 02-200 § 2).

14.890.060 Appendices.
A. Geological Assessment – Landslide Hazard Geotechnical Verification.

APPENDIX A

GEOLOGICAL ASSESSMENT – LANDSLIDE HAZARD GEOTECHNICAL VERIFICATION

A. A geotechnical verification shall include the following:

   1. The general report requirements in EMC 14.10.082.
   2. A description of the surface and subsurface geology, hydrology, soils, and vegetation at the site and a list of the landslide hazard area indicators, as set forth in EMC 14.80.020(A), that were found on or in the vicinity of the site.
   3. A summary of the results, conclusions, and recommendations resulting from the geological assessment of the landslide hazards on or in the vicinity of the site. This summary shall address all of the information required in EMC 14.80.020(B). The summary should include a description of observations during the site visit and a discussion of information obtained from review of the listed documents in EMC 14.80.020(B)(2).
   4. An accurate site plan drawn at a scale of one inch equals 20 feet, one inch equals 30 feet, one inch equals 50 feet (or other scale deemed appropriate by the department) is required. The department may require that the site plan information listed below be based on a field survey by a licensed surveyor. The site plan shall include:
      a. The limits and location of the any active landslide hazard area(s).
      b. The limits and location of the required landslide hazard buffer based upon the requirements set forth in EMC 14.80.020(A).
      c. The location of any existing and proposed structures, utilities, on-site septic systems, wells, and stormwater management facilities.

The Edgewood Municipal Code (Critical Areas Ordinance Update 2017)
d. The full geographical limits of the proposed project area or area to be developed.

e. Dimension the closest distance between the identified active landslide hazard area boundary and the project area.

f. Existing topography on the site presented in two-foot contours.

g. Property lines for the site.

h. North arrow and plan scale.

B. The professional who prepared the verification document shall stamp the verification with his or her license stamp or seal.

C. Geotechnical verifications shall be in conformance with a format that is pre-approved by the department.

APPENDIX B

GEODETICAL ASSESSMENT – LANDSLIDE HAZARD GEOTECHNICAL REPORT

A. At a minimum, a geotechnical report shall include the following:

1. The general critical areas report requirements in EMC 14.10.082.

2. A description of the surface and subsurface geology, hydrology, soils, and vegetation of the site and a list of the landslide hazard area indicators, as set forth in EMC 14.80.020(A), that were found on or in the vicinity of the site.

3. A summary of the results, conclusions, and recommendations resulting from the geological assessment of the landslide hazards on or in the vicinity of the site. This summary shall address all of the information required in EMC 14.80.030(B).

4. An accurate site plan drawn at a scale of one inch equals 20 feet, one inch equals 30 feet, one inch equals 50 feet (or other scale deemed appropriate by the department) is required. The department may require that the site plan information listed below be based on a field survey by a licensed surveyor. The site plan shall include:

a. The limits and location of any landslide hazard area(s) within the site. Delineation of the landslide hazard area limits shall identify any areas of historic landslide activity.

b. The limits and location of the required landslide hazard buffer based upon the requirements set forth in EMC 14.80.050(A).

d. The location of any existing and proposed structures, utilities, on-site septic systems, wells, and stormwater management facilities.

e. The full geographical limits of the proposed project area or area to be developed.

f. Location and unique identifier of geotechnical borings, CPT soundings, or other surveys or explorations used to characterize subsurface conditions.

g. Extent of cross-section(s) used to evaluate the three-dimensional subsurface geologic and groundwater conditions at the site.

h. Extent of cross-section(s) used in the evaluation of slope instability.

i. Existing topography on the site presented in two-foot contours.
Edgewood Municipal Code
Chapter 14.80 LANDSLIDE HAZARD AREAS

j. Property lines for the site.

k. North arrow and plan scale.

5. Subsurface characterization data must be provided. The data shall be based on both existing and new information that may include soil borings, test pits, geophysical surveys, or other appropriate subsurface exploration methods, development of site-specific soil and/or rock stratigraphy, and measurement of groundwater levels including variability resulting from seasonal changes, alterations to the site, etc.

a. Geotechnical borings or CPT soundings will be advanced to a depth sufficient to characterize geologic conditions within and below the existing or potential landslide mass.

b. Other methods used for subsurface characterization shall be assigned a unique identifier, and the basic data presented in appropriate graphical and/or tabular format.

c. The three-dimensional subsurface conditions at the site shall be presented using one or more cross-sections showing location and depth penetration of geotechnical borings, CPT soundings, or other subsurface characterization methods, interpretation of the geometry of major soil units, and projected location of the static groundwater surface determined from the subsurface exploration. The cross-sections shall be presented at a scale of one inch equals 20 feet, one inch equals 30 feet, one inch equals 50 feet (or other scale deemed appropriate by the department). Each cross-section shall have a legend with a description of the various major soil units.

6. A detailed description of any prior grading activity, soil instability, or slope failure.

7. Where deemed appropriate by the geotechnical professional assessments and conclusions regarding slope stability for both the existing and developed conditions shall be presented and documented. These assessments and conclusions shall include the information provided below in EMC Section 14.890.060, Appendix B. The project geotechnical professional must provide justification for not including a slope stability analysis if one is excluded. The City’s geotechnical professional reserves the right to request a slope stability analysis based on site conditions. If a dispute arises between the project geotechnical professional and the City’s geotechnical professional regarding the need for a slope stability analysis, then the City reserves the right to require an independent, third party review to be paid for by the applicant to resolve the dispute.

a. Determination of the potential type(s) of landslide failure mechanisms, (e.g., Debris Flow, rotational slump, translational slip) that may affect the site.

b. Quantitative stability evaluation of slope conditions of the various failure mechanisms using state-of-the-practice modeling techniques. Limiting equilibrium methods of analysis shall state the stability conditions as a factor of safety. The most unstable failure geometry(ies) shall be presented in the form of a cross-section(s), with the least stable failure geometry for each failure mechanism clearly indicated. The stability evaluation shall also consider dynamic (earthquake) loading, and shall use a minimum horizontal acceleration as established by the current version of the International Building Code.

c. An analysis of slope regression rate shall be presented in those cases where stability is impacted or influenced by erosional processes (e.g., wave cutting, stream meandering, etc.) acting on the toe of the slope.

8. Mitigation recommendations using engineered measures to protect the proposed structure(s) and any adjacent structures, infrastructure, adjacent Wetlands, or critical fish and wildlife habitat from damage or destruction as a result of proposed construction activities shall be designed by a professional engineer. Design plans and detailed geotechnical recommendations may be provided in a document separate from the geotechnical report. -When appropriate, such recommendations/plans may include, but are not necessarily limited to:

a. Design plans and associated design calculations for engineered structures or drainage systems (e.g., structural foundation requirements, retaining wall design, etc.).

The Edgewood Municipal Code (Critical Areas Ordinance Update 2017)
b. Recommendations and requirements pertaining to the handling of surface and subsurface runoff in the developed condition.

c. Identification of necessary geotechnical inspections to assure conformance with the report mitigation and recommendations.

d. Proposed angles of cut and fill slopes, site grading requirements, final site topography (shown as two-foot contours), and the location of any proposed structures, on-site septic systems, wells, and stormwater management features, or facilities associated with the development detailed within the body of the report and shown on a site map at the same scale as that required in subsection (A)(8) of this appendix.

e. Soil compaction criteria and compaction inspection requirements.

f. An analysis that indicates how the proposal meets the standards outlined in EMC Chapter 14.890.040.

g. Structural foundation requirements and estimated foundation settlement shall be provided if structures are proposed.

h. Lateral earth pressures.

i. Suitability of on-site soil for use as fill.

j. Mitigation measures for building construction on each lot for short plats, large lots, or formal plats such that additional geotechnical professional involvement is minimized during building construction.

B. The geotechnical report shall be prepared by an engineering geologist and shall be co-written by both an engineering geologist and professional engineer where both geological interpretations and engineering analyses and designs are necessary or prudent in the mitigation of the landslide hazard.

C. The professional(s) who prepared the geotechnical report shall stamp the report with his or her license stamp or seal.

D. The department may request a professional to provide additional information in the geotechnical report based upon existing conditions, changed conditions, or unique circumstances occurring on a case-by-case basis.

E. Geotechnical reports shall be in conformance with a format that is pre-approved by the department. (Ord. 05-247 § 1; Ord. 02-200 § 2).
Chapter 14.9100
SEISMIC (EARTHQUAKE) HAZARD AREAS

Sections:
14.9100.010 Purpose.
14.9100.020 Seismic hazard areas.
14.9100.030 Seismic hazard area review procedures.
14.9100.040 Seismic hazard area standards.
14.9100.050 Buffer requirements.
14.9100.060 Appendices.

14.9100.010 Purpose.
Earthquakes have historically occurred throughout the Puget Sound region. Large earthquakes have caused loss of life and over a billion dollars in property damage. The purpose of this chapter is to protect the public health, safety, and general welfare of the citizens of Edgewood from the damaging effects of earthquakes. This chapter provides standards to ensure life safety and minimize public and private losses that may occur within a seismic hazard area. (Ord. 02-200 § 2).

14.9100.020 Seismic hazard areas.
A. General. Seismic hazard areas are areas subject to severe risk of damage as a result of earthquake-induced landsliding, seismic ground shaking, dynamic settlement, fault rupture, or soil liquefaction.

B. Potential Seismic Hazard Areas. Potential seismic hazard areas are those areas where the suspected risk of earthquake-induced landsliding, dynamic settlement, fault rupture, ground deformation caused by soil liquefaction, or flooding is sufficient to require a further seismic hazard area review as set forth in EMC 14.90.030. These potential seismic hazard areas are determined using the following criteria:

1. Earthquake Induced Landslide Hazard Areas. Areas identified as potential landslide hazard areas in EMC Section 14.890.020.

2. Liquefaction and/or Dynamic Settlement Hazard Areas. Areas identified as high and moderate liquefaction and dynamic settlement hazard areas on the Geologically Hazardous Areas map.

3. Fault Rupture Hazard Areas.

C. Seismic Hazard Area Categories.

1. Earthquake Induced Landslide Hazard Areas. Earthquake induced landslide hazard areas include slopes that can become unstable as a result of strong ground shaking, even though these areas may be stable under non-seismic conditions.

2. Liquefaction and/or Dynamic Settlement Hazard Areas.

   a. Liquefaction hazard areas are areas underlain by unconsolidated (corrected Standard Penetration Test blow counts, [(N1)60] less than 30) sandy or silt soils (Unified Soil Classification System S or M soil-types) and a shallow groundwater table (static groundwater depth less than 30 feet) capable of liquefying in response to earthquake shaking.

   b. Dynamic settlement hazard areas are areas underlain by a significant thickness (more than 10 feet) of loose or soft soil not susceptible to liquefaction (e.g., peats or organic silts and clays, unsaturated loose sands or silts), but that could result in vertical settlement of the ground surface in response to earthquake shaking.

3. Fault Rupture Hazard Areas. Fault rupture hazard areas include:
Edgewood Municipal Code

Chapter 14.80 SEISMIC (EARTHQUAKE) HAZARD AREAS

a. Active fault rupture hazard areas are areas where displacement (movement up, down, or laterally) of the ground surface has occurred during past earthquake(s) in the Holocene Epoch; and

b. Areas adjacent to the active fault rupture hazard area that may be potentially subject to ground surface displacement in a future earthquake.

14.80100.030 Seismic Hazard Area review procedures.

A. General Requirements.

1. The City’s Geologically Hazardous Areas map provides an indication of where potential Seismic Hazard Areas are located within the city.

2. The Department will complete a review of the Critical Areas Atlas – Seismic Hazard Area Map for any regulated activity to determine whether the site for a proposed regulated activity is located within a Seismic Hazard Area.

3. When the Department’s maps indicate that the site for a proposed regulated activity is located within a potential liquefaction or dynamic settlement hazard area, the Department shall require the submittal of a geological assessment as outlined in subsection (B) of this section.

4. When the Department’s maps indicate that the site for a proposed regulated activity is located within a potential fault rupture hazard area, the Department shall require the submittal of a geological assessment as outlined in subsection (B) of this section. The requirement to submit a geological assessment may be waived at the Department’s discretion when it is determined that the proposed project area for the regulated activity is located outside the potential fault rupture hazard area.

5. When the Department’s maps indicate that the site for a proposed regulated activity is or may be located within a potential earthquake-induced landslide hazard area, the Department shall conduct a review pursuant to the requirements set forth in EMC Chapter 14.890.030.

6. Unless otherwise stated in this chapter, the Critical Area protective measure provisions contained in EMC Chapter 14.10.080 shall apply.

B. Geological Assessments. A geological assessment is a site investigation process to evaluate the on-site geology affecting a subject property and define the extent and severity of potential seismic hazards.

1. A geological assessment shall be required when the Department’s maps, sources, or field investigation indicate a site contains a potential liquefaction, dynamic settlement, or fault rupture hazard area. Geological assessments shall be submitted to the Department for review and approval together with a Seismic Hazard Area Application.

2. A Geotechnical Professional(s) shall complete a field investigation and geological assessment to determine whether or not the site for a proposed regulated activity is located within a liquefaction or dynamic settlement hazard area.

   a. The geological assessment shall be submitted in the form of a geotechnical verification when the Geotechnical Professional(s) finds that no liquefaction or dynamic settlement hazard area exists within the proposed project area. The geotechnical verification shall meet the requirements contained in EMC 14.90.060, Appendix A.

   b. The geological assessment shall be submitted in the form of a Geotechnical Report when the Geotechnical Professional(s) finds that a liquefaction or dynamic settlement hazard area exists within the proposed project area. The geotechnical report shall meet the requirements contained in EMC 14.90.060, Appendix A.

3. A Geotechnical Professional shall complete a field investigation and geological assessment presented in the form of a Geotechnical Report to determine whether or not the site for a proposed regulated activity is located within a fault rupture hazard area. The geological assessment shall meet the requirements contained in. 

The Edgewood Municipal Code (Critical Areas Ordinance Update 2017)
4. All geological assessments for seismic hazards submitted under this chapter shall include, at a minimum, the following items identified in paragraphs a-i:

   a. The dates when the geological assessment was conducted and when the assessment was prepared. All of the items required per EMC Section 14.10.080.C.
   b. The parcel number(s) of the subject property.
   c. Site address, if the city has assigned one.
   d. A brief description of the project (including the proposed land use) and the area to be developed.
   e. A map showing the property lines for the site, existing two-foot contours of the existing site topography, and the location of any existing structures, utilities, wells, stormwater or septic systems, or other developments.
   f. A site plan delineating the limits of the proposed development and the location of all areas of the site subject to potential seismic hazards based on the Geologically Hazardous Areas map and, if applicable, limits of associated buffers.
   g. A description of the surface and subsurface geology, hydrology, soils, and vegetation of the site.
   h. A detailed overview of the field investigations, published data and references, data and conclusions from past geological assessments or geotechnical investigations of the site, site-specific measurements, tests, investigations, or studies, as well as the methods of data analysis and calculations that support the determination regarding whether liquefaction and/or dynamic settlement hazards are present on the site.
   i. The results, conclusions, and recommendations resulting from the geological assessment of the liquefaction and/or dynamic settlement hazards on the subject property as prepared by a geotechnical professional(s).

5. Geological assessments shall be prepared, signed, stamped, and dated by the appropriate geotechnical professional(s) (as defined in Chapter 14.15 EMC and established in this chapter) and the format shall be pre-approved by the department.

6. Geological assessments that do not contain the minimum required information will be returned to the geotechnical professional(s) for revision.

7. The department shall review the geological assessment and either:

   a. Accept the geological assessment and approve the application; or
   b. Reject the geological assessment and require revisions or additional information.

8. A geological assessment for a specific site may be valid for a period of up to five years when the proposed land use activity and surrounding site conditions are unchanged. However, if any environmental conditions associated with the site change during that five-year period, the applicant may be required to submit an amendment to the geological assessment. (Ord. 02-200 § 2).

14.90.040 Seismic Hazard Area standards.

A. Earthquake Induced Landslide Hazard Areas. All standards set forth in EMC Chapter 14.80 EMC shall apply to earthquake induced landslide hazard areas.

B. Liquefaction and/or Dynamic Settlement Hazard Areas.
The Edgewood Municipal Code

Chapter 14.80 SEISMIC (EARTHQUAKE) HAZARD AREAS

1. All building structures shall conform to the standards set forth in EMC Title 15, Buildings and Construction.

2. Utility Lines. Utility lines, except for gas pipelines, which are prohibited, will be permitted when no other conveyance alternative is available. The line shall be located above ground and properly anchored and/or designed so that it will continue to function in the event of seismically induced ground deformation. Provision for automatic shut-off of utilities in a ground-rupturing event will be required.

3. Roads, Bridges, and Trails. Roads, bridges, and trails shall be allowed when mitigation measures are provided that ensure the roadway prism and/or bridge structure will not be susceptible to damage from seismic induced ground deformation. Mitigation measures shall be designed for static and seismic loading conditions in accordance with the most recent version of the American Association of State Highway and Transportation Officials (AASHTO) Manual and also for an estimated range of ground surface offset presented in the Geotechnical Report.

4. Fault Rupture Hazard Areas. Any development, encroachment, filling, clearing and grading, or building structures shall be prohibited within fault rupture hazard areas and associated buffers except as specified in the following standards:

   1. Utility Lines. Utility lines, except for gas pipelines, which are prohibited, will be permitted when no other conveyance alternative is available. The line shall be located above ground and properly anchored and/or designed so that it will continue to function in the event of seismically-induced ground deformation. Provision for automatic shutoff of utilities in a ground-rupturing event will be required.

   2. Roads, Bridges, and Trails. Roads, bridges, and trails shall be allowed when all of the following conditions have been met:

      a. Mitigation measures are provided that ensure the roadway prism and/or bridge structure will not be susceptible to damage from seismically-induced ground deformation. Mitigation measures shall be designed for static and seismic loading conditions in accordance with the most recent version of the American Association of State Highway and Transportation Officials (AASHTO) Manual and also for an estimated range of ground surface offset presented in the Geotechnical Report.

      b. The road is not a sole access for a development. (Ord. 02-200 § 2).

14.90100.050 Buffer requirements.

A. Determining Buffer Widths.

1. The buffer width shall be measured on a horizontal plane from a perpendicular line established at the edge of the fault rupture hazard area limits.

2. A buffer is an area that is adjacent to a fault rupture hazard area that may be potentially subject to ground surface displacement in a future earthquake. No development shall be permitted within a fault rupture hazard area and its associated buffer. The required buffer width is the greater amount of the following distances:

   a. Fifty feet from all edges of a fault rupture hazard area, except for high occupancy or essential facilities, where the minimum buffer distance shall be 100 feet; or

   b. The required buffer width is the minimum distance recommended by the Geotechnical Professional(s).

B. Modification of Buffer Widths. The Department may require a larger buffer width than the buffer distance, as determined in subsection (A) of this section, if the department determines the standard or proposed buffer is not adequate to protect the health, safety, or welfare of any proposed development. (Ord. 02-200 § 2).

14.90100.060 Appendices.

A. Geological Assessments – Liquefaction or Dynamic Settlement Hazard Areas.
APPENDIX A

GEOLOGICAL ASSESSMENTS – LIQUEFACTION OR DYNAMIC SETTLEMENT HAZARD AREAS

Article I. Geotechnical Verification

A. A geotechnical verification shall, at a minimum, include the following:

1. The general critical areas report requirements in EMC 14.10.082.

2. The geotechnical verification shall include all mandatory items listed in EMC Chapter 14.9100.030(B)(4).

3. The geological assessment must include a determination that no liquefaction and/or dynamic settlement hazard exists within the proposed project area.

4. The verification shall include an accurate site plan drawn at a scale of one inch equals 20 feet, one inch equals 30 feet, one inch equals 50 feet (or other scale deemed appropriate by the department) is required. The department may require that the site plan information be based on a field survey by a licensed surveyor. The site plan shall include:
   a. Property lines for the site, and the location of any existing structures.
   b. The full geographical limits of the proposed project area or conceptual project area (i.e., area to be developed) and the location of any proposed structures, on-site septic systems, wells, and stormwater management features or facilities associated with the development, if known.

B. The geotechnical professional(s) who prepared the geotechnical verification shall stamp the verification with their license stamp or seal.

C. Hold harmless clauses, disclaimers, and limitations are not allowed within a geotechnical verification.

Article II Geotechnical Report

A. A geotechnical report shall, at a minimum, include the following:

1. The general critical areas report requirements in EMC 14.10.082.

2. The document shall include all mandatory items listed in EMC Chapter 14.9100.030(B)(4). The report shall be prepared by an engineer and shall be co-written by an engineering geologist where geological interpretations and conclusions critical to the assessment of liquefaction and/or dynamic settlement hazard and potential effects are necessary or prudent. The report shall specify the desired performance level of the structures and other development facilities, (e.g., safety to building occupants, minimal damage to structure, post-earthquake serviceability for pre-earthquake operations, or no damage, etc.).

3. The results, conclusions, and recommendations resulting from the geological assessment of the liquefaction and/or dynamic settlement hazards on the subject property as prepared by the geotechnical professional(s).

4. The geological assessment geotechnical report shall include:
   a. A statement that the proposed project area falls within a liquefaction and/or dynamic settlement hazard area.
   b. A detailed engineering evaluation of expected ground displacements or other liquefaction and/or dynamic settlement effects, (e.g., bearing failures, flotation of buried tanks, or similar, etc.), and proposed mitigation measures to ensure an acceptable level of risk for the proposed structure type or other development facilities, as well as the proposed land use type or (i.e., occupancy category). The minimum
5. The report shall include a site plan drawn to scale. The department may require that the site plan information be based on a field survey by a licensed surveyor. The site plan shall include:

   a. Property lines for the site and the location of any existing structures.

   b. The limits of any liquefaction and/or dynamic settlement hazard area(s) as set forth in EMC.

   c. The full geographical limits of the proposed project area or conceptual project area (i.e., area to be developed) and the location of any proposed structures, on-site septic systems, wells, and stormwater management features or facilities associated with the development, if known.

   d. Location and unique identifier of geotechnical explorations used to characterize subsurface conditions.

6. The geotechnical study shall include field exploration sufficient to assess the potential for liquefaction or dynamic settlement hazards and options for mitigation of those hazards. Copies of the exploration logs shall be provided in the report. The geotechnical study shall include field exploration sufficient to assess the potential for liquefaction or dynamic settlement hazards and options for mitigation of those hazards. Copies of the exploration logs shall be included in the report. The geotechnical professional must provide justification for the scope of the field exploration program. The City’s geotechnical professional reserves the right to request additional exploration if deemed appropriate. If a dispute arises between the City’s geotechnical professional and the project geotechnical professional regarding the scope of the field exploration, the City reserves the right to require an independent, third party review to be paid for by the applicant to resolve the dispute.

7. If beneficial to the assessment of seismic hazards for the project, the three-dimensional subsurface conditions at the site shall be presented using one or more cross-sections showing location and depth penetration of borings or CPT soundings, interpretation of the geometry of major soil units, and projected location of the static groundwater surface determined from the subsurface exploration. The cross-sections shall be presented at a scale of one inch equals 20 feet, one inch equals 30 feet, one inch equals 50 feet (or other scale deemed appropriate by the department). Each cross-section shall have a legend with a description of the various major soil units. The City’s geotechnical professional reserves the right to request inclusion of one or more cross sections in the report. If a dispute arises between the project geotechnical professional and the City’s geotechnical professional regarding this issue, then the City reserves the right to require an independent, third party review to be paid for by the applicant to resolve the dispute.

8. All assessments of liquefaction and/or dynamic settlement hazards and effects will be based on a design earthquake using ground motion parameters consistent and equivalent to those specified in the most current version of the International Building Code. All assessments shall use the shallowest groundwater table observed during or inferred from subsurface exploration and characterization, e.g., the measured depth of static groundwater immediately prior to abandonment of borings, or observation of iron-oxide mottling of soils samples.

9. Results of laboratory testing of samples retrieved during drilling and sampling shall be presented in order to support the values of fines contents used in subsequent analysis of liquefaction and/or dynamic settlement hazard. Where only CPT methods are used in site assessment, the correlation between fines content and CPT measurements will be discussed and documented. This documentation will require rigorous correlation of CPT and fines content measurements from similar geological deposits within the Puget Sound region.

10. The geotechnical report shall include a detailed assessment of the liquefaction and/or dynamic settlement hazard based on analysis of available subsurface data using state-of-the-practice methodologies. The results of the analysis shall be documented, and all results of intermediate and final calculations and results, including factors of safety, shall be included.
The Edgewood Municipal Code (Critical Areas Ordinance Update 2017)

Chapter 14.80 SEISMIC (EARTHQUAKE) HAZARD AREAS

11. When appropriate, the Geotechnical Report shall include an assessment of the potential for large lateral spreads or flow failures, bearing failures, settlement, limited lateral displacement, and flotation of buried facilities. The methodologies used must be, at a minimum, state-of-the-practice, and the conclusions regarding the potential and severity of the possible liquefaction and/or dynamic settlement induced failure modes shall be presented.

12. Alternative mitigative measures including structural and foundation design options and/or soil improvement techniques shall be evaluated and compared for their effectiveness in reaching the level of performance specified in the report introduction. Effectiveness of soil improvement techniques shall be specified in terms of post-treatment densification or strength improvement as measured by appropriate subsurface investigation and testing. The extent of the post-treatment verification testing shall be provided on a site map at the same scale as the map presented in subsection (A)(4) of this article. Geotechnical review of all final plans is required and the findings of the review shall be documented in writing.

B. The Geotechnical Professional(s) who prepared the Geotechnical Report shall stamp the report with his or her license stamp or seal.

C. Hold harmless clauses, disclaimers, and limitations are not allowed within a Geotechnical Report.

APPENDIX B

GEOLOGICAL ASSESSMENTS – FAULT RUPTURE HAZARD AREA GEOTECHNICAL REPORT

A. A Geotechnical Report shall, at a minimum, include the following:

1. The general Areas report requirements contained herein in EMC 14.10.082.

2. The document shall include all mandatory items listed in EMC 14.90.030(B)(4). The report shall be prepared by an Engineer and shall be co-written by an Engineering Geologist where geological interpretations and conclusions critical to the assessment of liquefaction and/or dynamic settlement hazard and potential effects are necessary or prudent.

3. The following topics should be considered and addressed in detail where essential to support opinions, conclusions, and recommendations in any geologic report on faults. It is not expected that all the topics or investigative methods would be necessary in a single investigation. In specific cases, it may be necessary to extend some of the investigative methods well beyond the site or property being investigated.

   a. Purpose and scope of investigation; description of proposed development.

   b. Geologic and tectonic setting. Include seismicity and earthquake history.

   c. Site description and conditions, including dates of site visits and observations. Include information on geologic units, graded and filled areas, vegetation, existing structures, and other factors that may affect the choice of investigative methods and interpretation of data.

   d. Methods of Investigation.

      i. Review of published and unpublished literature, maps, and records concerning geologic units, faults, groundwater barriers, and other factors.

      ii. Stereoscopic interpretation of aerial photographs, review of LiDAR based topography, and other remotely sensed images to detect fault-related topography (geomorphic features), vegetation and soil contrasts, and other lineaments of possible fault origin. The area interpreted usually should extend beyond the site boundaries.

      iii. Surface observations, including mapping of geologic and soil units, geologic structures, geomorphic features and surfaces, springs, deformation of engineered structures due to fault creep, both on and beyond the site.

The Edgewood Municipal Code (Critical Areas Ordinance Update 2017)
iv. Subsurface Investigations.

(A) Trenching and other excavations to permit detailed and direct observation of continuously exposed geologic units, soils, and structures; must be of adequate depth and be carefully logged (Taylor & Cluff 1973, Hatheway & Leighton 1979, McCalpin 1996b).

(B) Borings and test pits to permit collection of data on geologic units and groundwater at specific locations. Data points must be sufficient in number and spaced adequately to permit valid correlations and interpretations.

(C) Cone penetrometer testing (CPT) (Grant et al., 1997, Edelman et al., 1996). CPT must be done in conjunction with continuously logged borings to correlate CPT results with on-site materials. The number of borings and spacing of CPT soundings should be sufficient to adequately image site stratigraphy. The existence and location of a fault based on CPT data are interpretative.

v. Geophysical Investigations. These are indirect methods that require a knowledge of specific geologic conditions for reliable interpretations. They should seldom, if ever, be employed alone without knowledge of the geology (Chase & Chapman 1976). Geophysical methods alone never prove the absence of a fault nor do they identify the recency of activity. The types of equipment and techniques used should be described and supporting data presented (California Board of Registration for Geologists and Geophysicists, 1993).

(A) High-resolution seismic reflection (Stephenson et al., 1995, McCalpin, 1996b).

(B) Ground penetrating radar (Cai et al., 1996).

(C) Other methods include: seismic refraction, magnetic profiling, electrical resistivity, and gravity (McCalpin, 1996b).

vi. Age-dating techniques are essential for determining the ages of geologic units, soils, and surfaces that bracket the time(s) of faulting (Pierce 1986, Birkeland et al., 1991, Rutter & Catto, 1995, McCalpin, 1996a).

(A) Radiometric dating (especially 14C).

(B) Soil-profile development.

(C) Rock and mineral weathering.

(D) Landform development.

(E) Stratigraphic correlation of rocks, minerals, and fossils.

(F) Other methods – artifacts, historical records, tephrochronology, fault scarp modeling, thermoluminescence, lichenometry, paleomagnetism, dendrochronology, etc.

vii. Other methods should be included when special conditions permit or requirements for critical structures demand a more intensive investigation.

(A) Aerial reconnaissance overflights.

(B) Geodetic and strain measurements.

(C) Microseismicity monitoring.

e. Conclusions.
edgewood municipal code
chapter 14.80 seismic (earthquake) hazard areas

i. Location and existence (or absence) of hazardous faults on or adjacent to the site; ages of past rupture events.

ii. Type of faults and nature of anticipated offset, including sense and magnitude of displacement, if possible.

iii. Distribution of primary and secondary faulting (fault zone width) and fault-related deformation.

iv. Probability of, or relative potential for, future surface displacement. The likelihood of future ground rupture seldom can be stated mathematically, but may be stated in semiquantitative terms such as low, moderate, or high, or in terms of slip rates determined for specific fault segments.

v. Degree of confidence in, and limitations of data and conclusions.

f. Recommendations.

i. The recommended increase from the standard buffer distance (50 feet) of proposed structures from fault rupture hazard areas. The recommended buffer distance generally will depend on the quality of data and type and complexity of fault(s) encountered at the site and the proposed land use type (i.e., occupancy). In order to establish an appropriate buffer distance from a fault located by indirect or interpretative methods (e.g., borings or cone penetrometer testing), the area between data points also should be considered underlain by a fault unless additional data are used to more precisely locate the fault. Additional measures (e.g., strengthened foundations, engineering design, and flexible utility connections) to accommodate warping and distributive deformation associated with faulting (Lazarte and others, 1994).

ii. Risk evaluation relative to the proposed development.

iii. Limitations of the investigation; need for additional studies.

g. References.

i. Literature and records cited or reviewed; citations should be complete.

ii. Aerial photographs or images interpreted – list type, data, scale, source, and index numbers.

iii. Other sources of information, including well records, personal communications, and other data sources.

h. Illustrations. The following illustrations should be provided:

i. A location map that identifies site locality, significant faults, geographic features, regional geology, seismic epicenters, and other pertinent data; 1:24,000 scale is recommended.

ii. A site development map that shows site boundaries, existing and proposed structures and limits of the proposed project area, graded areas, streets, exploratory trenches, borings geophysical traverses, locations of faults, and other data; recommended scale is 1:2,400 (one inch equals 200 feet), or larger.

iii. A geologic map that shows the distribution of geologic units (if more than one), faults and other structures, geomorphic features, aerial photo graphic lineaments, and springs; on topographic map 1:24,000 scale or larger; can be combined with subsection (B)(h)(i) or (ii) of this appendix.

iv. Geologic cross-sections, if needed, to provide three-dimensional picture.

v. Logs of exploratory trenches and borings that show details of observed features and conditions (note: these should not be generalized or diagrammatic). Trench logs should show topographic profile and geologic structure at a 1:1 horizontal to vertical scale; scale should be 1:60 (one inch equals five feet) or larger.
vi. Geophysical data and geologic interpretations.

i. Appendix. Attach any supporting data not included above (e.g., water well data, photographs, and aerial photographs).

4. The geotechnical professional who prepared the geotechnical Report shall stamp the report with his or her license stamp or seal.

5. The Department may request a geotechnical professional to provide additional information in the geotechnical report based upon existing conditions, changed conditions, or unique circumstances occurring on a case-by-case basis.

6. Hold harmless clauses, disclaimers, and limitations are not allowed to be included, neither expressly nor implied, within a geological assessment. (Ord. 02-200 § 2).
Chapter 14.110

EROSION HAZARD AREAS

Sections:
14.110.010 Purpose.
14.110.020 Erosion Hazard Areas.
14.110.030 Erosion Hazard Area review procedures.
14.110.040 Erosion Hazard Area standards.
14.110.050 Buffer requirements.
14.110.060 Appendices.

14.110.010 Purpose.
The following statements describe the purpose of this chapter:

A. Protect human life and health;
B. Regulate uses of land in order to avoid damage to structures and property being developed and damage to neighboring land and structures;
C. Identify and map erosion hazard areas;
D. Minimize impacts on wetland and critical fish and wildlife species and their associated habitat that can result from erosion;
E. Establish a permit requirement and review procedures for development proposals in areas with potential erosion hazards;
F. Strike a balance between the need to maintain natural shoreline erosion/regression processes and the need to protect existing and proposed development. (Ord. 02-200 § 2).

14.110.020 Erosion Hazard Areas.

A. Shoreline Erosion Hazard Area Indicators. Shoreline erosion hazard areas are areas potentially subject to land regression or retreat due to a combination of geologic, seismic, and/or hydrologic, or manmade factors. Shoreline erosion hazard areas can be identified by indicators of active land retreat as a result of fluvial processes.

B. Erosion Hazard Area Categories.

1. Potential Erosion Hazard Areas. Potential erosion hazard areas, as depicted on the Geologically Hazardous Areas map, are those areas where the suspected risk of erosion through either loss of soil, slope instability, or land regression is sufficient to require additional review to assess the potential for active erosion activity or apply additional standards. These potential erosion hazard areas are determined using the following criteria:
   a. Shoreline Erosion Hazard Areas. Areas within 200 feet of a freshwater (lake, pond, or shoreline.) The distance shall be measured landward perpendicularly from the edge of the ordinary high water mark.
   b. Riverine Erosion Hazard Areas. The rivers subject to regulation as a channel migration zone listed in EMC Section 14.8070.030020.B.4(B)(4).
   c. Soil Erosion Hazard Areas. Areas identified as having slopes of 20 percent or greater and that are classified as having severe, or very severe erosion potential by the Soil Conservation Service, United States Department of Agriculture (USDA).
2. Active Shoreline Erosion Hazard Areas. Land areas located directly adjacent to surface water bodies that, through the geological assessment process, are identified as regressing, retreating, or potentially unstable as a result of undercutting by wave action or bluff erosion. The limits of the active shoreline erosion hazard area shall extend landward to include that land area that is calculated, based on the rate of regression, to be subject to erosion processes within the next 10-year time period.

3. Riverine Erosion Hazard Areas or CMZs. Riverine erosion hazard areas are located within the lateral extent of likely watercourse channel movement due to bank destabilization and erosion, rapid incision, and shifts in location of watercourse channels. Riverine erosion hazard areas are also referred to as channel migration zones (CMZs). Rivers and streams subject to erosion are regulated as a CMZ as listed in EMC 14.70.020(B)(4).

4. Soil Erosion Hazard Areas. Soil erosion hazard areas are identified by the presence or absence of natural vegetative cover, soil texture condition, slope, and rainfall patterns, or man-induced changes to such characteristics that create site conditions which are vulnerable to erosion of the upper soil horizon. Soil erosion hazard areas include those areas with slopes of 20 percent or greater and that are classified as having severe, or very severe erosion potential by the USDA Natural Resources Conservation Service. (Ord. 02-200 § 2).

14.110.030 Erosion hazard area review procedures.

A. General Requirements.

1. The City’s Geologically Hazardous Areas map provides an indication of where potential erosion hazard areas are located. The actual presence or location of an erosion hazard area and/or additional potential erosion hazard area that have not been mapped, but may be present on or adjacent to a site, shall be determined using the procedures and criteria established in this chapter.

2. The department will complete a review of the Geologically Hazardous Areas map, and any other source documents for any proposed regulated activity to determine whether the site for the regulated activity is located within a potential erosion hazard area.

3. When the department’s maps, sources, or field investigations indicate that the site for a proposed regulated activity is located within a potential shoreline erosion hazard area, the department shall require a geological assessment as outlined in subsection (B) of this section.

4. When the department’s maps, sources, or field investigations indicate that the proposed project area for a regulated activity is located within a potential riverine erosion hazard area or CMZ, the department shall conduct a review pursuant to the requirements set forth in EMC Chapter 14.70.030. All standards set forth in Chapter 14.70 EMC shall apply to riverine erosion hazard areas (CMZs).

5. When the department’s maps, sources, or field investigations indicate that the proposed project area for a regulated activity is located within a potential soil erosion hazard area, the department shall require submittal of an erosion control plan pursuant to the requirements set forth in EMC Title 15, Buildings and Construction.

6. Applicants requesting to develop a bulkhead along a shoreline shall be required to submit a geotechnical report. The geotechnical report shall comply with the requirements established in EMC 14.110.060, Appendix C.

B. Geological Assessment. A geological assessment is a site investigation process to evaluate the on-site geology affecting a subject property and proposed development.
1. Geological assessments shall be submitted to the Department for review and approval together with a shoreline Erosion Hazard Area Application.

2. The geological assessment shall include a field investigation and may also include review of public records and documentation, analysis of historical air photos, LiDAR mapping, published data and references, etc.

3. The geological assessment shall include the following information and analysis identified in paragraphs a-d:
   a. An analysis of the shoreline erosion processes on and in the vicinity of the site including an evaluation of erosion and shoreline retreat that has occurred over the past decade and an estimated probable rate of erosion based upon the historic rate of erosion that has occurred on the site.
   b. A determination of which areas on the site meet the criteria for an active shoreline Erosion Hazard Area as set forth in EMC 14.110.020(B)(2).
   c. A determination of the area on the site or in the vicinity of the site that will experience regression in the next 120 years given natural processes.
   d. All of the information required per EMC Section 14.10.080.C.

4. Geological assessments shall be prepared, signed, and dated by a Geotechnical Professional (as defined in Chapter 14.15 EMC and established in this chapter) and the format shall be pre-approved by the Department.

5. A Geotechnical Professional shall complete a field investigation and geological assessment to determine whether or not an active shoreline Erosion Hazard Area exists within 200 feet of the site.
   a. The geological assessment shall be submitted in the form of a geotechnical letter when the Geotechnical Professional finds that no active shoreline Erosion Hazard Area exists within 200 feet of the site. The geotechnical letter shall meet the requirements contained in EMC 14.110.060, Appendix A.
   b. The geological assessment shall be submitted in the form of geotechnical verification when the Geotechnical Professional finds that an active shoreline Erosion Hazard Area exists but is located more than 200 feet away from the proposed project area. The geotechnical verification shall meet the requirements contained in EMC 14.110.060, Appendix B.
   c. The geological assessment shall be submitted in the form of a geotechnical report when the Geotechnical Professional finds that an active shoreline Erosion Hazard Area exists within 200 feet of the proposed project area or when a Geotechnical Professional determines that mitigation measures, such as a bulkhead, are necessary in order to construct or develop within a potential shoreline Erosion Hazard Area. The geotechnical report shall meet the requirements contained in EMC 14.110.060, Appendix C.

6. The Department shall review the geological assessment and either:
   a. Accept the geological assessment and approve the application; or
   b. Reject the geological assessment and require revisions or additional information.

7. A geological assessment for a specific site may be valid for a period of up to five years when the proposed land use activity and surrounding site conditions are unchanged. However, if any environmental conditions associated with the site change during that five-year period, the applicant may be required to submit an amendment to the geological assessment.

C. Riverine Erosion Hazard Area (Channel Migration Zones) Review. Riverine Erosion Hazard Areas shall be reviewed pursuant to the requirements set forth in EMC Chapter 14.30.20.030.
D. Soil Erosion Hazard Area Review. Soil erosion hazard areas shall be reviewed pursuant to the requirements set forth in EMC Title 15, Buildings and Construction. (Ord. 02-200 § 2).

14.110.040 Erosion hazard area standards.

A. Active Shoreline Erosion Hazard Areas. Any development, encroachment, filling, clearing, and grading, timber harvest, building structures, impervious surfaces, and vegetation removal shall be prohibited within active shoreline erosion hazard areas and associated buffers except as specified in the following standards:

1. Shoreline Erosion Protection Measures. Shoreline erosion protection measures located within or adjacent to freshwater or marine shorelines shall be allowed subject to the following:

   a. The proposed shoreline protection measure shall comply with the standards set forth in EMC Chapter 14.4050 – EMC, Critical Fish and Wildlife Habitat Conservation Areas.

   b. A geological assessment – shoreline erosion geotechnical report has been conducted in accordance with the provisions set forth in EMC 14.110.030(B) that indicates that the shoreline is currently experiencing active erosion, (i.e., land retreat or regression).

   c. The use of the shoreline erosion protection measure will not cause a significant adverse impact on adjacent properties or critical fish and wildlife species and their associated habitat (i.e., increase erosion on adjacent properties).

   d. The use of soft armoring techniques (soil bioengineering erosion control measures) is the preferred method for shoreline protection.

   e. Hard armoring shoreline erosion control measures shall be approved only when a geological assessment – shoreline erosion geotechnical report, as set forth in EMC 14.110.030(B), has been completed and indicates the following:

      i. The regression has been monitored on a yearly interval for a period of at least five consecutive years prior to allowing a bulkhead to be constructed. This monitoring shall be conducted by field survey measurements of a licensed surveyor. The department may shorten or eliminate the monitoring period if there are indicators that the regression rate is rapid and an existing structure may be threatened prior to completion of the monitoring period;

      ii. The use of beach nourishment alone or in combination with soft armoring techniques is not adequate to protect the property from shoreline erosion processes; and

      iii. The property contains an existing structure(s) that will be threatened within the next 10 years or the buildability of an undeveloped site will be threatened within the next 10 years if a hard armoring method of shoreline erosion protection is not provided.

   f. Hard armoring shoreline protection measures shall not be allowed when structures can be located landward of the 120-year rate of regression area.

2. Stormwater Conveyance. Surface drainage into an active shoreline erosion hazard area should be avoided. If there are no other alternatives for discharge, then drainage must be collected upland of the top of the active shoreline erosion hazard area and directed downhill in a high density polyethylene stormwater pipe with fuse welded joints that includes an energy dissipating device at the base of the active landslide hazard area. The pipe shall be located on the surface of the ground and be properly anchored so that it will continue to function in the event of an underlying slide. The number of these pipes should be minimized along the frontage.

3. Utility Lines. Utility lines will be permitted when no other conveyance alternative is available. The line shall be located above ground and properly anchored and/or designed so that it will continue to function in the event of an underlying slide.
Edgewood Municipal Code

Chapter 14.110 EROSION HAZARD AREAS

4. Roads, Bridges, and Trails. Roads, bridges, and trails shall be allowed when all of the following conditions have been met:

a. Mitigation measures are provided that ensure the roadway prism and/or bridge structure will not be susceptible to damage from active erosion.

b. The road is not a sole access for a development.

B. Shoreline Erosion Hazard Management Area. All activities such as but not limited to building structures, impervious surfaces, vegetation removal, timber harvest, and clearing or grading activities may be allowed in areas located within 200 feet of an active shoreline erosion hazard area subject to the following standards:

1. The Department reviews and approves a geological assessment – shoreline erosion hazard geotechnical report and determines that the proposed project area is located outside an active shoreline hazard area and the required buffer, as set forth in EMC 14.110.050.

2. The proposed recommendations and mitigation measures contained within the geotechnical report are adequate to reduce or mitigate risks to the natural environment, health, and safety.

3. Surface drainage from the proposed project area, including downspouts, landscape irrigation systems, and runoff from paved or unpaved surfaces upland of the shoreline, shall not be directed through an active shoreline erosion hazard area or its associated buffer unless it is conveyed in conformance with the provisions in subsection (A)(2) of this section.

4. Stormwater retention and detention systems, such as dry wells and infiltration systems utilizing buried pipe or french drains, shall not be permitted unless such systems are designed by a professional engineer and the geotechnical report indicates that such a system will not affect the stability of the shoreline.

5. Proposed developments, with the exception of shoreline erosion protection measures, shall be sited far enough from regressing shorelines to ensure 120 years of useful life for any proposed structures or infrastructure.

C. Riverine Erosion Hazard Area or CMZ (Channel Migration Zones) Review. Riverine erosion areas shall be reviewed pursuant to the requirements set forth in EMC Chapter 14.870.030.

D. Soil Erosion Hazard Area Review. Soil erosion areas shall be reviewed pursuant to the requirements set forth in EMC Title 15, Buildings and Construction. (Ord. 02-200 § 2).

14.110.050 Buffer requirements.

A. Determining Buffer Widths.

1. The buffer width shall be measured on a horizontal plane from a perpendicular line established at the edge of the active shoreline erosion hazard area limits.

2. An undisturbed buffer of existing vegetation shall be required for an active shoreline erosion hazard area. The required standard buffer width is either a or b below, whichever is the greatest amount of the distances in EMC 14.110.050(A)(2)(a) and (b):

   a. Fifty feet from all edges of the active shoreline erosion hazard area limits;

   b. A distance of one-third the height of the slope at the top of the slope and a distance of one-half the height at the bottom of the slope; or

   3. The buffer width may be reduced below the widths specified in EMC 14.110.050(A)(2)(a) and (b) or eliminated upon the Director’s approval by the Department of a geotechnical report that demonstrates that such a reduction would not result in an increased risk of erosion either on or off of the subject property.
B. Modification of Buffer Widths. The department may require a larger buffer width than the standard buffer distance, as determined in subsection (A) of this section, if any of the following are identified through the geological assessment process:

1. The adjacent land is susceptible to severe erosion and erosion control measures will not effectively prevent adverse impacts.

2. The area has a severe risk of slope failure or downslope stormwater drainage impacts. (Ord. 02-200 § 2).

14.110.060 Appendices.
A. Geological Assessment – Shoreline Erosion Hazard Geotechnical Letter.

APPENDIX A
GEOPHYSICAL ASSESSMENT – SHORELINE EROSION HAZARD GEOTECHNICAL LETTER
A. A geotechnical letter shall, at a minimum, include the following:
   1. The general report requirements in EMC 14.10.082.
   2. A summary of the findings of the site visit, a site plan, and a summary of the findings from the review of documents listed in EMC 14.110.030.B.2(B)(2). The appropriate professional preparing the geotechnical letter shall provide conclusions and recommendations as to shoreline stability for the proposed development.

B. The professional who prepared the geotechnical letter shall stamp the letter with his or her seal.

C. Hold harmless clauses, disclaimers, and limitations are not allowed within a geotechnical letter.

APPENDIX B
GEOPHYSICAL ASSESSMENT – SHORELINE EROSION HAZARD GEOTECHNICAL VERIFICATION
A. A geotechnical verification shall, at a minimum, include the following:
   1. The general report requirements in EMC 14.10.082.
   2. A summary of the results, conclusions, and recommendations resulting from the geological assessment, as set forth in EMC 14.110.030.B. The verification will also include a summary of the findings of the site visit, a site plan, and a summary of the findings from the review of the documents listed in EMC 14.110.030.B.2(B)(2).
   3. An accurate site plan drawn at a scale of one inch equals 20 feet, one inch equals 30 feet, one inch equals 50 feet (or other scale deemed appropriate by the department) is required. The department may require that the site plan information listed below be based on a field survey by a licensed surveyor. The site plan shall include:
      a. The limits and location of the active shoreline erosion hazard area(s) set forth in EMC 14.110.020.B.
      b. The limits of the required shoreline erosion hazard buffer based upon the requirements set forth in EMC 14.110.050.A.
      c. The limits and location of the shoreline erosion hazard management area.
      d. The limits and location of the 120-year regression area.
E. The location of any existing structures, utilities, on-site septic systems, wells, and stormwater management facilities.

f. The location of any proposed structures, utilities, on-site septic systems, wells, and stormwater management facilities.

g. The full geographical limits of the proposed project area (area to be developed).

h. Dimension of the closest distance between the identified active shoreline hazard area boundary and the proposed project area.

i. Dimension of the closest distance between the 120-year regression line and the proposed project area.

j. Existing contours on the site at two-foot intervals.

k. Property lines for the site.

l. North arrow and scale.

B. The geotechnical professional who prepared the geotechnical verification shall stamp the verification with his or her seal.

C. Hold harmless clauses, disclaimers, and limitations are not allowed within a geotechnical verification.

APPENDIX C

GEOLOGICAL ASSESSMENT – SHORELINE EROSION HAZARD GEOTECHNICAL REPORT

A. A geotechnical report shall, at a minimum, include the following:

1. The general critical areas report requirements in EMC 14.10.082.

2. A summary of the results, conclusions, and recommendations resulting from the geological assessment, set forth in EMC 14.110.030(B). The report will also include a summary of the findings of the site visit, a site plan, and a summary of the findings from the review of documents listed in EMC 14.110.030.B.2(B)(2). The summary shall specifically address:

   a. Whether it is possible given the physical constraints of the property (size, shape, building setbacks, utility requirements, etc.) to locate the proposed development outside of the 120-year area of regression based on natural shoreline processes.

   b. If it is not possible to locate the development outside of the 120-year area of regression (based on natural processes), determine whether beach nourishment, and/or soft armoring techniques, or both can be used to slow the rate of regression such that the proposed development is no longer within the 120-year regression area.

   c. If it is not possible to locate the development outside of the 120-year area of regression, based on the use of beach nourishment and/or soft armoring techniques, outline the strategy, set forth in EMC 14.110.040(A), to monitor the rate of regression on the site.

   d. Determine whether any proposed shoreline erosion protection measures will cause an increase in the rate of regression on neighboring properties.

3. An accurate site plan drawn at a scale of one inch equals 20 feet, one inch equals 30 feet, one inch equals 50 feet (or other scale deemed appropriate by the department) is required. The department may require that the site plan information listed below be based on a field survey by a licensed surveyor. The site plan shall include:
a. The limits and location of the active shoreline erosion hazard area(s) set forth in EMC 14.110.020(B)(2).

b. The limits of the required shoreline erosion hazard buffer based upon the requirements set forth in EMC 14.110.050(A).

c. The limits and location of the shoreline erosion hazard management area.

d. The limits and location of the 120-year regression area based on natural shoreline processes and, if applicable, based upon proposed shoreline protection measures.

e. The location of any existing structures, utilities, on-site septic systems, wells, and stormwater management facilities.

f. The location of any proposed structures, utilities, on-site septic systems, wells, and stormwater management facilities.

g. The full geographical limits of the proposed project area (area to be developed).

h. Dimension of the closest distance between the identified active shoreline hazard area boundary and the proposed project area.

i. Dimension of the closest distance between the 120-year regression line and the proposed project area.

j. Existing contours on the site at two-foot intervals.

k. Property lines for the site.

l. North arrow and scale.

4. A discussion of any proposed shoreline protection measures including design and construction drawings is required.

5. A list of references utilized in preparation of the report.

B. The professional(s) who performed the geological assessment shall stamp the report with his or her license stamp or seal. The report must be co-authored by a licensed professional engineer when engineering designs or interpretations are necessary to address the report requirements. The engineer must also stamp the report with his or her license stamp or seal.

C. The department may request a professional to provide additional information in the report based upon existing conditions, changed conditions, or unique circumstances occurring on a case-by-case basis.

D. Hold harmless clauses, disclaimers, and limitations are not allowed within a report.

E. Geotechnical reports shall be in conformance with a format that is pre-approved by the department. (Ord. 02-200 § 2).
Chapter 14.50120
NATURAL RESOURCE LANDS

Sections:
14.50120.010 Purpose.
14.50120.030 Applicability.
14.50120.040 Natural resource lands noticing requirements.
14.50120.050 Current use assessment.
14.50120.060 Variances and appeals.
14.50120.070 Review process.
14.50120.080 Title, plat, and regulated activities notification.
14.50120.090 Permitted uses.
14.50120.100 Appendices.

14.50120.010 Purpose.
This chapter establishes requirements and regulations to protect natural resource lands and is established pursuant to WAC 197-11-908 and RCW 36.70A.170 and 36.70A.060. The city therefore designates agricultural lands and mineral resource lands, and all associated buffers as being environmentally sensitive Critical Areas and designated natural resource lands. By regulating development within 500 feet of natural resource lands, this title seeks to implement the following goals and policies to:

A. Inform the public of the existence, location and potential incompatibility impacts of development on, or within 500 feet of, these environmentally sensitive Critical Areas within the city.
B. Encourage the retention of open space, development of recreational opportunities, conserve priority habitat, increase access to natural resource lands and water, and develop parks.
C. Assure the conservation of resource lands and related activities by limiting encroachment of incompatible development thereon.
D. Promote the conservation of mineral resource lands through inclusion of known deposits of minerals and materials.
E. Assure that undeveloped mineral and material resources will not be forever lost by prior development of the land for other purposes.
F. Allow for the necessary mineral processing to convert such minerals and materials into marketable products.
G. Protect the environment and enhance the state’s high quality of life, including air and water quality and the availability of water.
H. Maintain and enhance the biological and physical functions and values of wetlands. (Ord. 02-200 § 2).

Resource lands are of special concern to the citizens, the city, and the state. The intent of this chapter is to conserve resource lands by establishing standards for development of sites which contain, or are within 500 feet of, resource lands to promote the public health, safety, and welfare by:

A. Noticing of property on, or within, natural resource land areas;
B. Mitigating unavoidable impacts by regulating development;
C. Protecting from development impacts;

The Edgewood Municipal Code (Critical Areas Ordinance Update 2017)
D. Protecting the public against losses from:

1. Costs of public emergency rescue and relief operations where the causes are avoidable;
2. Degradation of the natural environment and the expense associated with repair or replacement;

E. Preventing adverse impacts on water availability, water quality, wetlands, and streams;
F. Protecting unique, fragile, and valuable elements of the environment, including fish and wildlife habitat;
G. Providing sufficient information to show that critical areas are adequately protected prior to approving, conditioning, or denying public or private development activity;
H. Providing the public with sufficient information and notice of potential risks associated with development in any critical area or sensitive area;
I. Implementing the goals and requirements of the Growth Management Act (RCW 36.70A.060), the city of Edgewood’s comprehensive plan, and all updates and amendments, functional plans, and other land use policies formally adopted or accepted by the city. (Ord. 02-200 § 2).

14.5001.20.030 Applicability.
This chapter shall apply to all properties designated as resource lands, including agricultural lands, mineral resource lands, or properties within 500 feet of designated resource lands within Edgewood. When the requirements of this title are more stringent than those of other local, state, or federal law, codes, or regulations, the requirements of this title shall apply.

A. Agricultural Lands. Lands that are not already characterized by urban growth and that have long-term significance for the commercial production of food or other agricultural products. Agricultural lands are those lands meeting all of the following criteria:

1. Lands in parcels which are 10 acres or larger in size;
2. Lands which are on prime or unique soils as identified in:
   a. United States Department of Agriculture (USDA), Soil Conservation Service, February 1979, Soil Survey of Pierce County Area, Washington; or
   b. USDA, Soil Conservation Service, June 1981, Important Farmlands of Pierce County, Washington;
3. Lands which are primarily devoted to the commercial production of horticultural, viticultural, floricultural, dairy, apiary, vegetable, or animal products or of berries, grain, hay, straw, turf, seed, Christmas trees not subject to the excise tax imposed by RCW 84.33.100 through 84.33.140, or livestock, and which have long-term commercial significance for agricultural production; and
4. Lands which are not within 500 feet of lots of record of one acre or less on more than 50 percent of the perimeter of the parcel.

B. Mineral Resource Lands. Mineral resource lands shall be identified by the city using the criteria set forth in WAC 365-190-070 as now exists or as may hereafter be amended or modified.

C. Property Adjacent to Resource Lands. All plats, short plats, development permits, and building permits issued for development activities within 500 feet of lands designated as natural resource lands shall contain a notice that a variety of commercial activities may occur that are not compatible with residential development for certain periods of limited duration. (Ord. 04-221 § 1; Ord. 02-200 § 2).

A. The city has classified the following areas as potential mineral resource lands based on the criteria in EMC 14.5001.20.030.
1. Parcels: 0420164023, 0420164024, 0420164016 (commonly known as Olson); and
2. Parcels: 0420162047, 0420162048 (commonly known as Josties); and

B. The city staff shall study each area and prepare a written analysis of each area.

C. The city council’s land use and economic development committee shall review the staff analysis and either send the analysis back to staff for clarification or recommend approval denial of each area as a mineral resource land to the city council. The staff analysis and land use and economic development committee’s recommendation shall be forwarded to the city council for review and action.

D. The city council shall review the staff analysis and recommendation(s) of the land use committee and shall, by ordinance, approve, deny, or modify the particular study area designation using the criteria in EMC Section 14.500120.0560(B). (Ord. 04-234 § 1).

14.500120.040050 Natural Resource Lands noticing requirements.

Pursuant to RCW 36.70A.060, the city shall require that all plats, development applications, or permits issued for development activities on, abutting, or within 500 feet of lands designated as Natural Resource Lands contain a notice (see Appendices A through C).

A. General. If more than one natural resource land subject to the provisions of this title intersects the subject parcel, then one notice addressing all of the natural resource areas shall be sufficient.

B. Title Notification.

1. When the city determines that activities not exempt from this title are proposed, the owner shall file a notice with the Pierce County auditor in accordance with Appendices A through C of this Chapter. The notice shall provide a public record of the presence of the any Sensitive Areas; the application of this title to the property; and any limitations on activity in or affecting such Sensitive Area.

2. The notice shall be notarized and recorded with the Pierce County auditor before approval of any regulated use or activity on the site.

C. Plat Notification. For all proposals requiring a plat within any Sensitive Areas, the applicant shall note the face of the plat consistent with the language set forth in Appendices A through C of this Chapter.

D. Permit Notification. The department shall require that all permits issued for Regulated Activities on or within 500 feet of Natural Resource Lands contain a notice as set forth in Appendices A through C. (Ord. 02-200 § 2).

A. An owner of Natural Resource Lands or open space desiring current use classification under Chapter 84.40 RCW may file for such current use classification.

B. An owner of undeveloped land with critical Areas which has been placed in a separate tract or tracts, protective easement, public or private land trust dedication, or other similarly preserved area for the protection of these critical Areas may have that portion of land reviewed for reassessment by the assessor-treasurer’s office consistent with those restrictions to determine the fair market value of the land pursuant to RCW 84.40.030.

C. The owner shall notify the assessor-treasurer’s office when restrictions on development occur on a particular site, and shall provide a plat map in addition to the following, or other special study documents as may be required by the department.
Chapter 14.500 NATURAL RESOURCE LANDS

14.500.0670 Variances and appeals.
Procedures for variances and appeals of an administrative decision issued pursuant to this chapter are set forth in EMC 18.40.090, Process II, Administrative action. (Ord. 02-200 § 2).

14.500.0780 Review process.
A. The department shall review any permit or application requested for any regulated activity, including, but not limited to, those set forth in EMC Chapter 14.500.010 on a site which includes, or is within 500 feet of, one or more resource land is located, unless otherwise provided in this title.
B. As part of all development applications, the department shall review the information submitted by the applicant to:
1. Confirm the nature and type of the resource land and evaluate any required title, plat, and/or regulated activity notification;
2. Determine whether the development proposal is consistent with this title; and
3. Determine whether any proposed alterations to the site containing resource lands are necessary.
C. The city may approve, approve with conditions, or deny any development proposal in order to comply with the requirements and carry out the goals, purposes, objectives, and requirements of this title.
D. Approval of a development proposal does not discharge the obligation of the applicant to comply with the provisions of this title. (Ord. 02-200 § 2).

14.500.0890 Title, plat, and regulated activities notification.
A. If more than one resource land subject to the provisions of this title exists on the site, then one notice addressing all of the resource lands shall be sufficient.
B. Notification shall be approved by the department and shall be consistent with the forms set forth in EMC 14.500.01100, Appendices A through C, as applicable.
C. Title notifications shall be notarized and recorded with the Pierce County auditor prior to approval of any regulated use or activity for the site. (Ord. 02-200 § 2).

14.500.0900 Permitted uses.
Uses permitted on designated resource land sites shall be the same as those permitted in the zone classifications shown on the city zoning map. (Ord. 02-200 § 2).

14.500.1100 Appendices.
A. Property Adjacent to Resource Lands.
B. Agriculture Lands Noticing.

APPENDIX A

PROPERTY ADJACENT TO RESOURCE LANDS

A. Title Notification.
Parcel Number: __________________________
Site Address: __________________________

NOTICE: This parcel lies within 500 feet of land designated resource lands by Edgewood. A variety of commercial and industrial activities occur in the area that may be inconvenient or
cause discomfort to area residents. This may arise from the use of chemicals, or from spraying or extraction which occasionally generates dust, smoke, noise, and odor. The City has established resource uses as priority uses on productive resource lands, and residents of adjacent property should be prepared to accept such inconveniences or discomfort from normal, necessary commercial resource lands operations.

Signature of Owner

_________________________________

(NOTARY ACKNOWLEDGMENT)

B. Plat Notification. The owner of any site within 500 feet of land designated as resource lands on which a large lot, short subdivision, or formal subdivision is submitted, shall record a notice on the face of the plat. Such notification shall be in the form as set forth below:

PROPERTY ADJACENT TO RESOURCE LANDS PLAT NOTIFICATION. This property lies within 500 feet of land designated resource lands by Edgewood. A variety of commercial and industrial activities occur in the area that may be inconvenient or cause discomfort to area residents. This may arise from the use of chemicals, or from spraying or extraction which occasionally generates dust, smoke, noise, and odor. The City has established resource uses as priority uses on productive resource lands, and residents of adjacent property should be prepared to accept such inconveniences or discomfort from normal, necessary commercial resource lands operations.

C. Regulated Activities Notification. The department shall require that permits issued for regulated activities, as defined in EMC Chapter 14.120500 EMC, within 500 feet of lands designated as resource lands, contain a notice as set forth below.

REGULATED ACTIVITIES NOTIFICATION. This property lies within 500 feet of land designated resource lands by Edgewood. A variety of commercial and industrial activities occur in the area that may be inconvenient or cause discomfort to area residents. This may arise from the use of chemicals, or from spraying or extraction which occasionally generates dust, smoke, noise, and odor. The City has established resource uses as priority uses on productive resource lands, and residents of adjacent property should be prepared to accept such inconveniences or discomfort from normal, necessary commercial resource lands operations.

APPENDIX B

AGRICULTURAL LANDS NOTICING

A. Title Notification.

Parcel Number: ____________________

Site Address: ______________________

NOTICE: This parcel lies within 500 feet of an area identified as Agricultural lands by Edgewood. A variety of commercial activities occur in the area that may be inconvenient or cause discomfort to area residents. This may arise from the use of agricultural chemicals, including herbicides, pesticides, and fertilizers; or from spraying, pruning, and harvesting which occasionally generate dust, smoke, noise, and odor. Edgewood has established agriculture as a priority use on productive Agricultural lands, and residents of adjacent property should be prepared to accept such inconveniences or discomfort from normal, necessary farm operations.
B. Plat Notification. The owner of any site within this designation on which a large lot, short subdivision, or formal subdivision is submitted, shall record a notice on the face of the plat. Such notification shall be in the form as set forth below.

AGRICULTURAL LANDS PLAT NOTIFICATION. This parcel lies within an area identified as Agricultural Lands by Edgewood. A variety of commercial agricultural activities occur in the area that may be inconvenient or cause discomfort to area residents. This may arise from the use of agricultural chemicals, including herbicides, pesticides, and fertilizers; or from spraying, pruning, and harvesting which occasionally generate dust, smoke, noise, and odor. The city has established agriculture as a priority use on productive Agricultural Lands, and residents of adjacent property should be prepared to accept such inconveniences or discomfort from normal, necessary farm operations.

C. Regulated Activities Notification. The department shall require that all permits issued for regulated activities, as defined in EMC Chapter 14.120500 EMC, within this zone contain a notice as set forth below.

REGULATED ACTIVITIES NOTIFICATION. This parcel lies within 500 feet of an area identified as Agricultural Lands by Edgewood. A variety of commercial agricultural activities occur in the area that may be inconvenient or cause discomfort to area residents. This may arise from the use of agricultural chemicals, including herbicides, pesticides, and fertilizers; or from spraying, pruning, and harvesting which occasionally generate dust, smoke, noise, and odor. The city has established agriculture as a priority use on productive Agricultural Lands, and residents of adjacent property should be prepared to accept such inconveniences or discomfort from normal, necessary farm operations.

APPENDIX C

MINERAL RESOURCE LANDS NOTICING

A. Title Notification.

Parcel Number: ____________________
Site Address: ______________________

NOTICE: This parcel lies within 500 feet of an area of land designated mineral resource lands by the city. A variety of commercial mineral extraction activities occur in the area that may be inconvenient or cause discomfort to area residents. This may arise from the use of heavy equipment, chemicals, and spraying which may generate dust, smoke, and noise associated with the extraction of mineral resources. Edgewood has established mineral resource extraction as a priority use on productive mineral resource lands, and residents of adjacent property should be prepared to accept such inconveniences or discomfort from normal, necessary mineral resource extraction operations.

Signature of Owner
B. Plat Notification. The owner of any site within this overlay district on which a large lot, short subdivision, or formal subdivision is submitted, shall record a notice on the face of the plat. Such notification shall be in the form as set forth below:

MINERAL RESOURCE LANDS PLAT NOTIFICATION. This property lies within 500 feet of an area of land designated mineral resource lands by the City of Edgewood. A variety of mineral resource extraction activities occur in the area that may be inconvenient or cause discomfort to area residents. This may arise from the use of heavy equipment, chemicals, and spraying which may generate dust, smoke, and noise associated with the extraction of mineral resources. Edgewood has established mineral resource extraction as a priority use on productive mineral resource lands, and residents of adjacent property should be prepared to accept such inconveniences or discomfort from normal, necessary mineral resource extraction lands.

C. Regulated Activities Notification. The Department shall require that all permits issued for regulated activities, as defined in EMC Chapter 14.500 § 120 EMC, within this designation contain a notice as set forth below:

REGULATED ACTIVITIES NOTIFICATION. This property lies within 500 feet of an area of land designated mineral resource lands by Edgewood. A variety of mineral resource extraction activities occur in the area that may be inconvenient or cause discomfort to area residents. This may arise from the use of chemicals and extraction of minerals, which occasionally generates dust, smoke, noise, and odor. The City has established mineral resource extraction as a priority use on productive mineral resource lands, and residents of adjacent property should be prepared to accept such inconveniences or discomfort from normal, necessary mineral resource extraction lands.

(Ord. 02-200 § 2).

14.10.010 Authority.
A. This title is established and adopted pursuant to the Growth Management Act (RCW 36.70A.060).
B. As provided herein, the Director or their designee is given the authority to interpret and apply, and the responsibility to enforce this title.

14.10.020 Purpose.
A. The purpose of this title is to protect the Critical Areas of Edgewood from the impacts of development by establishing minimum standards for Development Activity on sites that contain or adjoin any Critical Area or its Buffer(s). Further, the purpose of these regulations is to mitigate the potential hazard(s) to development in and near Critical Areas.
B. The purpose is further envisioned to promote the public health, safety, and welfare by:
1. Avoiding impacts to critical areas;
2. Mitigating unavoidable impacts of Regulated Activities;
3. Protecting Critical Areas from impacts of development;
4. Protecting the public against losses from:
   a. Costs of public emergency rescue and relief operations where the causes are avoidable; and
   b. Degradation of the natural environment and the expense associated with repair or replacement;
5. Preventing adverse impacts on water availability, water quality, Wetlands, and streams;
6. Protecting unique, fragile, and valuable elements of the environment, including critical Fish and Wildlife Habitat Conservation Areas;
7. Providing Department staff with sufficient information to adequately protect Critical Areas and proposed Development Activity when approving, conditioning, or denying public or private Regulated Activities;
8. Providing the public with sufficient information and notice of potential risks associated with Development in Critical Areas; and

9. Implementing the goals and requirements of the Growth Management Act (RCW 36.70A.060), the State Environmental Policy Act (SEPA), the City’s comprehensive plan, and all updates, amendments, functional plans, and other land use policies formally adopted or accepted by the City.

**14.10.030 Interpretation.**

A. In the interpretation and application of this title, all provisions shall be:

1. Considered the minimum necessary for compliance; and

2. Liberally construed to serve the purposes of this title.

B. Nothing contained herein shall be deemed to limit or repeal any other powers under state statute.

**14.10.040 Applicability.**

A. This title shall apply to all lands and waters within Edgewood that are designated as Critical Areas and their corresponding Buffers and setbacks.

B. No Development Activity or Regulated Activities shall hereafter take place without full compliance of this title.

C. When the requirements of this title are more stringent than those of other City codes and regulations, the requirements of this title shall apply.

D. Compliance with these regulations does not remove an applicant’s obligation to comply with applicable provisions of any other federal, state, or local law or regulation.

E. Criteria for determining the presence of a Critical Area is contained within each chapter of this title.

F. When a site contains two or more Critical Areas, the site shall meet the minimum standards and requirements for each.

G. Critical Areas are identified on, but may not be limited to, the following maps:

1. Wetlands;

2. Geologically Hazardous Areas;

3. Critical Aquifer Recharge Areas;

4. Streams; and

5. Frequently Flooded Areas.

H. The boundary of each mapped Critical Area is approximate and is only intended to provide an indication of the presence of a Critical Area on a particular site. Additional Critical Areas that have not been mapped may also be present on a site. The actual presence of a Critical Area and the applicability of these regulations shall be determined based upon the Classification or categorization criteria and review procedures established for each Critical Area. City staff or the City’s consultant(s) may request the ability to perform an on-site inspection to assess the site in order to advise if additional studies or reports shall be included with any Development Application.

I. Critical Area maps shall be updated and maintained by the Department.

**14.10.050 Administration.**

A. Critical Areas Permit or Approval Required. In order to conduct any Development Activity or Regulated Activity on any property located within three hundred (300) feet of a Critical Area, as each Critical Area is defined
in this Title or as shown on the City’s Critical Areas Map(s), a Critical Areas Permit or an Approval must be obtained from the City.

B. Critical Areas Approval.

1. If the City requires that another permit application be submitted under a different code chapter in order to allow the proposed Development Activity or Regulated Activity, then a separate Critical Areas Permit is not required. Instead, the City shall review the underlying application, together with the application materials required herein, to determine compliance or noncompliance with this title. The determination on such compliance or noncompliance shall be incorporated within the decision on the underlying application.

2. In addition to the materials required to make the underlying application complete as required by the City’s code outside of this Title, the applicant shall also submit the materials set forth herein, where the subject property is within three hundred (300) feet of a Critical Area. The City shall not issue a determination that the underlying application is complete until all materials have been submitted.

3. The Critical Areas materials shall be reviewed following the same process as the underlying application.

C. Critical Areas Permit.

1. If the City does not require any other permit in order to allow the proposed Development Activity or Regulated Activity, the applicant shall be required to obtain a separate Critical Areas Permit in order for the proposed development activity to proceed.

2. A complete application for a Critical Areas Permit shall consist of the materials set forth in EMC Section 14.10.050.D.

3. The process for review of a Critical Area Permit where there is no underlying application is the Type II Process, as set forth within EMC Section 18.40.090.

D. Elements of a Complete Permit Application. A complete application for Approval of a Critical Areas Permit under this Title shall consist of the following materials:

1. A completed permit application form, which must be signed by the record owner of the property (the person(s) whose name is on the most recently recorded deed or contract purchaser with written permission from the record owner). An application form may be signed by an agent for the record owner, as long as the application is also accompanied by a verified statement signed by the record owner, which specifically authorizes the agent to submit the application on the record owner’s behalf.

2. The subject site’s street address, legal description, or both items if necessary for property identification;

3. A complete description of the proposed development activity;

4. All items identified in this title that are necessary to complete the application for the specific Critical Area; and

5. The required application fee.

E. Critical Areas reports shall not be submitted without an accompanying permit Application for an underlying action, such as, but not limited to, a building permit, subdivision or boundary line adjustment action, site development, TPCHD permit, or an administrative, conditional, or special use permit, with the exception of Applications required by the Department as a result of an enforcement action, reports required by TPCHD for septic design approval, or associated with a request under the Pierce County Open Space public benefit rating system tax program.
F. Modifications. The Department may request an update of any required assessment, report, or Delineation due to the potential for change in the existing environment that may have been caused by a natural event, e.g., seismic event, landslides, or flooding or human induced activity that Degraded the existing conditions after the original document was submitted.

C. Public Notice. Public notice provisions for notice of Application; public hearing, if applicable; and final decision pursuant to this title are outlined in EMC Section 18.40.190, Notice of public hearing.

D. Review.

1. Initial Review. The Department shall conduct an initial review of any Application in accordance with the provisions outlined in EMC Section 18.40.150, Determination of Completeness.

2. Review Responsibilities.
   a. The Department is responsible for administration, circulation, and review of any Applications and approvals required by this title.
   b. Any Reasonable Use Exception Applications shall follow EMC Section 14.20.050.
   c. Other City or Pierce County departments and state agencies, as determined by the Department, may review an Application and forward their respective recommendations to the Director or Hearing Examiner, as appropriate.

   a. The Department shall perform a Critical Area review for any building or land use Application submitted for a Regulated Activity. Reviews for multiple Critical Areas shall occur concurrently.
   b. The Department shall, to the extent reasonable, consolidate the processing of related aspects of other City regulatory programs which affect activities in any regulated Critical Area.
   c. As part of the initial review of all related permit Applications, the Department shall review the information to:
      i. Confirm the nature and type of the Critical Area and evaluate whether any assessments, reports, or studies are required;
      ii. Determine whether the development proposal is consistent with this title;
      iii. Determine whether any proposed alterations to the site containing Critical Areas are necessary; and
      iv. Determine if the mitigation and monitoring plans submitted by the applicant are sufficient to protect the public health, safety, and welfare consistent with the goals, purposes, objectives, and requirements of this title.
   d. Regulated Activities subject to SEPA shall also be reviewed with consideration for impacts on Critical Areas as identified in this title. Regulated Activities that pose a significant adverse impact which are not addressed by the standards and criteria established in this title, may be subject to additional mitigation measures as determined through the SEPA process. A threshold determination issued pursuant to EMC Title 20 - SEPA, may not be made prior to the Department’s review of any special studies or technical reports required by this title, except where the applicant requests a declaration of significance so that environmental review is required.
   d. Critical Areas Applications required under this title shall be approved prior to approval of any underlying permit action.
e. The Department may waive the requirement to submit a Critical Area Report when the proposed project area for a regulated activity is located in an area that has been the subject of a previously submitted and approved assessment or report, if all of the following conditions have been met:

i. The provisions of this title have been previously addressed as part of another approval;

ii. There has been no material change in the potential impact to the Critical Area or required Buffer since the prior review;

iii. There is no new information available that is applicable to any critical review of the site or particular Critical Area;

iv. The permit or approval has not expired or, if there is no expiration date, no more than five years have elapsed since the issuance of that permit or approval; and

v. Compliance with any standards or conditions placed upon the prior permit or approval has been achieved or secured.

4. Burden of Proof. The applicant has the burden of proving that a proposed Application complies with the standards set forth in this title.

5. Final Decision.

a. The Department may approve, approve with conditions, or deny any Critical Areas Applications or underlying Applications for development within any Critical Area. Approval of a development proposal does not discharge the obligation of the applicant to comply with the provisions of this title.

b. Applicants shall comply with the recommendations or mitigation measures contained in final approved assessments or reports and any final decision and conditions of approval.

c. Approval of an Application required under this title must be given prior to the start of any development activity on a site.

6. Time Period for Final Decision. The provisions for issuing a notice of final decision on any Application filed pursuant to this title is set forth in EMC Section 18.40.040, Coordination of development permit procedures.

E. Time Limitations.

1. Expiration of Approval.

a. Approvals granted under this title shall be valid for the same time period as the underlying permit. If the underlying permit does not contain a specified expiration date, then approvals granted under this title shall be valid for a period of three (3) years from the date of issue, unless a longer or shorter period is specified in the final decision.

b. The approval shall be considered null and void upon expiration, unless a time extension is requested and granted as set forth in EMC Section 14.10.050.E.2.

2. Time Extensions.

a. The applicant or owner(s) may request in writing a one-time, one-year extension of the original approval. To receive the extension, the applicant must demonstrate that circumstances beyond their control dictated the need for the extension. The extension would set a new expiration date one year later than the initial expiration.

b. Knowledge of the expiration date and initiation of a request for a time extension is the responsibility of the applicant or owner(s).
c. A written request for a time extension shall be filed with the Department at least sixty (60) days prior to the expiration of the approval.

d. Upon filing of a written request for a time extension, a copy shall be sent to each party of record together with governmental departments or agencies that were involved in the original approval process. By letter, the Department shall request written comments be delivered to the Department within 30 days of the date of the letter.

e. Prior to the granting of a time extension, the Department may require a new Application(s), updated study(ies), and fee(s) if:

   i. The original intent of the approval is altered or enlarged by the renewal;

   ii. The circumstances relevant to the review and issuance of the original approval have changed substantially; or

   iii. The applicant failed to abide by the terms of the original approval.

F. Recording.

1. Approvals.

   a. Approvals to modify a Critical Area or which otherwise require mitigation and or monitoring shall be recorded on the title of the project parcel(s) at the Pierce County auditor’s office by City of Edgewood Staff prior to issuance of any permit authorizing the project to proceed and at the sole expense of Applicant.

   b. EMC Section 14.10.070.F, Title and Land Division Notification contains additional recording requirements.

   c. Work within a recorded, existing utility easement is not required to meet EMC Section 14.10.050.F.1.a.

2. Right of Entry.

   a. When an Application has been submitted, the City shall have a right of entry to verify the submitted information is correct; to ensure any applicable condition(s) of approval were satisfied; to confirm any required monitoring is being performed; or to attest that all outstanding items subject to a performance bond were completed.

   b. The right of entry shall extend until the last condition in the permit has been satisfied.
1. Conservation Easements and other similarly preserved areas restrict both the current use as well as future uses of the land to some important conservation quality such as habitat preservation, open space, or scenic views.

2. A land trust or governmental entity that manages properties for long-term goals typically holds the Conservation Easement or other similarly preserved area.

B. Mitigation Sequence. Adverse impacts caused by new activities and developments shall be mitigated using the following action(s) in order of priority:

1. Avoiding the impact altogether by not taking a certain action or parts of an action;

2. Minimizing impacts by limiting the degree or magnitude of the action and its implementation, by using appropriate technology, or by taking affirmative steps, such as project redesign, relocation, or timing, to avoid or reduce impacts;

3. Rectifying the impact by repairing, rehabilitating, or restoring the affected environment;

4. Reducing or eliminating the impact over time by preservation and maintenance operations;

5. Compensating for the impact by replacing, enhancing, or providing substitute resources or environments; and

6. Monitoring the impact and the compensation project and taking appropriate corrective measures.

C. Identification of Critical Areas and Required Buffers on Construction Plans. Critical Areas and required Buffers shall be clearly identified on all construction plans.

D. Building Setbacks.

1. Unless otherwise provided in this title, buildings and other structures shall be set back a distance of 15 feet from the edge of all Critical Area Buffers or, where no Buffers are required, the edge of the Critical Area.

2. The following uses and activities may be allowed in the building setback area:
   
a. Landscaping;

b. Uncovered decks;

c. Building overhangs extending 18 inches or less into the setback area;

d. Impervious ground surfaces, such as driveways, parking lots, roads, walkways, and patios; provided, that such improvements conform to the water quality standards set forth in the city’s adopted stormwater management manual and that construction equipment does not enter the Buffer during the construction process;

e. Clearing and Grading; or

f. Any combination of items a-e. (Ord. 02-200 § 2).

3. All other uses and activities not listed in EMC Section 14.10.070.D.2.a-e are prohibited.

E. Financial Guarantees.

1. The City may require an applicant to submit one or more financial guarantees, e.g., surety bond, cash escrow, cash set aside, assignment of funds, or letter of credit, to guarantee any performance, mitigation, maintenance, or monitoring required as a condition of permit approval. The approval for the project will not be granted until the financial guarantee is received by the Department. Projects where the City or one of its departments is the applicant shall not be required to post a financial guarantee.
2. Financial guarantee instruments required under this title shall be:
   a. In addition to any other site development guarantees required for project approval;
   b. Submitted on financial guarantee forms approved by the city;
   c. In the amount of 125 percent of the City Engineer’s estimate of the cost of mitigation or monitoring to allow for inflation and administration should the city have to complete the mitigation or monitoring; and
   d. Release by the City only when the applicant’s appropriate technical professional has provided written confirmation that the performance, mitigation, or monitoring requirements have been met and the Department or its agent inspected the site(s) for compliance.

3. Failure to complete any performance, mitigation, or monitoring may result in the forfeiture or release of the guarantee. Applicants who have previously defaulted will no longer be allowed to post a bond guarantee for improvements necessary for approval of a land use Application. Applicants who have previously defaulted will be allowed to post cash guarantees for subsequent Critical Area Mitigation work needed for approval of a land use Application or permit, but the guarantee must be by cash guarantee only.

F. Title and Land Division Notification.

1. General.
   a. Title or land division notice(s) shall be required to be recorded with the Pierce County auditor on each site that contains a Critical Area, at the time of approval of any regulated activity on a site.
   b. If more than one Critical Area subject to the provisions of this title exists on the site, then one notice which addresses all of the Critical Areas may be sufficient.
   c. Title or land division notifications and notes shall be approved by the Department and shall be consistent with EMC Section 14.10.170, Appendix A.
   d. Applicant shall be responsible for the recording costs of the notice.
   e. Notice on title is not required for utility line easements on lands not owned by the jurisdiction conducting the regulated activity, e.g., gas pipelines.

2. Land Division Notification and Notes. As referenced in EMC 14.10.170, Appendix A there shall be notes included on the face of any final plat, final binding site plan, short plat, or boundary line adjustment that contain any Critical Area or Buffers. The Critical Area boundaries and the boundary of any associated Buffers shall be identified on the face of these documents prior to submission to the City for approval.

G. Conservation Easements.

1. Prior to any final Critical Area approval, the part of the Critical Area and required Buffer which is located on the site shall be protected with a Conservation Easement or other similar permanent deed restriction.

2. The Conservation Easement shall indicate allowable and prohibited uses within the Critical Area and required Buffer.

H. Tracts. Critical Area tracts must adhere to the provisions in EMC Section 16.01.100 and the face of the plat shall include the requirement that the owners of all lots shall be required to preserve, protect, and maintain the Critical Areas.

I. Homeowner’s Covenants.
1. A description of the Critical Area and required Buffer shall be placed in any required homeowner’s covenants to provide notice to the homeowners of their responsibility to preserve, protect, and maintain the Critical Areas in perpetuity.

2. Such covenants shall contain a detailed description of the allowable uses within the Critical Area and, if applicable, associated Buffer and long-term management and maintenance requirements of the Critical Area.

J. Markers, Fencing, and Signage.

1. Markers.

   a. Prior to final approval of any Critical Areas Application, the outer edge of the Critical Areas boundaries or required Buffer boundaries on the site shall be flagged by the qualified professional, as outlined in each chapter.

   b. The boundaries shall then be identified with rebar and cap permanent markers and flagged by a licensed surveyor, unless otherwise stated in this title. The permanent markers shall be clearly visible, durable, and permanently affixed to the ground.

2. Fencing.

   a. Temporary Construction Fencing.

      i. Temporary fencing is required when vegetation is to be retained in an undisturbed condition within the Critical Area and required Buffer.

      ii. When temporary fencing is required, the applicant shall construct silt fencing, construction fencing, or other City-approved method of temporary fencing at the edge of the Critical Area or the edge of the required Buffer prior to beginning construction on the site.

   b. Permanent Fencing. Where deemed necessary by the Department to provide protection to the Critical Area, the applicant will be required to construct permanent, wildlife-passable fencing along the Buffer boundary.

3. Signage.

   a. The Department shall require permanent signage to be installed at the edge of the Critical Area or the edge of the required Buffer.

   b. The sign shall indicate the type of Critical Area and if the area is to remain in a natural condition as permanent open space.

   c. Exact sign locations, wording, size, and design specifications shall be established by the Department.

   d. Signage shall be clearly visible, durable, and permanently affixed to the ground.

   e. Prior to final approval of any Critical Area Application, the applicant shall submit an affidavit of posting to the Department as proof that the required signs were posted on the site.

14.10.080 Critical Areas Reports.

A. The applicant shall submit a Critical Areas report as required per this Title.

B. The Critical Areas report shall use scientifically valid methods and studies in the analysis of Critical Area data and field reconnaissance to evaluate the proposed development and all probably impacts to Critical Areas in accordance with the provisions of this title. The report shall reference the source(s) of science used in accordance with WAC 365-195-900 through WAC 365-195-925.

C. At a minimum the report shall contain the following ten (10) items:
1. The name and contact information of the applicant;
2. A description of the proposal;
3. The site plan for the proposed development, including a map drawn to scale depicting Critical Areas, Buffers, the proposed development, and any areas to be cleared or altered;
4. The date of the report and names and qualifications of the persons preparing the report;
5. Documentation of any fieldwork performed on the site;
6. Identification and characterization of all Critical Areas and Buffers on and adjacent to the proposed development;
7. A statement specifying the accuracy of the report, and all assumptions made and relied upon;
8. A discussion of the performance standards applicable to the Critical Area and proposed development;
9. A mitigation plan in accordance with EMC Section 14.10.090, if mitigation is required; and
10. Any additional report information required for the Critical Area as specified herein.

14.10.090 Mitigation plans.
A. When mitigation is required, the applicant shall submit a mitigation plan.
B. The mitigation plan shall include all of the following details outlined in paragraphs 1-6:
   1. Mitigation sequencing. A description of reasonable efforts made to apply mitigation sequencing pursuant to EMC Section 14.10.070.B to avoid, minimize, and mitigate impacts to Critical Areas and Buffers.
   2. Mitigation details.
      a. A description of the anticipated impacts to the Critical Area and Buffer, including impacts to Critical Area functions and values;
      b. The type of mitigation proposed, e.g., on-site or off-site; site selection criteria; identification of compensation goals; and identification of Critical Area functions.
      c. The environmental goals and objectives of the mitigation, together with specific measurable criteria and performance standards for evaluating whether or not the goals and objectives of the mitigation project have been successfully attained;
      d. A review of the Best Available Science supporting the proposed mitigation; and
      e. An analysis of the likelihood of success of the mitigation project.
   3. Construction details. The mitigation plan shall include written specifications, descriptions, and drawings of the mitigation proposed, including:
      a. Construction sequence, timing, and duration;
      b. Grading and excavation details;
      c. Erosion and sediment control features; and
d. Planting plan specifying plant species, quantities, locations, size, spacing, density, and measures to protect and maintain plants until established. All plant species must be native to the region.

   a. A program for monitoring construction and assessing the outcome of the mitigation project, including the schedule for site monitoring, e.g., monitoring shall occur in year 1, 3, and 5 after site construction, and how the monitoring data will be evaluated to determine if the performance standards are being met. Monitoring reports shall be submitted to document milestones, successes, problems, and contingency actions of the compensation project. The mitigation project shall be monitored for a period necessary to establish that performance standards have been met, but not for a period less than five (5) years. For example, ten years or more of monitoring are needed for forested and scrub-shrub communities. Mitigation monitoring shall be the responsibility of the applicant.
   b. A contingency plan with courses of action and corrective measures to be taken if monitoring or evaluation indicates project performance standards are not being met.

5. Mitigation Cost Estimate. A Mitigation Cost Estimate for the entire Compensatory Mitigation project, per the requirements of EMC Section 14.10.070.E.

6. Other requirements. The mitigation plan shall address any additional mitigation requirements relevant to the specific Critical Area as specified in the following chapters.

14.10.100 Variances to Critical Areas.
A. General. Variances are reviewed pursuant to the same permit process as a general variance, as outlined in EMC Chapter 18.40, and 18.50.080. The criteria for approval for a Critical Area Variances are contained herein, and are not subject to the criteria for general variances contained in EMC 18.50.080(D)(2).Conditions may be attached to any Critical Area variance, which will serve to meet the goals, objectives, and policies of this title.

B. Variance Criteria. A variance may be granted from the requirements of this chapter only if the decision maker makes written findings that the applicant has demonstrated that the requested action conforms to all of the criteria set forth as follows:

1. Special conditions and circumstances exist that are peculiar to the land, the lot, or something inherent in the land, and that are not applicable to other lands in the same district; and

2. The special conditions and circumstances do not result from the actions of the applicant; and

3. A literal interpretation of the provisions of this title would deprive the applicant of all reasonable economic uses and privileges permitted to other properties in the vicinity and zone of the subject property under the terms of this title, and the variance requested is the minimum necessary to provide the applicant with such rights; and

4. Granting the variance requested will not confer on the applicant any special privilege that is denied by this title to other lands, structures, or buildings under similar circumstances; and

5. The granting of the variance is consistent with the general purpose and intent of this title, and will not further degrade the functions or values of the associated Critical Areas or otherwise be materially detrimental to the public welfare or injurious to the property or improvements in the vicinity of the subject property; and

6. The decision to grant the variance incorporates the Best Available Science and gives special consideration to conservation or protection measures necessary to preserve or enhance anadromous fish habitat; and

7. The granting of the variance is consistent with the general purpose and intent of the Edgewood Comprehensive Plan and adopted development regulations.

C. Additional Criteria for Flood Hazard Area Variances. Refer to EMC Chapter 14.80 – Flood Hazard Areas for specific criteria. D. Should a variance be denied, the applicant may submit a Reasonable Use Exception Application.
14.10.110 Reconsideration and appeal procedures.
Procedures for appeal of a final decision on a Critical Areas permit, a decision relating to Critical Areas in the underlying permit, a Critical Areas variance, or a Critical Areas flood hazard variance are set forth in EMC Chapter 18.40.

14.10.120 Fees.
A. Fees for Applications or reviews of reports, studies, or plans filed pursuant to this title are set forth in the adopted fee schedule and as identified herein.

B. Fee Establishment. The City, by resolution, shall establish fees for filing of Critical Area review processing and other services provided by the City as required by this title.

C. Applicant Responsibilities. Unless otherwise indicated in this title, the applicant shall be responsible for the initiation, preparation, submission, and expense of all required reports, assessment(s), studies, plans, reconnaissance(s), peer review(s) by qualified consultants, and other work prepared in support of or necessary to review the Application. For those items initiated by the City, e.g., per review(s), the applicant is responsible for the expense and both the preparation and submission of the application materials and not initiation of the review or preparation of the package submitted to the respective Peer Reviewer.

D. Payment. Fees established in accordance with this title shall be paid upon submission of a signed Application or petition for appeal, or as otherwise provided by any fee ordinance or resolution adopted by the City Council.

E. Investigation Fee. To investigate Violations of this title, all city fees associated with investigation of Violations of this title may be assessed at the adopted billable staff hour rate in addition to any required consultant costs, legal costs, and other expenses necessary to complete the investigation of the Violation. The payment of such investigation fees shall not exempt any person from compliance with all other provisions of this title, nor from penalties prescribed by law.

14.10.130 Compliance.
A. The regulations for compliance with the provisions of this title are set forth in EMC Section 18.30.040, Scope and compliance.

B. When a Critical Area or its required Buffer has been altered in Violation of this title, the Department shall require the property owner to bring the site into compliance. The property owner shall be required to submit the appropriate Critical Areas Application, as applicable for each chapter of this title. In addition to any required site investigation, Delineations, assessments, or reports, the property owner shall be required to submit a Restoration plan that identifies the proposed mitigation to bring the subject property into compliance with the requirements of this title. (Ord. 02-200 § 2).

14.10.140 Warning and disclaimer of liability.
A. The degree of protection required through application of this title is deemed to be reasonable for regulatory purposes and is based on Best Available Science; however, natural events that may exceed the geographic boundaries regulated under this title can and will occur, e.g., flood heights that are higher than anticipated. This title does not imply that land outside designated hazard areas or uses permitted within such areas will be free from damages.

B. The express purpose of this title is to provide for the health, safety and welfare of the general public, and not to protect individuals or create or otherwise establish or designate any particular class or group of persons who will or should be especially protected or benefitted by the terms of this title. The obligation of complying with the requirements of this title and the liability for failing to do so is hereby placed upon the property owner and/or persons responsible for the condition of the property, buildings or premises.

C. Nothing in this title is intended to be nor shall be construed to create or form the basis for any liability on the part of the City, its officers, officials, employees or agents, for any injury or damage resulting from the failure of the owner of property or land to comply with the provisions of this title or by reason or in consequence of any inspection, notice, order, certificate, permission or approval, authorized or issued or done in connection with the
implementation or enforcement of this title, or by reason of any action or inaction on the part of the City, related in any manner to the enforcement of the title by its officers, officials, employees or agents.

14.10.150 Appendix.
A. Title and Plat Notification Forms.

APPENDIX A

TITLE AND PLAT NOTIFICATION FORMS

A. Notice for Title Notification.

1. Example:

Tax Parcel Number:

Address:

Legal Description:

Present Owner:

NOTICE: This property contains [identify Critical Area, e.g., Wetlands or Wetland Buffers] as defined by EMC Title 14. The site was the subject of a development proposal for application number [insert case file number] filed on [insert date]. Restrictions on use or alteration of the site may exist due to natural conditions of the property and resulting regulations. Review of such application has provided information on the location of the [identify Critical Area, e.g., Wetlands or Wetland Buffers] and any restriction on use.

___________________  __________________
Date   Signature of owner

Notary acknowledgment and notary seal

B. Additional Title Notification Statements.

1. Title notification for liquefaction and dynamic settlement hazard areas shall include a statement of the performance criteria, i.e., protection of life safety only, provision for minimal structural damage so that post-earthquake functionality is substantially unchanged, no structural damage for the design earthquake.

2. Title notification for fault rupture hazard areas shall include a statement that a fault rupture hazard area or associated Buffer exists on the site. The title notification shall include a site plan of the subject property with the fault rupture hazard area and associated Buffer identified.

3. Properties that contain Flood Hazard Areas pursuant to EMC Chapter 14.80 shall include the following statement:

4. Flood Elevation Certificates are kept on file by the Department.

C. Notice for Plat Notification/Plat Notes.

1. General. The following notice shall be placed on the face of the final plat, short plat, large lot, or binding site plan documents when said subdivision contains any Critical Area or Buffer:
Notice: This site lies within a [insert type of Critical Area] as defined in EMC Title 14. Restrictions on use or alteration of the site may exist due to natural conditions of the site and resulting regulation.

2. Native Vegetation Preservation Areas. The following notice shall be placed on the face of the final plat, short plat, large lot, or binding site plan documents when said subdivision contains any Critical Area or Buffer and when said Critical Area or Buffers have been identified as native or natural vegetation preservation areas.

Notice: The Critical Areas appearing on this [final site plan/preliminary plat/final plat/short plat/large lot/engineering drawing] contain areas of Native Vegetation intended to Buffer the Critical Area from the adverse effects of development. These Critical Areas shall remain and be maintained in a natural, undeveloped, open space state. There shall be no Clearing and Grading or construction within the Critical Areas, except as shown on plans or documents approved by the City of Edgewood and contained in the official files for this development. Each Critical Area shall remain undisturbed except for periodic watering and hand weeding of plants designated as noxious by the State of Washington.

3. Plat Notes for Flood Hazard Areas. The following notes shall be placed on the face of any of final plat, short plat, large lot, or binding site plan documents which lie within a Flood Hazard Area.

a. Clearing and Grading within the limits of the 100-year Floodplain is prohibited, except for watercourse related construction, repair, or maintenance work that is done by the City for management operations.

b. If a higher frequency event occurs or if existing conditions upon which the Flood Hazard Area boundaries were based were to change or occur differently than depicted, then the level of protection afforded by the existing levee, if applicable, and Flood Hazard Area standards may not be adequate to prevent the subject site from flooding.

c. All purchasers, developers, and their agents of property within the subject development area or parcel shall take notice of the above conditions and hereby agree to defend, indemnify, and hold harmless the City from any and all claims, losses, costs, liabilities, or damages of any nature imposed upon or asserted against Edgewood arising out of or caused by the City’s issuance of approval or by issuance of any other permits arising out of this approval.

d. All occupants or owners of property in the subject area assume the risk of flooding which may occur and waive any claims against the City arising out of damage or injury to person or property resulting therefrom. (Ord. 17-492 § 2 (Exh. A); Ord. 16-461 § 3; Ord. 02-200 § 2).
Chapter 14.20
DEFINITIONS

A. This title relies on the definitions contained in EMC Chapter 18.20 - Definitions. Any word or phrase not contained herein shall be first referenced to EMC Chapter 18.20 for meaning. The City also adopts by reference the definitions stated in WAC 197-11-700 through 197-11-799 as now or hereafter amended.

1. For any word or term not defined herein, the latest edition of Webster's Dictionary shall be used.
2. The Director, or their designee, has the final authority to determine the interpretation or usage of terms used in this Chapter.

B. Additional definitions not contained in EMC Chapter 18.20 that apply to this title are:

1. **Addition** – an alteration to an existing structure that increases the floor area, either affixed to the structure’s side or an upper story addition.

2. **Agricultural Activities** – the production of crops or raising or keeping livestock, including operation and maintenance of farm and stock ponds, drainage ditches, irrigation systems, and normal operation, maintenance, and repair of existing serviceable agricultural structures, facilities, or improved areas, and the practice of aquaculture. Activities which bring an area into agricultural use are not part of an ongoing activity. An operation ceases to be ongoing when the area in which it was conducted is proposed for conversion to a non-agricultural use or has lain idle for a period of longer than five (5) years, unless the idle land is registered in a federal or state soils conversation program. Forest practices regulated under RCW Chapter 76.09 or WAC Title 222 are not included in this definition.

3. **Agricultural Land(s)** – land primarily devoted to the commercial production of horticultural, viticultural, floricultural, dairy, apiary, vegetable, or animal products or of berries, grain, hay, straw, turf, seed, Christmas trees not subject to the excise tax imposed by RCW Sections 84.33.100 through 84.33.140, finfish in upland hatcheries, or livestock, and that has Long-Term Commercial Significance for agricultural production.

4. **Animal Containment Area** – a site keeping at least 2,000 pounds of large animals per acre or 750 pounds of small animals per acre, or where a high volume of waste material is deposited in quantities capable of impacting groundwater resources.

5. **Animal, Large** – an animal weighing 100 pounds or more.

6. **Animal, Small** – an animal with an average weight of less than 100 pounds.

7. **Application** – a request for a license.

8. **Base Flood** – the flood having a one percent chance of being equaled or exceeded in any given year, also referred to as the “100-year flood,” and is designated on FIRM(s) by the letter A or V.

9. **Best Available Science** – scientific information applicable to the Critical Area prepared by local, state, or federal natural resource agencies, a qualified scientific professional, or team of qualified scientific professionals that is consistent with criteria established in WAC Sections 365-195-900 through WAC 365-195-925.

10. **Best Management Practices (BMP)** – conservation practices or systems of practices and management measures that:

   a. Control soil loss and reduce water quality degradation caused by high conservations of nutrients, animal waste, toxics and sediment;
b. Minimize adverse impacts to surface water and ground water flow and circulation patterns and to the chemical, physical, and biological characteristics of Wetlands;

c. Protect trees and vegetation designated to be retained during and following site construction and use Native Plant species appropriate to the site for re-vegetation of disturbed areas; and

d. Provide standards for proper use of chemical herbicides within Critical Areas.

10. **Buffer** – areas contiguous with Critical Areas that are required for the integrity, maintenance, function, and structural stability of said Critical Areas.

11. **Building Footprint** – the horizontal area measured within the outside of the exterior walls of the ground floor of all principal and accessory buildings on a lot.

12. **City** – the City of Edgewood municipal corporation.

13. **City Council** – the Edgewood City Council.

14. **Classification** – defining value and hazard categories to which Critical Areas and land resource lands will be assigned.

15. **Compensatory Mitigation** – replacing project-induced losses or impacts to a Critical Area.

16. **Conservation Easement** – a recorded deed restriction or covenant that runs in perpetuity on a parcel of land restricting the use of the property by preventing future real estate development such as residential, industrial, or commercial use that may allow for continued current uses, e.g., residential, recreational, agriculture, forestry, or ranching.

17. **Contaminant** – any chemical, physical, biological, or radiological substance that does not occur naturally or occurs at concentrations and durations as to be injurious to human health or welfare or shown to be ecologically damaging.

18. **Crawl Space** – the shallow space beneath the bottom floor of a house with no basement; used for access and inspection of framing, electrical, plumbing, insulation, vapor barriers, or duct work. For purposes of the National Flood Insurance Program Elevation Certificate, this definition does not include spaces that have subgrade around all sides, which shall be considered a basement.

19. **Critical Aquifer Recharge Areas** – areas with a critical recharging effect on aquifers used for potable water, including areas where an aquifer that is a source of drinking water is vulnerable to contamination that would affect the potability of the water, or is susceptible to reduced recharge.

20. **Critical Area** – land that contains any of the following area, areas, or ecosystems: Aquifer Recharge Areas, Fish and Wildlife Habitat Conservation Areas, Frequently Flooded Areas, Geologically Hazardous Areas, or Wetlands; as defined in RCW 36.70A, as it now exists or may be hereinafter amended, and this Chapter.

21. **Critical Facilities** – those facilities occupied by populations or which handle dangerous substances including but not limited to hospitals, medical facilities, nursing homes; structures housing, supporting, or containing toxic or explosive substances; covered public assembly structures; school buildings through secondary, including daycare centers; buildings for colleges or adult education; police, fire, and emergency response installations; jails and detention facilities; and all structures with occupancy of greater than 5,000 people. These facilities are such that even a slight chance of flooding might be too great.

22. **Debris Flow** – the rapid downslope movement of a viscous mass of water-saturated sediments.

23. **Degraded** – to have suffered a decrease in naturally occurring function or value.

24. **Delineation** – a Wetland study conducted in accordance with the approved federal Wetland delineation manual and applicable regional supplements.
25. *Depressional Pothole* – a relatively sunken or low-lying area of the earth’s surface, especially one having no natural outlet for surface drainage.

27. *Development activity* – See EMC Section 18.20.070.

28. *Director* – the head of the City’s Community Development Department or their designee.

29. *DRASTIC* – an acronym for a computer model developed by the National Water Well Association and Environmental Protection Agency used to measure aquifer susceptibility.

30. *Earth Material* – naturally occurring rock, soil, stone, sediment, or combination thereof.

32. *Elevation Certificate* – the official form (FEMA Form 81-31) used to track development, provide elevation information necessary to ensure compliance with community floodplain management ordinances, and determine the proper insurance premium rate with Section B completed by community officials.

33. *Encroachment* – development or regulated activity conducted inside the boundaries of any Critical Areas or Buffer.

34. *Engineer* – as defined by RCW Chapter 18.43.

35. *Engineering Geologist* – a geologist who has met the qualifications in engineering geology established under Chapter 18.220 RCW.

36. *Enhancement* – actions performed within existing Critical Areas or Buffers to intentionally increase or augment one or more ecological functions or values of the existing area. Enhancement actions include, but are not limited to, increasing plant diversity and cover; increasing wildlife habitat and structural complexity with snags or woody debris; installing environmentally compatible erosion controls; removing non-Native Plant or animal species; or removing human-made structures or fill that are degrading ecological functions or values.

37. *Erosion Hazard Areas* – those areas that because of natural characteristics, including vegetative cover, soil texture, slope, gradient, and rainfall patterns, or human-induced changes to such characteristics, are vulnerable to erosion.

38. *Facility* – all structures, contiguous land, appurtenances, and other improvements on the land used for recycling, reusing, reclaiming, transferring, storing, treating, disposing, or otherwise handling a hazardous substance. This term includes underground and aboveground tanks and operations, which handle, use, dispose of, or store hazardous substances.

39. *Filling* – the act of placing fill or fill material on any surface, including temporary stockpiling of fill material.

40. *Finished Floor* – the top of the next higher floor above the Lowest Floor. For purposes of the National Flood Insurance Program Elevation Certificate, the finished floor referenced in this regulation shall equal the top of the next higher floor.

41. *Fisheries Biologist* – a professional with a degree in fisheries or certification by the American Fisheries Society, or with five (5) years of professional experience as a fisheries biologist.

42. *Flood Hazard Areas* – areas of flooding identified by verifiable flooded areas using:

   a. Aerial photographs of the city, especially those taken in wintertime 1996 and 1997;
b. Relevant and verifiable information from the City’s capacity analysis technical review Ad-hoc committee (CATRAC) draft report, 2000;

c. Relevant and verifiable government and citizen photographs, notes, observations, etc. regarding historic ponding/flooding levels;

d. Relevant and verifiable information available through Pierce County;

e. Relevant and verifiable information available through the Federal Emergency Management Agency (FEMA); or

f. Areas of land located in floodplains, which are subject to a one percent or greater chance of flooding in any given year, including, but not limited to, streams, rivers, lakes, ponds, Wetlands, or Depressional Potholes.

43. Flood Insurance Rate Map (FIRM) – the official map on which the Federal Insurance Administration (FIA) has delineated both the areas of special flood hazard and the risk premium zones applicable to the community.

44. Flood Fringe – the area subject to inundation by the Base Flood, but outside the limits of the Floodway, and which may provide needed temporary storage capacity for floodwaters.

45. Floodplain – the total area subject to inundation by the Base Flood, including the flood fringe and the Floodway areas.

46. Floodway – the channel of a river or other watercourse and the adjacent land areas that must be reserved in order to convey and discharge the Base Flood without cumulatively increasing the water surface elevation by more than one foot, and those areas designated as deep and/or fast-flowing water.

47. Fluvial Processes – the physical interaction of flowing water and the natural channels of rivers and streams.

48. Frequently Flooded Area – lands in the floodplain subject to at least a one percent or greater chance of flooding in any given year, or within areas subject to flooding due to high groundwater. These areas include, but are not limited to, streams, rivers, lakes, Wetlands, and areas where high groundwater forms ponds on the ground surface.

49. Geologically Hazardous Areas – areas that because of their susceptibility to erosion, sliding, earthquake, or other geological events are not suited to the siting of commercial, residential, or industrial development consistent with public health or safety concerns.

50. Geologist – an Engineering Geologist or hydrogeologist that is registered in the State of Washington.

51. Geotechnical Professional – a person with experience and training in analyzing, evaluating, and mitigating landslide, erosion, or seismic hazards. A geotechnical professional shall be licensed in the state of Washington as a Geologist or Professional Engineer, and must have five or more years’ experience specializing in landslide, erosion, or seismic hazards, as applicable.

52. Geotechnical Report – a report prepared by a Geologist or Professional Engineer licensed by the state of Washington with expertise in geotechnical engineering, evaluating the site conditions and mitigating measures necessary to reduce the risks associated with development in Geologically Hazardous Areas.

53. Grading or Clearing and Grading – any excavating, filling, clearing, creating of impervious surfaces, or any combination of these items.

54. Habitat Management Plan – a report prepared by a professional Wildlife Biologist or Fisheries Biologist, which discusses and evaluates the measures necessary to maintain fish and wildlife habitat conservation areas on a proposed development site.
55. *Habitat of Local Importance* – an area, range, or habitat within which a species has a primary association and which, if altered, may reduce the likelihood that the species will maintain and reproduce over the long term. Examples include areas of high relative density or species richness, breeding habitat, winter range, and movement corridors. These areas may also include habitats that are of limited availability or high vulnerability to alteration.

56. *Hard Armoring* – the use of large rock or human-made materials to protect property from shoreline erosion. Such techniques include cement or concrete bulkheads, steel structures, rock wall revetments, and rock gabion structures. Hard Armoring typically does not utilize or integrate any of soft armoring or Soil Bioengineering Methods.

57. *Holocene Epoch* – that part of the geologic record that post-dates the youngest deposits associated with the late Pleistocene Age Fraser Glaciation and is typically considered to be the past 10,000 years.

58. *Hydrogeologic Assessment* – a report detailing the subsurface conditions, the design of a proposed land use action, and the facilities operation which indicates the susceptibility and potential for contamination of groundwater supplies.

59. *Landslide Hazard Area* – any area subject to risk of mass movement due to a combination of geologic, topographic, and hydrologic factors.

60. *LiDAR* – an acronym that stands for Light Detection and Ranging imaging.

61. *Long-Term Commercial Significance* – the growing capacity, productivity, and soil composition of land, which makes it suitable for long-term commercial production, in consideration with the land’s proximity to population areas, and the possibility of more intense uses of land.

62. *Lowest Floor* – the lowest floor of the lowest enclosed area (including basement and crawl space). An unfinished or flood resistant enclosure, usable solely for parking of vehicles, building access, or storage in an area other than a basement area, is not considered a building’s lowest floor; provided, that such enclosure is not built so as to render the structure in Violation of the applicable non-elevation design requirements of this title.

63. *Mineral Resource Lands* – those lands primarily devoted to the extraction of minerals or which have known or potential long-term commercial significance for the extraction of minerals.

64. *Mudflow* – a Debris Flow containing an abundance of fine particles.

65. *Native Vegetation or Native Plants* – a mix of plant species comprising herbs, grasses, grass-like plants, shrubs and trees indigenous to the Puget Sound region that reasonably could be expected to naturally occur on the site.

66. *Natural Resource Lands* – agricultural and mineral resource lands, which have long-term commercial significance.

67. *New Construction* – structures for which the Start of Construction commenced on or after the effective date of this Critical Areas ordinance.

68. *Professional Engineer* – an engineer currently licensed and registered in the state of Washington.

70. *Restoration* – an action which returns habitat to a state in which its stability and functions approach its unaltered state as closely as possible. This may be accomplished through measures including, but not limited to, re-vegetation, removal of intrusive stream bank structures, and removal or treatment of toxic materials. Restoration does not imply a requirement for returning the Critical Area to aboriginal or pre-European settlement conditions.
71. **RCW** – an acronym that stands for Revised Code of Washington.

72. **Riparian** – the area adjacent to aquatic systems with flowing water that contains elements of both aquatic and terrestrial ecosystems which mutually influence each other. Riparian habitat begins at the ordinary high water mark and includes the entire extent of the floodplain and riparian areas of Wetlands that are directly connected to the stream course.

73. **Seismic Hazard Areas** – areas subject to severe risk of damage as a result of earthquake-induced ground shaking, slope failure, settlement, or soil liquefaction.

74. **Sensitive Areas** – agricultural lands and mineral resource lands and all associated Buffers.

75. **Shoreline** – the line where a body of water and the shore meet or the strip of land along the shoreline. There are no waters within the City meeting the criteria of shorelines of statewide significance as defined by RCW 90.58.030.

76. **Site** – a lot, parcel, tract, or combination of lots, parcels, or tracts on which a regulated activity is proposed.

77. **Sludge** – a semi-solid substance consisting of settled solids combined with varying amounts of water and dissolved materials generated from a wastewater treatment plant or system or other sources, including septage sludge, sewage sludge, and industrial sludge.

78. **Sludge Land Application Site** – a site where stabilized sludge, septage, and other organic wastes are applied to the surface of the land in accordance with established agronomic rates for fertilization or soil conditioning.

79. **Special Occupancy Structures** – those structures that have the potential to provide capacity for large numbers of people or special groups of people or assemblies such as but not limited to schools, jails and detention facilities, and resident incapacitated patients.

80. **Species of Local Importance** – species that are of local concern due to their population status or their sensitivity to habitat manipulation.

81. **Soft Armoring Techniques or Soil Bioengineering Methods** – the use of woody plants and limited structural-mechanical systems that are integrated in a structurally and environmentally sound manner to repair and protect slopes and shorelines against shallow mass wasting and surface erosion. Examples include, but are not limited to live stake, live fascine, brushlayer, live cribwall, vegetated geogrid, branchpacking, live slope grading, beach berms, or earthen berms.

82. **Stream** – a feature where surface waters produce a defined channel or bed. A defined channel or bed is an area that demonstrates clear evidence of the passage of water and includes, but is not limited to, bedrock channels, gravel beds, sand and silt beds, and defined-channel swales. The channel or bed need not contain water year-round. This definition is not intended to include artificially created irrigation ditches, canals, storm or surface water devices, or other entirely artificial watercourses, unless they are used by salmonids or created for the purposes of stream mitigation.

83. **Substantial Damage** – damage of any origin sustained by a structure whereby the cost of restoring the structure to its before-damaged condition would equal or exceed fifty (50) percent of the market value of the structure before the damage occurred.

84. **Substantial Improvement** – any repair, reconstruction, addition, rehabilitation, or other improvement of a structure, whereby the cost for the work exceeds fifty (50) percent of the market value of the existing structure before the “Start of Construction” of the improvement. The “cost” and “market value” may be determined using the current permit valuation. The Director shall determine the current permit valuation based on the cost per square foot values in effect at the time of permit application. Substantial improvement shall be accumulative from the effective date of the ordinance codified in this chapter. This term includes
structures which have incurred Substantial Damage, regardless of the actual repair work performed. The term does not, however, include either:

a. Any project for improvement of a structure to correct existing Violations of state or local health, sanitary, or safety code specifications which have been identified by the local code enforcement official and which are the minimum necessary to assure safe living conditions; or

b. Any alteration of a structure listed on the National Register of Historic Places or a State Inventory of Historic Places; provided, that the alteration will not preclude the structure’s continued designation as a historic structure.

85. **Toe of Slope** – a distinct topographic break in slope at the lowermost limit of the landslide or erosion hazard area.

86. **TPCHD** – an acronym that stands for the Tacoma-Pierce County Health Department.

87. **Underground Storage Tank or UST** – one tank or a combination of multiple tanks, including the underground pipes connected thereto, which are used to contain or dispense an accumulation of hazardous substances or hazardous wastes, and the total volume of which is 10 percent or more beneath the surface of the ground.

88. **Urban Growth** – growth that makes intensive use of the land for the location of buildings, structures, and impermeable surfaces to such a degree as to be incompatible with the primary use of such land for the production of food, other agricultural products, or fiber, or the extraction of mineral resources. When allowed to spread over wide areas, Urban Growth typically requires urban governmental services.

89. **View Corridor** – an area, which affords views of lakes, mountains, or other scenic amenities normally enjoyed by residential property owners.

90. **Violation** – See EMC Chapter 1.10 for penalties.

91. **Volcanic Hazard Areas** – those areas subject to pyroclastic flows, lava flows, and inundation by Debris Flows, Mudflows, or related flooding resulting from geologic or volcanic events on Mount Rainier.

92. **WAC** – an acronym that stands for the Washington Administrative Code.

93. **Wellhead Protection Area** – the area within the 10-year time-of-travel zone boundary or zone of contribution area of a Group A public water system well, as delineated on the Critical Aquifer Recharge Areas Critical Area Map, pursuant to WAC 246-290-135.

94. **Wetland** – areas that are inundated or saturated by surface water or groundwater at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands generally include swamps, marshes, bogs, and similar areas. Wetlands do not include those artificial Wetlands intentionally created from non-Wetland sites, including, but not limited to, irrigation and drainage ditches, grass-lined swales, canals, detention facilities, wastewater treatment facilities, farm ponds, and landscape amenities, or those Wetlands created after July 1, 1990, that were unintentionally created as a result of the construction of a road, street, or highway. Wetlands may include those artificial Wetlands intentionally created from non-Wetland areas created to mitigate conversion of Wetlands.

95. **Wetland Category** – the numeric designation (I through IV) assigned to a Wetland to indicate the Wetland’s overall function and value. Wetland categories rank the City’s Wetlands from highest (Category I) to lowest (Category IV) using the current version of the Washington State Wetland Rating System for Western Washington (Hruby, 2014)

96. **Wetland Mosaic** – a patchwork of Wetlands that is considered one unit where each patch of Wetland is less than one acre and the areas delineated as vegetated Wetland are more than fifty percent of the total area of the Wetlands and uplands together.
97. *Wetland Specialist* – a person that obtained Professional Wetland Scientist (PWS) or Wetland Professional In-Training (WPIT) certification from the Society of Wetland Scientists or a qualified Wetland professional with experience and training in Wetlands issues and with experience in performing a Delineation, analyzing Wetland functions and values, analyzing Wetland impacts, and recommending Wetland mitigation and Restoration. A Qualified Wetland Professional is a person with experience and training that includes, at a minimum:

a. A B.S., B.A., or equivalent degree in biology, botany, environmental studies, fisheries, soil science, wildlife, agriculture, or related field; and

b. Two years of related work experience; and

c. One-year experience delineating Wetlands using the federal delineation manual and applicable regional supplements and preparing Wetland reports and mitigation plans; OR

d. Four years of related work experience and training; and

e. Two years of experience delineating Wetlands using the Unified Federal Manual and preparing Wetland reports, and mitigation plans.

98. *Wildlife Biologist* – a professional with a degree in wildlife, or certification by the Wildlife Society, or with five (5) years of professional experience as a Wildlife Biologist. (Ord. 17-492 § 2 (Exh. A); Ord. 16-461 § 2; Ord. 15-447 § 1 (Exh. A); Ord. 02-200 § 2).
Chapter 14.30

USE AND ACTIVITY REGULATIONS

Sections:
14.30.010 Permitted uses.
14.30.020 Regulated uses and activities.
14.30.030 Exemptions.
14.30.040 Nonconforming uses and structures.
14.30.050 Reasonable use exceptions.
14.30.060 Current use assessment program.

14.30.010 Permitted uses.
Uses permitted on properties designated as Critical Areas shall be the same as those permitted in the zone Classification shown in the City’s Official Zoning Map unless specifically prohibited by this title. (Ord. 02-200 § 2).

14.30.020 Regulated uses and activities.
A. Unless the requirements of this title are met, the Department shall not grant any approval or permission to alter the condition of any land, water, or vegetation, or to construct or alter any structure or improvement regulated through the following: building permit, commercial or residential; binding site plan; franchise right-of-way construction permit; site development permit; right-of-way permit; short subdivision; large lots; use permits; subdivision; utility permits; or any subsequently adopted permit or required approval not expressly exempted by this chapter.

B. The following activities are regulated within any Critical Area and its Buffer, unless exempted by EMC 14.30.030:

1. Removing, excavating, disturbing, or dredging soil, sand, gravel, minerals, organic matter, or materials of any kind;

2. Dumping, discharging, Grading, or Clearing and Grading;

3. Draining, flooding, or disturbing the water level or water table. In addition, an activity which involves intentional draining, flooding, or disturbing the water level or water table in a Wetland or stream in which the activity itself occurs outside the regulated area shall be considered a regulated activity;

4. Driving, piling, or placing obstructions, including placement of utilities;

5. Constructing, reconstructing, installing, demolishing, or altering the size of any structure or infrastructure, including manufactured and mobile homes;

6. Altering the character of a regulated area by destroying or altering vegetation through clearing, harvesting, cutting, intentional burning, shading, or planting;

7. The division of land;

8. The creation of hard surfaces; and

14.30.030 Exemptions.
A. Individuals, organizations, or associated parties shall avoid potential impacts to Critical Areas and their Buffers to the greatest degree feasible. To be exempt from this title does not give permission to degrade a Critical Area or its Buffer or ignore risk from natural hazards. Any incidental damage to, or alteration of, a Critical Area or its Buffer that is not a necessary outcome of the exempted activity shall be restored, rehabilitated, or replaced at the responsible party’s expense.
B. The following activities are exempt from the provisions of this title:

1. Operation, maintenance, or repair of existing structures, infrastructure improvements, utilities, public or private roads, dikes, levees, or drainage systems, that do not require construction permits, if the activity does not further alter or increase the impact to, or encroach further within, the Critical Area or Buffer and there is no increased risk to life or property as a result of the proposed operation, maintenance, or repair. Operation and maintenance includes vegetation management performed in accordance with BMPs that are a part of ongoing maintenance of structures, infrastructure, or utilities, provided that such management actions are part of ongoing maintenance, do not expand further into the Critical Area or Buffer, are not the result of an expansion of the structure or utility, and do not directly impact an endangered or threatened species.

2. Normal maintenance or repair of existing structures or developments, including damage by accident, fire, or elements within the past three (3) years. “Normal maintenance” includes those usual acts to prevent a decline, lapse, or cessation from a lawfully established condition. “Normal repair” means to restore a development to a state comparable to its original condition including, but not limited to, its size, shape, configuration, location, and external appearance, within three (3) years after decay or partial destruction, except where repair causes substantial adverse effects to Critical Areas or their Buffers. Replacement of a structure or development may be authorized as repair where such replacement is the common method of repair for the type of structure or development and the replacement structure or development is comparable to the original structure or development including, but not limited to, its size, shape, configuration, location, and external appearance and the replacement does not expand further into the Critical Area or Buffer. Refer to EMC Section 14.30.040.D for requirements associated with repair of Substantial Damage of non-conforming structures.

3. Reconstruction, remodeling, or maintenance of existing single-family residential structures and accessory structures that are located outside a Flood Hazard Area and active Landslide Hazard Area; provided, that a one-time only expansion of the Building Footprint does not increase by more than 25 percent and that the New Construction or related activity does not further intrude into the Critical Area or related Buffer. The exemption shall not apply to reconstruction which is proposed as a result of structural damage associated with a Critical Area.

4. Reconstruction, remodeling, or maintenance of structures, other than single-family structures and accessory structures that are located outside a Flood Hazard Area or active Landslide Hazard Area; provided, that such reconstruction, remodeling, or maintenance does not increase the floor area nor extend beyond the existing ground coverage. The exemption shall not apply to reconstruction which is proposed as a result of site or structural damage associated with a Critical Area, such as slope failure in a Landslide Hazard Area or flooding in a Flood Hazard Area.

5. Site investigative work necessary for land use Application submittals such as surveys, soil logs, percolation tests, and other related activities. Critical Area impacts shall be minimized and disturbed areas shall be immediately restored.

6. Emergency actions necessary to prevent imminent threat or danger to public health or safety, or to public or private property, or serious environmental degradation.
   a. The Department shall review all proposed emergency actions to determine the existence of the emergency and reasonableness of the proposed actions taken; however, post-emergency actions, such as submittal of permits, completion of City review, modification or removal of the emergency repair work, or mitigation shall be required by the Department.
   b. Erosion protection measures shall only be allowed as an emergency action when the owner can demonstrate that there is an imminent threat to an existing residential, commercial, industrial, or agricultural structure. The owner shall retain either City staff or an Engineering Geologist to conduct a site investigation and provide adequate documentation that the situation is actually an emergency. An emergency action is not warranted when the structure is located outside the active landslide area.
   c. After the emergency, the person or agency undertaking the action shall fully fund and conduct necessary Restoration or Mitigation for any impacts to the Critical Area and Buffers resulting from the emergency
action in accordance with an approved Critical Area report and mitigation plan. The person or agency undertaking the action shall apply for review, and the alteration, Critical Area report, and mitigation shall be reviewed by the Department in accordance with the review procedures contained herein. Restoration or mitigation activities must be initiated within 90 days of the date of the emergency activity and both must be fully completed within one (1) year.

7. Installation, construction, replacement, repair, operation or alteration of natural gas, cable and telecommunication facilities, electric facilities and lines, water, sewer or storm lines, pipes, mains, equipment, or appurtenances in publicly owned right-of-way, which may be within or adjacent to any Critical Areas or Buffers, subject to full review and approval of the Department, including any Mitigation or Restoration requirements established by the Department.

8. Removal by hand of manmade litter and control of noxious weeds that are included on the state noxious weed list (Chapter 16-750 WAC) or invasive plant species as identified by the City. Control may be conducted by clipping, pulling, or digging, or by an alternative non-mechanical method upon approval of a plan by the Department.

9. Activities undertaken to comply with a United States Environmental Protection Agency superfund order, or a Washington Department of Ecology order, pursuant to the Model Toxics Control Act, including the following activities:
   a. Remediation or removal of hazardous or toxic substances;
   b. Source control; and
   c. Natural resource damage Restoration.

10. Activities within a portion of a Wetland Buffer or fish and wildlife habitat conservation area Buffer located landward of an existing, substantially developed area, such as a paved area, dike, levee, or permanent structure which eliminates or greatly reduces the impact of the proposed activities on the Wetland or fish and wildlife habitat conservation area. The Department shall review the proposal to determine the likelihood of associated impacts.

11. Passive recreation such as hunting, hiking, fishing, and wildlife viewing that does not involve the construction of trails.

12. Enhancement actions that do not involve clearing, Grading or construction activities, e.g., revegetation with Native Plants and installation of nest boxes. Enhancement activity proposals shall be reviewed by the Department.

13. Forest practices conducted in accordance with the requirements of the Forest Practice Act (Chapter 76.09 RCW) and its rules, with the exception of the conversion of forest land to a use other than commercial forestry (Class IV conversions).

14. Existing and ongoing Agricultural Activities, provided that they comply with the provisions of Chapter 14.80 EMC, Flood Hazard Areas, and implement applicable BMP contained in the latest editions of the USDA Natural Resources Conservation Service Field Official Technical Guide; or develop a farm conservation plan in coordinate with the local conservation district. The BMPs or farm plans should address potential impacts to Critical Areas from livestock, nutrient and farm chemicals, soil erosion and sediment control, and agricultural drainage infrastructure. The BMPs or farm plans should ensure that ongoing Agricultural Activities minimize their effects on water quality, Riparian ecology, salmonid populations, and wildlife habitat.

14.30.040 Nonconforming uses and structures.
A. An established use or existing structure located in a Wetland, fish and wildlife habitat conservation area, landslide or Erosion Hazard Area, Flood Hazard Area, and their associated Buffers that was lawfully permitted prior to the effective date of this title, but which is not currently in compliance with this title, may continue subject to the following:
1. Nonconforming Use Expansion. Nonconforming uses shall not be expanded or changed in any way that increases the nonconformity without a permit issued pursuant to the provisions of this title.

2. Nonconforming Structure Expansion. Existing structures shall not be expanded or altered in any manner that will increase the nonconformity without a permit issued pursuant to the provisions of this title, except as provided in EMC 14.30.030(B).

3. Discontinued Uses. Activities or uses which are discontinued for twelve (12) consecutive months shall be allowed to resume only if they are in compliance with this title.

4. Substantial Damage. Nonconforming structures, except for structures located in a Flood Hazard Area or active Landslide Hazard Area which are damaged or destroyed by fire, explosion, flood, or other casualty, may be restored or replaced if reconstruction is commenced within one year of such damage and is substantially completed within 18 months of the date such damage occurred. The reconstruction or Restoration shall not serve to expand, enlarge, or increase the nonconformity except as allowed through the provisions in EMC 14.30.030(B). Structures in a Floodway or active Landslide Hazard Area may be allowed to be restored only up to the limits of Substantial Improvement, as set forth in each chapter. (Ord. 02-200 § 2).

B. The provisions of EMC Section 18.90.110 may also apply to nonconformities not expressly described in this chapter.

14.30.050 Reasonable Use Exceptions.

A. If the application of this chapter would deny all reasonable use of the property, the applicant may apply for a Reasonable Use Exception pursuant to this subsection. The Hearing Examiner may approve alterations to a Critical Area or its Buffers to allow a reasonable use not otherwise allowed by this chapter when the following criteria are met:

1. The application of this chapter would deny all reasonable use of the property;

2. There is no other reasonable use with less impact on the Critical Area;

3. The proposed development does not pose an unreasonable threat to the public health, safety, or welfare on or off the development proposal site and is consistent with the general purposes of this title and the public interest; and

4. Any alterations permitted to the Critical Area or its Buffer shall be the minimum necessary to allow for reasonable use of the property; and any authorized alteration of a Critical Area under this subsection shall be subject to conditions established by the Department including, but not limited to, mitigation under an approved mitigation plan.

B. Application Requirements. A complete Application for a Reasonable Use Exception shall include the following nine (9) items:

1. A description of the areas of the site that contains a Critical Area, Buffers, or within setbacks required under this title;

2. A description of the amount of the site that is within setbacks required by other standards of the zoning code;

3. A description of the proposed development, including a site plan;

4. An analysis of the impact that the amount of development described in subsection (B)(3) of this section would have on the Critical Area;

5. An analysis of whether any other reasonable use with less impact on the Critical Area and associated Buffer(s) is possible;

6. A design of the proposal so that the amount of development proposed as reasonable use will have the least impact practicable on the Critical Area;
7. An analysis of the modifications needed to the standards of this title to accommodate the proposed development;

8. A description of any modifications needed to the required front, side, and rear setbacks; building height; and Buffer widths to provide for a reasonable use while providing greater protection to the Critical Area;

9. Such other information the Department determines is reasonably necessary to evaluate the issue of reasonable use as it relates to the proposed development, such as but not limited to a Wetland Analysis Report, mitigation plan, habitat evaluation study, or a Buffer Enhancement Plan.

C. Review. A Reasonable Use Exception shall be processed according to the procedures in EMC Section 18.40.080.

D. Findings and Determinations. A Reasonable Use Exception may be approved if all of the findings are made in writing and are supported by the record.

14.30.060 Current use assessment program.

A. An owner of Agricultural Land, timberland, or open space desiring current use Classification under Chapter 84.34 RCW may file for such current use Classification with the Pierce County assessor-treasurer’s office.

B. The Department shall notify the assessor-treasurer’s office when restrictions on development occur on a particular site.

C. The assessor-treasurer’s office shall consider the Critical Areas and Buffering requirements of this title in determining the fair market value of land. Any owner of an undeveloped Buffer which has been placed in a separate tract or tracts, protective easement, public or private land trust dedication, or other similarly preserved area shall have that portion of land assessed consistent with those restrictions. (Ord. 02-200 § 2).
Chapter 14.40

WETLANDS

Sections:
14.40.010 Purpose.
14.40.030 Buffer standards—Wetlands
14.40.040 Wetland review procedures.
14.40.050 Allowed activities.
14.40.060 Mitigation requirements.
14.40.070 Appendices.

14.40.010 Purpose.
A. The purpose of this chapter is to avoid or, in appropriate circumstances, to minimize, rectify, reduce, or compensate for impacts arising from land development and other activities affecting Wetlands, and to maintain and enhance the biological and physical functions and values of Wetlands with respect to water quality maintenance, stormwater and floodwater storage and conveyance, fish and wildlife habitat, primary productivity, recreation, education, and historic and cultural preservation. When Wetland impacts occur, mitigation will be required to achieve no net loss of Wetlands in terms of acreage, function, and value. (Ord. 02-200 § 2).

B. This Chapter is intended to be consistent with the requirements of RCW Chapter 36.70A and to implement the goals and policies of the City’s Comprehensive Plan for protecting Wetlands.

A. Designation. All areas within the city meeting the definition of Wetland in EMC Chapter 14.20 are hereby designated as Critical Areas.

B. Identification and Delineation.
1. Wetlands shall be identified and delineated by a qualified Wetland Specialist in accordance with the approved federal wetland delineation manual and applicable regional supplements.

2. A Wetland Delineation is valid for five (5) years, after which date the City shall require verification that the Wetland boundaries and prior conditions have not changed to determine whether a revision or additional assessment is needed.

C. Mapping.
1. The approximate location and extent of Wetlands are shown on maps maintained by the City.

2. These maps are useful as a guide for project applicants and property owners, but the maps do not provide a conclusive or definitive indication of a Wetland presence or its extent.

3. Wetlands may exist that do not appear on the maps and some Wetlands that appear on the maps may not meet all of the Wetland designation criteria.

D. Rating. Wetlands shall be rated according to the Washington Department of Ecology Wetland rating system, as set forth in the Washington State Wetland Rating System for Western Washington: 2014 Update (Ecology Publication #14-06-029, or as revised and approved by the Department of Ecology).

E. Illegal Modifications. Wetland rating categories shall not change due to illegal modifications made by the applicant or with the applicant’s knowledge.
The Edgewood Municipal Code (EMC)  
Critical Areas Ordinance Update 2018

A. Determining Buffer widths. Buffer widths shall be measured horizontally from the perpendicular line established at the Wetland edge as shown in Table 14.40.030.1. Note that Table 1 is Reduced Wetland Buffers with minimization of impacts. See Table 3 for buffers that apply without minimization techniques.

B. The following buffer widths have been established in accordance with the best available science. They are based on the category of wetland and the habitat score as determined by a qualified wetland professional using the Washington State Wetland Rating System for Western Washington: 2014 Update (Ecology Publication #14-06-029, or as revised and approved by Ecology). The adjacent land use intensity is assumed to be high.

1. For wetlands that score 5 points or more for habitat function, the buffers in Table 14.30.050.1 can be used if both of the following criteria are met:
   i. A relatively undisturbed, vegetated corridor at least 100 feet wide is protected between the wetland and any other Priority Habitats as defined by the Washington State Department of Fish and Wildlife.
      1. The latest definitions of priority habitats and their locations are available on the WDFW web site at: http://wdfw.wa.gov/hab/phshabs.htm
      2. The corridor must be protected for the entire distance between the wetland and the Priority Habitat by some type of legal protection such as a conservation easement.
      3. Presence or absence of a nearby habitat must be confirmed by a qualified biologist. If no option for providing a corridor is available, Table 14.30.050.1 may be used with the required measures in Table 14.030.050.2 alone.
   ii. The measures in Table 14.30.050.2 are implemented, where applicable, to minimize the impacts of the adjacent land uses.

2. For wetlands that score 3-4 habitat points, only the measures in Table 14.30.050.2 are required for the use of Table 14.30.050.1

D. Modification of Buffer Widths. The standard Buffer widths of subsection (A) of this section may be modified by averaging or increasing.

1. Buffer Averaging. Buffer width averaging may be allowed only where the applicant demonstrates all of the following through the submittal of a Wetland Report that is prepared by a qualified professional.

   a. Buffer Encroachment is unavoidable;
   b. The Wetland contains variations in sensitivity due to existing physical characteristics;
   c. Width averaging will provide equal or greater protection of current Wetland functions and values;
   f. The total Buffer area after averaging is no less than the Buffer area prior to averaging;
   g. The width of the Buffer at any given point after averaging shall be no smaller than 75 percent of the standard Buffer;
   h. The averaging is accomplished within the project boundaries; and
i. Measures will be taken to ensure that there is no loss of Wetland function due to the Buffer averaging.

2. Buffer Increases.

a. The Department may require increased Buffer width(s) when any of the following are identified:

i. A larger Buffer is necessary to maintain viable populations of existing species;

ii. The Wetland is used by, or associated with, species listed by the federal government or the state as endangered, threatened, sensitive, or as documented priority species or habitats, or essential or outstanding potential sites such as heron rookeries or raptor nesting areas;

iii. The adjacent land is susceptible to severe erosion and erosion control measures will not effectively prevent adverse Wetland impacts;

iv. The adjacent land has minimal vegetative cover, or slopes greater than 20 percent. (Ord. 02-200 § 2).

b. If an applicant chooses not to apply the Wetland Impact Minimization Measures identified in Table 14.40.030.2, then the Wetland Buffers applicable to the site shall be per Table 14.40.030.3.

Table 14.40.030.3

14.40.040 Wetland review procedures.
A. Wetland Report Requirements. If the Department’s maps indicate that a proposed project may be located within 300 feet of a Wetland, the applicant shall submit a Wetland Critical Areas report prepared by a qualified Wetland Specialist. The report requirement may be waived if the Department determines that there are no potential direct or
indirect impacts on the Wetland or its Buffers that would result from the proposed development. Wetland Critical Areas reports shall comply with the requirements of this Chapter.

B. Single-Family Dwelling Wetland Review. Construction of a single-family dwelling and Regulated Activities accessory to a single-family dwelling, such as driveways, gardens, fences, walls, lawns, or on-site septic systems, may utilize an alternative Wetland review procedure, subject to the following:

1. Prior to issuance of a building permit, site development permit, or on-site sewage system permit, the applicant shall submit a single-family Wetland certification form completed by a Wetland Specialist that certifies either:
   a. No regulated Wetlands are present within 300 feet of the project area; or
   b. Wetlands are present within 300 feet of the project area, but the Buffer does not extend onto the project site.

2. The single-family certification form may be used only to authorize single-family dwellings and accessory structures. It may not be used for new Agricultural Activities, expansion of existing Agricultural Activities, forest practices activities, commercial projects, land divisions, or Buffer width modifications.

14.40.050 Allowed activities.
A. The three (3) types of Wetlands identified in the paragraphs 1-3 are exempt from the requirement to avoid impacts in EMC 14.10.070.B and may be altered if the impacts are fully mitigated based on the remaining mitigation sequencing actions in EMC 14.10.070.B. In order to verify the following conditions, a Wetland Critical Areas Report meeting the requirements of EMC 14.40.070, Appendix A must be submitted.

1. All isolated Category IV Wetlands less than 4,000 square feet that:
   a. Are not associated with Riparian areas or their Buffers;
   b. Are not part of a Wetland Mosaic;
   c. Are not associated with shorelines of the state or their associated Buffers;
   d. Do not score 5 or more points for habitat functions based on current version of the Washington State Wetland Rating System for Western Washington (Ecology, 2014);
   e. Do not contain a Priority Habitat or a Priority Area for a Priority Species identified by the Washington Department of Fish and Wildlife, federally listed species or their critical habitat, or Habitats of and Species of Local Importance as identified in EMC 14.50.040(A).

2. Wetlands less than 1,000 square feet that meet the criteria specified in subsection (A)(1) of this section.

3. Utility projects within the outer 25 percent of any Wetland Buffers which have minor or short-duration impacts, as determined by the Department in accordance with the criteria below, and which do not significantly impact the function or values of Wetlands; provided, that such projects are constructed with BMPs and additional Restoration measures are provided. Minor activities shall not result in the transport of sediment or increased stormwater. Such allowed minor utility projects shall meet the following criteria:
   a. There is no practical alternative to the proposed activity with less impact on Wetlands;
   b. The activity involves the placement of a utility pole, street signs, anchor, or vault or other small component of a utility facility; and
   c. The activity involves disturbance of an area less than 75 square feet.

B. The activities listed below are allowed in Wetlands and their Buffers, except where such activities would result in a loss of the functions and values of a Wetland or Wetland Buffer. A Critical Areas Report must be submitted to the Department to determine if function or value will be lost. These activities include:

1. Activities in Wetlands in areas managed according to a special area management plan or other plan adopted by the Department and specifically designed to protect Wetland resources.

2. Trimming of vegetation for purposes of providing a View Corridor will be allowed. The trimming is limited to a maximum 20-foot width and the benefit to fish and wildlife habitat may not be reduced. No
more than thirty (30) percent of the live crown of a tree may be removed. Trimming shall be limited to hand pruning of branches and vegetation and does not include felling, topping, or the removal of trees. (Ord. 02-200 § 2).

a. Trimming and limbing of vegetation for the creation and maintenance of view corridors shall occur in accordance with the pruning standards of the International Society of Arboriculture (See articles published by the International Society of Arboriculture, Consumer Information Program, updated July, 2005)

b. The activity will not increase the risk of landslide or erosion.

3. Drilling for utilities or utility corridors under a Wetland, with an entrance or exit portal located completely outside of the Wetland Buffer, provided that the drilling does not interrupt the ground water connection to the Wetland or percolation of surface water down through the soil column. Specified studies by a hydrologist are necessary to determine whether the ground water connection to the Wetland or percolation of surface water down through the soil column will be disturbed.

14.40.060 Mitigation requirements.

A. Mitigation. Compensatory Mitigation is required for all unavoidable alterations to Wetlands or their Buffers, except for Buffer averaging when done in accordance with this Chapter. Compensatory Mitigation actions shall replace functions affected by the alteration and shall provide equal or greater functions compared to the impacted Wetland. All projects must first demonstrate compliance with EMC Section 14.10.070.B prior to development of Compensatory Mitigation plans.

B. Preference of Mitigation Actions. Compensatory Mitigation of Wetland areas shall occur in the following order of preference:

1. Restoration: The manipulation of the physical, chemical, or biological characteristics of a site with the goal of returning natural or historic functions to a former or Degraded Wetland. For the purpose of tracking net gains in Wetland acres, Restoration is divided into:

   a. Re-establishment: The manipulation of the physical, chemical, or biological characteristics of a site with the goal of returning natural or historic functions to a former Wetland. The re-establishment must result in a gain in Wetland acres and functions. Activities could include removing fill material, plugging ditches, or breaking drain tiles.

   b. Rehabilitation: The manipulation of the physical, chemical, or biological characteristics of a site with the goal of repairing natural or historic functions of a Degraded Wetland. The rehabilitation must result in a gain in Wetland function but does not result in a gain in Wetland acres. Activities could involve breaching a dike to reconnect Wetlands to a floodplain or return tidal influence to a Wetland

2. Creation: The manipulation of the physical, chemical, or biological characteristics of a site to develop a Wetland on an upland or deepwater site where a Wetland did not previously exist. Creation results in a gain in Wetland acres. Activities typically involve excavation of upland soils to elevations that will produce a Wetland hydroperiod, create hydric soils, and support the growth of hydrophytic plant species.

3. Enhancement: The manipulation of the physical, chemical, or biological characteristics of a Wetland site to heighten, intensify, or improve specific function(s) or to change the growth stage or composition of the vegetation present. Enhancement is undertaken for specified purposes such as water quality improvement, flood water retention, or wildlife habitat. Enhancement results in a change in some Wetland functions and can lead to a decline in other Wetland functions, but does not result in a gain in Wetland acres. Activities typically consist of planting vegetation, controlling non-native or invasive species, modifying site elevations or the proportion of open water to influence hydroperiods, or some combination of these activities.
C. Approaches to Compensatory Mitigation. Mitigation for alterations to Wetland and their Buffers shall rely on the approaches listed below.

1. Wetland Mitigation Banks. Credits from a certified Wetland mitigation bank may be used to compensate for impacts within the service area specified in the mitigation bank instrument. Use of credits from a Wetland mitigation bank certified under Chapter 173-700 WAC is allowed if:
   a. The Department determines that it would provide appropriate compensation for the proposed impacts; and
   b. The impact site is located in the service area of the bank.
   c. The proposed use of credits is consistent with the terms and conditions of the certified bank instrument.
   d. Replacement ratios for projects using bank credits is consistent with replacement ratios specified in the certified mitigation bank instrument.

2. In-Lieu Fee Mitigation. Credits from an approved in-lieu-fee program may be used when all the following apply:
   a. The approval authority determines that it would provide environmentally appropriate compensation for the proposed impacts.
   b. The proposed use of credits is consistent with the terms and conditions of the approved in-lieu-fee program instrument.
   c. Project using in-lieu-fee credits shall have debits associated with the proposed impacts calculated by the applicant’s qualified Wetland Specialist using the credit assessment method specified in the approved instrument for the in-lieu-fee program.
   d. The impacts are located within the service area specified in the approved in-lieu-fee instrument.

3. Permittee-responsible mitigation. In this situation, the permittee performs the mitigation after the permit is issued and is ultimately responsible for implementation and success of the mitigation. Permittee-responsible mitigation may occur at the site of the permitted impacts or at an off-site location within the same watershed. If available, the use of Wetland mitigation banks and in-lieu-fee programs are preferable to permittee-responsible mitigation.

D. Wetland mitigation ratios. The ratios listed in Table 14.40.060 apply to permittee-responsible mitigation. The first number specifies the acreage of replacement Wetlands required, and the second number specifies the acreage of Wetlands altered or relocated.

The Director may increase the ratios under the following circumstances:

1. Uncertainty as to the probable success of the proposed Restoration or creation;
2. Significant period of time between destruction and replication of Wetland values;
3. Projected losses in functional value; or
4. The Compensatory Mitigation is off-site.

E. Wetland Buffer mitigation. To mitigate unavoidable impacts to functions and values of Wetland Buffers, a minimum Buffer ratio of 1:1 (alteration area: mitigation area) is required. This ratio assumes that creation or Restoration of a Wetland Buffer with appropriate Native Vegetation is sufficient to compensate for the Wetland Buffer functions and values affected by alteration of an existing Wetland Buffer. If Enhancement of an existing Buffer is proposed as mitigation, a higher mitigation ratio may be required. For any proposed Buffer activities, the applicant must demonstrate that the functions and values of the altered Buffer will be fully replaced by the proposed mitigation. The Department may increase the Buffer mitigation ratios under the following circumstances:

1. The replacement ratio needed to recover the lost functions and values of Buffer area is greater than 1:1 based upon the existing type of vegetative cover of either the impact site or the proposed mitigation site.
2. Uncertainty exists as to the probable success of the proposed Restoration or creation;
3. A significant period of time will elapse between impact and replication of Wetland functions; or
4. The impact was an unauthorized impact.

F. Wetland and Buffer mitigation plans. Compensatory Wetland mitigation plans shall be consistent with Wetland Mitigation in Washington State – Part 2: Developing Mitigation Plans (Ecology, 2006); and Selecting Wetland Mitigation Sites Using a Watershed Approach (Ecology, 2009), or as revised. Mitigation plans shall comply with the requirements established in EMC 14.40.070, Appendix B.

**14.40.070 Appendices.**

A. Wetland Report.

B. Wetland Mitigation Plan

**APPENDIX A**

**WETLAND REPORT**

A. A Wetland Critical Areas Report shall, at a minimum, include the following:

1. The general Critical Areas report requirements in EMC Chapter 14.10.080;
2. Map showing the location of all Wetlands and required Buffers within three hundred (300) feet of the proposed development;
3. An analysis of the onsite Wetland(s) include the following site- and proposal-related information:
   a. Documentation of any fieldwork performed on the site, including, but not limited to, field Delineation data sheets for Delineations and Wetland rating forms;
   b. Wetland acreage;
   c. Wetland Category;
   d. A discussion of the water sources supplying the Wetland and documentation of hydrologic regime (locations of inlet and outlet features, water depths throughout the Wetland, evidence of recharge or discharge);
   e. A discussion of the functions of existing Wetlands, including vegetative, faunal, and hydrologic conditions; and
   f. A description of the methodologies used to conduct the Wetland Delineations;

4. A discussion of measures, including avoidance, minimization, and mitigation, proposed to preserve existing Wetlands;

5. A detailed discussion of the direct and/or indirect potential impacts on the Wetland by the project; and

6. The Wetland mitigation plan requirements of EMC Chapter 14.40.070, Appendix B, if the activity will result in unavoidable impacts to Wetlands or their Buffers.

APPENDIX B

WETLAND MITIGATION PLAN

A. A Wetland mitigation plan shall, at a minimum, include the general mitigation plan requirements in EMC Chapter 14.10.090 and the following information:

1. Existing and proposed Wetland acreage;

2. Vegetative and faunal conditions;

3. Surface and subsurface hydrologic conditions including an analysis of existing and future hydrologic regime and proposed hydrologic regime for enhanced, created, or restored mitigation areas;

4. Relationship within watershed and to existing waterbodies;

5. Soils and substrate conditions, topographic elevations;

6. Existing and proposed adjacent site conditions;

7. Required Wetland Buffers (including any Buffer reduction or averaging and mitigation proposed to enhance Buffers);

8. Property ownership;

9. A discussion of ongoing management practices that will protect Wetlands after the project site has been developed, including proposed monitoring and maintenance programs;

10. A bond estimate for the installation, site preparation, plant materials and installation, fertilizers, mulch, and the proposed monitoring and maintenance work for the required number of years, pursuant to EMC Chapter 14.10.070.E.

14.50.080 Appendix

14.50.010 Purpose.
Many land use activities can impact the habitats of fish and wildlife. Special care must be taken in the management of lands that support fish and wildlife species to ensure that development occurs in a manner that is sensitive to their habitat needs. The purpose of this chapter is to identify fish and wildlife habitat conservation areas and establish habitat protection procedures and mitigation measures that are designed to result in no net loss of habitat functions and values. These areas are necessary for maintaining species in suitable habitats within their natural geographic distribution so that isolated subpopulations are not created as designated by WAC 365-190-080(5). (Ord. 02-200 § 2).

14.50.020 Fish and wildlife habitat conservation area identification and classification.
A. Designation. Fish and wildlife habitat conservation areas include:

1. Waters of the state. Waters of the state include lakes, rivers, ponds, streams, and all other surface waters and watercourses within jurisdiction of the state of Washington, as classified in WAC 222-16-030.

2. Areas with which federally designated endangered, threatened, and sensitive species have a primary association. The U.S. Fish and Wildlife Service and the National Marine Fisheries Service should be consulted for current federal listing status.

3. Areas with which state designated endangered, threatened, and sensitive species have a primary association. The Washington State Department of Fish and Wildlife should be consulted for current state listing status.

4. State priority habitats and areas associated with state priority species. The state Department of Fish and Wildlife should be consulted for current listing of priority habitats and species.

5. Habitats of and Species of Local Importance. The following fish and wildlife species and their associated habitat areas shall be regulated under this chapter:

   a. Fish. Coho salmon (Oncorhynchus kisutch), pink salmon (Oncorhynchus gorbuscha), chum salmon (Oncorhynchus keta), cutthroat trout (Oncorhynchus clarkia), and steelhead (Oncorhynchus mykiss).

   b. Birds. Great blue heron (Ardea herodias) and green heron (Butorides virescens).

   c. Areas with which state-listed monitor or candidate fish or wildlife species or federally listed candidate fish or wildlife species have a primary association, and which if altered may reduce the likelihood that the species will survive and reproduce over the long term.

   d. Heron rookeries.
6. Areas not included. Fish and wildlife habitat conservation areas does not include such artificial features or constructs as irrigation delivery systems, irrigation infrastructure, irrigation canals, or drainage ditches that lie within the boundaries of and are maintained by a port district or an irrigation district or company.

B. Habitat boundary survey. If the Department determines that a regulated habitat conservation area may be present within the project vicinity, the Department may require the habitat area to be delineated and/or mapped by a qualified Fisheries Biologist or Wildlife Biologist who is knowledgeable of fish and wildlife habitat within western Washington, or by the Washington Department of Fish and Wildlife. The boundary of aquatic habitats shall be the ordinary high water mark of the waterbody. The management recommendations for Washington’s priority habitats and species or federal equivalent should be used as a tool for identifying and delineating wildlife habitat boundaries. The City may waive this requirement if there is adequate information available on the area proposed for development to determine the impacts of the proposed development and appropriate mitigating measures.

C. Mapping. The approximate location and extent of waters of the state and fish presence within the city are shown on maps maintained by the City. The City shall update the maps periodically as new information becomes available. The approximate location and extent of other fish and wildlife habitat conservation areas area shown on maps maintained by the Washington State Department of Fish and Wildlife and other state and federal agencies. These maps are to be used as a guide and do not provide definitive information about fish and wildlife habitat conservation area size or presence. Fish and wildlife habitat conservation areas may exist that do not appear on the maps.

D. Waters of the state classification. The City hereby adopts the water typing system specified in WAC 222-16-030, as described below:

1. Type S. All waters, within their ordinary high water mark, meeting the criteria as “shorelines of the state” and “shorelines of statewide significance” under RCW Chapter 90.58. As of the effective date of this title, there are no Type S streams within the City’s jurisdiction.

2. Type F: segments of natural waters other than Type S Waters, which are within the bankfull widths of defined channels and periodically inundated area of their associated Wetlands, or within lakes, ponds, or impoundments having a surface area of 0.5 acre or greater at seasonal low water and which in any case contain fish habitat.

3. Type Np: all segments of natural waters within the bankfull width of defined channels that are perennial non-fish habitat stream. Perennial stream waters do not go dry any time of a year of normal rainfall. However, for the purpose of water typing, Type Np Waters include the intermittent dry portions of the perennial channel below the uppermost point of perennial flow.

4. Type Ns: All segments of natural waters within the bankfull width of the defined channels that are not Type S, F, or Np waters. These are seasonal, non-fish habitat streams in which surface flow is not present for at least some portion of a year of normal rainfall and are not located downstream from any stream reach that is a Type Np Water. Ns Waters must be physically connected by an above-ground channel system to Type S, F, or Np Waters.

14.50.030 Buffer standards—Fish and wildlife habitat conservation areas.
A. Determining Buffer widths. Buffers shall be required as set forth for each habitat type. The required Buffers shall be delineated, both on a site plan or plat, and on the property prior to approval of any regulated activity.

1. Aquatic habitat conservation areas.

   a. Buffers for aquatic habitat conservation areas shall be based upon the water type Classification of the water body as specified in WAC 22-16-030. Refer to Table 14.50.030 for the water types and the associated Buffer requirements.

   b. The required Buffer width shall be measured in all directions from the ordinary high water mark.
c. The required Buffer shall be extended to include any adjacent regulated Wetland, Landslide Hazard Area, or Erosion Hazard Area and their respective Buffers.

2. Non-aquatic habitat conservation areas. Appropriate Buffers for critical habitat areas and species not listed in Table 14.50.030 shall be determined by the Washington Department of Fish and Wildlife or by a qualified Wildlife Biologist and documented in an approved Habitat Management Plan.

<table>

¹ In the event that Buffers for any habitat conservation area or other Critical Area are contiguous or overlapping, the landward-most edge of all such Buffers shall apply.

² As of the effective date of this title, there are no Type S streams within the City’s jurisdiction.

B. Modification to Buffer Width Requirements. The standard Buffer widths of subsection (A) of this section may be modified as follows:

1. Buffer Width Reductions. A Buffer width reduction may be proposed through submittal of a Habitat Management Plan. Buffer reductions of up to a maximum of 25 percent may be allowed when the applicant demonstrates the following circumstances:

   a. Buffer Encroachment is unavoidable.

   b. The existing Buffer is predominately un-vegetated, composed of nuisance species, or is in an otherwise highly disturbed condition.

   c. Buffer reduction with Enhancement will provide equal or greater protection of current habitat functions and values, and will not adversely affect salmon habitat.

   d. The Buffer reduction will not increase the risk of slope failure or downslope stormwater drainage impacts.

   e. The minimum width of the Buffer at any given point shall be at least seventy-five (75) percent of the standard width, or twenty-five (25) feet, whichever is greater.

   f. The project includes a Buffer Enhancement Plan as part of the mitigation required by EMC Chapter 14.50.070. The Buffer Enhancement Plan shall use Native Plant species.

2. Buffer Width Increases. The Department may require increased Buffer width(s) when any of the following are identified:

   a. A larger Buffer is necessary to maintain viable populations of existing species or protect the existing functions of the habitat area;

   b. The adjacent land is susceptible to severe erosion and erosion control measures will not effectively prevent adverse habitat impacts;

   c. The adjacent land has minimal vegetative cover or slopes greater than 20 percent; or
d. The habitat area is in an area of high tree blow down potential. In these cases the habitat area may be expanded an additional 50 feet on the windward side.

14.50.040   Fish and wildlife habitat conservation area review procedures.

A. Habitat Management Plan. If the Department’s maps, sources, or field investigations indicate that the proposed project area is located within 300 feet of a known or suspected fish or wildlife habitat conservation area, then the applicant shall submit a Habitat Management Plan prepared by a qualified Fisheries Biologist or Wildlife Biologist. The requirement to provide a habitat conservation plan for habitat conservation areas may be waived if the Department determines that there are no potential direct or indirect impacts on designated species or habitats that would result from the proposed Development Activity. Habitat Management Plans shall comply with the requirements established in EMC 14.50.080, Appendix A.

14.50.050   Allowed activities.

A. The following activities may be permitted in habitat conservation areas and/or their Buffers when all reasonable measures have been taken to avoid and mitigate adverse effects on species and habitats and a net loss of habitat functions will not occur. In order to verify the following conditions, a Habitat Management Plan meeting the requirements of EMC 14.50.080, Appendix A must be submitted.

1. Stream Erosion Control Measures. New or replacement stream erosion control measures shall be subject to the following standards:
   a. The proposal complies with the provisions set forth in EMC Chapter 14.110.
   b. The required Habitat Management Plan demonstrates the following:
      i. Natural stream processes will be maintained. The project will not result in increased beach erosion or alterations to, or loss of, stream substrate within one-quarter mile of the site.
      ii. The stream erosion control measure will not adversely impact fish or wildlife habitat conservation areas or associated Wetlands.

2. Docks and launching ramps. Construction, reconstruction, repair, and maintenance of docks and public or private launching ramps are subject to all of the following:
   a. The dock or ramp is located and oriented and constructed in a manner that minimizes adverse effects on water quality, movement of aquatic and terrestrial life, ecological processes, spawning habitat, and Wetlands.
   b. Docks and ramps shall meet or exceed all relevant state and federal permit requirements.

3. Roads, Trails, Bridges, and Rights-of-Way. Construction of trails, roadways, bridges, and culverts may be allowed subject to the following standards:
   a. There is no other feasible alternative route with less impact on the environment.
   b. The crossing minimizes interruption of downstream movement of wood, ice, and gravel and the movement of all fish and wildlife.
   c. Stream crossings, where necessary, shall only occur as near to the perpendicular with the stream as possible and be limited to the minimum width necessary.
   d. Road bridges and culverts are designed according to the latest versions of the Washington Department of Fish and Wildlife Water Crossing Design Guidelines (Washington Department of Fish and Wildlife) the Anadromous Salmonid Passage Facility Design guidelines (National Marine Fisheries Service).
e. Trails and associated viewing platforms shall be made of pervious materials.

4. Utility Facilities. New utility lines and facilities are permitted to cross habitat conservation areas if they comply with the following standards
   a. Avoid fish and wildlife habitat conservation areas to the maximum extent possible.
   b. Cross at an angle greater than 60 degrees to the centerline of the channel in streams or perpendicular to the channel centerline whenever boring under the channel is not feasible.
   c. Crossings are contained within the footprint of an existing road or utility crossing where possible.
   d. Avoid paralleling the stream or following a down-valley course near the channel.
   e. Do not increase or decrease the natural rate of shore migration or channel migration.
   f. Bore beneath the scour depth and hyporheic zone of the water body and channel migration zone (CMZ) where feasible.

5. Public Flood Protection Measures. New public flood protection measures and expansion of existing facilities may be approved, subject to the Department’s review and approval of a Habitat Management Plan.

6. Instream Structures. New instream structures (e.g., such as, but not limited to, high flow bypass, sediment ponds, instream ponds, retention and detention facilities, dams, weirs, etc.) shall be allowed only as part of an approved Mitigation or Restoration project or watershed basin plan approved by the Department and upon acquisition of any required state or federal permits. The structure shall be designed to avoid modifying flows and water quality in ways that may adversely affect critical fish species. Proposals for placement of water quality, water quantity, or other instruments or structures within a stream to gather data, or as a mitigation measure, shall be exempt from the provisions of this title upon review and approval by the Department.

7. Stormwater Conveyance Facilities. Conveyance structures whose sole purpose is to convey stormwater already treated for quality, or water bypassed around water quality treatment facilities pursuant to an approved stormwater plan, may be constructed subject to the following standards:
   a. No other feasible alternatives with less impact exist;
   b. Mitigation for impacts is provided;
   c. Stormwater conveyance facilities shall incorporate fish habitat features;
   d. Vegetation shall be maintained and, if necessary, added adjacent to all open channels and ponds in order to retard erosion, filter out sediments, and shade the water.

8. On-Site Sewage Systems and Wells.
   a. New on-site sewage systems and individual wells are permitted if accessory to an approved structure.
   b. Repairs to failing on-site sewage systems associated with an existing structure shall be accomplished by utilizing one of the following methods that result in the least impact:
      i. Connection to an available public sewer system;
      ii. Replacement with a new on-site sewage system located in a portion of the site that has already been disturbed by development and is located landward as far as possible, provided the proposed sewage system is in compliance with the provisions in EMC Chapter 14.80; or
      iii. Repair to the existing on-site septic system.
B. The activities listed below are allowed in habitat conservations areas and their Buffers, and do not require submission of a Habitat Management Plan, except where such activities would result in a loss of the functions and values of habitat conservation areas or Buffers.

1. Vegetation Removal, Disturbance, and Introduction. Limited vegetation removal shall be allowed subject to EMC Section 18.90.180 - Tree Preservation and the following standards in paragraphs a-b:

   a. Hazard trees may be cut; provided, that:

      i. The applicant submits a report from a certified arborist, licensed architect, or professional forester that documents the hazard and provides a replanting schedule for the replacement trees and receives written approval from the City authorizing the tree removal;

      ii. Tree cutting shall be limited to limbing and crown thinning, unless otherwise justified by the landowner’s expert. Where limbing or crown thinning is not sufficient to address the hazard, trees should be topped to remove the hazard rather than cut at or near the base of the tree. All vegetation cuttings (tree stems, branches, tops, etc.) shall be left within the habitat area or Buffer unless removal is warranted due to the potential for disease transmittal to other healthy vegetation;

      iii. The landowner shall replace any trees that are felled or topped with new trees at a ratio of two replacement trees for each tree felled or topped. Tree species that are native and indigenous to the site shall be used;

      iv. Hazard trees determined to pose an imminent threat or danger to public health or safety, or to public or private property, or serious environmental degradation may be removed or topped by the landowner prior to receiving written approval from the Department; provided, that within 14 days following such action, the landowner shall submit the necessary report and replanting schedule demonstrating compliance with subsections (B)(1)(a)(i) through (iii) of this section.

   b. Trimming of vegetation for purposes of providing a View Corridor will be allowed. The trimming is limited to a maximum 20-foot width and the benefit to fish and wildlife habitat may not be reduced. No more than 30 percent of the live crown may be removed. Trimming shall be limited to hand pruning of branches and vegetation and does not include felling, topping, or the removal of trees.

2. Fencing. Fencing shall be placed in such a manner as to maintain wildlife movement corridors and not create any fish passage blockages. The Department shall approve the location, type, and height of any proposed fencing.

14.50.060 Alteration of Watercourses

Alteration of Watercourses. Any alteration of a watercourse shall comply with the following standards:

1. The City will notify adjacent communities and the Washington State Department of Ecology prior to any alteration or relocation of a watercourse proposed by the applicant and submit evidence of such notification to the Federal Insurance Administration.

2. The City shall require that maintenance be provided within the altered or relocated portion of said watercourse, so that the flood-carrying capacity is not diminished. Therefore, if the maintenance program calls for future cutting of planted Native Vegetation used in performing the alteration, the system shall be oversized at the time of construction to compensate for said vegetation growth or any other natural factor that may need future maintenance.

3. Alterations and relocations, including stabilization projects, shall not degrade fish habitat and shall be subject to the following provisions:

   a. Structures that cross all watercourses and water bodies shall meet fish habitat requirements of the Washington Department of Fish and Wildlife.
b. Any culverts that are used on fish-bearing watercourses shall be arch/bottomless culverts or equivalent that provide comparable fish protection, and must meet fish habitat requirements of the latest edition of Washington Department of Fish and Wildlife’s Design Manual for Culverts.

c. Bridges or other crossings shall allow for uninterrupted downstream movement of wood and gravel, be as close to perpendicular to the watercourse as possible, and be designed to minimize fill and to pass the Base Flood flows.

d. Watercourse alterations shall maintain natural meander patterns, channel complexity, and floodplain connectivity. Where feasible, such characteristics shall be restored as part of the watercourse alteration.

e. The applicant shall identify the channel migration zone for the watercourse at the project site and for a reasonable reach upstream and downstream of the site, and shall not undertake actions as part of the alteration that would in any way inhibit movement of the channel.

f. Existing culverts that do not meet fish habitat requirements shall be removed or replaced as part of the approved watercourse alteration project.

g. Watercourse alteration projects shall not result in a fish blockage of side channels. Known fish barriers into side channels shall be removed as part of the approved watercourse alteration project.

h. For any watercourse alteration of a Type S or F water pursuant to EMC 14.50.020.D whose channel is subject to migration, bioengineered (soft) armoring of streambanks is required to allow for woody debris recruitment, gravels for spawning, and creation of side channels. The bioengineering technique used must be designed in accordance with the latest edition of Washington Department of Fish and Wildlife’s Integrated Streambank Protection Guidelines.

4. The project Engineer shall design the watercourse alteration so the activity does not increase the water surface elevation (zero-rise); decrease the capacity, storage, and conveyance of the watercourse; or cause an adverse impact to adjacent, cross-channel, or upstream or downstream properties. (Ord. 17-492 § 2 (Exh. A); Ord. 02-200 § 2).

14.50.070 Mitigation requirements.
A. Mitigation. Compensatory Mitigation is required for all unavoidable alterations to fish and wildlife habitat conservation areas or their Buffers. Mitigation of alteration to habitat areas shall achieve equivalent or greater biological functions. Mitigation shall address each functional attribute affected by the alteration to achieve functional equivalency or improvement on a per function basis. Mitigation elements to be addressed may include, but are not limited to: Restoration of previously Degraded areas and key habitat features, Restoration of Riparian vegetation communities to provide shade and large woody debris, addition of large woody debris, and installation of upland habitat features. All projects must first demonstrate compliance with EMC 14.10.070.B prior to development of Compensatory Mitigation plans.

B. Type of mitigation required. In determining the extent and type of mitigation required, the Department may consider all of the following:

1. The ecological processes that affect and influence habitat structure and function within the watershed or sub-basin;

2. The individual and cumulative effects of the action upon the functions of the Critical Area and associated watershed;

3. Observed or predicted trends regarding the gains or losses of specific habitats or species in the watershed, in light of natural and human processes;

4. The likely success of the proposed mitigation measures;

5. Effects of the mitigation actions on neighboring properties; and
6. Opportunities to implement Restoration actions formally identified by an adopted shoreline Restoration plan, watershed planning document prepared and adopted pursuant to Chapter 90.82 RCW, a salmonid recovery plan or project that has been identified on the Salmon Recovery Board Habitat Project List or by the Washington State Department of Fish and Wildlife as essential for fish and wildlife habitat Enhancement.

C. Location. Compensatory Mitigation shall be provided on-site or off-site in the location that will provide the greatest ecological benefit to the species or habitats affected and have the greatest likelihood of success. Mitigation shall occur as close to the impact site as possible, within the same sub-basin, and in a similar habitat type as the permitted alteration. If the applicant submits a watershed- or landscape-based analysis that demonstrates mitigation within an alternative sub-basin of the same watershed would have greater ecological benefit, then the Director may approve the demonstrated alternate mitigation.

D. Mitigation plans. When required by this chapter, the applicant shall submit a fish and wildlife habitat conservation area mitigation plan meeting the requirements of this Chapter.

14.50.080. Appendix.

APPENDIX A

HABITAT MANAGEMENT PLAN

A. A Habitat Management Plan shall, at a minimum, include the following:

1. The general Critical Areas report requirements.
2. Identification of any endangered, threatened, sensitive, or candidate species that have a primary association with habitat on the project area;
3. Map showing the location of the ordinary high water mark and locations of wildlife habitat conservation area(s) and their Buffers;
4. The vegetative, faunal, topographic, and hydrologic characteristics of the habitat conservation area;
5. A discussion of any federal, state, or local special management recommendations, including Washington Department of Fish and Wildlife habitat management recommendations, that have been developed for species or habitat located on or adjacent to the project area;
6. A detailed discussion of the direct and/or indirect potential impacts on the habitat conservation area by the project. Such discussion shall include a discussion of the ongoing management practices that will protect habitat after the project site has been developed;
7. Mitigation plan, if the activity will result in unavoidable impacts to habitat conservation areas. Mitigation measures may include:
   a. Prohibition or limitation of use and development activities within the habitat conservation area;
   b. Retention of vegetation and/or re-vegetation of areas/habitats critically important to species;
   c. Special construction techniques;
   d. Implementation of erosion and sediment control measures;
   e. Habitat Restoration or Enhancement, i.e., fish passage barrier removal;
   f. Seasonal restrictions on construction activities on the subject property;
   g. Clustering of development activities on the subject property; and/or
   h. Any other requirements and/or recommendations from federal, state, or local special management recommendations, including the Washington State Department of Fish and Wildlife’s habitat management guidelines.
Chapter 14.60
AQUIFER RECHARGE AND WELLHEAD PROTECTION AREAS

Sections:
14.60.010 Purpose.
14.60.020 Critical Aquifer Recharge Areas identification.
14.60.030 Critical Aquifer Recharge Areas review procedures.
14.60.040 Critical Aquifer Recharge Areas standards.

14.60.010 Purpose.
The purpose of this chapter is to protect Critical Aquifer Recharge Areas from degradation or depletion resulting from new or changed land use activities. Due to the exceptional susceptibility and vulnerability of groundwater underlying aquifer recharge areas to contamination and the importance of such groundwater as sources of public water supply, it is the intent of this chapter to safeguard groundwater resources and Wellhead Protection Areas by mitigating or precluding future discharges of any Contaminant from new land use activities. (Ord. 02-200 § 2).

14.60.020 Critical Aquifer Recharge Areas identification.
A. General. Critical Aquifer Recharge Areas are areas that have a critical recharging effect on groundwater used for potable water supplies and/or that demonstrate a high level of susceptibility or vulnerability to groundwater contamination from land use activities. These areas include the following:

1. Aquifer Recharge Areas, which are the boundaries of the two highest DRASTIC zones that are rated 180 and above on the DRASTIC index range, as identified in Map of Groundwater Pollution Potential, Edgewood, Washington, National Water Well Association, U.S. Environmental Protection Agency (EPA);

2. Wellhead Protection Areas, as defined in Chapter 14.20; and

3. Sole Source Aquifers, which are areas that have been designated by the EPA pursuant to the Federal Safe Water Drinking Act. As of the effective date of this title, there are no designated Sole Source Aquifers within city limits.

14.60.030 Critical Aquifer Recharge Areas review procedures.
A. General Requirements

1. The City’s Critical Aquifer Recharge Areas map provides an indication of where Critical Aquifer Recharge Areas are located within the city and the map is updated as necessary.

2. Any proposed development located within protection Critical Aquifer Recharge Areas shall comply with the standards set forth in EMC Chapter 14.60.

3. Any hazardous uses shall require the submittal of a Hydrogeologic Assessment, as set forth in subsection (B) of this section.

4. The Department may waive Critical Area protective measure provisions contained in EMC Chapter 14.10, as deemed appropriate by the Director and can be shown to meet the requirements associated with Best Available Science, if required.

B. Hydrogeologic Assessment.

1. The Hydrogeologic Assessment shall be prepared, signed, and dated by a state licensed Geologist or Hydrogeologist.

2. The Hydrogeologic Assessment shall be submitted in the form of a report detailing the subsurface conditions, the design of a proposed land use action, and the facilities operation which indicates the susceptibility and potential for contamination of groundwater supplies. The Hydrogeologic Assessment shall, at
a minimum, include the general Critical Area report requirements of EMC Chapter 14.10 in addition to the following fifteen (15) items listed in paragraphs a-o:

   a. Information sources;
   b. Geologic setting – includes well logs or borings used to identify information;
   c. Background water quality;
   d. Groundwater elevations;
   e. Location and depth to perched water tables;
   f. Recharge potential of a Facility site, i.e., the permeability and transmissivity;
   g. Groundwater flow direction and gradient;
   h. Current available data on wells located within one-quarter mile of the site;
   i. Current available data on any spring within one-quarter mile of the site;
   j. Surface water location and recharge potential;
   k. Water source supply to a Facility, e.g., a high capacity well;
   l. Any sampling schedules necessary;
   m. Discussion of the effects of the proposed project on the groundwater resource;
   n. Discussion of potential mitigation measures, should it be determined that the proposed project will have an adverse impact on groundwater resources; and
   o. Any other information as required by the TPCHD, including information required under Washington Department of Ecology Publication 97-30.

C. Storage Tank Permits. In addition to the requirements set forth in this title, the following agencies also have the authority to regulate the installation, repair, replacement, or removal of any UST:

   1. The Pierce County Fire Prevention Bureau regulates and authorizes permits for all USTs, pursuant to the International Fire Code (Article 79) and this chapter.

   2. The Washington Department of Ecology regulates and authorizes permits for all USTs (Chapter 173-360 WAC).

   3. The TPCHD regulates and authorizes permits for the removal of any UST (Pierce County Code, Chapter 8.34). (Ord. 02-200 § 2).

14.60.040 Critical Aquifer Recharge Areas standards.

A. General. All Regulated Activities that are not exempt or prohibited under the provisions of this chapter shall ensure sufficient groundwater recharge. In order to achieve sufficient groundwater recharge, the applicant shall comply with the City’s adopted stormwater manual, EMC Chapter 13.05, and demonstrate that the total post-development infiltration rate for the project area will be equal to or better than the predevelopment rate.

B. Prohibited Uses. Landfills (other than inert and demolition landfills), Class I, III, and IV underground injection wells, metals mining, wood treatment facilities, pesticide manufacturing, petroleum refining facilities (including distilled petroleum facilities), the storage of large volumes of petroleum products, and other uses or activities determined by the Department to have a significant adverse impact on ground water are prohibited within Critical Aquifer Recharge Areas.
C. Exemptions. In addition to the general exemptions listed in EMC Section 14.30.030, the following uses or activities are exempt from the requirements of this chapter:

1. Sewer lines and appurtenances;

2. Biosolids and Sludge Land Application Sites; provided, that these activities comply with the requirements established in Chapters 173-200, 173-216, and 173-304 WAC; and

D. Agricultural Activities. New Agricultural Activities that do not involve hazardous substance handling or application are allowed within an aquifer recharge or Wellhead Protection Area subject to the following:

1. The applicant is required to submit a farm management plan prepared by the USDA, NRCS, Pierce County Conservation District, or Washington State University, Cooperative Extension Office, that certifies that water quality and quantity within the aquifer recharge area is maintained. The farm management plan shall at a minimum address the following:

   a. The limits of the proposed Agricultural Activities.
   
   b. The proposed scope of Agricultural Activities, including the use of any pesticides, fertilizers, or other chemicals.
   
   c. The existing nitrate levels on the site and any proposed increases in nitrate levels.

2. Integrated pest management (IPM) practices for pest control and BMPs for the use of fertilizers, as described by the Washington State University, Pierce County Cooperative Extension Office, shall be utilized.

3. Nitrate levels at down-gradient property line shall not exceed 2.5 mg/L or, if the background nitrate concentration exceeds 2.5 mg/L, that the concentration will not be increased more than 0.1 mg/L.

4. Additional protective measures may be required if deemed necessary by the Department or TPCHD to protect public health or safety.

E. Nonhazardous Uses. Subdivision of land as defined in EMC Title 16, residential structures housing three or more units, and all commercial and industrial sites or activities that do not include or involve hazardous substance processing or handling in Critical Aquifer Recharge Areas are allowed subject to the following standards:

1. Stormwater quality treatment and flow control shall be provided in conformance with the City’s adopted stormwater management manual.

2. Floor drains shall not be allowed to drain to the stormwater system and must be designed and installed to meet the Uniform Plumbing Code (UPC) Section 303.

3. If any roof venting carries a Contaminant, then the portion of the roof draining from this area must go through pretreatment pursuant to UPC Section 304(b).

4. All nonresidential vehicle washing must be self-contained or be discharged to a sanitary sewer system, if approved by the sewer utility, and is subject to UPC Sections 708 and 711.

5. Integrated pest management (IPM) practices for pest control and BMPs for the use of fertilizers as described by the Washington State University, Pierce County Cooperative Extension Office, shall be utilized.

6. For new or changes in Regulated Activities served by on-site sewage systems, the applicant must demonstrate to the TPCHD that nitrate levels at the down-gradient property line will not exceed 2.5 mg/L or that if the background nitrate concentration exceeds 2.5 mg/L the concentration will not be increased more than 0.1 mg/L.
7. Additional protective measures may be required if deemed necessary by the Department or TPCHD to protect public health or safety.

F. Hazardous Uses – General. Hazardous substance processing or handling, hazardous waste treatment and storage facilities, Animal Containment Areas, and solid waste facilities that require a solid waste handling permit from the TPCHD, requiring approval from the City, shall be allowed only in Critical Aquifer Recharge Areas subject to review and approval of a Hydrogeologic Assessment by the Department and review by the TPCHD. The Department has the authority to apply whatever standards deemed necessary to mitigate any negative impacts that may be associated with the proposed development and will consider comments by TPCHD.

G. Hazardous Uses – Storage Tanks. In addition to the requirement to submit a Hydrogeologic Assessment, the following standards apply to storage tanks in Critical Aquifer Recharge Areas:

1. Underground Tanks. All new underground storage facilities used or to be used for the underground storage of hazardous substances or hazardous wastes shall be designed and constructed so as to:
   a. Prevent releases due to corrosion or structural failure for the operational life of the tank;
   b. Be protected against corrosion, constructed of noncorrosive material, steel clad with a noncorrosive material, or designed to include a secondary containment system to prevent the release or threatened release of any stored substance;
   c. Use material in the construction or lining of the tank which is compatible with the substance to be stored; and
   d. The installation of any UST shall also be subject to other state and local permit requirements.

2. Aboveground Tanks.
   a. No new aboveground storage Facility or part thereof shall be fabricated, constructed, installed, used, or maintained in any manner which may allow the release of a hazardous substance to the ground, groundwater, or surface water within any Critical Aquifer Recharge Areas.
   b. A new aboveground tank that will contain a hazardous substance will require both a double-walled tank and a secondary containment system separate from the tank that will hold 110 percent of the tank’s capacity. The secondary containment system or dike system must be designed and constructed to contain material stored in the tank(s). (Ord. 16-482 § 2 (Exh. C); Ord. 02-200 § 2).
Chapter 14.70

VOLCANIC HAZARD AREAS

Sections:
14.70.010 Purpose.
14.70.020 Volcanic Hazard Areas.
14.70.030 Volcanic Hazard Area review procedures.
14.70.040 Volcanic Hazard Area standards.

14.70.010 Purpose.
At over 14,411 feet high, Mount Rainier dominates the skyline of the southern Puget Sound region. This glacier-clad mountain is a dormant volcano capable of generating large floods and lahars which have historically reached the floors of the lowlands south of the City of Seattle and out to Commencement Bay in the Port of Tacoma, spewing ash from pyroclastic eruptions. The purpose of this chapter is to promote the public health, safety, and general welfare of the citizens of Edgewood by providing standards that minimize the loss of life that may occur as a result of volcanic events emanating from Mount Rainier. (Ord. 02-200 § 2).

14.70.020 Volcanic Hazard Areas.
A. General. Volcanic Hazard Areas are areas subject to pyroclastic flows, lava flows, and inundation by Debris Flows, Mudflows, or related flooding resulting from geologic and volcanic events on Mount Rainier.

B. Volcanic Hazard Area Categories. Volcanic Hazard Areas are areas that have been historically inundated by Case I, Case II, or Case III lahars or other types of Debris Flow; affected by pyroclastic flows, pyroclastic surges, lava flows, or ballistic projectiles in future eruptions; or are located in other drainages expected to be inundated by a future Case I, Case II, or Case III Debris Flow. Volcanic Hazard Areas are classified into the following categories:

1. Inundation Zone for Case I Lahars. Areas that could be affected by cohesive lahars that originate as enormous avalanches of weak chemically altered rock from the volcano. Case I lahars can occur with or without eruptive activity. The average reoccurrence rate for Case I lahars on Mount Rainier is about 500 to 1,000 years.

2. Inundation Zone for Case II Lahars. Areas that could be affected by relatively large non-cohesive lahars, which most commonly are caused by the melting of snow and glacier ice by hot rock fragments during an eruption, but which can also have a non-eruptive origin. The average time interval between Case II lahars from Mount Rainier is near the lower end of the 100- to 500-year range, making these flows analogous to the so-called “100-year flood” commonly considered in engineering practice.

3. Inundation Zone for Case III Lahars. Areas that could be affected by moderately large debris avalanches or small non-cohesive lahars, glacial outburst floods, or other types of Debris Flow, all of non-eruptive origin. The average time interval between Case III lahars at Mount Rainier is about one to 100 years.

4. Pyroclastic Flow Hazard Zone. Areas that could be affected by pyroclastic flows, pyroclastic surges, lava flows, and ballistic projectiles in future eruptions. During any single eruption, some drainages may be unaffected by any of these phenomena, while other drainages are affected by some or all phenomena. The average time interval between eruptions of Mount Rainier is about 100 to 1,000 years.

C. Travel Time Zones. The ability to evacuate people from within a Volcanic Hazard Area correlates to the distance from the source of an event, i.e., those areas closest to the event will have less time to evacuate than those areas farther away from the source of an event. The amount of time that is anticipated for a Debris Flow, lahar, flood, or avalanche to travel geographically has been classified into the following travel time zones:

1. Time Zone A. Time Zone A is an estimated one-hour travel distance from the source of the event.

2. Time Zone B. Time Zone B is an estimated one and one-half hour travel distance from the source of the event.
3. Time Zone C. Time Zone C is an estimated two-hour travel distance from the source of the event.

4. Time Zone D. Time Zone D is an estimated two hours or greater travel distance from the source of the event. (Ord. 02-200 § 2).

14.70.030 Volcanic Hazard Area review procedures.
A. The City’s Critical Areas Atlas – Volcanic Hazard Area Map provides an indication of where Volcanic Hazard Areas are located within the city.

B. The Department will complete a review of the Volcanic Hazard Area maps for any development proposal to determine whether the proposed project area for a regulated activity falls within a Volcanic Hazard Area.

C. When the Department’s maps or sources indicate that the proposed project area for a regulated activity is located within a Volcanic Hazard Area, the Department shall apply the standards for Regulated Activities in Volcanic Hazard Areas, as set forth in EMC Chapter 14.70.040.

14.70.040 Volcanic Hazard Area standards.
The following standards apply within the inundation zones for Case I, II, and III lahars and within the pyroclastic flow hazard zone (refer to Table 14.70.040):

A. Bonus densities, as set forth in EMC 18.90.080, Housing incentives program, shall be prohibited.

B. All Critical Facilities shall be prohibited, except sewer collection facilities and any other utilities that are located underground or not likely to cause harm to people or the environment if inundated by a lahar.

C. Special Occupancy Structures, as defined in EMC Section 14.20.107, are subject to the following:

1. Travel Time Zone A. Special Occupancy Structures located within the Travel Time Zone A area shall be limited to a maximum 100-person occupancy.

2. Travel Time Zone B. Special Occupancy Structures located within the Travel Time Zone B area shall be limited to a maximum 500-person occupancy.

3. Travel Time Zone C. Special Occupancy Structures located within the Travel Time Zone C area shall be limited to a maximum 1,000-person occupancy.

4. Travel Time Zone D. Special Occupancy Structures located within the Travel Time Zone D area shall be limited to a maximum 5,000-person occupancy.

Chapter 14.80

FLOOD HAZARD AREAS

Sections:
14.80.010 Purpose.
14.80.020 Flood Insurance Study Adoption
14.80.030 Definitions.
14.80.040 Flood Hazard Areas.
14.80.050 Flood Hazard Area review procedures.
14.80.060 Flood Hazard Area standards.
14.80.070 Variances to Flood Hazard Areas
14.80.080 Appendices.

14.80.010 Purpose.
The purpose of this chapter is to promote the public health, safety, and general welfare of the citizens of Edgewood. The standards contained in this chapter are intended to minimize public and private losses due to flood conditions in Flood Hazard Areas and provide special criteria necessary for Regulated Activities located within Flood Hazard Areas of the city. The following statements describe the purpose of this chapter:

A. Protect human life and health;
B. Minimize expenditure of public money and costly flood control projects;
C. Minimize the need for rescue and relief efforts associated with flooding;
D. Minimize prolonged business interruptions;
E. Minimize damage to public infrastructure, facilities and utilities;
F. Minimize damage to critical fish and wildlife habitat areas;
G. Minimize net loss of ecological functions of floodplains;
H. Ensure that potential buyers are notified that property is in a Flood Hazard Area;
I. Ensure that those who occupy Flood Hazard Areas assume responsibility for their actions; and
J. Qualify Edgewood for participation in the National Flood Insurance Program, thereby giving the citizens of Edgewood the opportunity to purchase flood insurance with particular emphasis to those in Flood Hazard Areas.

14.80.020 Flood Insurance Study Adoption
The areas of special flood hazard identified by the Federal Insurance Administration in a scientific and engineering report entitled “The Flood Insurance Study for Pierce County, Washington and Incorporated Areas” dated March 7, 2017, with accompanying FIRMs and any map amendments or corrections are hereby adopted by reference and declared to be a part of this title. The Flood Insurance Study and FIRMs are on file at Edgewood City Hall, 2224 104th Avenue East, Edgewood, Washington, 98371. The City may add or delete land from areas of special flood hazard or revise Base Flood elevations, utilizing best-available information for flood hazard identification in accordance with federal regulations.
14.80.030 Definitions.
A. Refer to Chapter 14.20 for definitions of any word or phrase not otherwise contained herein. For this Chapter (EMC 04.80) the definitions listed below shall apply:

1. Appeal – a request for a review of the interpretation of any provision of this chapter, per EMC 14.10.110, or request for a Flood Hazard Area Variance per EMC 14.80.070.

2. Area of Shallow Flooding – areas designated as AO or AH zones on the FIRM(s). AO zones are characterized as sheet flows, having base flood depths that range from one to three feet above the natural ground, where a clearly defined channel does not exist, the path of flooding is unpredictable and indeterminate, and velocity flow may be evident. AH zones indicate similar depth ponding, shown with standard base flood elevations on the FIRM(s).

3. Area of Special Flood Hazard – land in the floodplain within a community subject to a one percent or greater chance of flooding in any given year. Designation on FIRM(s) always includes the letter A or V.

4. Basement – any area of the building having its floor sub-grade (below ground level) on all sides, for the purposes of this title.

5. Breakaway Wall – a wall that is not part of the structural support of the building and is intended through its design and construction to collapse under specific lateral loading forces, without causing damage to the elevated portion of the building or supporting foundation system.

6. Critical Facilities – See EMC 14.20 B.22. For floodplain management purposes, Essential public facilities as defined under EMC 18.20.080 and 18.100.050 are considered Critical Facilities.

7. Development – any human-induced change to improved or unimproved real estate, including but not limited to: the construction of buildings or other structures, placement of a manufactured home/mobile home, mining, dredging, clearing, filling, grading, paving, excavation, drilling operations, storage of equipment or materials located within an area of special flood hazard, or activities otherwise governed by EMC Title 16, Subdivisions.

8. Elevated Building – a non-basement building that has its lowest elevated floor raised above ground level by foundation walls, shear walls, posts, piers, pilings, or columns.

9. Existing Manufactured Home Park or Subdivision – a manufactured home park or subdivision for which the construction of facilities for servicing the lots on which the manufactured homes are to be affixed (including, at a minimum, the installation of utilities, the construction of streets, and either final site grading or the pouring of concrete pads) is completed before the effective date of the adopted floodplain management regulations.

10. Expansion to an Existing Manufactured Home Park or Subdivision – the preparation of additional sites by the construction of facilities for servicing the lots on which the manufactured homes are to be affixed (including the installation of utilities, the construction of streets, and either final site grading or the pouring of concrete pads).

11. Flood or Flooding – a general and temporary condition of partial or complete inundation of normally dry land areas from:
   a. The overflow of inland or tidal waters; or
   b. The unusual and rapid accumulation of runoff of surface waters from any source.

12. Flood Insurance Study (FIS) – the official report provided by the Federal Insurance Administration (FIA) that includes flood profiles, FIRM(s), and the water surface elevation of the Base Flood.

13. Increased Cost of Compliance (ICC) – a flood insurance claim payment up to $30,000 directly to a property owner for the cost to comply with floodplain management regulations after a direct physical loss.
14. **Manufactured Home or Mobile Home** – a structure, transportable in one or more sections, which is built on a permanent chassis and is designed for use with or without a permanent foundation when connected to the required utilities. For floodplain management purposes, the term “manufactured home/mobile home” also includes park trailers, travel trailers, and other similar recreational vehicles placed on a site for greater than 180 consecutive days. For insurance purposes, the term “manufactured home/mobile home” does not include park trailers, travel trailers, recreational vehicles, or other similar vehicles.

15. **Manufactured Home Park or Subdivision** – a parcel (or contiguous parcels) of land divided into two or more manufactured home lots for rent or sale.

16. **New Construction** – structures for which the Start of Construction commenced on or after the following:
   a. For the purposes of determining flood insurance rates, the effective date of an initial FIRM (i.e., August 19, 1987, or specifically for Panel 350 August 4, 1988), and includes any subsequent improvements to such structures.
   b. For floodplain management purposes, March 7, 2017 (the effective date of this floodplain management ordinance), including any subsequent improvements to such structures.

17. **New Manufactured Home Park or Subdivision** – a manufactured home park or subdivision for which the construction of facilities for servicing the lots on which the manufactured homes are to be affixed (including, at a minimum, the installation of utilities, the construction of streets, and either final site grading or the pouring of concrete pads) is completed on or after March 7, 2017 (the effective date of this floodplain management regulation).

18. **Recreational Vehicle (RV)** – a vehicle built on a single chassis, 400 square feet or less when measured at the largest horizontal projection, designed to be self-propelled or permanently towable by a light duty truck, and designed primarily not for use as a permanent dwelling but as a temporary living quarters for recreational, camping, travel, or seasonal use.

19. **Start of Construction** – includes Substantial Improvement, and means the date the building permit was issued, provided the actual Start of Construction, repair, reconstruction, placement or other improvement was within 180 days of the permit date. The “actual start” means either the first placement of permanent construction of a structure on a site, such as the pouring of slab or footings, the installation of piles, the construction of columns, or any work beyond the stage of excavation; or the placement of a manufactured home on a foundation. Permanent construction does not include land preparation, such as clearing, grading and filling; nor does it include the installation of streets and/or walkways; nor does it include excavation for a basement, footings, piers, or foundations or the erection of temporary forms; nor does it include the installation on the property of accessory buildings, such as garages or sheds not occupied as dwelling units or not part of the main structure. For a Substantial Improvement, the “actual Start of Construction” means the first alteration of any wall, ceiling, floor, or other structural part of a building, whether or not that alteration affects the external dimensions of the building.

20. **Structure** – a walled and roofed building, including a gas or liquid storage tank that is principally above ground.

21. **Substantial Improvement** – any repair, reconstruction, or improvement of a structure, the cost of which equals or exceeds fifty (50) percent of the market value of the structure either:
   a. before the improvement or repair is started; or
   b. if the structure has been damaged and is being restored, before the damage occurred. For the purposes of this definition “Substantial Improvement” is considered to occur when the first
alteration of any wall, ceiling, floor, or other structural part of the building commences, whether or not that alteration affects the external dimensions of the structure.

The term “Substantial Improvement” does not, however, include either:

a. Any project for improvement of a structure to correct pre-cited existing Violations of state or local health, sanitary, or safety code specifications which have been previously identified by the local code enforcement official and which are the minimum necessary to assure safe living conditions; or

b. Any alteration of a structure listed on the National Register of Historic Places or a State Inventory of Historic Places; provided, that the alteration will not preclude the structure’s continued designation as a historic structure.

22. **Variance** – a grant of relief from the requirements of this chapter that permits construction in a manner that would otherwise be prohibited, per EMC 14.80.070.

23. **Violation** – See 14.20 B.88. With regard to floodplain management, projects without an Elevation Certificate, other certifications, or other evidence of compliance required in EMC Chapter 14.80 are presumed to be in Violation until such time as said documentation is provided.

24. **Water Dependent** – a structure for commerce or industry that cannot exist in any other location and is dependent on the water by reason of the intrinsic nature of its operations.

### 14.80.040 Flood Hazard Areas.

Edgewood regulates the following Flood Hazard Areas:

A. Potential Flood Hazard Areas.

1. Potential Flood Hazard Areas, as depicted on the Critical Areas Atlas – Flood Hazard Area Map, include:

   a. Detailed Study Areas.

      i. FEMA Flood Insurance Rate Map (FIRM) and Floodway Map AE and AH zones.

      ii. Areas within 300 feet horizontal distance from the Base Flood elevation established for the mapped AE and AH zones.

      iii. Areas within five feet of vertical height from the Base Flood elevation established for the mapped AE and AH zones.

   b. Unstudied Areas. FEMA Flood Insurance Rate Map (FIRM)A zones and shaded X zones, and areas within 300 feet horizontal distance from said mapped areas.

   c. Natural Waters or Watercourse. Areas within five feet of vertical height above the ordinary high water mark of an identified natural watercourse.

   d. Groundwater Flooding Areas. Areas within 300 feet horizontal distance from a mapped groundwater flooding area.

   e. Potholes. Areas not identified as a mapped Flood Hazard Area as described above, but within 10 feet of vertical relief from the bottom of an identified pothole or within two feet of vertical relief of a potential surface water spillway or other type of outlet. Potholes may be identified by City topographic mapping, field survey, or site inspections.

   f. Channel Migration Zones (CMZs). Channel migration zones shall apply only to those watercourses specifically identified by the City or listed in subsection (B)(4) of this section. In those areas where detailed CMZ studies have been completed and accepted by the Department, additional horizontal and vertical review threshold criteria (i.e., 300 feet horizontal and five feet vertical) shall not apply.
2. The Critical Areas Atlas – Flood Hazard Areas Map may not show all potential Flood Hazard Areas that may be necessary for a specific site analysis. The Department may make interpretations, where needed, as to the approximate location of the boundaries of potential Flood Hazard Areas. When there is a conflict between the elevations and the mapped potential Flood Hazard Area boundaries, the elevations shall govern.

3. Where there is insufficient information shown on the potential Flood Hazard Area maps, the Department may require the applicant to verify that the site is out of the Flood Hazard Area using the Flood Hazard Area review procedures set forth in EMC Chapter 14.80.

B. Floodway. A Floodway is an extremely hazardous area due to the depth or velocity of floodwaters, which carry debris, potential projectiles, and have erosion potential. The following areas are regulated by the City as Floodways:

1. Regulatory Floodway. Regulatory Floodway designated by Flood Hazard Area maps.

2. Deep or Fast Flowing Water Areas. Areas of deep or fast flowing water shall be regulated as a Floodway. Based on the criteria set forth in EMC Chapter 14.80, the Department shall make the determination after review and approval of applicant’s analysis of whether the project site falls within the Floodway area based on deep or fast flowing waters.

3. Potholes and Shaded X Zones. That portion of a pothole and zone area that is three feet or greater in depth shall be regulated as a Floodway.

4. Channel Migration Zone (CMZ).
   a. CMZs shall be regulated as a Floodway.
   b. CMZs are equivalent to the Base Flood elevation limits, i.e., 100-year floodplain limits.

C. Flood Fringe. All areas subject to inundation by the Base Flood, but outside the limits of the Floodway as set forth in subsection (B) of this section. Those portions of the A, AE, AH, and shaded X zones not defined as Floodway, and that portion of a pothole and FEMA shaded X zone area that is between zero feet (Base Flood elevation) and three feet in depth shall be regulated as a Flood Fringe.

D. Other Areas of Special Flood Hazard.

1. Groundwater Flooding Areas. Groundwater flooding areas are those areas identified by Edgewood and shown on flood hazard maps and are subject to flood inundation from subsurface waters that result from a fluctuation of the groundwater table. Groundwater flooding areas shall be regulated as a Floodway or Flood Fringe pothole.

2. Natural Waters or Watercourses. Natural waters or watercourses as identified on City topographic, planimetric or orthophoto maps, WDNR Stream Classification maps, USGS Quadrangle maps, or other source maps that are not identified as a Flood Hazard Area on the FEMA maps. That portion of the natural watercourse located between the ordinary high water mark and a topographic elevation five feet above the ordinary high water mark shall be regulated as a Floodway or Flood Fringe. If the applicant chooses to accept the five-foot topographic elevation line above the ordinary high water mark as the Base Flood elevation (i.e., floodplain elevation limits), a flood study shall not be required for a natural water/watercourse.

3. Frequently Flooded Areas. See EMC Chapter 14.80.050(A)(9) as the areas defined by this section.

14.80.050 Flood Hazard Area review procedures.

A. General Requirements.

1. The City’s Critical Areas Map – Flood Hazard Area Map provides an indication of where potential Flood Hazard Areas are located within the city. The actual presence or location of a Flood Hazard Area shall be determined using the procedures and criteria contained in this chapter.
2. The Department will complete a review of the Flood Hazard Area maps, and other source documents, for any development proposal to determine whether the proposed project area for a regulated activity falls within a potential Flood Hazard Area. When there is a conflict between the elevations and the mapped 100- or 500-year Floodplain or Floodway boundaries, the elevations shall govern. In the instance where Base Flood elevation data has not been provided within a mapped A zone, the Department shall obtain, review, and reasonably utilize any Base Flood elevation and Floodway data available from a federal, state, or other source to complete their review.

3. When the Department’s maps or sources indicate that the proposed project area for a regulated activity is or may be located within a potential Flood Hazard Area, except for coastal flood hazard areas, the Department shall require a flood boundary verification survey as outlined in subsection (C) of this section, and may require a flood study as outlined in subsection (D) of this section, a deep or fast flowing water analysis as outlined in subsection (E) of this section, or a zero-rise analysis as outlined in subsection (F) of this section.

4. Any proposed development located within a Flood Hazard Area shall comply with the Flood Hazard Area Standards set forth in EMC Chapter 14.80.060.

5. Prior to approval of any proposed Flood Hazard Area development, all necessary permits from those governmental agencies from which prior approval is required by federal or state law, including but not limited to Section 404 of the Federal Water Pollution Control Act Amendments of 1972, 33 U.S.C. 1334, must be provided to the City by the applicant.

6. A FEMA letter of map amendment (LOMA) or letter of map revision (LOMR) shall not be submitted to FEMA until review and approval has been granted by the Department. The City shall not recognize any LOMA or LOMR as an amendment to the Department’s flood hazard maps unless the Department has granted prior approval.

7. Unless otherwise stated in this chapter, the Critical Area protective measure provisions contained in EMC Section 14.10.070 shall apply.

8. The Federal Emergency Management Agency (FEMA) administers the nation’s floodplain management program. FEMA has identified some of the flood prone areas in the city; however, it is generally recognized that FEMA’s Flood Insurance Rate Maps (FIRMs) may not accurately reflect the degree or frequency of flooding within all areas of the city. Therefore, information available through FEMA may not meet Best Available Science criteria and cannot be used exclusively to address Frequently Flooded Areas.

9. The City has determined that the following documents and sources are the most current and accurate information concerning Frequently Flooded Areas within the city, and therefore represent Best Available Science:

   c. The City’s two-foot elevation contour mapping performed by Nies Mapping Group, Inc., 1999, or as subsequently updated.

   e. Relevant and verifiable government and citizen photographs, notes, observations, etc., regarding historic ponding/flooding levels, including but not limited to the City of Edgewood Potholes Water Level Monitoring 2006-2007 report prepared by Robinson Engineers, LLC.

   f. Relevant and verifiable information available through Pierce County.

   g. Relevant and verifiable information available through FEMA.
10. Flooding conditions within the city generally fall into three distinct hydrologic settings: (a) upland areas within enclosed depressions, (b) streams that flow off the upland areas, and (c) valley lowlands. Accordingly, the City manages Frequently Flooded Areas within these three zones, as described below:

   a. Upland Areas Within Enclosed Depressions. From the above list use the historic ponding elevation, determined by subsection (A)(9) of this section, or the FEMA 100-year Base Flood elevation, whichever is highest.

   b. Streams Which Flow Off the Upland Areas. From the above list use the historic flood elevation, determined by subsection (A)(9) of this section, or the FEMA 100-year Base Flood elevation, whichever is highest.

   c. Valley Lowlands. From the above list use the historic flood elevation determined by subsection (A)(9) of this section, or the FEMA 100-year Base Flood elevation, whichever is highest.

11. The City will provide local flood information to FEMA, and request FEMA’s assistance in accurately mapping and evaluating Frequently Flooded Areas.

12. Warning and Disclaimer of Liability. The degree of flood protection required by this chapter is considered reasonable for regulatory purposes and is based on scientific and engineering considerations. Larger floods can and will occur on rare occasions. Flood heights may be increased by manmade or natural causes. This chapter does not imply that land outside Frequently Flooded Areas or uses permitted within such areas will be free from flooding or flood damages. This chapter shall not create liability on the part of City, any officer or employee thereof, or the Federal Insurance Administration, for any flood damages that result from reliance on this chapter or any administrative decision lawfully made hereunder.

B. Channel Migration Zone Study.

   1. In areas where Edgewood has not conducted a detailed channel migration zone study, an applicant may submit an independent channel migration zone study to demonstrate that the channel migration zone limits for those watercourses listed in EMC Chapter 14.80 are located inside the 100-year floodplain limits.

   2. The channel migration zone study shall be prepared, signed, and dated by a professional Engineer or Engineering Geologist with at least five years of experience in fluvial geomorphology, river dynamics, or geotechnical engineering.

   3. The channel migration zone study shall, at a minimum, contain the information set forth in EMC Section 14.80.060, Appendix B.

   4. The Department shall review the channel migration zone study and either accept the new channel migration zone limits or reject the study and require the use of the 100-year floodplain limits. Once the Department has reviewed and approved the channel migration zone study, the applicant shall be required to provide a flood boundary verification survey, as outlined in subsection (C) of this section, utilizing the newly established channel migration zone limits as the Floodway limits.

C. Flood Boundary Verification Survey.

   1. A flood boundary verification survey that delineates the horizontal and vertical limits of the Base Flood elevation shall be submitted to the Department when the Department’s maps or sources indicate that the proposed project area for a regulated activity is located within a potential Flood Hazard Area.

      a. Where a Base Flood elevation has not been determined, a flood study shall be required pursuant to subsection (D) of this section.

      b. A Base Flood elevation that has been established through a detailed flood study accepted by the Department may be used in lieu of conducting a flood study.
c. The Base Flood elevation for a natural watercourse as set forth in EMC Chapter 14.80 shall be established at the five-foot topographic elevation line above the ordinary high water mark.

2. The requirement to submit a flood boundary verification survey may be waived at the Department’s discretion, when the Department can determine, using contour elevations, Base Flood data, orthophotos, and parcel data, that the extent of the regulated activity is clearly above the Base Flood elevation.

3. The flood boundary verification survey shall be prepared, signed, and dated by a registered land surveyor.

4. The Department shall review the flood boundary verification survey to determine if the proposed development is located within a Flood Hazard Area.

5. If the proposed development lies within the Flood Hazard Area, the limits of the Floodway, as well as the Base Flood elevation, shall be shown on the flood boundary verification survey.

D. Flood Study.

1. A flood study shall be conducted when the Department’s maps or sources indicate that the proposed project area for a regulated activity is, or may be located within, a potential Flood Hazard Area where Base Flood elevation data is not available through the Flood Insurance Study or other authoritative sources, or when an established Base Flood elevation is contested. A full engineering analysis to determine the Base Flood elevation shall be required by the Department. Base Flood elevations shall be determined using the detailed methods established in EMC Section 14.80.060, Appendix A. The Department may approve alternative methods.

2. The flood study shall be prepared, signed, and dated by a Professional Engineer.

3. Once the Department has reviewed and approved the flood study, the applicant shall be required to provide a flood boundary verification survey, utilizing the newly established Base Flood elevation, as outlined in subsection (C) of this section.

4. Flood studies shall not be required for coastal Flood Hazard Areas.

E. Deep or Fast Flowing Water Analysis.

1. When the Department determines that a proposed project area for a regulated activity is located within a Flood Hazard Area, a deep or fast flowing water analysis based on EMC Section 14.80.060, Appendix A, shall be required to determine the Floodway limits.

2. The Floodway limits and Flood Fringe limits identified in the deep and/or fast flowing water analysis shall be depicted on the flood boundary verification survey, as outlined in subsection (C) of this section.

3. The deep and/or fast flowing water analysis shall be prepared, signed, and dated by a professional Engineer.

4. Deep and/or fast flowing water analysis shall not be required for coastal Flood Hazard Areas.

F. Zero-Rise Analysis.

1. When the Department determines that a proposed project area for a regulated activity is located within a Flood Hazard Area, a zero-rise analysis shall be required to determine that no increase in Base Flood elevation, displacement of flood volume, or flow conveyance reduction will occur as a result of the development.

2. The zero-rise analysis shall be conducted utilizing Hydrologic Engineering Center – River Analysis System (HEC-RAS) modeling methodology for stream and channel Floodways; the Western Washington Hydrology Model, i.e., WWHM, for pothole or closed depression Floodways; or an alternative methodology approved by the City, see EMC Section 14.80.100, Appendix A). The analysis shall show that no rise greater than 0.01 foot has occurred as a result of the proposed development. The scope of the proposed development may need to be reduced or special engineering may be required, e.g., utilizing piers or pilings to achieve zero-rise.
3. The zero-rise analysis shall be prepared, signed, and dated by a Professional Engineer.

4. The zero-rise analysis shall be documented on the zero-rise analysis form, as set forth in EMC Section 14.80.100, Appendix A, and shall be attached to the Flood Hazard Area permit.

5. Zero-rise analysis shall not be required for coastal Flood Hazard Areas.

6. When structures are elevated by pier or pilings and no fill is placed in the Flood Hazard Area, the requirement to submit a zero rise analysis may be waived at the Department’s discretion.

14.80.060 Flood Hazard Area Standards.

A. General.

1. All subdivision proposals shall:
   a. be consistent with the need to minimize flood damage;
   b. have public utilities and facilities such as sewer, gas, electrical, and water systems located and constructed to minimize flood damage;
   c. have adequate drainage provided to reduce exposure to flood damage; and,

2. Where base flood elevation data has not been provided or is not available from another authoritative source, it shall be generated for subdivision proposals and other proposed developments which contain at least 50 lots or five acres (whichever is less).

3. New Construction done by or for the City, such as bridges, roads, flood control works, revetments, retaining walls, drainage structures, sewer or water lines, parks, or other structures necessary to promote the public’s health, safety, and welfare shall be allowed in a Flood Hazard Area when:
   a. The project is prepared, dated, and stamped by a registered Professional Engineer in the state of Washington and is designed so the project does not result in any increase in flood levels during the occurrence of the Base Flood discharge (zero-rise) and shall not obstruct the Floodway or cause an adverse impact to critical fish or wildlife habitat or adjacent, cross-channel, or upstream or downstream properties; and
   b. The improvements utilize appropriate flood hazard protection standards.

4. Elevation Certificate. A Federal Emergency Management Agency (FEMA) Elevation Certificate shall be required for New Construction, any Addition affixed to the side of a structure, and Substantial Improvements located within Flood Hazard Areas. The most current version of the FEMA Elevation Certificate must be completed and certified by a professional land surveyor, currently licensed in the state of Washington, kept on file by the City for public inspection, recording the actual (as-built) elevation (in relation to mean sea level) of:
   a. The Lowest Floor, including basement, of all new or substantially improved structures, whether or not the structure contains a basement;
   b. For flood proofed nonresidential structures, where the structure was flood proofed (including flood proofing certifications).

B. Floodways. Any development, Encroachment, Clearing and Grading, New Construction, or Substantial Improvements, including structures that do not require a building permit, shall be prohibited within the Floodway, except as allowed in the following standards:

1. Agricultural Activities that do not require the installation of structures and that do not have any associated fill.
2. Park and recreational uses and facilities that do not require the installation of structures and that do not have any associated fill.

3. Individual recreational vehicles, not located in an RV park, that are licensed and ready for highway use, on wheels or jacking system, and are not permanently attached to the site (i.e., attached only by quick disconnect type utilities and security devices, with no permanently attached additions).

4. Habitat Enhancement or stream Restoration activities are permitted subject to the provisions outlined in subsection (D) of this section.

5. Rehabilitation, reconstruction, or an upper story Addition to an existing structure that does not exceed the limits for a Substantial Improvement.

6. Private bridges may be allowed to cross the Floodway; provided, that the structure meets the requirements contained in EMC Section 14.80.050 and the following:
   a. The lowest structural member of a private bridge proposed to cross a channel migration zone shall be a minimum of six (6) feet above the Base Flood elevation.
   b. The lowest structural member of a private bridge proposed to cross the Floodway portion of any other watercourse shall be a minimum of one foot above the Base Flood elevation.

C. Flood Fringe Areas. All activities allowed in subsection (B) of this section shall be permitted in a Flood Fringe area. Any other proposed development, Encroachment, Clearing and Grading, New Construction, or Substantial Improvements are prohibited in a Flood Fringe area, except as permitted under the following standards:

1. Structures that do not require a building permit and that do not have any associated fill are allowed, subject to Flood Hazard Area review and permitting.

2. All other Regulated Activities shall only be allowed when the proposed development is located on an existing lot of record that was created prior to the effective date of the ordinance codified in this chapter. Applicants shall demonstrate there are no other feasible alternatives that would allow the proposed development to occur completely outside the Flood Hazard Area. At a minimum, the following shall be demonstrated:
   a. The development cannot be located outside the Flood Hazard Area due to topographic constraints of the parcel or its size or location in relation to the limits of the Flood Hazard Area and a building setback variance has been reviewed, analyzed, and rejected as a feasible alternative to encroachment into the Flood Hazard Area; and
   b. The proposed development shall not cause an adverse impact to adjacent, cross-channel, or upstream or downstream properties.

   a. Roads, bridges, driveways, trails, emergency vehicle access, and access routes and easements, where allowed, shall be constructed and armored based on the standards in subsection (C)(4) of this section and elevated a minimum of one foot above the Base Flood elevation.
   b. Parking lots shall be elevated to a minimum of one-half foot below the Base Flood elevation.

4. Clearing and Grading. When development is permitted under this subsection, it shall be designed to a zero-rise standard. Any Grading associated with the permitted development shall not increase flood hazards, water velocities, or flood elevations. In addition to meeting the requirements for zero-rise, all permitted development must also meet the following requirements:
   a. Compensatory Storage. New excavated storage volume shall be equivalent to the flood storage capacity eliminated by Grading within the Flood Fringe. Equivalent shall mean that the storage removed shall be
replaced by equal live storage volume between corresponding one-foot contour intervals that are hydraulically connected to the floodplain through their entire depth.

b. Flow Conveyance. New excavated conveyance areas shall be equivalent to existing conveyance within the Flood Fringe. Equivalent shall mean a mechanism for transporting water from one point to another using an open channel system.

c. Erosion Protection. Development shall be protected from flow velocities greater than two feet per second through the use of bio-engineering methods or, when bioengineering methods have been deemed insufficient to protect development, then Hard Armoring may be utilized. All erosion protection shall extend one to three feet, depending on development requirements, above the Base Flood elevation and shall be covered with topsoil and planted with Native Vegetation.

5. Critical Facilities.

a. New Construction, Additions affixed to an existing structure, and Substantial Improvement of hazardous facilities, and Special Occupancy Structures are prohibited.

b. New Construction of a Critical Facility, reconstruction of an existing Critical Facility, or any Addition to an existing Critical Facility that exceed the threshold for Substantial Improvement shall be permitted when no feasible alternative site is available outside the Flood Hazard Area. Such Regulated Activities are subject to the following:

   i. Critical Facilities with a Crawl Space elevated by fill shall have the Lowest Floor and any utilities and ductwork elevated a minimum of three feet above Base Flood elevation, or to the height of the 500-year flood, whichever is higher.

   ii. Critical Facilities elevated by piers or pilings shall have the Finished Floor and any utilities and ductwork elevated a minimum of three feet above the Base Flood elevation or to the height of the 500-year flood, whichever is higher and must be designed by a professional structural Engineer.

   iii. Access to and from the Critical Facility shall be protected to the height utilized under Subsections (C)(5)(b)(i)-(ii) of this Section. Access routes shall be elevated to or above the same elevation to the maximum extent possible.

   iv. Critical Facilities shall be armored based on the standards in subsection (C)(4) of this section.

   v. Flood proofing and sealing measures must be taken to ensure that toxic or explosive substances will not be displaced or released into floodwaters.

6. Structures, except for Critical Facilities as set forth in subsection (C)(5) of this section, shall be allowed subject to the following standards:

a. New Construction, Additions affixed to an existing structure, and Substantial Improvement of any structure with a Crawl Space shall have the Lowest Floor elevated a minimum of two feet above Base Flood elevation.

b. New Construction, Additions affixed to an existing structure, and Substantial Improvement of any structure elevated by piers or pilings shall have the bottom of the lowest horizontal structural member elevated a minimum of two feet above the Base Flood elevation and must be designed by a professional structural Engineer. Electrical, heating, ventilation, plumbing, air-conditioning equipment, and other service facilities and associated ductwork shall be elevated a minimum of two feet above Base Flood elevation; however, the Department may approve a lesser minimum distance above Base Flood elevation; provided, that the systems are designed to prevent floodwater from entering or accumulating within the components. Areas below the lowest horizontal structural member shall not be enclosed and shall remain free of obstructions.
c. Mobile or manufactured homes shall be anchored to prevent flotation, collapse, or lateral movement, and shall be installed using methods and practices to minimize flood damage. Anchoring methods may include, but are not limited to, use of over-the-top or frame ties to ground anchors. This is in addition to applicable state and local anchoring requirements for resisting wind forces.

7. Agricultural Accessory Structures. The Lowest Floor in an agricultural accessory structure shall be located at the Base Flood elevation or higher; provided, that the structure be designed to automatically equalize hydrostatic flood forces on exterior walls by allowing for the entry and exit of floodwaters. Designs for meeting this requirement must either be certified by a professional Engineer in the state of Washington or must meet or exceed the following minimum criteria:

   a. A minimum of two openings having a total net area of not less than one square inch for every square foot of enclosed area subject to flooding shall be provided;
   
   b. The bottom of all openings shall be no higher than one foot above grade; and
   
   c. Openings may be equipped with screens, louvers, or other coverings or devices; provided, that they permit the automatic entry and exit of floodwaters.

8. Construction Standards.

   a. Construction of a basement is prohibited.
   
   b. Crawl Spaces shall be backfilled with clean Earth Material and shall meet International Building Code requirements. Finished grade within the crawlspace shall be at least two feet above the Base Flood elevation.
   
   c. Flood proofing in lieu of elevating the structure is prohibited.
   
   d. All single-family, two-family, multifamily, mobile or manufactured homes, commercial, and industrial structures shall be placed on standard concrete stemwall or footing foundations or piles, piers, or column foundations and engineered pursuant to International Building Code requirements.

   a. New and replacement public water sources, i.e., wells and water supply lines and public sanitary sewage conveyance systems are allowed. These systems shall be designed to withstand scour resulting from flow velocity, minimize or eliminate infiltration of floodwaters into the systems, and minimize or eliminate discharge from the systems into floodwaters.
   
   b. All replacement wells and replacement on-site sewage system (OSS) shall be designed to minimize or eliminate impairment to them or contamination from/to them during flooding, i.e., infiltration of floodwaters into or discharge out of the systems. They shall not be located in pothole or no-outlet floodplains.
   
   c. All new individual wells and new on-site sewage system (OSS) shall be prohibited. Conveyance systems from a structure to a well or OSS located outside of the Flood Hazard Area shall be allowed provided these systems are designed to meet the standards in subsection (C)(4) of this section.

14.80.070 Variances to Flood Hazard Areas.

A. General. Variances are reviewed pursuant to the process and criteria outlined in EMC 14.10.100, Variances to Critical Areas.

B. Additional Criteria for Flood Hazard Area Variances. In addition to the variance criteria referenced above in subsection (A) of this section, in order for the decision maker to approve a Flood Hazard Area variance, there must be written findings that the applicant has demonstrated the proposal satisfies all of the following:

1. Generally, the only condition under which a variance from the elevation standard may be issued is for New Construction and Substantial Improvements to be erected on a small or irregularly shaped lot contiguous to...
and surrounded by lots with existing structures constructed below the Base Flood level. As the lot size increases the technical justification required for issuing the variance increases.

2. Variances shall not be issued within a designated Floodway if any increase in flood levels during the Base Flood discharge would result.

3. Variances shall only be issued upon a determination that the variance is the minimum necessary, considering the flood hazard, to afford relief.

4. Variances shall only be issued upon:
   a. A showing of good and sufficient cause;
   b. A determination that failure to grant the variance would result in exceptional hardship to the applicant and that the hardship was not created by the applicant;
   c. A determination that the granting of a variance will not result in increased flood heights, additional threats to public safety, extraordinary public expense, create nuisances, cause fraud on or victimization of the public, or conflict with existing local laws or ordinances.

5. Variances as interpreted in the National Flood Insurance Program are based on the general zoning law principle that they pertain to a physical piece of property; they are not personal in nature and do not pertain to the structure, its inhabitants, economic or financial circumstances. They primarily address small lots in densely populated residential neighborhoods. As such, variances from flood elevations should be quite rare.

6. Variances may be issued for nonresidential buildings in very limited circumstances to allow a lesser degree of flood proofing than watertight or dry-flood proofing, where it can be determined that such action will have low damage potential, complies with all other variance criteria except B.1, above, and otherwise complies with EMC 14.80.060, Flood Hazard Area Standards.

7. Any applicant to whom a variance is granted shall be given written notice that the permitted structure will be built with its Lowest Floor below the Base Flood elevation and that the cost of flood insurance will be commensurate with the increased risk.

14.80.080 Appendices.
A. Floodplain/Floodway Analysis.

B. Channel Migration Zone Study.

APPENDIX A

FLOODPLAIN/FLOODWAY ANALYSIS

This Appendix describes the flood hazard analyses and studies as required by EMC Chapter 14.80 – Flood Hazard Areas. Flood hazard studies establish the Base Flood elevation and delineate floodplain and/or Floodway(s) when a proposed project contains or is adjacent to a river, stream, lake, or closed depression.

Flood hazard studies must conform to FEMA regulations described in Part 65 of 44 Code of Federal Regulations (CFR). In addition, the following information must be provided and procedures performed for flood hazard studies used under EMC Chapter 14.80 to examine development proposals or improvements within a floodplain.

Article I. Floodway Determination

The City recognizes two distinct Floodways. The FEMA Floodway describes the limit to which encroachment into the natural conveyance channel can cause one foot or less rise in water surface elevation. The deep and fast flowing (DFF) water Floodways are hazardous areas and conditions of the floodplain for both people and habitable structures. Life safety and protection to improved properties are compromised if encroached upon. Encroachment cannot occur within these areas.

A. FEMA Floodways.

1. FEMA Floodways are determined through the procedures outlined in the FEMA publication Guidelines and Specifications for Study Contractors using the one-foot maximum allowable rise criteria.

2. Transitions shall take into account obstructions to flow such as road approach grades, bridges, piers, culverts, or other restrictions. General guidelines for transitions may be found in HEC-RAS, Water Surface Profiles –

B. Deep and/or Fast Flowing (DFF) Floodways.

1. DFF Floodways are generally assumed to include the entire 100-year floodplain until the Department approves a detailed Floodway analysis that defines areas of DFF within the entire floodplain area based on the criteria.

2. The hydraulic model must adequately be calibrated to known or recorded stage elevations of past flood events with computed recurrence frequency intervals for the 100-year flood recurrence interval. This is to ensure model accuracy.

Article II. Flood Study Content and Required Information

Three copies of the completed floodplain/Floodway analysis study report and the modeling digital files shall be submitted. The report submittal must be stamped by a licensed professional civil Engineer and include the following information in addition to that required for the drainage plan of a proposed project:

A. Floodplain/Floodway Map.

1. A scaled survey base map stamped by a licensed professional land surveyor registered in the state of Washington. The map must accurately locate the proposed development with respect to the floodplain and Floodway, the channel of the subject stream, river, and/or pothole location, and the existing improvements within the subject study area. It must also supply all pertinent information such as the nature of the proposed project, legal description of the property on which the project would be located, fill quantity, limits and elevation, the building floor elevations, and use of compensatory storage.

2. The map must show elevation contours at a minimum of two-foot vertical intervals and shall comply with survey and map guidelines published in the FEMA publication Guidelines and Specifications for Study Contractors. The map must show the following:
   a. Elevations and ground contours, spot elevations, and vertical datum NAVD 88 (North American Vertical Datum of 1988) (or most recent vertical datum accepted by the Department).
   b. Elevations and dimensions of existing structures, fill, and compensatory storage areas.
   c. Size, location, elevation and spatial arrangement of all proposed structures on the site.
   d. Location and elevations of roadways, drainage facilities, water supply lines, and sanitary sewer facilities.
   e. Areas of DFF must clearly be shown and plotted on the map sheet depicting the bounded area of the Floodway on both sides of the study channel through the subject site. DFF Floodway studies must reflect all transitions as referenced above as well.
   f. The base maps must also be accompanied by all field survey notes/computations, drawings, etc., for each cross-section with water surface elevation at the time the cross-section field survey was done.

B. Study Report.

1. Soil maps, groundcover maps, and photographs.

2. A narrative report containing the purpose of the study and description of the study area, data collection, methodology for both the hydrology and hydraulics, detailed discussion on the input parameters used, modeling results, and conclusions.
3. A floodplain/Floodway analysis must include calculations and all computer analysis input and output information, supporting graphical illustrations, as well as the following additional information:

a. Scaled cross-sections showing the current, existing conditions of the river or stream channel, the floodplain adjoining each side of the channel, the computed Floodway, the cross-sectional area to be occupied by any proposed development and all historic high water information.

b. Profiles showing the bottom of the channel, the top of both left and right banks and computed Base Flood water surface elevations for the 10-, 25-, 50- and 100-year events.

c. Plans and specifications of any flood protection for structures, construction areas, Clearing, dredging, channel improvements, storage of materials, water supply, and sanitary facilities within the floodplain.

d. Complete printout of input and output data of the model that was used for the analysis. Liberal use of comments and written discussion will assist considerably in understanding the model logic and minimize misinterpretations and/or questions.

e. A map, showing the graphical/plotted location and limits of the computed Floodway and/or floodplain.

f. Three copies of ready-to-run digital files of both the hydrologic and hydraulic model and its input and output files used in the study. Data shall be submitted on a disk in standard ASCII format, ready to use on an IBM-compatible personal computer and in the applicable software application, e.g., HEC-RAS, HSPF – Hydrological Simulation Program – FORTRAN, SBUH, or similar application.

g. A section on the flood flow including computer modeling or calculations.

h. Aerial photographs of the site including pre-February 1996 and post-February 1996 photos of the site.

i. All field survey notes/computations, maps, and drawings for each cross-section with water surface elevation at the time of the cross-section field survey.

C. Computer Modeling Information. Floodway/floodplain studies submitted to the City for review must include output summary tables and include the following (but not limited to) items:

1. Cross-section(s) identification number.

2. Range of flows being examined.

3. Computed water surface elevation at each cross-section.

4. Energy grade line at each cross-section.

5. Graphical plots of the channel cross-sections with computed water surface elevations for all model runs including calibrated model runs.

6. All model input and output printouts.

7. Graphical plots of the model output data that show the points and segments along each cross-section where deep and/or fast flowing water occurs. This shall include cross-section plots of depth and velocity in one-unit increments. The plots shall also be accompanied with a table listing the station distance (right and left bank), flow rate, area, hydraulic depth, velocity, and whether each point is a Floodway.

8. A plan sheet clearly showing the graphical representation of the bounded area of the Floodway based on DFF criteria through the entire study site and reach. Note that identified islands or pockets within the middle of the bounded Floodway area are generally considered as part of the Floodway, unless otherwise approved by the Department.

9. Discussion on the starting water surface elevation for the hydraulic model.
Article III. Determining Flood Flows

The three techniques used to determine the flows used in a flood study depend on whether gauge data is available, whether a basin plan has been adopted, or a detailed flood study has been done and approved for use by the Department. The first technique is for basins with adopted basin plan areas. The second technique is used if a gauging station exists on the stream. The third technique is used on ungauged catchments or those with an insufficient length of record. In all cases, the Engineer shall be responsible for assuring that the hydrologic methods used are technically reasonable, conservative, conform to the FEMA publication, Guidelines and Specifications for Study Contractors, and are acceptable by FEMA and the Department.

A. Flood Flows from Adopted Basin Plan Information. Flood flows may be determined using information from the City’s basin plan. The hydrologic model used in the basin plan shall be updated to include the latest changes in zoning or any additional information regarding the basin which has been acquired since the adoption of the basin plan.

1. This technique may be used only if data from a gauging station in the basin is available for a period of at least 10 years.

2. If the difference in the drainage area on the stream at the study site and the drainage area to a gauging station on the stream at a different location in the same basin is less than or equal to 50 percent, the flow at the study site shall be determined by transferring the calculated flow at the gauge to the study site using a drainage area ratio raised to the 0.86 power, as in the following equation:

   \[
   Q_{ss} = Q_G \times \left(\frac{A_{ss}}{A_G}\right)^{0.86}
   \]

   where

   - \(Q_{ss}\) = estimated flow for the given return frequency on the stream at the study site.
   - \(Q_G\) = flow for the given return frequency on the stream at the gauge site.
   - \(A_{ss}\) = drainage area tributary to the stream at the study site.
   - \(A_G\) = drainage area tributary to the stream at the gauge site.

3. If the difference in the drainage area at the study site and the drainage area at a gauging station in the basin is more than 50 percent and a basin plan has not been prepared, a continuous model shall be used as described below to determine the flood flows at the study site.

4. In all cases where dams or reservoirs, floodplain development, or land use upstream may have altered the storage capacity or runoff characteristics of the basin so as to affect the validity of this technique, a continuous model shall be used to determine flood flows at the study site.

C. Flood Flows from a Calibrated Continuous Model. Flood flows may be determined by utilizing a continuous flow simulation model such as HSPF or other equivalent continuous flow simulation model, as approved by the City. Where flood elevation or stream gauging data are available, the model shall be calibrated to the known data. Otherwise, regional parameters may be used.

Article IV. Determining Flood Elevations, Profiles and Floodways (Hydraulic Model)

A. Reconnaissance. The applicant’s project Engineer is responsible for the collection of all existing data with regard to flooding in the study area. This shall include a literature search of all published reports in the study area and adjacent communities and an information search to obtain all unpublished information on flooding in the immediate and adjacent areas from federal, state, and local units of government. This search shall include specific information on past flooding in the area, drainage structures such as bridges and culverts that affect flooding in the area,
available topographic maps, available community maps, photographs of past flood events, and general flooding problems within the community. Documented discussions with nearby property owners should also be done to obtain a witness account of the flooding extent. A field reconnaissance shall be made by the applicant’s project Engineer to determine hydraulic conditions of the study area, including type and number of structures, locations of cross-sections, and other parameters including the roughness values necessary for the hydraulic analysis.

B. Base Data. Channel cross-sections used in the hydraulic analysis shall be current/existing at the time the study is performed and shall be obtained by field survey. Topographic information obtained from aerial photographs/mapping may be used in combination with surveyed channel cross-sections in the hydraulic analysis. The elevation datum of all information used in the hydraulic analysis shall be verified. All information shall be referenced directly to NAVD 1988 (and include local correlation to NGVD) unless otherwise approved by the City.

C. Methodology. Flood studies and analysis (including deep and/or fast flowing Floodways and zero-rise analysis) shall be calculated using the U.S. Army Corps of Engineers HEC-RAS computer model (or subsequent revision) unless otherwise approved by the City.

D. Adequacy of the Hydraulic Model. Edgewood considers the following (but not limited to) factors when determining the adequacy of the hydraulic model for use in the Floodway/floodplain model:

1. Cross-section of a downstream starting location and spacing.

2. Differences in energy grade line (significant differences in the energy grade line from cross-section to cross-section are an indication that cross-sections should be more closely spaced or that other inaccuracies exist in the hydraulic model).

3. Methods and results for analyzing the hydraulics of structures such as bridges and culverts.

4. Lack of flow continuity.

5. Use of a gradually varied flow model. In certain cases, rapidly varied flow techniques may need to be used in combination with a gradually varied flow model such as weir flow over a levee, flow through a spillway of a dam, or special application of bridge flow (pressure flow if bridge superstructure is shown to be submerged for the study event).

6. Manning’s “n” value.

7. Calibration of hydraulic model to known or observed flow stage elevations including past flood events.

8. Special applications. In some cases, steady state one-dimensional hydraulic models may not be sufficient for preparing the floodplain/Floodway analysis. This may occur where sediment transport, two-dimensional flow, or other unique hydraulic circumstances affect the accuracy of the model. In these cases, the project Engineer must propose and obtain Department approval of alternative models for establishing the water surface elevations.

9. All reported error or warning messages by the model must be properly and adequately addressed or resolved and included in the report for review verification.

Article V. Zero-Rise Analysis (ZRA)

A. Zero-rise analysis (ZRA) is required where Encroachment within the Flood Fringe area is allowed and approved by the Department. The ZRA must show that the proposed development Encroachment in the Flood Fringe area will not create more than a 0.01-foot rise in the Base Flood elevation resulting from a comparison of existing conditions and proposed conditions. This is directly attributable to development in the floodplain but not attributable to manipulation of mathematical variables such as roughness factors, coefficients, discharge, and other hydraulic parameters.

B. In addition to those items listed in subsection (A) of this article, the following shall be included in a ZRA:
1. Floodway boundaries (based on zero-rise) are to follow the stream lines and reasonably balance the rights of property owners on either side of the Floodway. Use of the automatic equal conveyance encroachment option in the model will be considered equitable.

2. The ZRA must include a sufficient number of cross-sections in order to accurately model the subject fill and compensatory storage areas of the site. In all cases, cross-sections shall be located downstream, through the subject site and upstream of the site at a very minimum. They shall also be located where changes in channel and the fill material characteristics occur, such as slope, shape, and roughness. The sections shall also be located perpendicular to the flow path in the channel and the outside overbank areas. The Department shall review and approve the proposed number and location of cross-sections. All cross-sections and surveys shall be prepared and certified by a professional land surveyor or registered professional Engineer in the state of Washington.

3. The difference between two profiles of water surface elevation at the cross-section, e.g., difference between existing and encroached water surface. The model must report 0.01 feet or less an allowable change in the water surface elevation. This must be shown in the profile graphical plot as well.

4. The difference between profiles of the energy grade line at the cross-section. The model must report 0.01 feet or less. This is the allowable change in the energy grade line. This must be shown in the profile graphical plot as well.

C. Conveyance Capacity.

1. The ZRA must also show that the proposed development Encroachment in the Flood Fringe area will not show a measurable decrease (less than 0.01 CFS) in the conveyance capacity of the channel, resulting from a comparison of existing conditions and proposed conditions, for each of the cross-sections. This is also directly attributable to development in the Floodplain but not attributable to manipulation of mathematical variables such as roughness factors, coefficients, discharge, and other hydraulic parameters.

2. The analysis must provide calculations of the reduction in conveyance caused by the proposed development Encroachment, assuming no change in the water surface elevation, and using the roughness coefficient value(s) appropriate for the proposed development.

3. The analysis must then provide calculations for the increase in conveyance of the proposed compensatory measure, using the roughness coefficient value(s) appropriate for the proposed development.

4. Include a comparison analysis and discussion from subsections (C)(2) and (3) of this article. The comparison must adequately show that the conveyance capacity has not measurably decreased between the existing condition and proposed development condition.

Floodplain/Floodway Zero-Rise Certification

This is to certify that I am a duly qualified professional Engineer licensed to practice in the state of Washington.

This is to further certify that the attached Floodplain/Floodway zero-rise analysis conclusively shows that the proposed development of:

APPENDIX B

CHANNEL MIGRATION ZONE STUDY REQUIREMENTS

The channel migration zone (CMZ) is the area within the lateral extent of likely stream channel movement due to stream bank destabilization and erosion, rapid stream incision, and shifts in location of stream channels. The CMZ will define areas in which, to the best information available, development should be regulated due to the dangers expected from erosion.

Article I. Determining Channel Migration Zone Limits

A. The CMZ shall be based on available historic records of channel migration, or 100 years of calculated channel migration whichever is greater, and will generally include those areas that encompass:

1. The limit of geologic controls, such as hill slope, bedrock outcrop, or abandoned Floodplain terrace;

2. Side channels, abandoned channels, and oxbows; and

3. Outside edges of progressive bank erosion at meander bends.

B. Channel migration over the 100-year time frame can be estimated and predicted from geomorphic analysis of annual bank erosion rates, historic meander belt width, and measured meander bend amplitudes, potential avulsion sites, and previous river channel locations as depicted on historic aerial photographs and maps. The 100-year time span represents the time required to grow mature trees that can provide functional large woody debris to streams.

C. The CMZ boundaries will be determined using the following specific criteria:

1. The representative average annual rate of channel migration in the affected river reach is calculated by dividing the lateral distance eroded with the corresponding elapsed time shown in sequential aerial photographs or historic maps (distance/time equals channel movement). Measurements from reaches that have had some form of bank armoring shall not be included. Historical records will need to be checked closely for this information.
2. Identify the width of the channel migration zone by multiplying the representative average annual erosion rate by 100 years.

D. Areas separated from the active channel by legally existing artificial channel constraints (levees, roads, driveways, etc.) that limit bank erosion and channel avulsion to the 100-year recurrence interval flood elevation plus three feet of freeboard shall serve as a boundary for the outer limit of the CMZ.

Article II. Channel Migration Zone Study Content and Required Information

Three copies of the completed channel migration zone study shall be submitted. The study submittal must be stamped by a licensed professional Engineer or professional Geologist with five (5) years of experience in fluvial geomorphology, river dynamics, or geotechnical engineering. The CMZ study shall include the following information in addition to that required for the drainage plan of a proposed project. The CMZ study will consist of a written technical report including:

A. Detailed methods, techniques, and assumptions used in determining the location of the CMZ.

B. A vicinity map and site with scale, north arrow, and parcel number(s) or specific site being studied.

C. A clear statement of the requested revision to Pierce County’s determination of the 100-year Floodplain limits as the CMZ.

D. A clearly stated conclusion of the study results that support the requested revision. The conclusion needs to document the basis for the revision, show how the data presented refutes the 100-year Floodplain limits as the CMZ, and calculates the new results using the new information.

E. A map clearly delineating the subject property and the CMZ of the adjacent watercourse. In addition to providing a hard copy of the CMZ map, the CMZ map shall also be provided in ARC-View shapefile format. Contact the Department for mapping and aerial imaging standards. (Ord. 02-200 § 2).
Chapter 14.90

LANDSLIDE HAZARD AREAS

Sections:
14.90.010 Purpose.
14.90.020 Landslide Hazard Areas.
14.90.030 Landslide Hazard Area review procedures.
14.90.040 Landslide and Erosion Hazard Area standards.
14.90.050 Buffer requirements.
14.90.060 Appendices.

14.90.010 Purpose.
The purpose of this chapter is to:

A. Protect human life and health.

B. Regulate uses of land in order to avoid damage to structures and property being developed and damage to neighboring land and structures.

C. Identify and map active Landslide Hazard Areas.

D. Minimize the ill effects on Wetlands and critical fish and wildlife habitat that can result from landslides.

E. Establish permit requirement and review procedures for development proposals in areas with potential landslides. (Ord. 02-200 § 2).

14.90.020 Landslide Hazard Areas.
A. Landslide Hazard Areas. Landslide Hazard Areas are areas potentially subject to mass movement due to a combination of geologic, seismic, topographic, hydrologic, or manmade factors. Landslide Hazard Areas are identified by the presence of any of the following five (5) indicators.

1. Areas of historic failures, including areas of unstable, old and recent landslides or landslide debris within a head scarp.

2. Areas with all three (3) of the following characteristics:
   a. Slopes steeper than 15 percent with a vertical relief of 20 feet or more; and
   b. Hillsides that intersect geologic contacts with a relatively permeable sediment overlying a relatively impermeable sediment or bedrock; and
   c. Springs or groundwater seepage.

3. Areas exhibiting geomorphological features indicative of past slope failure within the last 10,000 years, such as hummocky ground, back-rotated benches on slopes, tension cracks, etc.

4. Any area with a slope of 40 percent or steeper and with a vertical relief of 15 or more feet.
   a. Slopes may be exempted from the requirements of this section provided that it can be demonstrated by a qualified Geotechnical Professional that such an exemption does not result in an increased risk of landsliding or damage to the subject site, nearby properties, and existing structures. Any associated hazards to proposed structures must be suitably mitigated.
   b. For the purposes of determining whether a slope is considered to be a Landslide Hazard Area, the horizontal and vertical distance between the Top of Slope and Toe of Slope are utilized.
5. Areas that are at risk of mass movement due to seismic events.

B. Potential Landslide Hazard Areas. Potential Landslide Hazard Areas, as depicted on the Geologically Hazardous Areas map, are those areas where the suspected risk of slope instability and landslide is sufficient to require a geological assessment to assess the potential for active landslide activity. Potential Landslide Hazard Areas are determined by using the following criteria:

1. Areas that possess one or more of the Landslide Hazard Area indicators (stratigraphy, topography, emergent groundwater seepage, etc.) as set forth in subsection (A) of this section and any adjacent area within a distance of 65 feet. These areas include, but are not necessarily limited to, those areas designated on the City’s Geologically Hazardous Areas map as moderate or steep slope areas.

14.90.030 Landslide Hazard Area review procedures.
A. General Requirements.

1. The City’s Geologically Hazardous Areas map provides an indication of where potential Landslide Hazard Areas are located within the city. The actual presence or location of Landslide Hazard Areas that have not been mapped, but may be present on or adjacent to a site, shall be determined using the geological assessment procedures established in this chapter.

2. The Department will complete a review of the Geologically Hazardous Areas map and other source documents for any proposed regulated activity to determine whether the site is, or may be, located within a Landslide Hazard Area or potential Landslide Hazard Area. Identification of a Landslide Hazard Area or potential Landslide Hazard Area may also occur as a result of field investigations conducted by Department staff.

3. When the Department’s maps or sources indicate that the site for a proposed regulated activity is or may be located within a Landslide Hazard Area or potential Landslide Hazard Area, the Department shall require the submittal of a geological assessment as outlined in subsection (B) of this section.

4. Unless otherwise stated in this chapter, the critical protective measure provisions contained in EMC Chapter 14.10 shall apply.

B. Geological Assessment. A geological assessment is a site investigation process to evaluate the on-site geology affecting a subject property. The findings of the geological assessment shall be presented in a Landslide Hazard Geotechnical Verification or Geotechnical Report.

1. Geological assessments shall be submitted to the Department for review and approval together with a Landslide Hazard Area application and associated fee.

2. A geological assessment shall include a field investigation and may include the use of historical air photo analysis, LiDAR mapping, review of regional geologic mapping, review of public records and documentation, and interviews with adjacent property owners, etc.

3. The geological assessment shall include the following information and analysis contained in paragraphs a-d:

   a. A determination of which areas on the site or within the vicinity of the site meet the criteria for a Landslide Hazard Area as set forth herein.

   b. Consider the run-out hazard of landslide debris to the proposed development that starts upslope (whether part of the subject property or on a neighboring property) and/or the impacts of landslide run-out on down slope properties.

   c. The geological assessment shall include a detailed review of the field investigations, published data and references, data and conclusions from past geological assessments, or geotechnical investigations of the site, site-specific measurements, tests, investigations, or studies, as well as the methods of data analysis and calculations that support the results, conclusions, and recommendations.
d. All of the information required per EMC Section 14.10.080.C.

4. Geological assessments shall be prepared, signed, and dated by a Geotechnical Professional. The format shall be pre-approved by the Department.

5. A Geotechnical Professional shall complete a field investigation and geological assessment to determine whether or not a Landslide Hazard Area is likely to exist within 300 feet of the site. Where access to off-site properties is not available by the Geotechnical Professional, evaluation of off-site landslide hazards must include review of regional geologic mapping and LiDAR based topographic mapping.

   a. The geological assessment shall be submitted in the form of geotechnical verification when the Geotechnical Professional finds that no Landslide Hazard Area exists within 300 feet of the project area.

   b. The geological assessment shall be submitted in the form of a Geotechnical Report when the Geotechnical Professional finds that a Landslide Hazard Area exists within 300 feet of the proposed project area or when a Geotechnical Professional determines that mitigation measures are necessary in order to construct or develop within a potential Landslide Hazard Area.

6. Geological assessments that do not contain the required information will be returned to the Geotechnical Professional for revision.

7. The Department shall review the geological assessment and either:

   a. Accept the geological assessment; or

   b. Reject the geological assessment and require revisions or additional information.

8. A geological assessment for a specific site may be valid for a period of up to five years when the proposed land use activity and surrounding site conditions are unchanged. However, if any environmental conditions associated with the site change during that five-year period, the applicant may be required to submit an amendment to the geological assessment. (Ord. 02-200 § 2).

14.90.040 Landslide and Erosion Hazard Area standards.

A. Landslide Hazard Areas. Any development, Encroachment, Clearing and Grading, building structures, impervious surfaces, or vegetation removal shall be prohibited within Landslide Hazard Areas and associated Buffers except as specified in the following standards:

1. Stormwater Conveyance. Stormwater conveyance shall be allowed when it is conveyed through a high-density polyethylene stormwater pipe with fuse-welded joints and when no other stormwater conveyance alternative is available. The pipe shall be located on the surface of the ground and be properly anchored so that it will continue to function in the event of an underlying slide.

2. Utility Lines. Utility lines will be permitted when no other conveyance alternative is available. The line shall be located above ground and properly anchored and/or designed so that it will continue to function in the event of an underlying slide.

3. Roads, Bridges, and Trails. Roads, bridges, and trails shall be allowed when all of the following conditions have been met:

   a. Mitigation measures are provided that ensure the roadway prism and/or bridge structure will not be susceptible to damage from landslide-induced ground deformation or impact/coverage by landslide debris. Mitigation measures shall be designed for static and seismic loading conditions in accordance with the most recent version of the American Association of State Highway and Transportation Officials (AASHTO) Manual.

   b. The road is not a sole access for a development.
c. The removal or disturbance of vegetation and Grading activities shall be prohibited during the wet season from November 1st until May 1st.

B. Landslide Hazard Management Areas. All Regulated Activities may be allowed in areas located within 300 feet of a Landslide Hazard Area subject to the following standards:

1. The Department reviews and approves a geological assessment – Geotechnical Report and determines that the potential Landslide Hazard Area is stable.

2. The proposed development is located outside of a Landslide Hazard Area and any required Buffer.

3. The proposed recommendations and mitigation measures contained within the Geotechnical Report are adequate to reduce or mitigate risks to health and safety.

4. The proposed development shall not decrease the factor of safety for landslide occurrence below the limits of 1.5 for static conditions and 1.1 for dynamic conditions. Analysis of dynamic (seismic) conditions shall be based on a minimum horizontal acceleration as established by the current version of the International Building Code.

5. The removal and disturbance of vegetation and Grading activities shall be limited to the area of the approved development and shall not be allowed during the wet season from November 1st until May 1st unless adequate provisions for wet season erosion have been addressed in the Geotechnical Report and approved by the Department.

6. Surface drainage from developed areas, including downspouts and runoff from paved or unpaved surfaces up slope, shall not be directed through a Landslide Hazard Area or its associated Buffer unless it is conveyed in conformance with the provisions in EMC 14.90.030.

7. Stormwater retention facilities, including infiltration systems utilizing perforated pipe, are prohibited unless the slope stability impacts of such systems have been analyzed and mitigated by a Geotechnical Professional and the impacts have been determined to be negligible.

8. The proposed development shall not create a need for larger Landslide Hazard Area Buffers and setbacks on neighboring properties unless approved through a notarized written agreement with the affected property owner(s).

9. The proposed development shall be sited far enough from regressing slope faces to project 120 years of useful life for the proposed structure(s) or infrastructure.

10. Any proposed lots must be completely located outside any identified Landslide Hazard Areas or their associated Buffers.

11. Landslide Hazard Areas that are directly adjacent to any Riparian areas, or Wetlands, may be subject to additional Buffer requirements and standards. See EMC Chapter 14.50, Critical Fish and Wildlife Habitat Areas and EMC Chapter 14.40, Wetlands for additional details. (Ord. 02-200 § 2).

14.90.050 Buffer requirements.
A. Determining Buffer Widths.

1. The Buffer width shall be measured on a horizontal plane from a perpendicular line established at the edge of the Landslide Hazard Area limits, both from the top and toe of the slope.

2. A Buffer of undisturbed vegetation shall be required for a Landslide Hazard Area. The required Buffer width is the greater amount of the distances described in EMC Chapter 14.90:

   a. Fifty feet from all edges of the active Landslide Hazard Area limits;
b. A distance of one-third the height of the slope at the top of the active Landslide Hazard Area and a
distance of one-half the height of the slope at the bottom of an active Landslide Hazard Area; or

B. Modification of Buffer Widths. The Department may require a larger Buffer width than the Buffer distance, as
determined in subsection (A) of this section, if any of the following are identified:

1. The adjacent land is susceptible to severe erosion and erosion control measures will not effectively prevent
adverse impacts.

2. The area has a severe risk of slope failure or downslope stormwater drainage impacts. (Ord. 02-200 § 2).

14.90.060 Appendices.
A. Geological Assessment – Landslide Hazard Geotechnical Verification.

APPENDIX A

GEOLOGICAL ASSESSMENT – LANDSLIDE HAZARD GEOTECHNICAL VERIFICATION

A. A geotechnical verification shall include the following:

1. The general Critical Areas report requirements.

2. A description of the surface and subsurface geology, hydrology, soils, and vegetation at the site and a list of
the Landslide Hazard Area indicators that were found on or in the vicinity of the site.

3. A summary of the results, conclusions, and recommendations resulting from the geological assessment of the
landslide hazards on or in the vicinity of the site.

4. An accurate site plan drawn at a scale of one inch equals 20 feet, one inch equals 30 feet, one inch equals 50
feet (or other scale deemed appropriate by the Department) is required. The Department may require that the
site plan information listed below be based on a field survey by a licensed surveyor. The site plan shall include:

a. The limits and location of any active Landslide Hazard Area.

b. The limits and location of the required landslide hazard Buffer.

c. The location of any existing and proposed structures, utilities, on-site septic systems, wells, and
stormwater management facilities.

d. The full geographical limits of the proposed project area or area to be developed.

e. Dimension the closest distance between the identified active Landslide Hazard Area boundary and the
project area.

f. Existing topography on the site presented in two-foot contours.

g. Property lines for the site.

h. North arrow and plan scale.

B. The Geotechnical Professional who prepared the verification document shall stamp the verification with their
license stamp or seal.

C. Geotechnical verifications shall be in conformance with a format that is pre-approved by the Department.

APPENDIX B
GEOLOGICAL ASSESSMENT – LANDSLIDE HAZARD GEOTECHNICAL REPORT

A. At a minimum, a Geotechnical Report shall include the following:

1. The general Critical Areas report requirements.

2. A description of the surface and subsurface geology, hydrology, soils, and vegetation of the site and a list of the Landslide Hazard Area indicators that were found on or in the vicinity of the site.

3. A summary of the results, conclusions, and recommendations resulting from the geological assessment of the landslide hazards on or in the vicinity of the site.

4. An accurate site plan drawn at a scale of one inch equals 20 feet, one inch equals 30 feet, one inch equals 50 feet (or other scale deemed appropriate by the Department) is required. The Department may require that the site plan information listed below be based on a field survey by a licensed surveyor. The site plan shall include:

   a. The limits and location of any Landslide Hazard Area within the site. Delineation of the Landslide Hazard Area limits shall identify any areas of historic landslide activity.

   b. The limits and location of the required landslide hazard Buffer.

   d. The location of any existing and proposed structures, utilities, on-site septic systems, wells, and stormwater management facilities.

   e. The full geographical limits of the proposed project area or area to be developed.

   f. Location and unique identifier of geotechnical borings, CPT soundings, or other surveys or explorations used to characterize subsurface conditions.

   g. Extent of cross-section(s) used to evaluate the three-dimensional subsurface geologic and groundwater conditions at the site.

   h. Extent of cross-section(s) used in the evaluation of slope instability.

   i. Existing topography on the site presented in two-foot contours.

   j. Property lines for the site.

   k. North arrow and plan scale.

5. Subsurface characterization data must be provided. The data shall be based on both existing and new information that may include soil borings, test pits, geophysical surveys, or other appropriate subsurface exploration methods, development of site-specific soil and/or rock stratigraphy, and measurement of groundwater levels including variability resulting from seasonal changes, alterations to the site, etc.

   a. Geotechnical borings or CPT soundings will be advanced to a depth sufficient to characterize geologic conditions within and below the existing or potential landslide mass.

   b. Other methods used for subsurface characterization shall be assigned a unique identifier, and the basic data presented in appropriate graphical and/or tabular format.

   c. The three-dimensional subsurface conditions at the site shall be presented using one or more cross-sections showing location and depth penetration of geotechnical borings, CPT soundings, or other subsurface characterization methods, interpretation of the geometry of major soil units, and projected location of the static groundwater surface determined from the subsurface exploration. The cross-sections shall be presented at a scale of one inch equals 20 feet, one inch equals 30 feet, one inch equals 50 feet (or other scale deemed appropriate by the Department). Each cross-section shall have a legend with a description of the various major soil units.
6. A detailed description of any prior Grading activity, soil instability, or slope failure.

7. Where deemed appropriate by the Geotechnical Professional assessments and conclusions regarding slope stability for both the existing and developed conditions shall be presented and documented. These assessments and conclusions shall include the information provided below in EMC Section 14.90.060, Appendix B. The project Geotechnical Professional must provide justification for not including a slope stability analysis if one is excluded. The City’s Geotechnical Professional reserves the right to request a slope stability analysis based on site conditions. If a dispute arises between the project Geotechnical Professional and the City’s Geotechnical Professional regarding the need for a slope stability analysis, then the City reserves the right to require an independent, third party review to be paid for by the applicant to resolve the dispute.

   a. Determination of the potential type(s) of landslide failure mechanisms, Debris Flow, rotational slump, or translational slip that may affect the site.

   b. Quantitative stability evaluation of slope conditions of the various failure mechanisms using state-of-the-practice modeling techniques. Limiting equilibrium methods of analysis shall state the stability conditions as a factor of safety. The most unstable failure geometry(ies) shall be presented in the form of a cross-section(s), with the least stable failure geometry for each failure mechanism clearly indicated. The stability evaluation shall also consider dynamic (earthquake) loading, and shall use a minimum horizontal acceleration as established by the current version of the International Building Code.

   c. An analysis of slope regression rate shall be presented in those cases where stability is impacted or influenced by erosional processes (e.g., wave cutting, stream meandering, etc.) acting on the toe of the slope.

8. Mitigation recommendations using engineered measures to protect the proposed structure(s) and any adjacent structures, infrastructure, adjacent Wetlands, or critical fish and wildlife habitat from damage or destruction as a result of proposed construction activities shall be designed by a professional Engineer. Design plans and detailed geotechnical recommendations may be provided in a document separate from the Geotechnical Report. When appropriate, such recommendations/plans may include, but are not necessarily limited to:

   a. Design plans and associated design calculations for engineered structures or drainage systems (e.g., structural foundation requirements, retaining wall design, etc.).

   b. Recommendations and requirements pertaining to the handling of surface and subsurface runoff in the developed condition.

   c. Identification of necessary geotechnical inspections to assure conformance with the report mitigation and recommendations.

   d. Proposed angles of cut and fill slopes, site Grading requirements, final site topography shown as two-foot contours, and the location of any proposed structures, on-site septic systems, wells, stormwater management features, or facilities associated with the development detailed within the body of the report and shown on a site map at the same scale as that required in subsection (A)(8) of this appendix.

   e. Soil compaction criteria and compaction inspection requirements.

   f. An analysis that indicates how the proposal meets the standards outlined in EMC Chapter 14.90.

   g. Structural foundation requirements and estimated foundation settlement shall be provided if structures are proposed.

   h. Lateral earth pressures.

   i. Suitability of on-site soil for use as fill.
j. Mitigation measures for building construction on each lot for short plats, large lots, or formal plats such that additional Geotechnical Professional involvement is minimized during building construction.

B. The Geotechnical Report shall be prepared by an Engineering Geologist and shall be co-written by both an Engineering Geologist and professional Engineer where both geological interpretations and engineering analyses and designs are necessary or prudent in the mitigation of the landslide hazard.

C. The Geotechnical Professional(s) who prepared the Geotechnical Report shall stamp the report with their license stamp or seal.

D. The Department may request a Geotechnical Professional to provide additional information in the Geotechnical Report based upon existing conditions, changed conditions, or unique circumstances occurring on a case-by-case basis.

E. Geotechnical Reports shall be in conformance with a format that is pre-approved by the Department. (Ord. 05-247 § 1; Ord. 02-200 § 2).
Chapter 14.100
SEISMIC (EARTHQUAKE) HAZARD AREAS

Sections:
14.100.010 Purpose.
14.100.020 Seismic Hazard Areas.
14.100.030 Seismic Hazard Area review procedures.
14.100.040 Seismic Hazard Area standards.
14.100.050 Buffer requirements.
14.100.060 Appendices.

14.100.010 Purpose.
Earthquakes have historically occurred throughout the Puget Sound region. Large earthquakes have caused loss of life and over a billion dollars in property damage. The purpose of this chapter is to protect the public health, safety, and general welfare of the citizens of Edgewood from the damaging effects of earthquakes. This chapter provides standards to ensure life safety and minimize public and private losses that may occur within a Seismic Hazard Area. (Ord. 02-200 § 2).

14.100.020 Seismic Hazard Areas.
A. General. Seismic Hazard Areas are areas subject to severe risk of damage as a result of earthquake-induced landsliding, seismic ground shaking, dynamic settlement, fault rupture, or soil liquefaction.

B. Potential Seismic Hazard Areas. Potential Seismic Hazard Areas are those areas where the suspected risk of earthquake induced landsliding, dynamic settlement, fault rupture, ground deformation caused by soil liquefaction, or flooding is sufficient to require a further Seismic Hazard Area review. These potential Seismic Hazard Areas are determined using the following criteria:

1. Earthquake Induced Landslide Hazard Areas. Areas identified as potential Landslide Hazard Areas in EMC Section 14.90.020.

2. Liquefaction or Dynamic Settlement Hazard Areas. Areas identified as high and moderate liquefaction and dynamic settlement hazard areas on the Geologically Hazardous Areas map.

3. Fault Rupture Hazard Areas.

C. Seismic Hazard Area Categories.

1. Earthquake Induced Landslide Hazard Areas. Earthquake induced Landslide Hazard Areas include slopes that can become unstable as a result of strong ground shaking, even though these areas may be stable under non-seismic conditions.

2. Liquefaction and/or Dynamic Settlement Hazard Areas.
   a. Liquefaction hazard areas are areas underlain by unconsolidated (corrected Standard Penetration Test blow counts, ([N]_{60}) less than 30) sandy or silt soils (Unified Soil Classification System S or M soil-types) and a shallow groundwater table (static groundwater depth less than 30 feet) capable of liquefying in response to earthquake shaking.

   b. Dynamic settlement hazard areas are areas underlain by a significant thickness (more than 10 feet) of loose or soft soil not susceptible to liquefaction (e.g., peats or organic silts and clays, unsaturated loose sands or silts), but that could result in vertical settlement of the ground surface in response to earthquake shaking.

3. Fault Rupture Hazard Areas. Fault rupture hazard areas include:
a. Active fault rupture hazard areas are areas where displacement (movement up, down, or laterally) of the
ground surface has occurred during past earthquake(s) in the Holocene Epoch; and

b. Areas adjacent to the active fault rupture hazard area that may be potentially subject to ground surface
displacement in a future earthquake.

14.100.030 Seismic Hazard Area review procedures.

A. General Requirements.

1. The City’s Geologically Hazardous Areas map provides an indication of where potential Seismic Hazard
Areas are located within the city.

2. The Department will complete a review of the Critical Areas Atlas – Seismic Hazard Area Map for any
regulated activity to determine whether the site for a proposed regulated activity is located within a Seismic
Hazard Area.

3. When the Department’s maps indicate that the site for a proposed regulated activity is located within a
potential liquefaction or dynamic settlement hazard area, the Department shall require the submittal of a
geological assessment as outlined in subsection (B) of this section.

4. When the Department’s maps indicate that the site for a proposed regulated activity is located within a
potential fault rupture hazard area, the Department shall require the submittal of a geological assessment as
outlined in subsection (B) of this section. The requirement to submit a geological assessment may be waived at
the Department’s discretion when it is determined that the proposed project area for the regulated activity is
located outside the potential fault rupture hazard area.

5. When the Department’s maps indicate that the site for a proposed regulated activity is or may be located
within a potential earthquake-induced Landslide Hazard Area, the Department shall conduct a review pursuant
to the requirements set forth in EMC Chapter 14.90.

6. Unless otherwise stated in this chapter, the Critical Area protective measure provisions contained in EMC
Chapter 14.10 shall apply.

B. Geological Assessments. A geological assessment is a site investigation process to evaluate the on-site geology
affecting a subject property and define the extent and severity of potential seismic hazards.

1. A geological assessment shall be required when the Department’s maps, sources, or field investigation
indicate a site contains a potential liquefaction, dynamic settlement, or fault rupture hazard area. Geological
assessments shall be submitted to the Department for review and approval together with a Seismic Hazard Area
Application.

2. A Geotechnical Professional(s) shall complete a field investigation and geological assessment to determine
whether or not the site for a proposed regulated activity is located within a liquefaction or dynamic settlement
hazard area.

   a. The geological assessment shall be submitted in the form of a geotechnical verification when the
   Geotechnical Professional(s) finds that no liquefaction or dynamic settlement hazard area exists within the
   proposed project area.

   b. The geological assessment shall be submitted in the form of a Geotechnical Report when the
   Geotechnical Professional(s) finds that a liquefaction or dynamic settlement hazard area exists within the
   proposed project area.

3. A Geotechnical Professional shall complete a field investigation and geological assessment presented in the
form of a Geotechnical Report to determine whether or not the site for a proposed regulated activity is located
within a fault rupture hazard area. Any structural recommendations proposed to mitigate the fault rupture
hazard that are included in the Geotechnical Report shall be prepared by an Engineer.
4. All geological assessments for seismic hazards submitted under this chapter shall include, at a minimum, the following items identified in paragraphs a-i:

   a. All of the items required per EMC Section 14.10.080.C.
   b. The parcel number(s) of the subject property.
   c. Site address, if the City has assigned one.
   d. A brief description of the project (including the proposed land use) and the area to be developed.
   e. A map showing the property lines for the site, existing two-foot contours of the existing site topography, and the location of any existing structures, utilities, wells, stormwater or septic systems, or other developments.
   f. A site plan delineating the limits of the proposed development and the location of all areas of the site subject to potential seismic hazards based on the Geologically Hazardous Areas map and, if applicable, limits of associated Buffers.
   g. A description of the surface and subsurface geology, hydrology, soils, and vegetation of the site.
   h. A detailed overview of the field investigations, published data and references, data and conclusions from past geological assessments or geotechnical investigations of the site, site-specific measurements, tests, investigations, or studies, as well as the methods of data analysis and calculations that support the determination regarding whether liquefaction and/or dynamic settlement hazards are present on the site.
   i. The results, conclusions, and recommendations resulting from the geological assessment of the liquefaction and/or dynamic settlement hazards on the subject property as prepared by a Geotechnical Professional(s).

5. Geological assessments shall be prepared, signed, stamped, and dated by the appropriate Geotechnical Professional(s) and the format shall be pre-approved by the Department.

6. Geological assessments that do not contain the minimum required information will be returned to the Geotechnical Professional(s) for revision.

7. The Department shall review the geological assessment and either:

   a. Accept the geological assessment and approve the Application; or
   b. Reject the geological assessment and require revisions or additional information.

8. A geological assessment for a specific site may be valid for a period of up to five years when the proposed land use activity and surrounding site conditions are unchanged. However, if any environmental conditions associated with the site change during that five-year period, the applicant may be required to submit an amendment to the geological assessment. (Ord. 02-200 § 2).

14.100.040 Seismic Hazard Area standards.

A. Earthquake Induced Landslide Hazard Areas. All standards set forth in EMC Chapter 14.90 shall apply to earthquake induced Landslide Hazard Areas.

B. Liquefaction or Dynamic Settlement Hazard Areas.

1. All building structures shall conform to the standards set forth in EMC Title 15, Buildings and Construction.

2. Utility Lines. Utility lines, except for gas pipelines, which are prohibited, will be permitted when no other conveyance alternative is available. The line shall be located above ground and properly anchored and/or
designed so that it will continue to function in the event of seismically induced ground deformation. Provision for automatic shut-off of utilities in a ground-rupturing event will be required.

3. Roads, Bridges, and Trails. Roads, bridges, and trails shall be allowed when mitigation measures are provided that ensure the roadway prism or bridge structure will not be susceptible to damage from seismic induced ground deformation. Mitigation measures shall be designed for static and seismic loading conditions in accordance with the most recent version of the American Association of State Highway and Transportation Officials (AASHTO) Manual and also for an estimated range of ground surface offset presented in the Geotechnical Report.

C. Fault Rupture Hazard Areas. Any development, Encroachment, Clearing and Grading, or building structures shall be prohibited within fault rupture hazard areas and associated Buffers except as specified in the following standards:

1. Utility Lines. Utility lines, except for gas pipelines, which are prohibited, will be permitted when no other conveyance alternative is available. The line shall be located above ground and properly anchored and/or designed so that it will continue to function in the event of seismically-induced ground deformation. Provision for automatic shutoff of utilities in a ground-rupturing event will be required.

2. Roads, Bridges, and Trails. Roads, bridges, and trails shall be allowed when all of the following conditions have been met:
   a. Mitigation measures are provided that ensure the roadway prism and/or bridge structure will not be susceptible to damage from seismically-induced ground deformation. Mitigation measures shall be designed for static and seismic loading conditions in accordance with the most recent version of the American Association of State Highway and Transportation Officials (AASHTO) Manual and also for an estimated range of ground surface offset presented in the Geotechnical Report.
   b. The road is not a sole access for a development. (Ord. 02-200 § 2).

14.100.050 Buffer requirements.

A. Determining Buffer Widths.

1. The Buffer width shall be measured on a horizontal plane from a perpendicular line established at the edge of the fault rupture hazard area limits.

2. A Buffer is an area that is adjacent to a fault rupture hazard area that may be potentially subject to ground surface displacement in a future earthquake. No development shall be permitted within a fault rupture hazard area and its associated Buffer. The required Buffer width is the greater amount of the following distances:
   a. Fifty feet from all edges of a fault rupture hazard area, except for high occupancy or essential facilities, where the minimum Buffer distance shall be 100 feet; or
   b. The required Buffer width is the minimum distance recommended by the Geotechnical Professional(s).

B. Modification of Buffer Widths. The Department may require a larger Buffer width than the Buffer distance, as determined in subsection (A) of this section, if the Department determines the standard or proposed Buffer is not adequate to protect the health, safety, or welfare of any proposed development. (Ord. 02-200 § 2).

14.100.060 Appendices.

A. Geological Assessments – Liquefaction or Dynamic Settlement Hazard Areas.

APPENDIX A

GEOLOGICAL ASSESSMENTS – LIQUEFACTION OR DYNAMIC SETTLEMENT HAZARD AREAS

Article I. Geotechnical Verification
A. A geotechnical verification shall, at a minimum, include the following:

1. The general Critical Areas report requirements.
2. The geotechnical verification shall include all mandatory items listed in EMC Chapter 14.100.
3. The geological assessment must include a determination that no liquefaction or dynamic settlement hazard exists within the proposed project area.
4. The verification shall include an accurate site plan drawn at a scale of one inch equals 20 feet, one inch equals 30 feet, one inch equals 50 feet (or other scale deemed appropriate by the Department) is required. The Department may require that the site plan information be based on a field survey by a licensed surveyor. The site plan shall include:
   a. Property lines for the site, and the location of any existing structures.
   b. The full geographical limits of the proposed project area or conceptual project area (i.e., area to be developed) and the location of any proposed structures, on-site septic systems, wells, and stormwater management features or facilities associated with the development, if known.

B. The Geotechnical Professional(s) who prepared the geotechnical verification shall stamp the verification with their license stamp or seal.

C. Hold harmless clauses, disclaimers, and limitations are not allowed within a geotechnical verification.

Article II Geotechnical Report

A. A Geotechnical Report shall, at a minimum, include the following:

1. The general Critical Areas report requirements.
2. The document shall include all mandatory items listed in EMC Chapter 14.100. The report shall be prepared by an Engineer and shall be co-written by an Engineering Geologist where geological interpretations and conclusions critical to the assessment of liquefaction and/or dynamic settlement hazard and potential effects are necessary or prudent. The report shall specify the desired performance level of the structures and other development facilities, e.g., safety to building occupants, minimal damage to structure, post-earthquake serviceability for pre-earthquake operations, or no damage.
3. The results, conclusions, and recommendations resulting from the geological assessment of the liquefaction or dynamic settlement hazards on the subject property as prepared by the Geotechnical Professional(s).
4. The geological assessment Geotechnical Report shall include:
   a. A statement that the proposed project area falls within a liquefaction and/or dynamic settlement hazard area.
   b. A detailed engineering evaluation of expected ground displacements or other liquefaction or dynamic settlement effects, e.g., bearing failures, flotation of buried tanks, or similar, and proposed mitigation measures to ensure an acceptable level of risk for the proposed structure type or other development facilities, as well as the proposed land use type or occupancy category. The minimum level of acceptable risk for any proposed structure or development Facility shall ensure the life safety of any occupant. Where appropriate, a range of mitigation options should be considered depending on site conditions, the intended use of the structures, and acceptable levels of settlement.
5. The report shall include a site plan drawn to scale. The Department may require that the site plan information be based on a field survey by a licensed surveyor. The site plan shall include:
   a. Property lines for the site and the location of any existing structures.
b. The limits or location of any liquefaction or dynamic settlement hazard area(s).

c. The full geographical limits of the proposed project area or conceptual project area (i.e., area to be developed) and the location of any proposed structures, on-site septic systems, wells, and stormwater management features or facilities associated with the development, if known.

d. Location and unique identifier of geotechnical explorations used to characterize subsurface conditions.

6. The geotechnical study shall include field exploration sufficient to assess the potential for liquefaction or dynamic settlement hazards and options for mitigation of those hazards. Copies of the exploration logs shall be provided in the report. The geotechnical study shall include field exploration sufficient to assess the potential for liquefaction or dynamic settlement hazards and options for mitigation of those hazards. Copies of the exploration logs shall be included in the report. The project Geotechnical Professional must provide justification for the scope of the field exploration program. The City’s Geotechnical Professional reserves the right to request additional exploration if deemed appropriate. If a dispute arises between the City’s Geotechnical Professional and the project Geotechnical Professional regarding the scope of the field exploration, the City reserves the right to require an independent, third party review to be paid for by the applicant to resolve the dispute.

7. If beneficial to the assessment of seismic hazards for the project, the three-dimensional subsurface conditions at the site shall be presented using one or more cross-sections showing location and depth penetration of borings or CPT soundings, interpretation of the geometry of major soil units, and projected location of the static groundwater surface determined from the subsurface exploration. The cross-sections shall be presented at a scale of one inch equals 20 feet, one inch equals 30 feet, one inch equals 50 feet (or other scale deemed appropriate by the Department). Each cross-section shall have a legend with a description of the various major soil units. The City’s Geotechnical Professional reserves the right to request inclusion of one or more cross sections in the Geotechnical Report. If a dispute arises between the project Geotechnical Professional and the City’s Geotechnical Professional regarding this issue, then the City reserves the right to require an independent, third party review to be paid for by the applicant to resolve the dispute.

8. All assessments of liquefaction or dynamic settlement hazards and effects will be based on a design earthquake using ground motion parameters consistent and equivalent to those specified in the most current version of the International Building Code. These assessments shall use the shallowest groundwater table observed during or inferred from subsurface exploration and characterization, e.g., the measured depth of static groundwater immediately prior to abandonment of borings, or observation of iron-oxide mottling of soils samples.

9. Results of laboratory testing of samples retrieved during drilling and sampling shall be presented in order to support the values of fines contents used in subsequent analysis of liquefaction and/or dynamic settlement hazard. Where only CPT methods are used in site assessment, the correlation between fines content and CPT measurements will be discussed and documented. This documentation will require rigorous correlation of CPT and fines content measurements from similar geological deposits within the Puget Sound region.

10. The Geotechnical Report shall include a detailed assessment of the liquefaction and/or dynamic settlement hazard based on analysis of available subsurface data using state-of-the-practice methodologies. The results of the analysis shall be documented, and all results of intermediate and final calculations and results, including factors of safety, shall be included.

11. When appropriate, the Geotechnical Report shall include an assessment of the potential for large lateral spreads or flow failures, bearing failures, settlement, limited lateral displacement, and flotation of buried facilities. The methodologies used must be, at a minimum, state-of-the-practice, and the conclusions regarding the potential and severity of the possible liquefaction and/or dynamic settlement induced failure modes shall be presented.

12. Alternative mitigative measures including structural and foundation design options and/or soil improvement techniques shall be evaluated and compared for their effectiveness in reaching the level of performance specified in the report introduction. Effectiveness of soil improvement techniques shall be specified in terms of
post-treatment densification or strength improvement as measured by appropriate subsurface investigation and testing. The extent of the post-treatment verification testing shall be provided on a site map at the same scale as the map presented in subsection (A)(4) of this article. Geotechnical review of all final plans is required and the findings of the review shall be documented in writing.

B. The Geotechnical Professional(s) who prepared the Geotechnical Report shall stamp the report with their license stamp or seal.

C. Hold harmless clauses, disclaimers, and limitations are not allowed within a Geotechnical Report.

APPENDIX B

GEOLOGICAL ASSESSMENTS – FAULT RUPTURE HAZARD AREA GEOFACIAL REPORT

A. A Geotechnical Report shall, at a minimum, include the following:

1. The general Critical Areas report requirements contained herein.

2. The report shall be prepared by an Engineer and shall be co-written by an Engineering Geologist where geological interpretations and conclusions critical to the assessment of liquefaction and/or dynamic settlement hazard and potential effects are necessary or prudent.

3. The following topics should be considered and addressed in detail where essential to support opinions, conclusions, and recommendations in any geologic report on faults. It is not expected that all the topics or investigative methods would be necessary in a single investigation. In specific cases, it may be necessary to extend some of the investigative methods well beyond the site or property being investigated.

   a. Purpose and scope of investigation; description of proposed development.

   b. Geologic and tectonic setting. Include seismicity and earthquake history.

   c. Site description and conditions, including dates of site visits and observations. Include information on geologic units, graded and filled areas, vegetation, existing structures, and other factors that may affect the choice of investigative methods and interpretation of data.

   d. Methods of Investigation.

      i. Review of published and unpublished literature, maps, and records concerning geologic units, faults, groundwater barriers, and other factors.

      ii. Stereoscopic interpretation of aerial photographs, review of LiDAR based topography, and other remotely sensed images to detect fault-related topography (geomorphic features), vegetation and soil contrasts, and other lineaments of possible fault origin. The area interpreted usually should extend beyond the site boundaries.

      iii. Surface observations, including mapping of geologic and soil units, geologic structures, geomorphic features and surfaces, springs, deformation of engineered structures due to fault creep, both on and beyond the site.

      iv. Subsurface Investigations.

         (A) Trenching and other excavations to permit detailed and direct observation of continuously exposed geologic units, soils, and structures; must be of adequate depth and be carefully logged (Taylor & Cluff 1973, Hatheway & Leighton 1979, McCalpin 1996b).

         (B) Borings and test pits to permit collection of data on geologic units and groundwater at specific locations. Data points must be sufficient in number and spaced adequately to permit valid correlations and interpretations.
(C) Cone penetrometer testing (CPT) (Grant et al., 1997, Edelman et al., 1996). CPT must be done in conjunction with continuously logged borings to correlate CPT results with on-site materials. The number of borings and spacing of CPT soundings should be sufficient to adequately image site stratigraphy. The existence and location of a fault based on CPT data are interpretative.

v. Geophysical Investigations. These are indirect methods that require a knowledge of specific geologic conditions for reliable interpretations. They should seldom, if ever, be employed alone without knowledge of the geology (Chase & Chapman 1976). Geophysical methods alone never prove the absence of a fault nor do they identify the recency of activity. The types of equipment and techniques used should be described and supporting data presented (California Board of Registration for Geologists and Geophysicists, 1993).

(A) High-resolution seismic reflection (Stephenson et al., 1995, McCalpin, 1996b).

(B) Ground penetrating radar (Cai et al., 1996).

(C) Other methods include: seismic refraction, magnetic profiling, electrical resistivity, and gravity (McCalpin, 1996b).

vi. Age-dating techniques are essential for determining the ages of geologic units, soils, and surfaces that bracket the time(s) of faulting (Pierce 1986, Birkeland et al., 1991, Rutter & Catto, 1995, McCalpin, 1996a).

(A) Radiometric dating (especially 14C).

(B) Soil-profile development.

(C) Rock and mineral weathering.

(D) Landform development.

(E) Stratigraphic correlation of rocks, minerals, and fossils.

(F) Other methods – artifacts, historical records, tephrochronology, fault scarp modeling, thermoluminescence, lichenometry, paleomagnetism, dendrochronology, etc.

vii. Other methods should be included when special conditions permit or requirements for critical structures demand a more intensive investigation.

(A) Aerial reconnaissance overflights.

(B) Geodetic and strain measurements.

(C) Microseismicity monitoring.

e. Conclusions.

i. Location and existence (or absence) of hazardous faults on or adjacent to the site; ages of past rupture events.

ii. Type of faults and nature of anticipated offset, including sense and magnitude of displacement, if possible.

iii. Distribution of primary and secondary faulting (fault zone width) and fault-related deformation.

iv. Probability of, or relative potential for, future surface displacement. The likelihood of future ground rupture seldom can be stated mathematically, but may be stated in semiquantitative terms such as low, moderate, or high, or in terms of slip rates determined for specific fault segments.
v. Degree of confidence in, and limitations of data and conclusions.

f. Recommendations.

i. The recommended increase from the standard Buffer distance (50 feet) of proposed structures from fault rupture hazard areas. The recommended Buffer distance generally will depend on the quality of data and type and complexity of fault(s) encountered at the site and the proposed land use type (i.e., occupancy). In order to establish an appropriate Buffer distance from a fault located by indirect or interpretative methods (e.g., borings or cone penetrometer testing), the area between data points also should be considered underlain by a fault unless additional data are used to more precisely locate the fault. Additional measures (e.g., strengthened foundations, engineering design, and flexible utility connections) to accommodate warping and distributive deformation associated with faulting (Lazarte and others, 1994).

ii. Risk evaluation relative to the proposed development.

iii. Limitations of the investigation; need for additional studies.

g. References.

i. Literature and records cited or reviewed; citations should be complete.

ii. Aerial photographs or images interpreted – list type, data, scale, source, and index numbers.

iii. Other sources of information, including well records, personal communications, and other data sources.

h. Illustrations. The following illustrations should be provided:

i. A location map that identifies site locality, significant faults, geographic features, regional geology, seismic epicenters, and other pertinent data; 1:24,000 scale is recommended.

ii. A site development map that shows site boundaries, existing and proposed structures and limits of the proposed project area, graded areas, streets, exploratory trenches, borings geophysical traverses, locations of faults, and other data; recommended scale is 1:2,400 (one inch equals 200 feet), or larger.

iii. A geologic map that shows the distribution of geologic units (if more than one), faults and other structures, geomorphic features, aerial photo graphic lineaments, and springs; on topographic map 1:24,000 scale or larger; can be combined with subsection (B)(h)(i) or (ii) of this appendix.

iv. Geologic cross-sections, if needed, to provide three-dimensional picture.

v. Logs of exploratory trenches and borings that show details of observed features and conditions (note: these should not be generalized or diagrammatic). Trench logs should show topographic profile and geologic structure at a 1:1 horizontal to vertical scale; scale should be 1:60 (one inch equals five feet) or larger.

vi. Geophysical data and geologic interpretations.

i. Appendix. Attach any supporting data not included above, e.g., water well data, photographs, and aerial photographs.

4. The Geotechnical Professional who prepared the Geotechnical Report shall stamp the report with their license stamp or seal.

5. The Department may request a Geotechnical Professional to provide additional information in the Geotechnical Report based upon existing conditions, changed conditions, or unique circumstances occurring on a case-by-case basis.
6. Hold harmless clauses, disclaimers, and limitations are not allowed to be included, neither expressly nor implied, within a geological assessment. (Ord. 02-200 § 2).
Chapter 14.110

EROSION HAZARD AREAS

Sections:
14.110.010 Purpose.
14.110.030 Erosion Hazard Area review procedures.
14.110.040 Erosion Hazard Area standards.
14.110.050 Buffer requirements.
14.110.060 Appendices.

14.110.010 Purpose.
The following statements describe the purpose of this chapter:

A. Protect human life and health;
B. Regulate uses of land in order to avoid damage to structures and property being developed and damage to neighboring land and structures;
C. Identify and map any Erosion Hazard Area;
D. Minimize impacts on Wetlands and critical fish and wildlife species and their associated habitat that can result from erosion;
E. Establish a permit requirement and review procedures for development proposals in areas with potential erosion hazards;
F. Strike a balance between the need to maintain natural shoreline erosion/regression processes and the need to protect existing and proposed development. (Ord. 02-200 § 2).

A. Erosion Hazard Area Indicators. Erosion Hazard Areas are areas potentially subject to land regression or retreat due to a combination of geologic, seismic, hydrologic, or manmade factors. Erosion Hazard Areas can be identified by indicators of active land retreat as a result of Fluvial Processes.

B. Erosion Hazard Area Categories.

1. Potential Erosion Hazard Areas. Potential Erosion Hazard Areas, as depicted on the Geologically Hazardous Areas map, are those areas where the suspected risk of erosion through either loss of soil, slope instability, or land regression is sufficient to require additional review to assess the potential for active erosion activity or apply additional standards. These potential Erosion Hazard Areas are determined using the following criteria:

a. Shoreline Erosion Hazard Areas. Areas within 200 feet of a freshwater lake, pond, or shoreline. The distance shall be measured landward perpendicularly from the edge of the ordinary high water mark.

c. Soil Erosion Hazard Areas. Areas identified as having slopes of 20 percent or greater and that are classified as having severe, or very severe erosion potential by the Soil Conservation Service, United States Department of Agriculture (USDA).

2. Active Shoreline Erosion Hazard Areas. Land areas located directly adjacent to surface water bodies that, through the geological assessment process, are identified as regressing, retreating, or potentially unstable as a result of undercutting by wave action or bluff erosion. The limits of the active shoreline Erosion Hazard Area

The Edgewood Municipal Code (Critical Areas Ordinance Update 2017)
shall extend landward to include that land area that is calculated, based on the rate of regression, to be subject to erosion processes within the next 10-year time period.

3. Riverine Erosion Hazard Areas or CMZs. Riverine Erosion Hazard Areas are located within the lateral extent of likely watercourse channel movement due to bank destabilization and erosion, rapid incision, and shifts in location of watercourse channels. Rivers and streams subject to erosion are regulated as a CMZ.

4. Soil Erosion Hazard Areas. Soil Erosion Hazard Areas are identified by the presence or absence of natural vegetative cover, soil texture condition, slope, and rainfall patterns, or man-induced changes to such characteristics that create site conditions which are vulnerable to erosion of the upper soil horizon. Soil Erosion Hazard Areas include those areas with slopes of 20 percent or greater and that are classified as having severe, or very severe erosion potential by the USDA Natural Resources Conservation Service. (Ord. 02-200 § 2).

14.110.030 Erosion Hazard Area review procedures.

A. General Requirements.

1. The City’s Geologically Hazardous Areas map provides an indication of where potential Erosion Hazard Areas are located. The actual presence or location of an Erosion Hazard Area or additional potential Erosion Hazard Area that have not been mapped, but may be present on or adjacent to a site, shall be determined using the procedures and criteria established in this chapter.

2. The Department will complete a review of the Geologically Hazardous Areas map, and any other source documents for any proposed regulated activity to determine whether the site for the regulated activity is located within a potential Erosion Hazard Area.

3. When the Department’s maps, sources, or field investigations indicate that the site for a proposed regulated activity is located within a potential shoreline Erosion Hazard Area, the Department shall require a geological assessment as outlined in subsection (B) of this section.

4. When the Department’s maps, sources, or field investigations indicate that the proposed project area for a regulated activity is located within a potential riverine Erosion Hazard Area or CMZ, the Department shall conduct a review pursuant to EMC Chapter 14.80.

5. When the Department’s maps, sources, or field investigations indicate that the proposed project area for a regulated activity is located within a potential soil Erosion Hazard Area, the Department shall require submittal of an erosion control plan pursuant to the requirements set forth in EMC Title 15.

6. Applicants requesting to develop a bulkhead along a shoreline shall be required to submit a Geotechnical Report.

B. Geological Assessment. A geological assessment is a site investigation process to evaluate the on-site geology affecting a subject property and proposed development.

1. Geological assessments shall be submitted to the Department for review and approval together with a shoreline Erosion Hazard Area Application.

2. The geological assessment shall include a field investigation and may also include review of public records and documentation, analysis of historical air photos, LiDAR mapping, published data and references, etc.

3. The geological assessment shall include the following information and analysis identified in paragraphs a-d:
   a. An analysis of the shoreline erosion processes on and in the vicinity of the site including an evaluation of erosion and shoreline retreat that has occurred over the past decade and an estimated probable rate of erosion based upon the historic rate of erosion that has occurred on the site.
b. A determination of which areas on the site meet the criteria for an active shoreline Erosion Hazard Area.

c. A determination of the area on the site or in the vicinity of the site that will experience regression in the next 120 years given natural processes.

d. All of the information required per EMC Section 14.10.080.C.

4. Geological assessments shall be prepared, signed, and dated by a Geotechnical Professional and the format shall be pre-approved by the Department.

5. A Geotechnical Professional shall complete a field investigation and geological assessment to determine whether or not an active shoreline Erosion Hazard Area exists within 200 feet of the site.

a. The geological assessment shall be submitted in the form of a geotechnical letter when the Geotechnical Professional finds that no active shoreline Erosion Hazard Area exists within 200 feet of the site.

b. The geological assessment shall be submitted in the form of geotechnical verification when the Geotechnical Professional finds that an active shoreline Erosion Hazard Area exists but is located more than 200 feet away from the proposed project area.

c. The geological assessment shall be submitted in the form of a Geotechnical Report when the Geotechnical Professional finds that an active shoreline Erosion Hazard Area exists within 200 feet of the proposed project area or when a Geotechnical Professional determines that mitigation measures, such as a bulkhead, are necessary in order to construct or develop within a potential shoreline Erosion Hazard Area.

6. The Department shall review the geological assessment and either:

a. Accept the geological assessment and approve the Application; or

b. Reject the geological assessment and require revisions or additional information.

7. A geological assessment for a specific site may be valid for a period of up to five years when the proposed land use activity and surrounding site conditions are unchanged. However, if any environmental conditions associated with the site change during that five-year period, the applicant may be required to submit an amendment to the geological assessment.

C. Riverine Erosion Hazard Area (Channel Migration Zones) Review. Riverine Erosion Hazard Areas shall be reviewed pursuant to the requirements set forth in EMC Chapter 14.80.

D. Soil Erosion Hazard Area Review. Soil Erosion Hazard Areas shall be reviewed pursuant to the requirements set forth in EMC Title 15, Buildings and Construction. (Ord. 02-200 § 2).

14.110.040 Erosion Hazard Area standards.

A. Active Shoreline Erosion Hazard Areas. Any development, Encroachment, Clearing and Grading, timber harvest, building structures, impervious surfaces, and vegetation removal shall be prohibited within active shoreline Erosion Hazard Areas and associated Buffers except as specified in the following standards:

1. Shoreline Erosion Protection Measures. Shoreline erosion protection measures located within or adjacent to freshwater or marine shorelines shall be allowed subject to the following:

a. The proposed shoreline protection measure shall comply with the standards set forth in EMC Chapter 14.50 – Critical Fish and Wildlife Habitat Areas.

b. A geological assessment Geotechnical Report that indicates that the shoreline is currently experiencing active erosion, i.e., land retreat or regression.
c. The use of the shoreline erosion protection measure will not cause a significant adverse impact on adjacent properties or critical fish and wildlife species and their associated habitat (i.e., increase erosion on adjacent properties).

d. The use of Soft Armoring Techniques is the preferred method for shoreline protection.

e. Hard Armoring shoreline erosion control measures shall be approved only when a geological assessment-shoreline erosion Geotechnical Report has been completed and indicates the following:

   i. The regression has been monitored on a yearly interval for a period of at least five consecutive years prior to allowing a bulkhead to be constructed. This monitoring shall be conducted by field survey measurements of a licensed surveyor. The Department may shorten or eliminate the monitoring period if there are indicators that the regression rate is rapid and an existing structure may be threatened prior to completion of the monitoring period;

   ii. The use of beach nourishment alone or in combination with Soft Armoring Techniques is not adequate to protect the property from shoreline erosion processes; and

   iii. The property contains an existing structure(s) that will be threatened within the next 10 years or the buildability of an undeveloped site will be threatened within the next 10 years if a Hard Armoring method of shoreline erosion protection is not provided.

f. Hard Armoring shoreline protection measures shall not be allowed when structures can be located landward of the 120-year rate of regression area.

2. Stormwater Conveyance. Surface drainage into an active shoreline Erosion Hazard Area should be avoided. If there are no other alternatives for discharge, then drainage must be collected upland of the top of the active shoreline Erosion Hazard Area and directed downhill in a high density polyethylene stormwater pipe with fuse welded joints that includes an energy dissipating device at the base of the active Landslide Hazard Area. The pipe shall be located on the surface of the ground and be properly anchored so that it will continue to function in the event of an underlying slide. The number of these pipes should be minimized along the slope frontage.

3. Utility Lines. Utility lines will be permitted when no other conveyance alternative is available. The line shall be located above ground and properly anchored and/or designed so that it will continue to function in the event of an underlying slide.

4. Roads, Bridges, and Trails. Roads, bridges, and trails shall be allowed when all of the following conditions have been met:

   a. Mitigation measures are provided that ensure the roadway prism and/or bridge structure will not be susceptible to damage from active erosion.

   b. The road is not a sole access for a development.

B. Shoreline Erosion Hazard Management Area. All Regulated Activities such as but not limited to building structures, impervious surfaces, vegetation removal, timber harvest, or Grading activities may be allowed in areas located within 200 feet of an active shoreline Erosion Hazard Area subject to the following standards:

   1. The Department reviews and approves a geological assessment – shoreline erosion hazard Geotechnical Report and determines that the proposed project area is located outside an active shoreline hazard area and the required Buffer.

   2. The proposed recommendations and mitigation measures contained within the Geotechnical Report are adequate to reduce or mitigate risks to the natural environment, health, and safety.

   3. Surface drainage from the proposed project area, including downspouts, landscape irrigation systems, and runoff from paved or unpaved surfaces upland of the shoreline, shall not be directed through an active shoreline
Erosion Hazard Area or its associated Buffer unless it is conveyed in conformance with the provisions in subsection (A)(2) of this section.

4. Stormwater retention and detention systems, such as dry wells and infiltration systems utilizing buried pipe or french drains, shall not be permitted unless such systems are designed by a professional Engineer and the Geotechnical Report indicates that such a system will not affect the stability of the shoreline.

5. Proposed developments, with the exception of shoreline erosion protection measures, shall be sited far enough from regressing shorelines to ensure 120 years of useful life for any proposed structures or infrastructure.

C. Riverine Erosion Hazard Area or CMZ Review. Riverine Erosion Hazard Areas shall be reviewed pursuant to the requirements set forth in EMC Chapter 14.80.

D. Soil Erosion Hazard Area Review. Soil Erosion Hazard Areas shall be reviewed pursuant to the requirements set forth in EMC Title 15, Buildings and Construction. (Ord. 02-200 § 2).

14.110.050 Buffer requirements.
A. Determining Buffer Widths.

1. The Buffer width shall be measured on a horizontal plane from a perpendicular line established at the edge of the active shoreline Erosion Hazard Area limits.

2. An undisturbed Buffer of existing vegetation shall be required for an active shoreline Erosion Hazard Area. The required standard Buffer width is either a or b below, whichever is greater:
   a. Fifty feet from all edges of the active shoreline Erosion Hazard Area limits;
   b. A distance of one-third the height of the slope at the top of the slope and a distance of one-half the height at the bottom of the slope; or

3. The Buffer width may be reduced or eliminated upon the Director’s approval of a Geotechnical Report that demonstrates that such a reduction would not result in an increased risk of erosion either on or off of the subject property.

B. Modification of Buffer Widths. The Department may require a larger Buffer width than the standard Buffer distance, as determined in subsection (A) of this section, if any of the following are identified through the geological assessment process:

1. The adjacent land is susceptible to severe erosion and erosion control measures will not effectively prevent adverse impacts.

2. The area has a severe risk of slope failure or downslope stormwater drainage impacts. (Ord. 02-200 § 2).

14.110.060 Appendices.
A. Geological Assessment – Shoreline Erosion Hazard Geotechnical Letter.

APPENDIX A

GEOLOGICAL ASSESSMENT – SHORELINE EROSION HAZARD GEOTECHNICAL LETTER
A. A geotechnical letter shall, at a minimum, include the following:

1. The general Critical Areas report requirements.
2. A summary of the findings of the site visit, a site plan, and a summary of the findings from the review of documents listed in EMC 14.110.030.B.2. The appropriate professional preparing the geotechnical letter shall provide conclusions and recommendations as to shoreline stability for the proposed development.

B. The Geotechnical Professional who prepared the geotechnical letter shall stamp the letter with his or her seal.

C. Hold harmless clauses, disclaimers, and limitations are not allowed within a geotechnical letter.

APPENDIX B

GEOLOGICAL ASSESSMENT – SHORELINE EROSION HAZARD GEOTECHNICAL VERIFICATION

A. A geotechnical verification shall, at a minimum, include the following:

1. The general Critical Areas report requirements.

2. A summary of the results, conclusions, and recommendations resulting from the geological assessment, as set forth in EMC 14.110.030.B. The verification will also include a summary of the findings of the site visit, a site plan, and a summary of the findings from the review of the documents listed in EMC 14.110.030.B.2.

3. An accurate site plan drawn at a scale of one inch equals 20 feet, one inch equals 30 feet, one inch equals 50 feet (or other scale deemed appropriate by the Department) is required. The Department may require that the site plan information listed below be based on a field survey by a licensed surveyor. The site plan shall include:

   a. The limits and location of the active shoreline Erosion Hazard Area(s).
   b. The limits of the required shoreline erosion hazard Buffer.
   c. The limits and location of the shoreline erosion hazard management area.
   d. The limits and location of the 120-year regression area.
   e. The location of any existing structures, utilities, on-site septic systems, wells, and stormwater management facilities.
   f. The location of any proposed structures, utilities, on-site septic systems, wells, and stormwater management facilities.
   g. The full geographical limits of the proposed project area to be developed.
   h. Dimension of the closest distance between the identified active shoreline hazard area boundary and the proposed project area.
   i. Dimension of the closest distance between the 120-year regression line and the proposed project area.
   j. Existing contours on the site at two-foot intervals.
   k. Property lines for the site.
   l. North arrow and scale.

B. The Geotechnical Professional who prepared the geotechnical verification shall stamp the verification with their seal.

C. Hold harmless clauses, disclaimers, and limitations are not allowed within a geotechnical verification.

APPENDIX C

GEOLOGICAL ASSESSMENT – SHORELINE EROSION HAZARD GEOTECHNICAL REPORT
A. A Geotechnical Report shall, at a minimum, include the following:

1. The general Critical Areas report requirements.

2. A summary of the results, conclusions, and recommendations resulting from the geological assessment. The report will also include a summary of the findings of the site visit, a site plan, and a summary of the findings from the review of documents listed in EMC 14.110.030.B.2. The summary shall specifically address:
   a. Whether it is possible given the physical constraints of the property (size, shape, building setbacks, utility requirements, etc.) to locate the proposed development outside of the 120-year area of regression based on natural shoreline processes.
   b. If it is not possible to locate the development outside of the 120-year area of regression (based on natural processes), determine whether beach nourishment, Soft Armoring Techniques, or both can be used to slow the rate of regression such that the proposed development is no longer within the 120-year regression area.
   c. If it is not possible to locate the development outside of the 120-year area of regression, based on the use of beach nourishment or Soft Armoring Techniques, outline the strategy, to monitor the rate of regression on the site.
   d. Determine whether any proposed shoreline erosion protection measures will cause an increase in the rate of regression on neighboring properties.

3. An accurate site plan drawn at a scale of one inch equals 20 feet, one inch equals 30 feet, one inch equals 50 feet (or other scale deemed appropriate by the Department) is required. The Department may require that the site plan information listed below be based on a field survey by a licensed surveyor. The site plan shall include:
   a. The limits and location of the active shoreline Erosion Hazard Area(s).
   b. The limits of the required shoreline erosion hazard Buffer based upon the requirements.
   c. The limits and location of the shoreline erosion hazard management area.
   d. The limits and location of the 120-year regression area based on natural shoreline processes and, if applicable, based upon proposed shoreline protection measures.
   e. The location of any existing structures, utilities, on-site septic systems, wells, and stormwater management facilities.
   f. The location of any proposed structures, utilities, on-site septic systems, wells, and stormwater management facilities.
   g. The full geographical limits of the proposed project area to be developed.
   h. Dimension of the closest distance between the identified active shoreline hazard area boundary and the proposed project area.
   i. Dimension of the closest distance between the 120-year regression line and the proposed project area.
   j. Existing contours on the site at two-foot intervals.
   k. Property lines for the site.
   l. North arrow and scale.

4. A discussion of any proposed shoreline protection measures including design and construction drawings is required.
5. A list of references utilized in preparation of the report.

B. The Geotechnical Professional(s) who performed the geological assessment shall stamp the report with their license stamp or seal. The report must be co-authored by a licensed professional Engineer when engineering designs or interpretations are necessary to address the report requirements. The Engineer must also stamp the report with their license stamp or seal.

C. The Department may request a Geotechnical Professional to provide additional information in the Geotechnical Report based upon existing conditions, changed conditions, or unique circumstances occurring on a case-by-case basis.

D. Hold harmless clauses, disclaimers, and limitations are not allowed within a Geotechnical Report.

E. Geotechnical Reports shall be in conformance with a format that is pre-approved by the Department. (Ord. 02-200 § 2).
Chapter 14.120
NATURAL RESOURCE LANDS

Sections:
14.120.010 Purpose.
14.120.020 Intent.
14.120.030 Applicability.
14.120.040 Mineral Resource Lands designation.
14.120.050 Natural Resource Lands noticing requirements.
14.120.060 Current use assessment.
14.120.070 Variances and appeals.
14.120.080 Review process.
14.120.090 Title, plat, and Regulated Activities notification.
14.120.100 Permitted uses.
14.120.110 Appendices.

14.120.010 Purpose.
This chapter establishes requirements and regulations to protect Natural Resource Lands and is established pursuant to WAC 197-11-908 and RCW 36.70A.170 and 36.70A.060. The City therefore designates Agricultural Lands and Mineral Resource Lands, and all associated Buffers as being Critical Areas and designated Natural Resource Lands. By regulating development within 500 feet of Natural Resource Lands, this title seeks to implement the following goals and policies to:

A. Inform the public of the existence, location and potential incompatibility impacts of development on, or within 500 feet of, these Critical Areas within the city.

B. Encourage the retention of open space, development of recreational opportunities, conserve priority habitat, increase access to Natural Resource Lands and water, and develop parks.

C. Assure the conservation of resource lands and related activities by limiting encroachment of incompatible development thereon.

D. Promote the conservation of Mineral Resource Lands through inclusion of known deposits of minerals and materials.

E. Assure that undeveloped mineral and material resources will not be forever lost by prior development of the land for other purposes.

F. Allow for the necessary mineral processing to convert such minerals and materials into marketable products.

G. Protect the environment and enhance the state’s high quality of life, including air and water quality and the availability of water.

H. Maintain and enhance the biological and physical functions and values of Wetlands. (Ord. 02-200 § 2).

14.120.020 Intent.
Resource lands are of special concern to the citizens, the City, and the state. The intent of this chapter is to conserve resource lands by establishing standards for development of sites which contain, or are within 500 feet of, resource lands to promote the public health, safety, and welfare by:

A. Noticing of property on, or within, natural resource land areas;

B. Mitigating unavoidable impacts by regulating development;

C. Protecting from development impacts;
D. Protecting the public against losses from:

   1. Costs of public emergency rescue and relief operations where the causes are avoidable;

   2. Degradation of the natural environment and the expense associated with repair or replacement;

E. Preventing adverse impacts on water availability, water quality, Wetlands, and streams;

F. Protecting unique, fragile, and valuable elements of the environment, including fish and wildlife habitat;

G. Providing sufficient information to show that Critical Areas are adequately protected prior to approving, conditioning, or denying public or private development activity;

H. Providing the public with sufficient information and notice of potential risks associated with development in any Critical Area or Sensitive Area;

I. Implementing the goals and requirements of the Growth Management Act (RCW 36.70A.060), the City’s comprehensive plan, and all updates and amendments, functional plans, and other land use policies formally adopted or accepted by the City. (Ord. 02-200 § 2).

14.120.040 Mineral Resource Lands designation.

A. The City has classified the following areas as potential Mineral Resource Lands.

B. Mineral Resource Lands. Mineral Resource Lands shall be identified by the City using the criteria set forth in WAC 365-190-070 as now exists or as may hereafter be amended or modified.

C. Property Adjacent to Resource Lands. All plats, short plats, development permits, and building permits issued for development activities within 500 feet of lands designated as Natural Resource Lands shall contain a notice that a variety of commercial activities may occur that are not compatible with residential development for certain periods of limited duration. (Ord. 04-221 § 1; Ord. 02-200 § 2).
1. Parcels: 0420164023, 0420164024, 0420164016 (commonly known as Olson); and

2. Parcels: 0420162047, 0420162048 (commonly known as Josties); and

B. The City staff shall study each area and prepare a written analysis of each area.

C. The City Council shall review the staff analysis and recommendation(s) and shall, by ordinance, approve, deny, or modify the particular study area designation using the criteria in EMC Section 14.120.060. (Ord. 04-234 § 1).

14.120.050 Natural Resource Lands noticing requirements.

Pursuant to RCW 36.70A.060, the City shall require that all plats, Development Applications, or permits issued for development activities on, abutting, or within 500 feet of lands designated as Natural Resource Lands contain a notice (see Appendices A through C).

A. General. If more than one natural resource land subject to the provisions of this title intersects the subject parcel, then one notice addressing all of the natural resource areas shall be sufficient.

B. Title Notification.

1. When the City determines that activities not exempt from this title are proposed, the owner shall file a notice with the Pierce County auditor in accordance with Appendices A through C of this Chapter. The notice shall provide a public record of the presence of any Sensitive Area; the application of this title to the property; and any limitations on activity in or affecting such Sensitive Area.

2. The notice shall be notarized and recorded with the Pierce County auditor before approval of any regulated use or activity on the site.

C. Plat Notification. For all proposals requiring a plat within any Sensitive Area, the applicant shall note the face of the plat consistent with the language set forth in Appendices A through C of this Chapter.

D. Permit Notification. The Department shall require that all permits issued for Regulated Activities on or within 500 feet of Natural Resource Lands contain a notice as set forth in Appendices A through C. (Ord. 02-200 § 2).

14.120.060 Current use assessment.

A. An owner of Natural Resource Lands or open space desiring current use Classification under Chapter 84.40 RCW may file for such current use Classification.

B. An owner of undeveloped land with Critical Areas which has been placed in a separate tract or tracts, protective easement, public or private land trust dedication, or other similarly preserved area for the protection of these Critical Areas may have that portion of land reviewed for reassessment by the assessor-treasurer’s office consistent with those restrictions to determine the fair market value of the land pursuant to RCW 84.40.030.

C. The owner shall notify the assessor-treasurer’s office when restrictions on development occur on a particular site, and shall provide a plat map in addition to the following, or other special study documents as may be required by the Department.

14.120.070 Variances and appeals.

Procedures for variances and appeals of an administrative decision issued pursuant to this chapter are set forth in EMC 18.40. (Ord. 02-200 § 2).

14.120.080 Review process.

A. The Department shall review any permit or Application requested for any regulated activity, including, but not limited to, those set forth in EMC Chapter 14.500 on a site which includes, or is within 500 feet of, one or more resource land is located, unless otherwise provided in this title.
B. As part of all development Applications, the Department shall review the information submitted by the applicant to:

1. Confirm the nature and type of the resource land and evaluate any required title, plat, or regulated activity notification;
2. Determine whether the development proposal is consistent with this title; and
3. Determine whether any proposed alterations to the site containing resource lands are necessary.

C. The City may approve, approve with conditions, or deny any development proposal in order to comply with the requirements and carry out the goals, purposes, objectives, and requirements of this title.

D. Approval of a development proposal does not discharge the obligation of the applicant to comply with the provisions of this title. (Ord. 02-200 § 2).

14.120.090 Title, plat, and Regulated Activities notification.
A. If more than one resource land subject to the provisions of this title exists on the site, then one notice addressing all of the resource lands shall be sufficient.

B. Notification shall be approved by the Department and shall be consistent with the forms set forth in EMC 14.120.110, Appendices A through C, as applicable.

C. Title notifications shall be notarized and recorded with the Pierce County auditor prior to approval of any regulated use or activity for the site. (Ord. 02-200 § 2).

14.120.100 Permitted uses.
Uses permitted on designated resource land sites shall be the same as those permitted in the zone Classifications shown on the City zoning map. (Ord. 02-200 § 2).

14.120.110 Appendices.
A. Property Adjacent to Resource Lands.

B. Agriculture Lands Noticing.

APPENDIX A

PROPERTY ADJACENT TO RESOURCE LANDS

A. Title Notification.

Parcel Number: ______________

Site Address: ______________________

NOTICE: This parcel lies within 500 feet of land designated resource lands by Edgewood. A variety of commercial and industrial activities occur in the area that may be inconvenient or cause discomfort to area residents. This may arise from the use of chemicals, or from spraying or extraction which occasionally generates dust, smoke, noise, and odor. The City has established resource uses as priority uses on productive resource lands, and residents of adjacent property should be prepared to accept such inconveniences or discomfort from normal, necessary commercial resource lands operations.

Signature of Owner

_______________________________
B. Plat Notification. The owner of any site within 500 feet of land designated as resource lands on which a large lot, short subdivision, or formal subdivision is submitted, shall record a notice on the face of the plat. Such notification shall be in the form as set forth below:

PROPERTY ADJACENT TO RESOURCE LANDS PLAT NOTIFICATION. This property lies within 500 feet of land designated resource lands by Edgewood. A variety of commercial and industrial activities occur in the area that may be inconvenient or cause discomfort to area residents. This may arise from the use of chemicals, or from spraying or extraction which occasionally generates dust, smoke, noise, and odor. The City has established resource uses as priority uses on productive resource lands, and residents of adjacent property should be prepared to accept such inconveniences or discomfort from normal, necessary commercial resource lands operations.

C. Regulated Activities Notification. The Department shall require that permits issued for regulated activities, as defined in EMC Chapter 14.120, within 500 feet of lands designated as resource lands, contain a notice as set forth below.

REGULATED ACTIVITIES NOTIFICATION. This property lies within 500 feet of land designated resource lands by Edgewood. A variety of commercial and industrial activities occur in the area that may be inconvenient or cause discomfort to area residents. This may arise from the use of chemicals, or from spraying or extraction which occasionally generates dust, smoke, noise, and odor. The City has established resource uses as priority uses on productive resource lands, and residents of adjacent property should be prepared to accept such inconveniences or discomfort from normal, necessary commercial resource lands operations.

APPENDIX B

AGRICULTURAL LANDS NOTICING

A. Title Notification.

Parcel Number: ____________________

Site Address: ______________________

NOTICE: This parcel lies within 500 feet of an area identified as Agricultural Lands by Edgewood. A variety of commercial Agricultural Activities occur in the area that may be inconvenient or cause discomfort to area residents. This may arise from the use of agricultural chemicals, including herbicides, pesticides, and fertilizers; or from spraying, pruning, and harvesting which occasionally generate dust, smoke, noise, and odor. Edgewood has established agriculture as a priority use on productive Agricultural Lands, and residents of adjacent property should be prepared to accept such inconveniences or discomfort from normal, necessary farm operations.

Signature of Owner

(NOTARY ACKNOWLEDGMENT)
B. Plat Notification. The owner of any site within this designation on which a large lot, short subdivision, or formal subdivision is submitted, shall record a notice on the face of the plat. Such notification shall be in the form as set forth below.

AGRICULTURAL LANDS PLAT NOTIFICATION. This parcel lies within an area identified as Agricultural Lands by Edgewood. A variety of commercial Agricultural Activities occur in the area that may be inconvenient or cause discomfort to area residents. This may arise from the use of agricultural chemicals, including herbicides, pesticides, and fertilizers; or from spraying, pruning, and harvesting which occasionally generate dust, smoke, noise, and odor. The City has established agriculture as a priority use on productive Agricultural Lands, and residents of adjacent property should be prepared to accept such inconveniences or discomfort from normal, necessary farm operations.

C. Regulated Activities Notification. The Department shall require that all permits issued for regulated activities, as defined in EMC Chapter 14.120, within this zone Classification contain a notice as set forth below.

REGULATED ACTIVITIES NOTIFICATION. This parcel lies within 500 feet of an area identified as Agricultural Lands by Edgewood. A variety of commercial Agricultural Activities occur in the area that may be inconvenient or cause discomfort to area residents. This may arise from the use of agricultural chemicals, including herbicides, pesticides, and fertilizers; or from spraying, pruning, and harvesting which occasionally generate dust, smoke, noise, and odor. The City has established agriculture as a priority use on productive Agricultural Lands, and residents of adjacent property should be prepared to accept such inconveniences or discomfort from normal, necessary farm operations.

APPENDIX C

MINERAL RESOURCE LANDS NOTICING

A. Title Notification.

Parcel Number: ____________________
Site Address: ______________________

NOTICE: This parcel lies within 500 feet of an area of land designated mineral resource lands by the City. A variety of commercial mineral extraction activities occur in the area that may be inconvenient or cause discomfort to area residents. This may arise from the use of heavy equipment, chemicals, and spraying which may generate dust, smoke, and noise associated with the extraction of mineral resources. Edgewood has established mineral resource extraction as a priority use on productive mineral resource lands, and residents of adjacent property should be prepared to accept such inconveniences or discomfort from normal, necessary mineral resource extraction operations.

Signature of Owner

_________________________________

(NOTARY ACKNOWLEDGMENT)

B. Plat Notification. The owner of any site within this overlay district on which a large lot, short subdivision, or formal subdivision is submitted, shall record a notice on the face of the plat. Such notification shall be in the form as set forth below:

MINERAL RESOURCE LANDS PLAT NOTIFICATION. This property lies within 500 feet of an area of land designated mineral resource lands by the City of Edgewood. A variety of
mineral resource extraction activities occur in the area that may be inconvenient or cause discomfort to area residents. This may arise from the use of heavy equipment, chemicals, and spraying which may generate dust, smoke, and noise associated with the extraction of mineral resources. Edgewood has established mineral resource extraction as a priority use on productive mineral resource lands, and residents of adjacent property should be prepared to accept such inconveniences or discomfort from normal, necessary mineral resource extraction lands.

C. Regulated Activities Notification. The Department shall require that all permits issued for regulated activities, as defined in EMC Chapter 14.120, within this designation contain a notice as set forth below:

REGULATED ACTIVITIES NOTIFICATION. This property lies within 500 feet of an area of land designated mineral resource lands by Edgewood. A variety of mineral resource extraction activities occur in the area that may be inconvenient or cause discomfort to area residents. This may arise from the use of chemicals and extraction of minerals, which occasionally generates dust, smoke, noise, and odor. The City has established mineral resource extraction as a priority use on productive mineral resource lands, and residents of adjacent property should be prepared to accept such inconveniences or discomfort from normal, necessary mineral resource extraction lands.

ORDINANCE NO. 17-0513

AN ORDINANCE OF THE CITY OF EDGEWOOD, WASHINGTON, RELATING TO COMPLIANCE WITH THE GROWTH MANAGEMENT ACT (GMA), CHAPTER 36.70A RCW, INCORPORATING THE CITY’S MANDATORY UPDATE OF ITS CRITICAL AREAS REGULATIONS, AS REQUIRED BY RCW 36.70A.130(7)(B); REPEALING TITLE 14 – CRITICAL AREAS OF THE EDGEWOOD MUNICIPAL CODE (EMC) AND REPLACING IT WITH A NEW TITLE 14; REPEALING EMC CHAPTER 15.10, PROVIDING FOR SEVERABILITY; AND ESTABLISHING AN EFFECTIVE DATE.

WHEREAS, the Washington Growth Management Act (GMA) requires the adoption of development regulations that designate and protect Critical Areas in accordance with RCW 36.70A.60 and RCW 37.70A.170; and

WHEREAS, as defined by the GMA in RCW 36.70A.030(5): "Critical areas" include the following areas and ecosystems: (a) Wetlands; (b) areas with a critical recharging effect on aquifers used for potable water; (c) fish and wildlife habitat conservation areas; (d) frequently flooded areas; and (e) geologically hazardous areas; and

WHEREAS, the City of Edgewood is required to review its Critical Area regulations periodically and revise them if needed to comply with the requirements of RCW 36.70A; and

WHEREAS, cities are required to include the best available science in developing policies and development regulations to protect the functions and values of critical areas; and

WHEREAS, The Department of Commerce, Growth Management Services, and the state Department of Ecology have provided helpful guidance on addressing the GMA's best available science requirements; and

WHEREAS, the language contained in EMC Chapter 15.10 – Flood Damage Prevention has been incorporated into the new Title 14 under Chapter 14.80; and

WHEREAS, the City’s SEPA Responsible Official determined that this Ordinance does not have a probable significant adverse impact on the environment and issued a Determination of Nonsignificance (DNS) pursuant to WAC 197-11-340(1) on September 8, 2017; and

WHEREAS, on March 30, 2018, the City sent a copy of this ordinance to the Washington State Department of Commerce, as required by RCW 36.70A.106(1); and

WHEREAS, the Planning Commission held a Public Hearing to receive public testimony regarding the Proposed Code Amendment at their April 16, 2018 meeting; and

WHEREAS, after the public hearing, the Planning Commission submitted a formal recommendation the City Council; and

WHEREAS, the City Council considered this ordinance and the Planning Commission’s recommendation during its regular City Council meeting of May 8, 2018 and postponed action until its regular City Council meeting of July 10, 2018; and
NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF EDGEWOOD, WASHINGTON, DO ORDAIN AS FOLLOWS:

Section 1. Repealers. The current EMC Title 14 – Critical Areas is hereby repealed in its entirety.

Section 2. Repealers. The current EMC Chapter 15.10 – Flood Damage Prevention is hereby repealed in its entirety.

Section 3. Code Replacement. The new EMC Title 14 – Critical Areas, attached as Exhibit A, is hereby adopted by the City Council of the City of Edgewood and shall be codified as such.

Section 4. Severability. Should any section, paragraph, sentence, clause or phrase of this ordinance, or its application to any person or circumstance be declared unconstitutional or otherwise invalid for any reason, or should any portion of this ordinance be preempted by state or federal law or regulation, such decision or preemption shall not affect the validity of the remaining portions of this ordinance or its application to other persons or circumstances.

Section 5. Effective Date and Publication. This ordinance shall take effect and be in full force five (5) days after publication, as provided by law.

SUMMARY STATEMENT:
The Domus Townhome project is a Planned Residential Development (PRD) subdivision located at 10413 11th Street East. This project is a townhome style development comprised of 56 attached single-family residences; one commercial lot; and five tracts. A State Environmental Policy Act (SEPA) Mitigated Determination of Non-significance (MDNS) was issued on January 11, 2017 and modified on June 7, 2017. The Preliminary Plat was approved, subject to conditions, on April 25, 2017. The PRD was approved, subject to conditions, on July 11, 2017. In total, 57 unique conditions were imposed by the City as a part of these approving actions. The Final Plat application was submitted on May 22, 2018 and deemed complete on June 6, 2018. The staff report (Exhibit 3) details the project’s compliance with the approvals issued for the project.

The applicant is finalizing the Covenants, Conditions, Easements Restrictions and Reservations document and performance bonds at this time. These items are required to be submitted not later than 5pm July 10, 2018, or this item will be pulled from the current council agenda. Staff recommends approval of the final plat having reviewed the detail of the referenced permits and all associated approvals, pending the submittal of the bonds and final documents.

Pursuant to EMC Section 16.04.160 and RCW 58.17.170(1), "when the legislative body of the city . . . finds that the subdivision proposed for final plat approval conforms to all terms of the preliminary plat approval and that said subdivision meets the requirements of chapter 58.17 RCW, other applicable state laws and any local ordinances adopted under this chapter which were in effect at the time of preliminary plat approval, it shall suitably inscribe and execute its written approval on the face of the plat."

COUNCIL COMMITTEE REVIEW AND RECOMMENDATION: N/A

RECOMMENDED ACTION: MOTION to adopt Resolution No. 18-0413, approving the Domus Townhomes PRD Final Plat, located at 10413 11th Street East, Edgewood, WA

ALTERNATIVES TO RECOMMENDED ACTION:
1) Do not adopt
2) Forward to Study Session for further review
RESOLUTION NO. 18-0413

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF EDGEWOOD, WASHINGTON, APPROVING THE DOMUS TOWNHOMES PRD FINAL PLAT, LOCATED AT 10413 11TH STREET EAST, EDGEWOOD WASHINGTON

WHEREAS, in October 2016, an application was submitted to the City for a planned residential development (PRD) and preliminary plat to divide 5.83 acres into 55 townhome style attached single-family lots and one commercial tract. The site is split zoned with Commercial and mixed residential 2 (MR2) zoning, located at 10413 11th Street East, Edgewood, WA 98371; and

WHEREAS, the City issued a Mitigated Determination of Nonsignificance (MDNS) on January 11, 2017 and there were no appeals to the MDNS; an Addendum was subsequently issued on June 7, 2017 incorporating minor new information; and

WHEREAS, on February 9, 2017, the Hearing Examiner held a hearing on the planned residential development and issued a recommendation on February 27, 2017 for approval subject to 56 conditions; and

WHEREAS, April 24, 2017, the Hearing Examiner held a hearing on the preliminary plat, and on April 25, 2017, the Hearing Examiner granted preliminary plat approval, subject to fifty-seven (57) conditions; and

WHEREAS, on June 13, 2017, the Edgewood City Council considered the PRD application in a closed record hearing, and voted to continue the hearing until June 27, 2017; and

WHEREAS, on June 27, 2017, the Edgewood City Council held the continued closed record hearing on the PRD application, voted to approve it subject to conditions; and

WHEREAS, on July 11, 2017, the Edgewood City Council voted to approve the PRD under Resolution 17-0380 incorporating its findings and conclusions supporting its decision;

WHEREAS, on May 22, 2018, an application was submitted to the City for final plat approval, this application was deemed complete by the City on June 6, 2018; and

WHEREAS, the final plat application has been reviewed by relevant City departments and on June 22, 2018 the City requested revisions to the Final plat map, CC&R document, and documented several outstanding items to be bonded for or completed prior to final plat approval; and

WHEREAS, the final plat map was resubmitted for City review on June 28, 2018; and
WHEREAS, City staff reviewed the revised final plat map on June 29, 2018 and issued a revised letter to the applicant documenting remaining revisions needed on the Final plat and remaining items to be addressed; and

WHEREAS, on July 5, 2018, revised materials including an updated final plat map, attached as Exhibit A, attached hereto and incorporated herein by this reference as set forth in full, were provided to the City for review and circulated for final approval; and

WHEREAS, the City of Edgewood Public Works Director has certified through the submittal of the City Engineer’s Certificate of Improvements in accordance with EMC 16.04.110 that substantial completion of the required improvements has been provided through construction and with the submittal of the performance bonds associated with Domus Townhomes PRD subject to conditions; and

WHEREAS, the performance bonds associated with the Domus Townhomes PRD were accepted by the City on ________________; and

WHEREAS, the final plat application has been reviewed by relevant City departments in a staff report dated July 5, 2018 and attached as Exhibit B;

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF EDGEWOOD, WASHINGTON, HEREBY RESOLVES AS FOLLOWS:

Section 1. Findings. The Edgewood City Council makes the following findings with regard to the Domus Townhomes final plat:

A. In the City Staff Report dated June 5, 2018, and attached to this Resolution as Exhibit B, the City of Edgewood staff including the City’s engineer have determined that the conditions of the PRD, preliminary plat and SEPA mitigations have been complied with as discussed therein.

B. The Domus Townhomes PRD Plat, has posted performance bonding for minor outstanding improvements located east of 104th. The bond for minor outstanding improvements is not released by this approval and which the applicant is required to complete prior to the final inspection and occupancy of the first residential or commercial structure within the subdivision or three years whichever is sooner.

C. The final plat as conditioned and with the performance posted for the Domus Townhomes PRD Final Plat, satisfies all applicable state and local requirements for final plat approval, including without limitation all applicable requirements set forth in Chapter 16.04 EMC and Chapter 58.17 RCW.

D. The Domus Townhomes PRD Final Plat, as conditioned, is in conformity with all applicable zoning ordinances and land use controls.
D. The Domus Townhomes PRD Final Plat, as conditioned, is in conformity with all applicable zoning ordinances and land use controls.

E. The Domus Townhomes PRD Final Plat, as conditioned, is supported by all applicable staff and agency approvals, attestations, certifications, and/or recommendations as required by state and local regulations.

F. The Domus Townhomes PRD Final Plat complies with the conditions of the Hearing Examiner’s decision.

G. The Domus Townhomes PRD Final Plat has been processed and reviewed in compliance with all applicable state and local procedural requirements.

Section 2. Final Plat Approval. Based upon the above findings, the City Council of Edgewood hereby adopts the Staff Report dated July 5, 2018 by reference attached as Exhibit B, and APPROVES the final plat of The Domus Townhomes PRD subdivision subject to completion of the conditions as bonded and identified above, and authorizes and directs staff and the Mayor to inscribe and execute the Council’s written approval on the face of the plat. The original of the plat shall be filed for record by the City at the applicant’s cost with the Pierce County Auditor’s office.

Section 3. Severability. If any section, sentence, clause or phrase of this resolution should be held to be invalid or unconstitutional by a court of competent jurisdiction, such invalidity or unconstitutionality shall not affect the validity or constitutionality of any other section, sentence, clause or phrase of this resolution.

Section 4. Effective Date. This resolution will take effect immediately upon passage by the City Council

PASSED THIS 10TH DAY OF JULY, 2018

Daryl Eidinger, Mayor

ATTEST:

Rachel Pitzel, City Clerk

APPROVED AS TO FORM:

Carol A. Morris, City Attorney
Exhibit A

The Domus Townhomes PRD Final Plat
Staff Report and Recommendation
Domus Townhomes PRD Subdivision Final Plat Approval

To: Edgewood City Council
From: Kristin Moerler, Senior Planner
Date: July 5, 2018
Subject: Final Plat Approval for Domus Townhomes Subdivision

NAME OF SUBDIVISION: Domus Townhomes PRD Subdivision

NUMBER OF LOTS: One Commercial lot and 55 single family residential lots.

CITY FILE NUMBER: 18-1181

CITY FILE NUMBER FOR PRELIMINARY PLAT APPROVAL: 16-5633

LOCATION: 10413 11th Street East, Edgewood, WA 98372

TAX PARCELS: 0420033084

APPLICANT: Domus Homes LLC

PROPERTY OWNER: Domus Homes LLC

LEGAL DESCRIPTION: THE NORTH HALF OF THE SOUTH HALF OF THE NORTHWEST QUARTER OF THE SOUTHWEST QUARTER OF SECTION 3, TOWNSHIP 20 NORTH, RANGE 4 EAST OF WILLAMETTE MERIDIAN, PIERCE COUNTY, WASHINGTON; EXCEPT THE WEST 683.6 FEET, THEREOF; TOGETHER WITH A NON-EXCLUSIVE EASEMENT FOR INGRESS AND EGRESS CREATED BY INSTRUMENTS RECORDED UNDER RECORDING NUMBERS 8311010014 AND 8404160011; SITUATE IN THE CITY OF EDGEWOOD, COUNTY OF PIERCE, STATE OF WASHINGTON.

Zoning: C – Commercial and MR-2 – Mixed Residential Two
Comprehensive Plan Designation:
C – Commercial and MR-2 – Mixed Residential Two

Critical Areas:
The property contains one Category III wetland.

SEPA: The City of Edgewood issued a Final Mitigated Determination of Nonsignificance (MDNS) on January 11, 2018 and there were no appeals to the MDNS. An Addendum was additionally issued on June 7, 2017 addressing discrepancies in the issued MDNS and the project.

PRELIMINARY PLAT APPROVAL: The City of Edgewood Hearing Examiner granted preliminary approval subject to fifty-seven (57) conditions on April 25, 2017. No appeals were submitted following issuance of this decision. Please be advised that this project was additionally approved as a Planned Residential Development (PRD) on July 11, 2017. The analysis within this staff report includes responses to all conditions placed on the project.

FINAL PLAT APPLICATION: Application was received on May 22, 2018. The City deemed the application complete on June 6, 2018.

ATTACHMENTS:
1. The City of Edgewood Engineer’s Certificate of Completion
2. Final Plat Map attached as Exhibit A to Resolution No. 18-0413

I. APPROVAL PROCESS
The final plat is reviewed by staff for conformance with preliminary plat approval conditions and all applicable laws and regulations. In this report, City staff is submitting written findings and a recommendation to the City Council for final plat approval.

Pursuant to EMC Section 16.04.160 and RCW 58.17.170(1), "when the legislative body of the city . . . finds that the subdivision proposed for final plat approval conforms to all terms of the preliminary plat approval and that said subdivision meets the requirements of chapter 58.17 RCW, other applicable state laws and any local ordinances adopted under this chapter which were in effect at the time of preliminary plat approval, it shall suitably inscribe and execute its written approval on the face of the plat."

II. PROJECT ANALYSIS
The proposed subdivision is determined by staff to meet the criteria established in the Edgewood zoning and subdivision ordinances, the City of Edgewood Comprehensive Plan and to be generally consistent with the requirements and conditions of the preliminary plat approval. The legal requirements as well as the hearing examiner’s conditions are set forth below, together with staff’s recommended findings on each.
Please be advised that current staff has reviewed the project and permit processing for this case and cannot make full findings of consistency with several conditions of approval that were imposed on this project. Where these occur they have been noted.

A. Conformance with the City of Edgewood Zoning Ordinance (EMC Title 18)
The zoning designation of the property is Commercial on the western portion of the site and MR2 on the easterly portion. The preliminary plat and PRD approvals detail the project’s compliance with the zoning designations applicable to the site. The project includes 55 townhome style attached single family residences and one commercial lot. The commercial lot is provided to reserve area for commercial uses within the project consistent with the Commercial zone requirements in EMC 18.80.080, this lot will require additional review and permitting when a use is proposed. The proposed final plat provides lots consistent with the preliminary plat approval. Parking, landscaping, and tree preservation/replacement requirements have been met pursuant to EMC 18.90.130, 18.90.090, and 18.90.180.

B. Conformance with the City of Edgewood Subdivision Ordinance (EMC Title 16) and Issuance of the Hearing Examiner’s conditions of approval.
The applicant submitted a final plat application in conformance with 16.04.100-16.04.180. Staff finds the proposed subdivision conforms to EMC Title 16.

C. Conformance with the Comprehensive Plan
The project was authorized as a Planned Residential Development which allowed for a blending of residential density requirements within the subject zones. The Commercial designation accommodates a wide range of commercial development, such as retail and service businesses. The designation also allows for multifamily development and single-family attached, such as townhouses (as a conditional use). The Mixed Residential Two designation allows for residential, civic, and utility uses but limits commercial uses. This designation allows for single-family attached or detached dwellings and multifamily dwelling units. Staff finds the proposed subdivision is in conformance with the Comprehensive Plan.

D. Conformance with the City of Edgewood Engineering Requirements
The City’s Public Works staff and City Engineer have reviewed the civil design, construction drawings and final plat application with the purpose to promote the public health, safety, and welfare in accordance with the standards established by the state and the City to provide and promote safe, convenient vehicle access on public and private streets, to facilitate the adequate provision of public water and sewer service and for the proper handling of stormwater.

The City Engineer issued a City Engineer’s Certificate of Improvements for Domus Townhomes file #17-1173 for site development improvements in accordance with chapter 16.04 EMC on May 11, 2018. The letter authorizes bonding for the final lift of asphalt, sidewalks and associated ramps adjacent to the private roadways.
and irrigation and off-site improvements to 11th street. It additionally listed eight items to be provided to the City prior to final plat recording.

Bonds have been submitted pursuant to the Engineers Certificate for the maintenance of 104th. Bonds at the time of this report for the remaining minor improvements east of 104th and for wetland mitigation maintenance and monitoring have been approved and are being finalized by the applicant at this time. The remaining bonds will be provided prior to Council review of this item, if not submitted prior to the close of business on July 10, 2018, staff will pull the project from the Council agenda.

C. Conformance with Hearing Examiner’s conditions of approval
The following conditions include all SEPA conditions, all PRD conditions and all Subdivision conditions imposed by the City on the Domus Townhomes PRD Project.

1. A Site Development Permit shall be obtained from the City of Edgewood and a pre-construction meeting shall be held prior to beginning construction.

   *Site Development Permit #17-1173 was approved for issuance and the pre-construction meeting was held on August 29, 2017.*

2. The applicant shall provide adequate site control measures for erosion control for the proposed movement of up to 19,000 cubic yards of soil. If soil is proposed to be moved on or off of the site during site development, the applicant shall provide a trip plan showing the route of travel. Any routes that have been damaged and require repair based on actions associated with the project shall be repaired at the expense of the applicant to pre-site development condition.

   *The approved Site Development Permit contains a Temporary Erosion and Sediment Control Plan that was deemed adequate. Soils were substantially retained on the project site, so a trip plan was not requested by staff. The calculation for the amount of approved grading was determined to be in error and a SEPA Addendum was issued on June 7, 2017 authorizing up to 40,000 cubic yards. The calculation error is understood to relate to errors in the application that omitted the stormwater retention facilities located below grade. The amounts typically relate to an amount of soil that is being trucked into or out of the site, here the site was essentially balanced so while the amount of soil moved on the site was increased, the amount of soils moved on or off the site was far lower than anticipated when the condition was written.*

3. During construction, the stockpiling of excavated materials or backfill materials shall meet the TESC plans and specifications as approved. Material stockpile locations shall be approved prior to stockpiling of soils by the City of Edgewood.

   *All stockpile locations were approved by City staff during construction, as required. Should additional needs for stockpiling of soils exist during building permit construction, such piles will require review and approval.*
4. In accordance with EMC Chapter 13.25, all oils, hydraulic fluids, fuels, other petroleum products, paints, solvents, and other deleterious materials must be contained onsite during construction, and removed in a manner that will prevent their discharge from the site, either to surface waters or soils. The cleanup of spills shall take precedence over other work on the site.

EMC 13.25 was adhered to during construction activity, to our knowledge. Construction of the residences and commercial lot within the development will continue to be subject to this requirement moving forward.

5. During construction, if any contaminated soil is suspected or discovered, testing of it shall be removed and sent to approved sites and appropriate documentation of the disposal shall be made available upon request.

There were no contaminated soils discovered or suspected during construction, to our knowledge. Construction of the residences and commercial lot within the development will continue to be subject to this requirement moving forward.

6. Dust control measures shall be performed during site development and any home construction, as needed due to soil conditions during periods of dry weather. Dust control measures shall be addressed in the SWPPP.

Appropriate dust control measures have been and continue to be employed by the contractor. Construction of the residences and commercial lot within the development will continue to be subject to this requirement moving forward.

7. Appropriate provisions shall be made to minimize the tracking of sediment by construction vehicles onto paved public roads during site development and home construction. If sediment is deposited, it shall be cleaned by the end of each working day by shoveling or sweeping. Water cleaning shall only be done after the area has been shoveled out or swept.

Track out of sediment from construction activity has been minimized as required. Construction of the residences and commercial lot within the development will continue to be subject to this requirement moving forward.

8. Provisions (tire washings of vehicles or approved alternatives (e.g. quarry spalls) shall be made to minimize the tracking of sediment by construction vehicles onto paved public roads during site development and apartment home construction. If sediment is deposited, it shall be cleaned every day by shoveling or sweeping. Water cleaning shall only be done after the area has been shoveled out or swept.

Track out of sediment from construction activity has been minimized as required, and additional measures will be employed during building construction as needed.
9. All construction activity during site development shall be limited by the hours of operation from 7 a.m. to 5 p.m., Monday through Friday. Special provisions to work beyond the established hours may be permitted through written request to the Mayor or Designee a minimum of one week prior to the special hours or days requested.

Construction activity has adhered to the prescribed schedule, and special provisions have been granted on a few occasions. Construction of the residences and commercial lot within the development will continue to be subject to this requirement moving forward.

Stormwater:

10. Compliance with EMC Chapters 13.05 (Stormwater Manual – Site Development Regulations) and 13.25 (Illicit Stormwater Discharges) is required during and following any site development activity.

The contractor and applicant have complied with EMC 13.05 and 13.25 thus far in the development of the subdivision, construction of the residences and commercial lot will continue to be subject to this requirement moving forward.

11. Engineered stormwater drainage facilities are required for all disturbed areas of the project site. The applicant shall provide a Stormwater Site Plan in accordance with EMC Chapter 13.05 and the 2005 DOE Stormwater Management Manual for Western Washington (SMMWW) at the time of site development. The plan shall include a Stormwater Pollution Prevention Plan (SWPPP) addressing Minimum Requirement Two for all proposed development. The applicant shall provide engineering plans for City approval prior to site development approval.

A Stormwater Site Plan was reviewed for compliance with EMC 13.05 and approved, as required.

12. A Temporary Erosion and Sedimentation Control (TESC) plan must be submitted with the SWPPP prior to site development permit issuance, approved by the City Engineer, and implemented during site development and any future home construction. Said plan and SWPPP must adequately propose BMP measures to address the movement of 40,000 cubic yards of earth, as proposed. If removal of material is necessary, the applicant shall prepare a haul route plan for review and approval. Prior to approval of site development permits, the applicant shall prepare a haul route plan for review and approval for import of material from an approved off-site source.

The Temporary Erosion and Sediment Control Plan was reviewed with the approved Stormwater Site Plan. Soils were substantially retained on the project site, so a trip plan was not requested by staff.
13. As more than one (1) acre of land disturbance is expected, the applicant shall acquire a National Pollution Discharge Elimination System (NPDES) permit and provide a copy of the permit to the City of Edgewood prior to site development permit issuance. A Certified Erosion and Sediment Control Lead (CESCL) shall be present throughout the construction of site development improvements, implement and maintain the SWPPP, and provide regular reports to the City of Edgewood.

NPDES coverage was issued by the Department of Ecology on July 24, 2017, under permit number WAR305642. A CESCL with Georesources was present regularly throughout the duration of construction maintaining the SWPPP. The applicant has submitted twenty five CESCL reports during this review to support that such reports were prepared during the construction, although they were not filed with the City at the time of preparation.

14. Any proposed surface water discharged from the project site (including areas bypassing proposed facilities) must meet all of the Minimum Requirements of the SMMWW, with any stormwater modeling of pre-development conditions assuming “forested” land coverage and using the “42 IN EAST” precip / evap station (or equivalent). Any dispersion facilities proposed for stormwater mitigation purposes (including overflows) must demonstrate adequate flowpath length on the project site and outside of any sensitive areas (EMC 13.05.170).

The approved Stormwater Site Plan meets all the prescribed requirements.

15. As discharge from the site is proposed and a potential capacity problem has been identified within one-quarter mile of the proposed improvements, a complete downstream analysis consistent with Volume I, Section 2.6.2 of the 2005 DOE SMMWW must be prepared and submitted with the site development application. This analysis must clearly identify existing drainage problems downstream (based on existing tributary flows), evaluate the capacity of the existing downstream conveyance, consider other tributary properties in the capacity analysis, and propose measure(s) to ensure downstream property will not be adversely impacted by the proposal.

A downstream analysis was provided by the project engineer that satisfactorily resolved any conveyance capacity concerns.

16. If onsite retention is proposed, in-situ infiltration testing must be performed on the project site to determine the design infiltration rate, consistent with the 2005 DOE SMMWW, 2012 LID Manual, or the 2015 Pierce County Manual’s Falling Head Test (Appendix III-A). All applicable correction factors must be applied to the chosen infiltration test method. All retention facilities shall be modeled with an overflow riser, even if no overflow is provided or proposed, to properly simulate and identify any potential for overflow.
In-situ testing was performed to determine the design infiltration rate, as required.

17. The applicant’s geotechnical engineer shall verify and confirm soil conditions and design infiltration rates during and following construction of any proposed stormwater retention BMPs, including facilities designed using Low Impact Development (LID) techniques. If conditions are different than design, the applicant’s geotechnical engineer shall provide a revised infiltration rate and the stormwater retention BMPs shall be redesigned accordingly. Revisions shall be submitted to the City of Edgewood and approved prior to implementation and final construction approval. Corrections and/or design errors may require revisions to the plat.

The applicant’s geotechnical engineer verified and confirmed soil conditions and design infiltration rates during construction as required.

18. The applicant shall provide right of entry by the City of Edgewood for all stormwater facilities prior to final site development approval. If constructed conditions are found to be different than those designed and approved, the applicant’s engineer shall revise the stormwater system accordingly. Any revisions shall be provided to the City of Edgewood and approved prior to implementation and final site development construction approval. Corrections and/or design errors may require revisions to the plat.

A Surface Water Maintenance Agreement has been executed and will be recorded against the property title at the time of final plat recording.

Street/Road:

19. The applicant shall submit street improvement construction plans for the proposed public parallel and onsite loop private roadways, for review and approval by the City Engineer, prior to final plat submittal. Improvements shall be designed in compliance with EMC Title 12 (Streets, Sidewalks and Public Places), which adopts Pierce County Code (PCC) Title 12 by reference. The specific cross section shall be in accordance with the “Manual on Design Guidelines and Specifications for Road and Bridge Construction in Pierce County,” and Pierce County Standard Drawing PC.A3.2 and as described herein.

Street improvement construction plans were submitted, reviewed, and approved under the Site Development Permit.

20. The public parallel road (104th Avenue East) shall be designed in accordance with Ordinance 07-0279, regarding the Meridian Corridor Roadway Network and meeting the City’s Commercial Collector Cross Section, with cement concrete barrier curb and gutter, buffer and sidewalk with closed drainage. The public road right-of-way
shall be 50-foot minimum, with a minimum 22-foot drive lane, 4.5-foot landscape buffers, 6-foot concrete sidewalks, 1.5-foot concrete barrier curb and gutter with storm drainage, and a minimum asphalt road surface thickness of 3 inches. The applicant may propose 8-foot concrete parallel parking strips on one or both sides of the road. The applicant shall dedicate the public road right-of-way to the City of Edgewood upon approval and acceptance of the construction and at the time of final plat approval.

**104th Avenue East was designed as prescribed, reviewed and approved under the Site Development Permit. The right-of-way for 104th Avenue East will be dedicated upon recording of the final plat.**

21. Prior to final site development construction approval the applicant shall dedicate the public road (104th Avenue East) Right-of-Way and the approved public road system to the City of Edgewood.

**The right-of-way for 104th Avenue East will be dedicated upon recording of the final plat.**

22. The onsite private road shall include, at minimum, a 20-foot drive lane per City of Edgewood Local Street cross-section and PCC Section 17B.20.040, Table 17B.20.040-3, a minimum-1.5-foot curb and gutter section on both sides of the road, a stormwater management system per EMC 13.05, a 4-foot landscaping strip, and a 5-foot concrete sidewalk. Any dead-end segment of road with centerline length over 150 feet must have an EVA turnaround. The site development plans must be submitted to the City of Edgewood and be approved prior to site development commencement.

**The onsite private roads were designed as prescribed, reviewed and approved under the Site Development Permit. There are no dead-end segments with a centerline length over 150 feet.**

23. Tract ‘C’ (Private Road Tract) must include the entire width of the roadway improvements, from back-of-sidewalk to back-of-sidewalk, with a minimum width of 40 feet. This road improvement area may be designated as a separate tract and/or an easement over the individual lots.

**Tract ‘C’ meets the prescribed requirements as presented on the final plat map.**

24. The applicant shall submit street improvement construction plans for the new roadway intersections to the proposed private road from the public parallel road, for review and approval by the City Engineer, prior to final plat submittal. The intersections shall be constructed in accordance with EMC Title 12, which adopts by PCC Title 17B, including Section 17B.10.060, the “Manual on Design Guidelines and Specifications for Road and Bridge Construction in Pierce County.” Details on the
roadway intersection improvements may be found in Chapter 5: Access and Intersections.

_The intersections were designed as prescribed, reviewed and approved under the Site Development Permit._

25. The applicant shall submit offsite access improvement construction plans for 11th Street East, for review and approval by the City Engineer, prior to final plat submittal. Improvements shall include, at minimum, a 20-foot drive lane per City of Edgewood Local Street cross-section and PCC Section 17B.20.040, Table 17B.20.040-3, a minimum-1.5-foot curb and gutter section on both sides of the road, a stormwater management system per EMC 13.05, and a 5-foot gravel pathway for pedestrian access on the north side of the road, all designed in accordance with EMC Title 12. For ease of stormwater facility construction, the access may be sloped all to one side (north preferred).

_The offsite 11th Street East private road was designed as prescribed, reviewed and approved under the Site Development Permit._

26. The applicant shall submit lighting plans for the project site, consistent with City of Edgewood design standards, for review and approval by the City Engineer, prior to final short plat submittal. Vehicle-level street lighting shall be provided at the three proposed intersections and near the southeast corner of the project, per PCC 17B.20.005, Table 17B.20.005-2, as incorporated in EMC Title 12. Installation, utility charges, and ongoing maintenance of private roadway street lighting shall be the responsibility of the developer and future homeowner’s association (HOA). Street lights in the parallel road (104th Avenue East) ROW shall become City property upon dedication of the street to the City and the City will take responsibility for this street lighting in the public ROW.

_The lighting has been designed as prescribed, reviewed and approved under the Site Development Permit. The lighting on 104th has been paid for and is presently pending construction by PSE crews. Further the applicant has bonded for installation of the lighting required along the private roadways._

27. The applicant shall submit a plan detailing all roadway signs (in and adjacent to public right-of-way) in accordance with Manual on Uniform Traffic Control Devices (MUTCD) standards, for review and approval by the City Engineer, prior to site development permit issuance.

_Roadway signs in and adjacent to 104th Avenue East (public right-of-way) have been installed per MUTCD standards._

28. Patterned concrete crosswalks shall be installed at intersections with the private road system and 104th Avenue East (north-south parallel road) on the east side of the
104th Avenue East providing a continuous pedestrian walkway along the east side of the 104th Avenue East from the south property line to the north property line of the development. Additional crosswalks shall be provided crossing 104th Avenue East for access to the park/stormwater tract and to provide a continuous east-west pedestrian walkway on the north side of 11th Street East across 104th Avenue East. The patterned concrete crosswalks shall be installed per the City of Edgewood Roadway Design Standards, Rodway Detail Drawing “Detail C.”

*The crosswalks have been designed as prescribed, reviewed, approved, and installed under the Site Development Permit.*

29. The design and construction of the new roadways and pedestrian improvements shall meet or exceed current Americans with Disabilities Act (ADA) requirements. This includes but is not limited to design of sidewalk transitions, curb ramps, street crossings, and lighting.

*The aforementioned facilities have been designed and installed per ADA requirements in the western portion of the site (104\(^{th}\) and west thereof). The sidewalks associated with the private roads are presently designed and bonded for.*

30. The applicant shall coordinate with the Puyallup School District regarding the location and construction of future bus stops within the project area prior to site development approval and shall provide a letter from the Puyallup School District providing location approval at the time of site development application.

*The applicant has provided bus stop waiting area south of the project within public right-of-way, as discussed with and approved by the Puyallup School District.*

**Tree Retention:**

31. Any significant trees to be retained that may be affected by grading activity shall incorporate tree wells in accordance EMC 18.90.180(2)(e)(i)(G). An area free of disturbance, corresponding to the dripline of the significant tree’s canopy shall be identified and protected during the construction stage with a temporary three-foot-high chain-link or plastic net fence. No impervious surfaces, fill, excavation, storage of construction materials, operations or parking of vehicles shall be permitted within the area defined by such fencing or stakes.

*The significant trees retained on the site are located within the wetland buffer at the outer edge of the site. Grading was revised during the site development plan review to avoid grade changes in the vicinity of retained trees. The wetland and significant trees were protected during construction by fencing. There is no evidence of fill, excavation, storage of construction materials, operations, or parking of vehicles within the vicinity of retained trees.*
32. The applicant shall ensure protection of off-site trees on adjacent properties that have tree root systems that encroach onto the project property.

No tree impacts were documented during the construction. Staff has walked the perimeter of the site to review the existing trees along the property line for impacts from construction. Staff observed no evidence of impacts to trees on the adjacent properties.

33. Any installed plant material that dies shall be replaced within the spring or fall growing season following plant loss, but not to exceed three months from the time of loss. In order to guarantee performance of the landscaping requirements, cash bonds or other appropriate security (including letters of credit) in the amount of 125 percent of the estimated cost of the required landscaping shall be required if replacement landscaping is not installed prior to issuance of occupancy permits.

Landscaping was installed and inspected in May of 2018 at the site west of 104th, since that inspection a handful of plants have died and require replacement. The applicant is working with their landscaper to get these replaced per their warranty. This area will be re-inspected prior to occupancy of the residential units. Landscaping east of 104th is included in the performance bond for the site.

Other Requirements:

34. A Pre-Construction Meeting with the City of Edgewood shall be held prior to any site development activity and scheduled at least 72 hours in advance. All construction activity shall occur between 7 a.m. and 5 p.m., Monday through Friday. Special provisions to work beyond these hours may be permitted through written request to the Mayor (or designee) a minimum of 48 hours before the special hours or days requested.

As stated above, Site Development Permit #17-1173 was approved for issuance and the pre-construction meeting was held on August 29, 2017.

35. The applicant shall place permanent, clearly visible, wetland boundary buffer signs at the edge of the buffer per EMC 14.30 – Wetlands prior to any earth moving activities.

Staff inspection notes do not indicate if wetland signs were installed prior to the start of work at the site, current planning staff cannot confirm if such signs existed. Fencing to prevent impacts was installed prior to start of work. As a part of the project, split rail fencing has been installed with buffer signage as a part of the wetland mitigation work inspected at the site in May of 2018.

36. A Homeowners’ Association (HOA) shall be created to address all private improvements within the proposed plat including storm/park tract and stormwater...
facilities, private streets, curbs and gutters, street lighting, landscaping, and irrigation. Associated Covenants, Conditions and Restrictions (CCRs) shall be submitted at the time of final plat for review and approval. Once approved by the City, the CCRs shall be recorded separately at the time of final plat recording and the recording number shall be hand-written on the face of the final plat and the final plat number hand-written on the cover sheet of the CCRs as cross-reference.

The applicant has submitted CC&Rs for review and approval to the City. Minor revisions were requested on June 22, 2018 to address the stormwater maintenance. Staff reviewed the revised CC&R document on July 5, 2018 and found minor revisions requiring correction and review prior to recording to assure consistency with the Condition. The final CC&Rs will be provided to staff prior to the Council review for final acceptance and shall be recorded at the time of the final plat to allow cross referencing between the two documents.

37. The applicant shall coordinate and receive approval from Mt. View-Edgewood Water (MTVE) Company prior to final site development approval. The applicant shall provide water service improvements in accordance with the MTVE requirements and provide MTVE approval to the City prior to final site development approval.

The file contains no documentation as to the review of MTVE Water Company that would allow staff at this time to confirm this was in place at the time of site development approval. A letter of water availability was provided for this project at the time of application (included Exhibit K to the Subdivision approval). MTVE has commented on the final plat application that water mains and hydrants are accepted and in service at this stage which supports that the applicant coordinated with and received approval from MTVE Water prior to the installation of water mains.

38. The applicant shall pay School Impact Fees to the Puyallup School District in accordance with EMC 4.10.

School impact fees are paid at the time of building permit submittal which cannot occur until after final plat approval.

39. The applicant shall pay Park Impact Fees in accordance with EMC 4.20.

Park impact fees are paid at the time of building permit submittal which cannot occur until after final plat approval.

40. The applicant shall pay Traffic Impact fees in accordance with EMC 4.30.
Traffic impact fees are paid at the time of building permit submittal which cannot occur until after final plat approval.

41. If significant changes are made to the proposal, additional documentation and study will be required to be submitted to the City and supplemental SEPA environmental review will be required.

No substantial changes were proposed that would create a need to re-open the SEPA review for this site. A calculation error related to the scope of the grading did yield an addendum that was issued revising the allowed amount of grading under this permit as initial calculations were based on the amount of earth moved, not the amount of cut and fill per code.

Conditions added by Hearing Examiner in PRD Recommendation (only includes new conditions):

1. The Mitigated Determination of Nonsignificance was issued on January 11, 2017. The conditions are hereby incorporated fully and shall be incorporated into the design of the project and considered conditions of the final PRD approval.

   The MDNS conditions are integrated into the site development permit. Further the conditions of the MDNS are included in this condition review and are responded to herein.

9. The applicant shall submit and receive final design review approval prior to site development application in accordance with EMC 18.95.

   Design Review was submitted with the initial application for the PRD on October 28, 2016. It is not clear why staff included a condition of approval for a permit that was on file at the time the condition was written. It appears to have been a standard condition that was imposed under SEPA to reflect that Design Review is required for the project. Further there is no approval for the design review that was submitted in the file. The last action staff has located related to design review is the review letter dated January 11, 2017 which is referenced in condition 16 below.

10. If the applicant proposes fences on individual lots, the applicant shall submit a Sight Distance Study that evaluates the impact of proposed lot fences on roadway sight distance for review by the City. The study shall be submitted and reviewed prior to issuance of the site development permit.

   Site distance has not been an issue, as no fencing requiring such review has been proposed. Fencing of the individual lots if proposed in the future would be required to comply with the provision to provide a site distance study pursuant to EMC 18.90.060.
11. The applicant shall provide a copy of the facility maintenance plan prior to permit issuance of the first apartment building to address all common spaces as well as building maintenance and shall specifically include provisions regarding stormwater maintenance referencing the Operation and Maintenance (O&M) Manual prepared by the Engineer of Record, landscaping, parking lot, site lighting and general building maintenance and lighting maintenance. The manual shall include:

- A landscape maintenance plan including irrigation system maintenance.
- A parking lot maintenance plan for striping and future overlay/coating.
- Reference to the International Property Maintenance Code requiring regular maintenance of the project's structures, and associated appurtenances.

This requirement is intended to be met prior to building permit issuance for the first of the townhome buildings. As the applicant cannot submit a building permit application for any new structures until after final plat pursuant to EMC 16.01.180(B), this condition will be imposed at the time of the first building permit application review.

12. Addresses for individual buildings shall be obtained from the City prior to submittal for the final plat. Addresses shall be assigned and displayed in accordance with the International Fire Code (IFC).

Addresses have been issued to the applicant and are shown on page 3 of the final plat document. No address signs have been installed as no structures have been constructed at the site. Such signage is required to be installed prior to occupancy of a building.

13. The applicant shall comply with the comments provided by the Mountain View Edgewood Water Company found in Part 4 – Agency/Public Comments, Section b, above.

Mike Craig with MTVE Water Company has commented on the final plat application that the water system installed for the Domus project is in service and accepted. It is presumed that the applicant has satisfactorily complied with the detailed comments referenced in this condition.

14. The applicant shall comply with the comments provided by Lakehaven Utility District found in Part 4 – Agency/Public Comments, Section c, above.

Lakehaven Utility District operates sewers on behalf of Edgewood. The City has issued a Letter of Sewer Availability documenting that sewer is available to the
The condition reflects details required to be addressed in the development application required by Lakehaven. The City file does not reflect the details of the Lakehaven review. However the pre-construction meeting was coordinated to include both Lakehaven and City staff which reflects that the plans were reviewed and coordinated. Confirmation has been received from Lakehaven that the sewers are installed per the requirements referenced above and accepted.

15. The applicant shall comply with the comments provided by East Pierce Fire and Rescue found in Part 4 – Agency/Public Comments, Section d, above.

The referenced comments reflect details typically reviewed at the time of Site Development for the plat related to access requirements and hydrant locations as well as comments related to the construction of the residences. The fire marshal has reviewed the final plat and associated site development plans and determined that the fire requirements have been met for final plat approval.

16. The applicant submitted a Design Standards Review Checklist as prescribed within EMC 18.95 including documents regarding building design, landscaping and irrigation. A Design Review Letter requesting additional information be provided was sent to the applicant on January 10, 2017.

It appears this condition was intended as a lead into the design conditions that occur in #17, 18, 19, and 20 which follow. This condition does not direct the applicant to take any action it is reflective of the status of design review at the time of public hearing. As stated above this is the last action staff was able to locate in the design folder or file for this case. The applicant has been asked to speak to what they understood or can document occurred during this time relative to design.

17. The applicant shall provide an updated site plan including patterned crosswalks that meet the Edgewood Meridian Avenue/State Route 161 corridor parallel road standards (Ordinance No. 07-0279). The patterned sidewalks shall connect sidewalks along the east side of the parallel road, crossing the private road connections to the north-south parallel road. A patterned crosswalk shall also cross the parallel road to the proposed park/stormwater tract and cross the parallel road at the SE corner of the Commercial tract to the SW corner of the project site tract.

Patterned crosswalks were shown in the site development plans. The crosswalks were approved and installed on the east side of the public road (104th) at the private street connections and across the public road at the northern end of the park/storm tract and as the SE corner of lot 1, the commercial lot as required.

18. The color elevations indicate differentiating materials may be used on the buildings. In addition to the color schemes provided, the applicant shall provide material
samples, material sample photos and material information, or weblinks to information on proposed differentiating material that is proposed.

Staff is unable to locate any such response or approval related to this item. It is not clear if prior staff did not document such information being submitted and reviewed, or what direction prior staff gave the applicant regarding this item. Staff expects that design review of the buildings will be finalized as a part of the building permit review for the proposed buildings similar to the review of apartments or single family homes within a typical subdivision.

19. The applicant shall submit rear elevations for buildings 4, 5, 7, and 8 on the construction plans for review and approval by the City.

Staff is unable to locate any such response or approval related to this item. It is not clear if prior staff did not document such information being submitted and reviewed, or what direction prior staff gave the applicant regarding this item. Staff expects that design review of the buildings will be finalized as a part of the building permit review for the proposed buildings similar to the review of apartments or single family homes within a typical subdivision.

20. The applicant shall install screening, composed of a free-standing wall or trellis and landscaping, in front of the electrical meters proposed for the end walls of buildings 1, 4, and 7 facing the proposed north-south public road per EMC 18.95.040 I.2.b. 

This provision reflects the requirement in EMC 18.95.040 I.2.b to screen such areas from public view. As the applicant has yet to construct the structures within this PRD, no such screens exist or are needed at this time. Staff will review the development plans for such elements when building permits are submitted and assure such screening is provided.

21. The applicant shall install landscaping around the perimeter of the site per EMC 18.90.090. Type IV (25-foot solid barrier) landscaping shall be installed along the property boundaries with single family zoned properties (the east boundary of the site), and along the north and south property lines in the MR-2 zone section of the subject property. The applicant shall install Type I (15 foot Vegetative Buffer) landscaping along the property boundary of the commercially zoned portion of the site.

The landscaping plans provide more than the minimum required trees and shrubs specified for a type IV landscape area on the eastern side of the site. Further the plans reflect type IV landscaping on the north and south boundaries of the site with depths of 15 feet on the north boundary and 10 feet on the south. It is not clear why the condition called out a 25 foot type IV buffer for this area as it is not the correct landscape type per the code, 15 feet is prescribed in 18.90.090(H). The landscaping
on the commercial lot (lot 1), has been deferred to the time of development as there is no commercial use at this time requiring screening.

22. The applicant shall install Type II Streetscape landscaping along all public and private road frontages in accordance with EMC 18.90.090.

The landscaping plans generally provide Type II Streetscape landscaping along the road frontages within the project. Street trees were omitted along the park and wetland frontage. Trees are contained in the wetland buffer and park areas which exceed the tree standards typically imposed for this frontage length. The use of park materials and buffer trees to meet street frontage requirements is consistent with other projects with this condition.

48. The wetland and reduced wetland buffer shall be placed in a separate tract from the remainder of the site per EMC 14.30 – Wetlands.

The wetland and associated buffer are located within tract A which is a separate tract for the preservation of the wetland.

56. The commercial building on Lot 1 shall have a minimum footprint of 4,265 square feet. Lot 1 shall provide the required number of parking spaces for said building.

A note reflecting this condition and condition #57 has been placed on the final plat reflecting this requirement.

57. The applicant shall place notice to title on the title for lot 1 restricting use to Commercial retail, restaurant, or personal service uses.

A note reflecting this condition and condition #56 has been placed on the final plat reflecting this requirement.

III. STAFF RECOMMENDATION
Based on the information above and materials provided in the file, the City of Edgewood staff has determined that the final plat meets the applicable requirements for final plat approval. The applicant has substantially completed required improvements for the development as noted above and submitted performance bonds for the remaining improvements. Therefore, the City staff recommends the City Council adopt the findings in this report and APPROVE the Domus Townhomes PRD Subdivision Final Plat, File Number 18-1181, subject to completion of the bonded civil improvements. Completion of improvements shall occur prior to occupancy of the residential units or commercial lot.

SUBJECT: CITY ENGINEER’S CERTIFICATE OF IMPROVEMENTS, DOMUS TOWNHOME  
CITY OF EDGEWOOD, PIERCE COUNTY, WASHINGTON  
G&O #16463.10 EDGEOOD #17-1173

Dear Mr. Neuffer:

This letter is to inform you that pursuant to the City of Edgewood Municipal Code (EMC) Section 16.04.110, the City of Edgewood has determined that Substantial Completion of the required improvements associated with conditions for preliminary subdivision approval and requirements as described within the approved Site Development Plans have been substantially approved by the Public Works and Engineering Department.

In lieu of receiving full site development construction approval prior to final plat application, the City has agreed to receive multiple Performance Bond Guarantees to complete the civil, street illumination, landscaping, and wetland mitigation work prior to final plat approval. Items to be included in the Performance Bond Guarantee shall include:

1. Final lift of asphalt pavement on proposed private roadways.

2. Sidewalks and curb ramps adjacent to private roadways per the approved plans.

3. Landscaping and irrigation system needs to be completed (including installation of wetland buffer mitigation plantings and receipt of maintenance/monitoring bond).

4. Off-site improvements to 11th Street East.
In addition, the following conditions must be met prior to final plat recording:

2. Execute the Right-of-Way Dedication.

3. Execute the SWMA (Surface Water Maintenance Agreement).

4. Execute the Public Stormwater Easements(s).

5. The City receives As-Built Records (PDF and AutoCAD formats).

6. Planning Department Final (Tree Preservation, Landscaping, Irrigation, Parking, Amenities, and Building Facades).

7. Provide proof of Mountain View-Edgewood Water Company acceptance.

8. Provide proof of Lakehaven Water & Sewer District acceptance.

A copy of this letter certifying Substantial Completion of site improvements along with accompanying documents as outlined in EMC Section 16.04.140 shall be submitted with the final plat application.

Please contact the Public Works Department at (253) 952-3299 if you have any questions regarding this letter.

Sincerely,

GRAY & OSBORNE, INC.

Tani Stafford, P.E.
Contract City Engineer

cc: Mr. Jeremy Metzler, P.E., Public Works Director, City of Edgewood
File #17-1173
THESE ACTIONS MUST BE COMPLETED PRIOR TO BEGINNING CONSTRUCTION:

1. CONTACT THE APPLICANT'S RETAINED ENGINEER TO COORDINATE REQUIRED INSPECTIONS.

2. APPOINT A TRAINED ESC LEAD WHO SHALL BE PROVIDED A COPY OF THE ESC PLAN & INSPECTION SCHEDULE.

3. CONTACT _________________________, THE AREA INSPECTOR, AT 253-798- _____, TO COORDINATE THE PRECONSTRUCTION MEETING AND COUNTY INSPECTIONS.

FAILURE TO OBTAIN REQUIRED INSPECTIONS MAY ENDANGER OR DELAY PROJECT APPROVAL.

ALL WORK IN THE PUBLIC RIGHT-OF-WAY REQUIRES A PERMIT FROM THE PIERCE COUNTY PUBLIC WORKS DEPARTMENT.
