NOTES:

1. Flowable grout shall be 2,000 PSI, and shall be poured 1/8 to 1/2 inch above the lip of the adjacent concrete, and shall be flush with the asphalt.

2. Cleanly remove all trench spoils so that the proposed conduit shall sit evenly along the bottom of the trench.

3. Transverse road crossings will be allowed at a minimum spacing of 150 feet.

4. Crossing concrete improvements such as curb or sidewalk shall be done by boring methods, and not by cutting or trenching.

5. Trenching through unimproved areas (ie. behind sidewalks, along roads without concrete edging) shall maintain a minimum depth of 24” to top of conduit.
